Wausau

“A Good Place to Come”

WAUSAU is the largest lumber producing point in Wisconsin, with a tributary supply of Hemlock, Tamarack, Pine, Birch, Basswood, Hard and Soft Maple, Rock and Soft Elm, Ash and other timber.

CENTRALLY LOCATED, with good freight service on two lines, dependable labor supply, cheap electric power, suitable factory sites, and the best of living conditions, WAUSAU offers excellent facilities for the manufacture of:

- | | |
|---------------|------------------|
| Hubs | Toothpicks |
| Dowels | Silos |
| Vehicle Parts | Last Blocks |
| Tanks | Kitchen Cabinets |
| Handles | Sporting Goods |
| Refrigerators | Woodenware |

Let us send you our booklets, “Wausau, a Good Place to Come,” and “Factory Facilities in Wausau.” Please ask for them on your business letterhead.

TIMBER

WE OFFER TRACTS OF VIRGIN TIMBER IN LOUISIANA, MISSISSIPPI, FLORIDA, ALABAMA AND ALSO ON

PACIFIC COAST

We employ a larger force of expert timber cruisers than any other firm in the world. We have furnished banks and trust companies with reports on timber tracts upon which millions of dollars of timber certificates or bonds have been issued. We furnish detailed estimates which enable the buyer to verify our reports at very little expense and without loss of valuable time. Correspondence with bona fide investors solicited.

CHICAGO

THE GREATEST HARDWOOD MARKET IN THE WORLD

A floor to adore

For thirty-three years Wilce's Hardwood Flooring has been among the foremost on the market and because it stands today "unequaled" is the best evidence that its manufacturer has kept abreast of modern methods and the advanced demands of the trade. To convince yourself of the above statements, try our polished surface flooring, tongued and grooved, hollow backed, with matched ends and holes for blind nailing—you'll find it reduces the expense of laying and polishing.

Our Booklet tells all about Hardwood Flooring and how to care for it—also prices—and is free.

SAVE YOUR MONEY BY USING THE

RED BOOK

Published Semi-annually
in February and August

It contains a carefully prepared list of the buyers of lumber in car lots, both among the dealers and manufacturers.

The book indicates their financial standing and manner of meeting obligations. Covers the United States, Alberta, Manitoba and Saskatchewan. The trade recognizes this book as the authority on the lines it covers.

A well organized Collection Department is also operated and the same is open to you. Write for terms.

Put the Hardwood Club On Your Mailing List

When you are in a hurry to get lumber, and want it just right as to price, grade and other features, don't waste time and effort sending out a big batch of inquiries to dozens of firms; make sure of getting quick action by letting the Louisville Hardwood Club handle it.

When you ask for quotations from the club, you get prices from all its individual members who handle that particular kind of stock, thus assuring yourself of receiving offers from everybody in this, the leading market of the Hardwood Belt, who is in a position to supply your wants.

Of special items, which a single firm may have trouble in quoting on, you can always get a car or two in Louisville, for by our co-operative service the stocks of various members may be drawn on to make up the necessary quantity of lumber. It is handled through one house, however, thus making the transaction simple and convenient for you.

There are a lot of points about Hardwood Club service that it would pay you to find out about. Don't be too bashful to let us know when you are in the market.

Wood-Working Machines For Those Who Discriminate

BEAR THE IMPRINT OF THE WORD

DEFIANCE

ON THE ORIGINAL CASTING

It means we defy any wood-working machine on the market today to produce results with as high a character as those produced on our tools.

We have always aimed to give the trade the best we, or any one else, could produce, and the future for DEFIANCE buyers contains even a higher expectation.

An initial order will prove our claim.

Write us for catalog and prices.

Review and Outlook

General Market Conditions

Nothing has occurred in the last fortnight that involves any new phase in hardwood market conditions, save that red and white oak, both plain and quartered, and of all grades and thicknesses, is growing in still shorter supply with advancing prices. Northern hardwoods in the hands of producers are fully fifty per cent short of a year ago, and that is the general situation with the majority of southern hardwoods.

Poplar in some items is in fairly good supply, and there seems to be a growing accumulation of both first and seconds and number one common red gum and first and seconds sap gum, with the result that the good end of gum seems to be slightly weakening in value. This is somewhat remarkable when this wood seems to be in better repute than ever before in its history. On every hand and for hundreds of new purposes it is growing in appreciation, which is fully warranted by its intrinsic merits. It has been but recently discovered that red gum, when exposed to alternate dryness and dampness, will outlast cypress or the best varieties of southern oak, but such is unmistakably the fact. Furniture and interior finish people are using large quantities of it, but there seems to have been an extraordinary effort on the part of manufacturers to produce a large quantity since the flood period of the Mississippi valley last spring, with the result that there is danger that the demand will not equal the supply unless production is materially reduced.

Mahogany, Circassian walnut and English oak, notably the first-named wood, are enjoying a tremendous and increasing demand, which is taxing the capacity of all foreign wood mills to their utmost.

The veneer and panel business is improving in volume of demand and somewhat in price, although at a recent conference of veneer and panel producers in Chicago it was generally conceded that the plants that are busiest are delivering goods on a basis that shows very little profit. Undoubtedly veneer and panel products are being sold at much less relative value than solid wood.

The hardwood flooring trade is in a fairly satisfactory condition and although the stocks in warehouse of a year ago have been very materially reduced, there still remains ample supply of both oak

and maple flooring in the hands of manufacturers. The agricultural implement, broom handle and hickory handle industries are in a fairly satisfactory condition, both in demand and price.

There is every indication that the general volume of trade in hardwood forest products will be fully maintained at the present demand or even a stronger one as the fall advances, as the furniture trade, interior finish and manufacturers of many articles employing hardwoods, including the box-shook industry, report that all see active business ahead of them for months to come.

The Eucalyptus Game

With every recurring period of good times the country is flooded with promotion enterprises, the majority of which are schemes put up by unscrupulous promoters to secure investments in enterprises that are usually of very questionable character. It was supposed that after the exposures of the eucalyptus land promotion enterprises in California that have been published by HARDWOOD RECORD during the last two years, and widely quoted by other leading journals, there would be a suspension of attempts to force eucalyptus-growing properties on the public.

Such is not the case. In this recurring period of good times the promoters of eucalyptus-growing schemes have become more numerous than ever, and, like Banquo's ghost, will not down. They are issuing the most specious and misleading literature on the subject of eucalyptus that ever attended the promotion of any enterprise, good, bad or indifferent. They are making statements of the possibility and even certainty of enormous profits of eucalyptus planting that are in no instance borne out by the facts. Let it be unmistakably said in HARDWOOD RECORD, with the assurance that the statement can be fully verified, that eucalyptus, and notably the particular variety chiefly under planting in California, is a wood with fewer virtues and with less possible value than any other variety of commercial timber that grows in the United States. HARDWOOD RECORD regards eucalyptus and eucalyptus growing as absolutely fraudulent, and within a very short time will publish specific and carefully prepared information covering the subject in full, based on a thorough investigation and analysis by the best wood-utilization experts in the United States, fully substantiating the statements above made.

SUBSCRIPTION TERMS: In the United States and its possessions, and Canada, \$2.00 the year; in foreign countries, \$1.00 extra postage.

In conformity with the rules of the postoffice department, subscriptions are payable in advance and in default of written orders to the contrary, are continued at our option.

Instructions for renewal, discontinuance, or change of address, should be sent one week before the date they are to go into effect. Both old and new addresses must be given.

Both display and classified advertising rates furnished upon application.

Advertising copy must be received five days in advance of publication dates.

Telephones:—Harrison 8086-8087-8088.

Henry H. Gibson, Editor; Hu Maxwell and Edwin W. Meeker, Associate Editors.

Entered as second-class matter May 26, 1902, at the postoffice at Chicago, Ill., under act of March 3, 1879.

People who invest their money in eucalyptus growing are simply throwing it to the dogs, because eucalyptus at its best does not constitute a material that makes even a commendable firewood.

Opportunity Neglected

Lumbermen have been slow to make use of the opportunity afforded by the government forest products laboratory maintained at Madison, Wis., and fully equipped with machines, apparatus and technically trained men, to make tests and carry on experiments along lines in which lumbermen ought to be interested. The laboratory has been at work more than three years, and during that time it is said not one lumberman has visited it to investigate its work or its scope. The only reasonable explanation of that state of affairs is that those engaged in the lumber business are not fully informed of the existence of the laboratory, or, at least, do not know of the opportunities offered by it for solving or helping to solve problems of the greatest importance.

Although the lumber business in this country is about three hundred years old, and large numbers of very competent, experienced men have been engaged in it, it is nevertheless a fact that a good many features of cutting and handling the products of the forest are yet in experimental stages. At any rate, some of the old methods are too slow for present conditions, while an increasing scarcity of certain kinds of timber makes it necessary to lay aside methods which once might have been all right but are now out of date.

The laboratory's work is along practical lines; it deals with present conditions, not those which prevailed long ago. It does not concern itself with theories which lead no man knows where. Its purpose is to apply science to common, simple problems which have not yet been worked out in a satisfactory manner. Take the matter of seasoning lumber as an example. No millman claims that the last word has been said on that subject, or that present methods are accomplishing all that is to be desired. Much has been learned, but something remains to be found out, and right there is where the laboratory is getting in its work.

It is seasoning lumber by every known process which promises valuable results, and it is pushing its investigations somewhat outside the processes which have been tried elsewhere and heretofore. It carries out air drying; it applies artificially heated air; it mixes the hot air with certain amounts of moisture; it applies steam under all pressures from atmospheric up to three hundred pounds. It combines, varies and modifies these methods and makes record of results. Special apparatus has been constructed to test every process at every step. Checking, warping, shrinking, swelling, case-hardening, and all other undesirable results which have plagued lumbermen from the beginning until the present, are duly studied, with a view to finding a cure.

Work has followed another line, no less interesting and no less valuable. Preservative treatment of timber to lessen decay is no new thing, but the art still seems to be only on the threshold of what it is destined to become. The laboratory is striking ahead in its exploration of new fields. Timbers which once had little more value than weeds are now made fit for substantial service to mankind. The laboratory did not blaze the trails in this exploration, but it is rounding up results. Some of the old methods and materials which have been proved to possess little value have been replaced by others. Cheap woods are fitted to take the place

once occupied by the more expensive, leaving those of great value to fill higher places.

The waste problem is ever present to the successful lumberman; he cannot get away from it. Very much must yet be done before the problem, with all its ramifications, can be solved, but the laboratory has attacked it, and with success in many particulars. Take as an example paper making from southern yellow pine. It is well known that enormous quantities of that wood are wasted, and popular belief has been held that paper of a substantial grade could not be made of that material. The laboratory installed a small paper mill, employed practical paper makers, and went to work on the problem. It demonstrated the practicability of manufacturing strong, tough, serviceable paper from yellow pine. The wearing properties of the product are excellent. Its color disqualifies it for book and newspaper work, but it is suitable for bags, wrapping paper, colored envelopes, and for many other purposes.

Another line of investigation has been undertaken by the laboratory, promising valuable results to the lumber interests in general, but particularly to engineers, architects and builders. It concerns the physical properties of American woods, strength, stiffness, toughness, elasticity and hardness. No thorough, systematic and uniform work has ever been carried out along that line for all the important woods in this country. Investigators have worked at it piecemeal, and figures obtained by one differed from another's because based on different conditions. The laboratory started at the beginning, and is producing figures uniform and accurate. There will never be occasion to do it over.

The examples cited indicate the lines along which the laboratory is doing its work, but do not by any means show the full scope of its activities. The men are thoroughly trained in scientific methods, and each is a specialist in his particular work.

A good many lumbermen are too much inclined to believe that there is nothing more in their business for them to learn; but many of the most practical problems are only half solved. A closer working relationship between lumbermen and the laboratory would unquestionably bear good fruit. A full and free discussion of troubles, suc-

cesses, failures, and achievements would lead to valuable results. The lumbermen's experience and observations, combined with the scientists' knowledge of natural laws and applied mechanics, would doubtless, in many cases, lead to satisfactory solutions of some of the problems which have long vexed the lumber industry. The laboratory is maintained by the government at great expense for the benefit of those engaged in manufacturing and using forest products.

Standardizing Lumber for Furniture Making

Charles F. Kade in an article in *The Furniture Manufacturer* for October points out to furniture producers the desirability of establishing standard sizes in the manufacture of their product. The writer calls attention to the fact that many manufacturers in different lines of industry are getting together and standardizing their products so that designs, sizes, material and price-lists are all standard. He cites as examples the following industries: Glue, screws, nails, lumber, glass, sandpaper, mirrors, art glass, iron, steel, copper, tools, electrical supplies, motors, machinery, carpets, rugs, clothing, hats and shoes. Many other examples might be added to this list.

UNSOLICITED TESTIMONIAL

The Royer Wheel Company

Manufacturers of
Vehicle Wheels

Aurora, Ind., Oct. 15, 1912.

HARDWOOD RECORD,
Chicago, Ill.

Gentlemen:

We certainly read each issue of *Hardwood Record* closely, and have gotten a great deal of benefit from these columns. We would feel lost without it.

THE ROYER WHEEL COMPANY,
J. H. Wilder, Supt.

Mr. Kade states that in the furniture business, such as chairs, sideboards, china closets, bookcases (excepting sectional bookcases), desks, parlor furniture, refrigerators and almost everything else, there seems to be no standard at all as far as design, material, measurements and finish are concerned, save that a chair seat is a certain height from the floor, and a bed is made of a certain length and width.

The only woodworking lines he knows of that have standards are the manufacturers of packing cases, wash-tubs, pails, barrels, coffins, caskets and sectional bookcases. To this specific list might be added wagon material, and generally table manufacturers have established approximate uniformity in sizes for their work.

It is generally regarded that about twenty-five per cent of the cost of the average piece of furniture is involved in the lumber that goes into it, and it is fully believable that if the furniture trade would standardize its sizes so as to enable lumber manufacturers to produce specific sizes, knowing they would have a certain demand and hence a substantial market value, they could materially reduce their price. Today it is not safe for a millman to over-produce a single item of dimension material for the furniture trade, for the reason that it may not fit the demands of any other manufacturer. Hence, in getting out a specific bill for one manufacturer a larger price must be demanded for it than if the material were standard and would sell to any of a hundred manufacturers.

There is no good reason why ninety per cent of the furniture produced in the United States should not be made to standard sizes, and why a lumber manufacturer should not be able to produce these various sizes in quantities at a distinct economy to both himself and to the consumer.

The writer above noted says that from a manufacturing viewpoint it would simplify production materially if every bed were built to standard heights, widths and lengths, and every desk to a certain standard length, like four feet, four feet-six, five feet, five feet-six and six feet, all of the same uniform height and width, say three different widths—low-top, medium and high top, but all the same, no matter what factory made them. He says every show-case, floor case, wall case, shelving section, partition, etc., could be produced by standard dimensions; that every table of a certain size should have the same standard, and furthermore he argues that factory colors and finish should be evolved to some standard; and the hardware and trimmings be made as nearly uniform as it is possible to standardize. He argues that the way to bring this desideratum about is through associations in the particular line in which the manufacturer is interested, and that every member should advocate "standardization" at each meeting.

This argument for standardizing furniture and establishing standard sizes of materials entering into its production has been a pet argument of HARDWOOD RECORD for years, and it is therefore only too glad to note that the furniture men and periodicals are taking up this important and eminently desirable subject, which spells not only economy, but much higher efficiency in furniture production.

In Glass Houses?

A traffic expert was recently going over the records of mis-weights on lumber shipments when, coming to a statement of underweights, he laughed and said that the railroads would receive no notification of such error. A few minutes later, however, he launched upon a heated tirade concerning the atrocities of the roads in connection with overcharges on freight. While records show that undercharges are much less frequent than overcharges, the aggregate undercharge by the various important freight carrying lines of the country amounts to considerable money. Many traffic managers see no wrong in taking from the railroads what they as carriers are legally entitled to, but when the shoe is on the other foot these same men are righteously indignant and will believe nothing less than that the roads are maliciously and intentionally doing everything in their power to beat shippers out of as much extra change as possible by means of false weighing, false tare, etc.

Equally unscrupulous shippers employ other methods of "putting

one over" on the railroads. Misstatement of classification, as in the case of a certain furniture manufacturer who deliberately concealed pianos in the middle of a carload shipment of furniture, is one way of "doing" the railroads and getting around the law at the same time, but it is doubtful if the traffic manager responsible for such practices fully realizes the serious consequences if they are discovered. Nor is it likely that he is aware of the fact that he puts himself liable to federal prosecution if he accepts a statement of freight charges showing underweight.

It is pretty generally known that most of the large railroad systems in the country are in the business to make as much as possible out of it, and therefore they have undoubtedly done a great deal which has not been in exact keeping with the most honest methods of competition. On the other hand, however, these systems are made up of human beings who appreciate as well as others the value of fair treatment. The country-wide protest against wrongful methods of car weighing is based on positive facts, but it is doubtful if these practices by the roads are sufficient justification for the employment of similar retaliatory methods by the shippers. In fact such action has the tendency to morally weaken the shippers' cause and for this reason, if for no other, shippers should make every effort to maintain a position of absolute fair dealing toward the carriers.

The Safety of the Passenger

The Wall Street Journal, in its issue of October 15, says that in criticizing the use of mixed trains of wooden and steel cars on fast express trains and the calamitous fire arising from that reason in the recent accident on the New Haven road, it willingly recognizes that operating difficulties are of a kind which cannot be settled off-hand. Railroad rather than lay experience is necessary in revising the present methods of handling express passenger service. One of the ablest and most experienced railroad officials in the United States writes this publication as follows:

I understand no official investigation of the causes of this accident has yet taken place. I beg to suggest therefore that until such investigation has been held it is unwise to assume knowledge as to the causes. I beg to suggest also that if the cars had been lighted by electricity instead of by gas, there would have been no loss of life by fire, and that in all probability the loss of life and injury from other causes would have been fully as great in a steel car as in a well-constructed wooden car. As a person of some experience, I am prepared to state that in a train heated by steam and lighted by electricity, I would prefer to take my chances in a collision or other wreck in a thoroughly well built wooden car with steel underframe than in a car composed entirely of steel, and I think railroad men in general share this opinion. The cars in the fore part of the train should, perhaps, be made of steel because of the possibility of fire being communicated from the engine in case of wreck; but the other cars of the train are very much more comfortable and quite as safe if properly constructed of wood with steel underframes. When to this is added the very much larger first cost and the enormous enhanced weight of the steel car, their general use seems to be of very doubtful benefit.

The Pennsylvania Railroad is about the only line left that still continues the building and use of entire steel cars, and this is apparently done purely as an advertisement for the alleged fireproof qualities embraced in total steel car construction and for its steel and concrete tubes under the Hudson river, New York City, and the East river. Sad to relate, a few days ago a car of express matter caught fire in one of the Pennsylvania tunnels in New York and produced a first-class conflagration, suspending traffic in the tunnel for hours.

It will readily be seen that it is absolutely futile to build fireproof tunnels and transport through them fireproof cars that are loaded with combustible materials, and insure freedom from fire. A fireproof car is no more fireproof than the contents are fireproof.

The Pullman Car Company and nearly all the other leading passenger and sleeping car builders have gone back to the steel underframe and solid wood construction in passenger and sleeping cars. As a matter of fact, the Pullman Car Company has bought more solid wood and veneer during the past year than during any previous year in its history. The craze for the steel passenger and sleeping car is apparently over, which is a desideratum for which both the railroads and the traveling public should be devoutly thankful.

THE EUCALYPTUS BUBBLE

Nearly Ready to Burst

"And you mistook her for another young lady, eh? Nothing in that to get mad about."
"I mistook her for a piano lamp."

Unknown Quantity

Knocker—"Is your boy at the head or foot of his class?"
Bocker—"He's like champagne—will go to either."—*Judge*.

Mutual Distrust

"That new statesman is giving you quite an argument."
"Yes," replied Senator Sorghum. "It's the same old story. He thinks we need reformation, and we think he needs information."

Most Annoying

"It's fearfully annoying to lose all your money on a get-rich-quick scheme," said Mr. Silliwad.
"Yes," replied Mr. Lambkin. "Such a disappointment to find the most enticing propositions coming along after you have wasted all your available coin on a hack number prospectus."—*Washington Star*.

What the Handsaw

The handsaw wood while the bucksaw dust,
The bandsaw snakes while circulars hust,
The backsaw nails while the jigsaw fret,
But the seesaw all that and more yet.
—W. D. Graves.

Both Tired

Patron—"Say, look here, I'm tired waiting here."
Waiter—"So am I, sur; let's go to some other restaurant."

Matrimonial Amenities

Mrs. Knagg—"When I die you'll never find another woman like me."
Mr. Knagg—"No, for I don't intend to look for one."—*Boston Evening Transcript*.

A Bad Mistake

"That young lady is angry with me. The episode happened at a reception. I couldn't see her face under her big hat."

American Forest Trees

NINETY-EIGHTH PAPER SILVER OR SOFT MAPLE (*Acer saccharinum*—Linn)

The names silver maple and soft maple are applied to this tree in nearly all parts of its range. The first name refers to the bright underside of the leaves, and is used by those who speak of the tree as it stands, either as an ornament along highways or in parks, or in its native woods. The name soft maple refers to the wood, and is a lumberman's term. It is applied to the standing tree and to the lumber made from it. In many parts of its range it is called white maple, because the trunk is largely sapwood, except old specimens, and the wood is whiter than that of sugar maple. Many persons doubtless have in mind the color of the underside of the leaves when they speak of the tree as white maple. Three or four other names are applied, referring to the localities where the trees usually grow. Among these names are river maple, creek maple, water maple, and swamp maple. These names are used oftener in Pennsylvania, Maryland and West Virginia than elsewhere. The species is at its best on rich bottom land where water is abundant and soil fertile.

The range of silver maple extends from New Brunswick through southern Canada to the region of the Great Lakes, thence through Michigan, Wisconsin, Minnesota, to South Dakota. West of the Mississippi river it grows southward to Oklahoma; its southern limit reaches Florida. It is not abundant on the immediate Atlantic coast, but is of considerable importance among the Appalachian mountains and westward in the Ohio valley.

Next after sugar or hard maple it is the most important maple species. Figures which show the annual use of the two maples in four states will indicate their comparative importance:

Sugar maple, Average		Soft maple, Average	
	feet.	feet.	price.
Michigan	333,724,000	13,659,000	\$17.53
Illinois	101,487,000	21,785,000	27.04
Kentucky	1,814,000	3,212,000	13.47
Missouri	3,196,000	4,503,000	34.71
			8.13
			24.98

The above figures are from reports by the United States Forest Service. It appears that the comparative importance of the two maples changes from the North toward the South; the sugar maple loses and the soft maple gains.

The red maple (*Acer rubrum*) and Drummond maple (*Acer rubrum drummondii*) bear much resemblance to soft maple, yet there are several distinguishing features. The leaves of soft maple have five lobes; red maples have three. The small twigs, bloom and fruit of red maple are red; those of soft maple are not, the flowers

being greenish yellow. Few trees ripen their fruit in a shorter time than soft maple. It blooms during the first warm days of spring; and the key-shaped fruit soon follows, reaches maturity quickly, and is scattered by the wind before the earliest leaves appear on the tree. The seeds have very strong wing power and fly long distances. As they whirl through the air in their descent to the ground, they look like gauzy wheels three or four inches in diameter. They germinate at once if they light on damp ground, and young trees are under way before the heat of summer strikes them. Most of them are doomed to die, because they come up in such multitudes that nearly all are crowded to death. For many purposes soft maple is considered inferior to sugar maple. It is of faster growth, and the wood is weaker and more brittle. It weighs 32.84 pounds per cubic foot; sugar maple is eleven pounds heavier. Trees of the two species reach similar sizes, but soft maple attains maturity many years earlier than the other. The wood is pale brown, the thick sapwood whiter. Small soft maples often have no heartwood; but at the age of fifty or sixty years it begins to form.

Branches of sugar maple are seldom broken by the wind; those of soft maple often are. They are so brittle that when they snap they seldom hang to the stubs, but fall to the ground. This constitutes a serious defect in soft maple as a street or park tree. Before it has reached middle life it has become ragged and lopsided. The trunk is apt to become defective at the same time, and a symmetrical, healthy soft maple street or park tree eighteen inches in diameter is unusual. Notwithstanding these drawbacks, it is extensively planted. It is a beautiful tree when quite young, and at that stage it appeals to purchasers of nursery stock. Half a dozen varieties have been developed by cultivation. The autumn foliage of soft maple is yellow, and it falls far short of presenting the fine appearance of the brilliant red leaves of sugar maple.

Lumbermen are interested in soft maple chiefly as a forest tree and a source of lumber supply. The statistics of sawmill output in the United States do not separate the maples, and the total yield only is given. That in 1910 was 1,006,637,000 feet, and probably ten per cent of it was soft maple. When great strength and hardness are essential, the woodworker seldom chooses soft maple when sugar maple is obtainable; but the softer wood is suitable for many purposes. The most trying place in which it is used is for flooring, including parquetry. It is low in wearing qualities,

TYPICAL FOREST GROWTH S OFT MAPLE, LOWER APPALACHIAN REGION

but its white color recommends it, particularly when it is placed in contrast with darker woods. It is one of the best hardwoods for boxes, and possesses in a high degree three requisites: strength, whiteness, and freedom from stain and odor; a fourth, comparative lightness in weight, may be added. Much of the wood is worked into veneer packages and containers, for berries and small fruits. Furniture manufacturers pick it out for several purposes. It looks nice when made into baby carriages, carts and children's sleds; and the makers of certain patterns of hall clocks like it. It serves well as parts of chairs, piano benches, book cases, filing cabinets and kitchen cabinets.

Makers of ice boxes and refrigerators give it a place because of its clean appearance. It is manufactured into broom handles and appears to equal hard maple in every way, but objection to it is sometimes heard from broom makers because it is not heavy enough. Brooms are often sold by weight, and if the handle is light, enough broom corn must be put in to make up the difference, and, weight for weight, broom corn costs more than wood.

It is a standard material for woodenware of certain kinds. Ironing boards and sleeve boards are made of it, also butter bowls, root cutters, potato mashers, rolling pins, washboards, and many similar articles.

It is manufactured into interior house finish, including balusters, stair railing, newel posts and spindles; parts of musical instruments, such as organ pipes, piano and mandolin ribs, rims of guitars, and parts of sounding board equipments. Makers of business vehicles employ it for shelving in bakers' and butchers' wagons.

LEAF PRINT OF SILVER OR SOFT MAPLE;
ABOUT ONE-HALF ACTUAL SIZE

Soft maple wood contains multitudes of very minute pores which are visible only under a magnifying glass. The glass further shows that the medullary or silver rays of the wood are exceedingly thin. For that reason, quarter-sawed soft maple does not present the silvery appearance of quarter-sawed sugar maple, in which the medullary rays are much broader, and it is possible to exhibit much more of their surface.

Soft maple sometimes exhibits a highly artistic curly or wavy effect. The old-time hunters used to search far and wide to find such a tree, and made stocks of it for their long-barreled rifles. The wood was no more serviceable than plain maple, but the curly effect caught the backwoodsman's eye and he exhausted his utmost skill in scraping and polishing it to bring out the artistic figure. Some of those old gunstocks, though soiled by the grime and smoke of a century, are as fine samples of woodwork as can be found anywhere.

The supply of soft maple has always been sufficient to meet the demand, and there is no immediate danger that scarcity is at hand. It cannot be classed among the so-called indispensable woods, like hickory. A good many can take its place when it runs short. It could be easily grown as a forest tree or on wood lots, but no beginning seems to have been made in that direction, although large numbers of soft maples have been planted for ornamental purposes. Few forest species of this country can be more easily planted and made to grow. It is said to cost nurseries as much to raise one sugar maple to size for transplanting as ten soft maples, which is probably one reason why soft maples are planted so much more extensively than others.

Uses and Supply of Kauri Pine

The kauri pine (*Agathis australis*) is the finest tree in New Zealand, and produces the most valuable timber. The native name "kauri" is the only common name given to this tree, but in the English and American markets it is sometimes called "cowrie" or "kowdie" pine. It is not a pine at all, but is more closely related to *Araucaria* than it is to *Pinus*. It is closely related to and resembles the Norfolk Island pine, which is familiar in this country as a house plant. Kauri is restricted to the northern part of the North Island, where large forests of it occur and afford one of the most impressive scenes in New Zealand. The tree attains the height of 120 to 160 feet and upward; clean, symmetrical trunks may be seen from 50 to 80 feet or even 100 feet in length, varying from 5 to 12 feet and upward in diameter. The wood is esteemed above all other New Zealand timber for masts, spars and other purposes in naval construction, which first led to its being exported for use in the British dockyards.

Formerly its use for general building purposes was confined chiefly to the North Island, and its durability for this purpose has been thoroughly proved. Logs that have been cut and left in the forests showed a perfectly sound heart-wood after thirty years. Weather boarding is in many cases in use for more than thirty years without showing any signs of decay. Some of the oldest houses in the city of Auckland and in other parts of the island are built of this wood and many of them are in a good state of preservation. Kauri pine has been employed, together with totara (*Pdocarpus totara*), for the upper beams were in good condition after eighteen years' use. It has also been used extensively for bridge timbers with the best results. Its superiority over Tasmanian blue gum (*Eucalyptus globulus*) under heavy wear and tear has been demonstrated by the use of both timbers for

wharf construction, when the former was found to last twice as long as the latter under severe tests. Cross-ties after from five to nine years' use were found to be in good condition.

Kauri is undoubtedly the best timber in New Zealand for general building purposes. It is largely used for cross-ties, telegraph posts, mine props, masts, and deck planking of ships, for which it has no equal, being even-grained, free from large knots, is of smooth surface and resists a large amount of wear and tear. It is also used extensively for the outer and inner planking of coasting boats. Kauri affords a splendid timber for interior finish, as it takes a high polish and is especially adapted to all the purposes of the cabinet maker where light colored wood is required. The common kind of kauri wood is excellent for ordinary grades of furniture. The finest figured wood is equally as valuable as bird's-eye maple and is highly prized for ornamental work.

A steady export of kauri pine was formerly carried on, chiefly with Australia, Tasmania, Mauritius, and England; it was, in fact, the only New Zealand timber exported to any extent. It is significant alike of its intrinsic value and of the abundance in which it originally occurred in the limited area to which it is confined, that the export of kauri timber was so great that it exceeded the total export of all other timber from all parts of New Zealand. About the year 1875 the demand for this wood suddenly began to increase and in 1885 the quantity exported amounted to over 30,000,000 board feet. This enormous drain on the kauri pine timber, together with the destruction of the forests by fire, so greatly lessened the available amount of timber that there is little if any of this valuable timber sold for other than home consumption.

L. L. D.

LITTLE RIVER RAILROAD AT CROSSING OF FORKS OF MAIN RIVER

A Remarkable Logging Railroad

What is probably the most remarkable standard gauge logging railroad in the world is the Little River railroad, and its connection, the East Prong railroad, of the Little River Lumber Company of Townsend, Tenn. This road is located in the Great Smoky mountains in Blount and Sevier counties, Tennessee, and is employed to transport logs from the mountains to the sawmill operations of the company at Townsend, and for the delivery of its lumber from Townsend to the Southern railway at its connection with that line at Walland, Tenn., and also for a general and miscellaneous passenger and freight business between Walland and Elkmont.

The Little River Railroad is an incorporated company and a common carrier between Walland, Tenn., and the three forks of the Little river, four miles southeast of Townsend, where it connects with the East Prong railroad, owned by the Little River Lumber Company, and extends from this connection up the east prong of the Little river to the three forks of this branch, a distance of twenty-four miles, making in its entirety a main line proposition of thirty-five miles with numerous spurs and sidings, involving altogether fifty miles of track now in service.

Some idea of what would be regarded as a tremendous expense for a logging railroad may be had when it is stated that the cost of the eighteen miles of road through the gorge of the Little river alone involved an expenditure of approximately twenty thousand dollars a mile, or a total of \$360,000. A cost like this would seem appalling to the average sawmill operator, but W. B. Townsend, the president and presiding genius of the Little River Lumber Company, realized the long-time service his company would require of the road, and

knew the quantity and high value of the timber lying above the gorge. Hence he built a railroad that would carry his logs long distances at a minimum of operating cost. It may be noted that this accomplishment is manifest from the fact that trains of as high as twelve logging cars, carrying from 7,000 to 9,000 feet to the car, are daily hauled from Elkmont, Tenn., to Townsend to stock the big double band mill at that point. Besides this, large quantities of bark and other forest products are handled.

It has been demonstrated that the sanity of this type of railroad construction has been fully verified, from the fact that the big double band mill of the company, which cuts upwards of 80,000 feet of lumber every ten hours, is always stocked with logs, which is a rare condition with mills where logs are obtained on steep mountain slopes.

The grade on the first twenty-six miles, i. e., from Walland to Elkmont, is not excessive, its maximum being two-and-a-half per cent. However, the road is built through a narrow mountain gorge along the Little river, which makes it a most picturesque piece of railroad. Its building necessitated excessive curvatures of the most difficult construction, so much so that strictly professional engineers, after careful surveys, would not lay out the road unless permission was given to tunnel the mountains at several points.

Mr. Townsend, in speaking of the enterprise, says: "As a matter of fact, the gorge of the Little river, along which the railroad runs, was too narrow to afford reasonable room for the river itself," and with a wink further observed that "no one but a dunce would have ever undertaken its construction, inasmuch as room had to be provided for both the river and the railroad." Mr. Townsend wished to

SCENIC FEATURES OF THE LITTLE RIVER RAILROAD
 1—The Narrows; 2—Where the rainbow trout abound; 3—Big London Rock; 4—The cut through the Long Arm of Curry He; 5—Where solid rock was blasted to make room for the railroad; 6—The Sinks; 7—Little White Horse Rapids; 8—Clingmans Dome from top of Sillers Bald

avoid the tremendous expense incident to tunnel building, which resulted in some spectacular railroad construction. For example: At the cut through the "Long Arm of Curry He," shown in one of the accompanying pictures, it was necessary to reverse two thirty-four degree curves on a substantial grade, without any intervening tangent (which, as railway engineering is taught, is an impossible railroad proposition) in order to get around the point of the mountain and cross the river. There are two thirty-six degree curves on the main line, which is the maximum curvature. This excessive curvature required special motive power. The ordinary direct-connected locomotive would not take the curves, and the distance involved was too great to operate geared locomotives economically or successfully, which resulted in the company's having designed special mallet-type locomotives, which were built by the Baldwin Locomotive Works, Philadelphia, and which have performed the service most satisfac-

As before noted, the Little River railroad starts at Walland, Tenn., which is at the end of a ten-mile plug of the Knoxville & Augusta railroad, a branch of the Southern Railway, extending from Marysville, Tenn. Marysville is eighteen miles southeast of Knoxville, where the main line of this division starts. Direct connections are made for Little River railroad points with through service trains on all divisions of the Southern reaching Knoxville.

In connection with this article are several pictures illustrating but inadequately the marvelous picturesque features of this lumber and logging railroad. In rare beauty the scenery along the line can scarcely be surpassed by any of the famous scenic routes in the country. It is only within the last few years that even the residents nearby Knoxville and other cities have learned of the wonderfully alluring features of this Great Smoky region, and especially along the route of the Little River railroad. Now they are taking advan-

"THE NARROWS" OF LITTLE RIVER, ALONG WHICH THE RAILROAD RUNS

torily. The bridges on the main line are all of steel construction, with concrete piers and abutments. Attractive station houses or shelters are provided at all the stations along the line.

The motive power of the railroad consists of one mallet-type engine, three Shay geared locomotives, one special direct-connected locomotive and two other direct-connected locomotives, seven in all.

The rolling stock comprises twenty-eight 80,000-pound capacity logging cars; seven 60,000-pound capacity flat cars; three 60,000-pound capacity service cars; two passenger coaches; two observation cars; and one automobile speeder. This rolling stock was specially designed and constructed so as to take the excessive curves, provisions being made for a very wide swing of the coupling device.

The entire road is standard gauge laid with sixty-pound steel. It is rock ballasted, has oak ties, and compares favorably with the construction of any first-class trunk line railroad. The geared locomotives are operated above Elkmont, where the curvature often exceeds thirty-six degrees, and involves grades as high as ten per cent.

PLANK LOG SLIDES BY MEANS OF WHICH LOGS ARE MOVED TO RAILROAD

tage of both the railroad and its several summer resort hotels and club-houses scattered along the line, and thousands of summer residents and excursionists are transported over the road to various points for rest and recreation during the entire summer season. At Sunshine, near Walland, are many cottages privately owned, and others are maintained by some charitable organizations of Knoxville as a place for recreation for working women and children. Nineteen miles above Walland near Lyon Springs is a well patronized hotel and medicinal spring. Near Elkmont is a fine club-house belonging to the Appalachian Club, and surrounding it is a score or more of attractive cottages. Near this station there was also built this year a large hotel known as "Wonderland," which overlooks a wide stretch of mountain country, and which already has become very popular for health and pleasure seekers.

For several summers the editor of HARDWOOD RECORD has had a tent encampment at the very farthest end of the main line of the railroad, just above the three forks of the east prong, and ex-

LOADING LOGS DELIVERED BY SLIDES TO CARS

pects early next spring to build a comfortable lodge at this point to supplement his tent equipment.

All the cut-over lands of the Little River Lumber Company, and a considerable area of undepredated land, involving spruce and balsam tops of the mountains, something like 55,000 acres, is under contract to the United States government as a part of its Appalachian National Forest. It is more than likely that the remainder of the property also will be taken over by the government as soon as the company takes out its large merchantable timber. Under the terms of this sale, present owners of small tracts within the boundary are left in undisputed possession of their holdings. The plans of the Forest Service involve a regrowing of the forest and the protection of the entire area from fire, thus making provision for the maintenance of an equitable stream flow of rivers which have their sources in this region.

While primarily this national forest is not intended as a playground for the public, beyond question certain sections will be set aside for this purpose, and any American citizen who so desires will have an opportunity of camping in this delightful region of pure air, sparkling springs, rushing waters, splendid trees, beautiful flowers and singing birds. It is expected that, with the eventual conclusion of the logging operations of the Little River Lumber Company, which will probably consume twenty years or more, the main line of the Little River railroad will be taken over by the government or some private corporation, electrified and be continuously employed as a means of ingress and egress to this picturesque and alluring section of the country.

It is a singular fact that this most charming region of the United States and its delights as a summer resort are almost unknown to even the inhabitants of the nearby cities, many of the residents of which travel long distances seeking places for rest and recreation. At the four thousand feet level, which has already been attained by the terminus of the Little River railroad, the summer temperature ranges from a minimum of forty-five degrees to a maximum of seventy-five. The air during every hour of both day and night is invigorating and refreshing, without being either too chilly or too warm for perfect comfort. Again, the region is free from all insect pests. Hence, it is that the writer, after traversing practically every wooded area of the United States, has chosen a sylvan retreat in Sevier county, east Tennessee, as the most charming and alluring spot in the country that could be selected for a summer home.

Food products of surpassing character are readily obtainable, and while small game is well nigh exhausted, this fact is compensated for by the plethitude of both speckled trout in the upper streams and rainbows in the lower reaches of the river. On the mountain tops, from five to fifteen miles from the present end of the railroad, a considerable number of bear and some deer and wild turkey still abound. For the hunting sportsman the region offers but small attraction, but for the fly fisherman it is exceedingly alluring.

APPALACHIAN CLUB STATION AND PARK

Many pictures depicting the features of this region have appeared in *HARDWOOD RECORD* during several years, and the few that are published in connection with this article are used simply to illustrate the features of the Little River railroad and the scenic beauty along its route.

To the skill and hard work of Superintendent J. P. Murphy of the Little River Railroad its owners are largely indebted for its admirable construction and faultless operation. H. H. G.

To Prevent Water-Logging

Practically every stream in the country, which has been extensively used for floating logs, has claimed a heavy toll in sunken timber. Deep holes, lakes, ponds and harbors in many regions have their bottoms strewn with saw-logs which became water-logged.

A recent article in the *Trade Journal* of Calcutta, India, describes a method by which it is claimed timbers may be prevented from becoming water-logged. As it is not expensive, it might be worth trying in this country. The article says that the hill forests of the United Provinces and the Punjab hold very extensive stores of spruce with which is associated the well-known silver fir. The trees grow to a very large size, with a girth of 20 feet, and a height of 200 feet is by no means uncommon.

The vast forests in which these trees are found are generally situated far from the plains at a high altitude. They are thus very inaccessible, and the only possible means of getting the timber out to the markets is by floating it down the rivers. Unfortunately this has hitherto not been found possible as the wood, though light and weighing only thirty or thirty-two pounds to the cubic foot and floating easily even in a green state, is porous and in water quickly becomes water-logged and is lost. During the last few years many experiments have been made in the Punjab and Northwest Frontier Province with a view to ascertaining how the timber can be prevented from becoming water-logged.

Mr. Barker, deputy conservator of forests, found that by dipping the ends of sleepers (which had been cut and allowed to season for twelve months) in hot coal tar, the loss from water-logging can be practically prevented. Of 223 broad-gauge sleepers treated in this way, launched into the Kaghan river and floated to the Jhelum depot, only four were lost, whereas out of 331 untreated sleepers 132 were lost. The treatment is very cheap, and this discovery should prove of the greatest importance and may render it possible to work out the timber from the high hills of the western Himalayas. Further experiments are in progress, but there seems no reason to doubt that, given a period of seasoning, the treatment by hot coal tar will prevent the loss by water-logging of spruce and silver fir whether in scantling or in the log.

An Object Lesson in Utilization

As pointed out in a recent issue of *HARDWOOD RECORD*, one of the ways in which the participation of the government in the timber business helps private interests is in the object lessons afforded. The government is in a position to conduct experiments and put theories into practice which private concerns are hesitant to do.

A case in point is in the construction and operation by the United States Indian Service of a large band sawmill and planing mill to cut timber belonging to the Menominee Indians. This plant, which has an eight-hour capacity of 120,000 feet, was constructed during the fall of 1908 at Neopit, Wis. The area of the Indian reservation is 230,400 acres and the stand of timber is estimated at nearly two billion feet board measure. About two-fifths of the stand is hemlock, one-sixth each of basswood and sugar maple, one-tenth white pine, and the rest elm, yellow birch, white and red oak, white ash, beech, aspen, Norway pine, white cedar, balsam, tamarack, and white spruce. Only the mature and fire-damaged timber is logged, and the cut is so regulated that the productive capacity of the forest is not impaired and operations may be kept up indefinitely.

One of the most important phases of the work is the development of a great many lines of uses of minor products. When it is realized that the average amount of wood material actually utilized in the average operations is less than forty per cent of that grown in the woods, the importance of more thorough utilization seems obvious. The usual reply of the operator is that there is not sufficient demand or market for the material, or that the transportation facilities are so poor that the cost of placing the wood on the market is prohibitive: in other words, it doesn't pay.

From a report by N. C. Brown recently published in the *Forestry Quarterly* it appears that the methods of utilization employed by the Indian Service do pay. The minor products discussed in some detail as to costs and profits are: hemlock bark, cordwood, lath, shingles, crating material, basswood and popple bolts for excelsior; pine bolts for pail stock; ties, cedar poles and posts, and picket stock. The following are a few examples:

CORDWOOD

The operation pays eighty cents a cord to the Indian contractors for cutting. Everything from sixteen inches to forty-eight inches in length is taken and all cordwood over ten inches in diameter is split. The contractor cuts up only the tops and dead and down material left in the woods after logging, and no stumpage is charged for this material. "A face cord" in this region equals a stack of wood four feet high, sixteen inches wide and eight feet long. Both this short sized wood and the regulation four-foot cord lengths are commonly sawed. It costs on an average of sixty cents per cord to haul to the tracks and load on the cars. The operator receives from two to three dollars per cord f. o. b. at Neopit, depending upon the character of the wood; three dollars per cord is received for maple and birch sound body wood, that is, clear material free from knots or defects. All other hardwoods bring two dollars per cord. The more valuable cordwood is used for special kiln and charcoal work. The profit on this class of product is therefore very high. About two thousand cords were sold during the past year, yielding a profit of from sixty cents to one dollar and sixty cents per cord. This market is just being developed and as the quantity consumed by the market is almost unlimited, the cuttings of this product can be increased in very much larger quantities.

LATH

As the slabs, trimmings, etc., come from the slasher they are picked first for lath, then for picket stock and last for crating and box material. All species go both into lath and board material, but only pine and basswood are used for picket stock. The average cost of lath per thousand is \$1.34. Average sales are \$2.34, giving a profit of one dollar per thousand. The average cost includes manufacturing, yarding, shipping, sales, insurance, etc., but no stumpage, inasmuch as that is taken care of by the lumber product. The annual output is about 10,000,000 lath.

BOX BOARD AND CRATING STOCK

All species are used for crating stock. Slabs, edgings, and any defective logs which when sawed will hold a nail are used after first being picked over for lath and picket material. The average cost of manufacturing, yarding, shipping, etc., including sale expenses, depreciation on machinery, etc., is \$1.65. The average price received is two dollars per thousand pieces, giving a net profit of 35 cents per thousand. No charge is placed against stumpage, since that is taken care of by the lumber obtained from the logs. The annual output of the mill is about 4,000,000 pieces of box board material, which vary in size according to order.

BASSWOOD AND POPPLE BOLTS FOR EXCELSIOR

Basswood bolts cost three dollars per cord to cut, make, peel, and pile in the woods. A cord is considered a stack four feet high, eight feet long and fifty-four inches wide. It costs from fifty cents to one dollar per cord to haul out of the woods and load on the cars, depending upon the length of the haul, which varies from one to three and one-half miles. The price received is \$7.50 per cord f. o. b. at Neopit, giving an average profit of about \$3.75 per cord.

Popple bolts are made for \$2.50 per cord unpeeled, or \$3.50 per cord, peeled and delivered at the tracks for these prices. These bolts come in two lengths, 37 and 54 inches; \$5.25 is received per cord for the 54-inch stock and \$4.75 per cord for the 37-inch stock. Both lengths are sold on the basis of 54-inch face cords. The average profit per cord is about \$1.50.

PICKET STOCK

This material is largely made from red and white pine and basswood. The prices received for this stock vary from \$1.71 per thousand for pieces 1 by 1 inch wide by 20 inches long, up to \$14.70 for pieces 1½ by 1½ inches wide by 48 inches long. All of this stock goes into window shade material.

Slat stock, which is always associated with window shade material, bring \$1.72 per thousand for pieces ¾ by 1½ inches by 40 inches long, and \$2.45 for pieces ¾ by 1 inch by 48 inches long. Up to the present date the mill has not turned out a sufficient amount of picket stock on which to base any fair estimates of cost, but it is beyond question a paying proposition.

Besides the above various lines of utilization the operation is planning to turn out a special stock of maple and birch for woodenware material, and to utilize the slabs and waste of certain species for paper pulp. In addition, it will dispose of all kinds of hardwood material for chairs, tools, furniture, and special woodenware manufacturing.

MATERIAL	SPECIES	UNIT	UNIT PROFITS
Hemlock bark	Hemlock	Cord	\$2.14
Cordwood	Maple and birch	Cord	1.60
Cordwood	All other hardwoods	Cord	.60
Lath	All species	Thousand pieces	1.00
Shingles	White cedar	Thousand pieces	.53
Box boards or crating	All species	Thousand pieces	.35
Excelsior bolts	Basswood	Cord	3.75
Excelsior bolts	Popple	Cord	1.50
Pail stock bolts	White and red pine	Face cord	.55
Railroad ties	Hemlock, 90%	Piece	.12
Telegraph poles	White cedar	Piece	2.07
Posts	White cedar	Piece	.025
Picket stock	Red and white pine and basswood	Thousand pieces	Unknown

The above figures are intended to show the excellent profits possible from utilizing by-products of a large lumber operation. Neopit is on the Wisconsin Northern railroad, about twenty miles from Shawano. Here it connects via the Chicago & Northwestern railroad with the wood markets in the larger cities of Wisconsin. However, much of the above material, besides the lath and shingles, is consumed outside the state. Several markets have been developed in Chicago and even as far away as the central prairie states and New York, proving that the transportation and market problems are not prohibitive. The labor used on this operation is about equally divided between Indians and whites. The latter have proven to be the more efficient of the two classes.

J. R. S.

Northern Manufacturers Meet

The quarterly meeting of the Northern Hemlock and Hardwood Manufacturers' Association took place at the Hotel Pfister, Milwaukee, on Tuesday, October 22. Following the regular routine of opening, Secretary R. S. Kellogg read his report as follows:

Secretary's Report

It is very interesting to compare conditions at this time with those which existed when we met here a year ago. During the year then drawing to a close, business had been of strictly a hand-to-mouth character, and on a most limited scale. Four years of depression had run their course and left their baleful influence behind. The lower grades of lumber were being marketed throughout the country at several dollars per thousand less than the cost of production, and in many cases there was not sufficient margin on the higher grades to bring the average up to a profitable point. Production had been in excess of the demand for lumber, and a buyer's market had prevailed throughout. Some rays of hopes were visible, however, and although most of us did not realize it until afterward, a business revival had actually begun at the very time we were meeting here. Starting with the coming into the market on a large scale by the railroads for material whose purchase could no longer be delayed, the influence spread until for several months past we have been in the midst of a general trade revival. The results are evident in the figures which are presented for your consideration to-day.

CUT AND SHIPMENTS—JANUARY 1 TO SEPTEMBER 30, 1912 AND 1911.

The following comparison of cut and shipments from Jan. 1 to Sept. 30 this year and last is based upon reports from the same firms in the corresponding months:

	Hardwoods			
	Cut, M ft.		Shipped, M ft.	
	1912.	1911.	1912.	1911.
January	14,666	15,396	13,733	12,369
February	24,794	21,405	18,439	12,250
March	29,907	31,456	19,413	13,543
April	28,544	33,293	18,921	13,894
May	20,643	28,644	18,423	13,077
June	17,620	26,519	20,703	19,118
July	13,645	16,411	21,731	17,263
August	11,135	13,664	29,136	22,555
September	8,188	9,244	21,588	20,855
	169,142	196,032	182,087	144,834

Decrease in hardwood cut, 14 per cent.

Increase in hardwood shipments, 26 per cent.

Reports from forty-five representative firms show a decrease of 48 per cent in unsold hardwoods on hand as compared with a year ago.

LOGGING OPERATIONS

Excellent reports upon log input and woods wages have been received from seventy-one representative firms throughout Wisconsin and northern Michigan.

LOG INPUT

The log input of the reporting firms last season and the logging planned for this winter compare as follows:

	Hardwood, M ft.
Logged 1911-12	200,304
Expect to log 1912-13	239,797

WOODS WAGES

Average woods wages per month including board at present compare as follows with reports in October, 1911:

	1912.	1911.
Choreboys	\$28.50	\$26.00
Swampers	29.30	26.40
Roadmen	29.10	27.40
Cookies	30.80	29.00
Sawyers	32.90	29.80
Hookmen	34.20	31.30
Teamsters	34.20	31.40
Barnmen	34.50	31.90
Top loaders	37.80	34.80
Blacksmiths	55.90	56.50
Cooks	66.50	64.75
Engineers	68.20	73.00

STATISTICS

Reports upon logging operations last fall indicated a decrease in log input during the winter of 10 per cent compared with the previous year which was confirmed by reports received in the spring after most firms had finished their woods work. The correctness of this estimate is further proved by the monthly statements which show a decrease in hemlock and hardwood production of 10 per cent from Jan. 1 to Oct. 1, 1912, compared with the same period in 1911. On the other hand, an increase in shipments of 31 per cent during this period amply proves the reality of the business revival, and tells clearly of a great shortage in lumber stocks. This is still further emphasized by the reports of dry stocks on hand unsold Oct. 1 this year and last. Decreases of 37 per cent in hemlock, 58 per cent in ash, 44 per cent in basswood, 39 per cent in birch, 67 per cent in elm, and 57 per cent in maple, or of 40 per cent in hemlock and hardwoods combined, are sufficient answer to any inquiry as to why lumber prices have advanced so sharply this year.

Inquiring into the probable log input this winter, we find that the

present intention is to log but 10 or 15 per cent more hemlock and hardwoods than was logged last winter, while there will be a heavy decrease in pine, owing to the exhaustion of timber supply. Many factors, of course, will arise to influence the actual log input as compared with the estimates now, and while some firms log the year around, and are in a condition to take quick advantage of market changes, the majority still continue to log and saw in the old fashioned way, so in view of possible unsatisfactory weather conditions and shortage of labor, it is not likely that the input this winter will exceed the amount now planned for.

There is a general belief that woods wages will be considerably higher this winter than last—some firms even saying that the increase will be as much as \$5.00 per month. However, the average of all reports received indicates an increase of about 10 per cent for the common classes of labor, with little or no increase for the higher paid classes of blacksmiths, cooks and engineers. While it may cost more to feed men this winter because of the highest known prices for beef, this will be offset by cheaper hay and grain for horse feed. There may be a more abundant labor supply later in the season that will reduce wages somewhat, but with the present general industrial activity, no super-abundance of labor is likely to appear for some time to come.

COMMITTEE ACTIVITIES

Since our meeting in Houghton, July 24, the various association activities have gone steadily forward. The railroad committee, through its traffic expert, has presented a brief to the Interstate Commerce Commission in the transit rate case, and an opinion from the commission may be expected soon. It is possible that this may be of such a nature as to call for further action on our part.

Pursuant to instructions, the committee on grades and information met with the grading rules committee of the Michigan Hardwood Manufacturers' Association in Chicago on Sept. 19 and agreed upon recommendations for changes in the hardwood rules that have been submitted to all members and will be further discussed to-day by the chairman of the committee, Mr. Quinlan.

The advertising campaign for birch and hemlock began on Oct. 1 as authorized by the association, and the results to date will be reported by the chairman of the committee, Mr. McCullough.

CONDITIONS ELSEWHERE

Reports of prosperity come from every section of the lumber producing field. The advances of from \$1.00 to \$4.00 per thousand feet in the prices of the various grades of hemlock and hardwoods have been duplicated in practically every prominent wood. An exceptionally well informed lumberman computed that from Jan. 1 to Sept. 1 the advance in northern pine grades had ranged from \$.50 to \$3.00 per thousand, in yellow pine from \$1.50 to \$4.00, in coast fir from \$2.00 to \$4.50, and in Idaho timber from \$.50 to \$3.00. Since this compilation was made, still further advances have taken place. Nowhere in the lumber field is there now much, if any, surplus of stock—in fact, the shortages far overbalance the surpluses. Neither is there any indication of serious overproduction of lumber for at least a year.

GENERAL CONDITIONS

Nineteen hundred and twelve will go down in history as a presidential year, which, contrary to all precedents, brought increasingly better general business conditions with each succeeding month. The business revival which began at the first of the year has been supplemented by record breaking crops which are bringing remunerative prices to the producer, and which will carry the tide of prosperity well into 1913. Foreign trade is the largest ever known. The steel mills have on their books five months business at full capacity, and pig iron prices have at last advanced in commensuration with the earlier advances of the finished product. Railroad operations are also beginning to show a healthy gain in net profit. All this is simply part of the natural reaction from the preceding period of depression that is bound to continue for some time to come. There is an abundance of room for healthy growth and expansion in many lines, and it is to be hoped that the activity now manifest will not outgrow proper bounds and become a boom which may later be punctured. At this time, we can do no better than to repeat the admonition made a year ago—"Say nothing and saw wood—only don't saw too much."

The report of the treasurer showed a total on hand October 21, 1912, \$8,605.68. There were paid out on vouchers \$4,733.64, which, with miscellaneous expense, made a total of \$5,249.97. The net balance on hand October 21, allowing for balance in bank and vouchers not paid, was \$3,355.71.

M. J. Quinlan, reporting for the grades committee, told of his committee having met with a similar committee from the Michigan Hardwood Manufacturers' Association relative to proposed changes in grading rules on northern hardwoods. Mr. Quinlan pleaded for more general moral support from the members, asking them to express to the members of the committee their opinion regarding this important question. He asked for a roll call vote on the sentiment

of the association regarding the proposed changes. The motion calling for an endorsement of the committee's actions was passed by a unanimous vote.

President Hamar suggested the need for more grades in hemlock lumber and stated that they would probably be effected by the first of the year. The recommendations of the grading committee in this direction were explained and the proposed new grades discussed by the members. It was suggested that present rules are not adequate, which is shown in the fact that the various manufacturers are using their own grades for hemlock lumber. It was suggested that the chief inspector visit the various mills and go into the yards, making hemlock grades which would conform to the suggestions of the committee and which would therefore be uniform throughout the membership. It was subsequently moved that this suggestion be carried out.

M. P. McCullough, chairman of the advertising committee, reported on the work done by that body since the last meeting. The association, through its committee, has contracted with two farm papers circulating principally in Wisconsin and northern Illinois for hemlock advertising and has taken space in three architectural and building papers in order to cover birch in an advertising way. In addition, books of plans have been prepared and follow up on the hemlock advertising and birch books illustrating the wide adaptability of that wood have been prepared to back up the advertising of birch.

The committee has also sent reprints of the hemlock ads to some eight hundred retail dealers in the territory reached by the advertising, together with a letter explaining the campaign and offering to send them the building books. In this way a considerable interest has been stirred up among the retail yards.

The efficiency of the committee's efforts is shown in the fact that, while the ads first appeared October 1 and in no case had run more than one issue to the date of the meeting, 144 replies had already been received, 93 being on birch and 51 on hemlock.

It was later determined to allow the advertising committee to

print any number up to 5,000 of hemlock books and 1,500 birch books for the use of the members.

Chairman W. G. Collar of the railroad committee, said that since the last meeting the committee's attorney, Mr. Ewing, has filed a brief with the Interstate Commerce Commission covering the matter of transit rates on logs and lumber, but that nothing more can be done along this line until the decision of the commission is rendered. Mr. Collar requested that the members read this brief carefully, as copies have been sent to each. He stated that as soon as the commission renders an opinion it will be necessary for the committee to take up the matter with the individual railroads, in order to have tariffs which are put in to conform with the decisions of the commission worded in such way as to do the least possible damage. He further suggested that if such a conference is necessary it will be extremely important that some other representatives of the association meet with the committee. The report carried with it a request that the president be authorized to appoint other members to join with the committee in taking up the matter with the railroads at the proper time. Inasmuch as this request was embodied in the report, the acceptance of the report was equivalent to a motion to that effect.

President Hamar endeavored to start a discussion on market conditions but it seemed to be the general opinion of the members that it is pretty hard to give any opinion on a market when they didn't have any lumber to sell. Discussion of the question of woods labor brought out the fact that there have been a number of vacancies filled in the woods by woods laborers returning from the harvest fields of Minnesota and the Dakotas. The situation seemed to be somewhat easier.

The secretary's statistics on labor showed that wages this year are ten per cent higher on an average than at the same period last year.

The discussion of the labor situation was followed by a number of suggestions from the members covering various topics, after which the meeting adjourned.

Specific Heat of Wood

The United States Forest Products Laboratory, at Madison, Wis., has issued Bulletin 110, in its series of publications. "The Specific Heat of Wood" is the title, and it indicates the line of investigation. The author is Frederick Dunlap, first assistant. The publication is strictly technical, but the purpose in view is to reach results and conclusions which will be of practical value to those who handle wood in any form, but particularly those who operate dry-kilns. Experiments with sixteen species which grow in the United States, and four which are foreign, show that not quite one-third as much heat is required to raise a given body of wood to a certain temperature as to heat an equal body of water to the same temperature. The samples of wood were exposed to temperatures from 0 to 106 degrees, centigrade, and were all oven dry at the beginning of the experiments. They consisted of hard and soft woods, and those very light and very heavy.

The results are so nearly the same for all these woods as to lead to the belief that the capacity to receive heat is practically the same for all.

The fact that the specimens were oven dry appears to detract somewhat from the practical application of the information by dry-kiln operators, for wood that is oven dry has no place in a dry-kiln. It is already as thoroughly seasoned as any kiln can make it. Anticipating, perhaps that this criticism might be made by persons who are looking for immediate practical results which can be applied in a business way, the author is careful to say that the search is for exact information and precise figures, rather than for something which can be used immediately and in its present form. The real character of the wood itself—the

ultimate structure and constituents—is one of the matters under investigation, and hope is expressed that the experiments will throw light on that subject.

The real substance of wood—known as lignin—is yet a chemical puzzle. Investigators have found out a great deal about it, but some things are still being investigated. The microscope shows the physical structure, the cells, the pores, the fibres, and other elements; but the microscope is powerless to penetrate the mysteries of chemical combination. It is known that wood dried at a temperature of 300 degrees contains only about one per cent of inorganic matter; the other ninety-nine per cent is organic. This combination is lignin.

In a study of the ultimate character of wood, the chemist begins where the microscopist leaves off. The bulletin just issued from the laboratory at Madison is a beginning along that line, though it is not a chemical investigation thus far. One thing which is indicated by the investigation is that wood which has been steamed requires more heat to raise it to a given temperature than is required by unsteamed wood. This result has not been announced as a fact, but simply as an indication. "It appears possible," says the report, "that exposure to moisture at high temperature increases the specific heat of wood. If this is true, other properties, and with them technological character, may change also. This behavior needs further study."

This suggestion gives a hint which may lead to important results in lumber seasoning. If the application of steam produces a change in wood which may be measured by an increased specific heat, results may be worked out which will be of great practical value in seasoning timbers.

Satinwoods of Commerce

Under the name of satinwood a number of entirely different kinds of woods for cabinet making are distinguished in commerce, according to the deeper or lighter shades of yellow. The requirements of the trade in the United States are satisfied with satinwood chiefly from the West Indies and the Guianas, but several important kinds are found also in Mexico, Central America, and Colombia. A great uncertainty still exists as to what species the different satinwoods belong, and in order to determine this definitely it will be necessary to arrive at the true origin of these woods. The only sure way of finding out to what species they belong is by examining authentic specimens of the foliage and flowers of the different trees from which the woods are obtained.

If it were possible to procure specimens of all the so-called satinwoods, with information as to where and in what quantities they can be procured, their cost, and their physical and mechanical properties, and place them before the manufacturer, he would soon be able to select for himself the kind or kinds best suited for his particular purposes. While this is possible with a good many groups of woods, it has never happened with the satinwoods. In every case manufacturers have had to take what was offered as satinwood and make the best of the material which importers were able to procure from one source or another. There are a number of excellent woods with which manufacturers and importers are wholly unacquainted and could be used in lieu of the costly substitutes.

The true and original satinwood of commerce is produced by a tree growing in Ceylon and India. It is known botanically as *Chloroxylon swietenia*, and belongs to the same natural group of plants as the true mahogany of tropical America. While these two trees are closely related botanically the woods have very few characters in common. The East Indian satinwood tree attains a large size and is esteemed in value next to the East Indian ebony (*Diospyros quæsita*), which is the most valuable ornamental wood in Ceylon. The wood is hard, heavy (about sixty pounds per cubic foot), very close and fine-grained, very durable, of a light orange color, takes a beautiful polish and is suitable and used for all kinds of ornamental work. It is more or less liable to warp and split if not well seasoned in the shade. The flowered or feathered satinwood when first polished is one of the most beautiful woods in the world. This grade of wood is generally obtained from the roots of the tree. Satinwood gets darker and loses much of its beauty unless it is protected by a coat of fine varnish. The wood is exported to Europe chiefly from Ceylon, and to a less extent from India, and occasionally comes to the American markets either direct or is reshipped from England. It is known in the trade as East Indian satinwood, and is quoted in London at prices ranging from fifteen to thirty cents per superficial foot.

Of the West Indian species yielding satinwood, the best known kind is the wood of *Xanthoxylum flava*, a tree closely related to our southern prickly ash (*Xanthoxylum clava-herculis*). The latter is also a native of Cuba, Porto Rico, St. Domingo and Trinidad, and the wood is often substituted for satinwood. It is called yellow sanders in Jamaica and epineux jaune in the French West Indies. *Xanthoxylum flava*, which is rarely more than thirty-five feet in height and about eighteen inches in diameter, does not develop a distinct heartwood, but the color gradually deepens from a light yellow at the bark inward to a light orange at the center. It is even and very fine-grained, of a satiny luster in a longitudinal section, and shows on its polished surface a beautiful rippled pattern (see illustration). It is slightly aromatic like the East Indian satinwood when it is first cut. Its weight is about sixty pounds per cubic foot and its crushing strength 4.31 tons per cubic inch. It is a great favorite for veneering, panels, turned articles, inlaying, cabinet work, and furniture. Its value is from \$30 to \$35 per ton in England.

POLISHED SURFACE OF WEST INDIAN SATINWOOD (*XANTHOXYLUM FLAVA*)

Another West Indian tree yielding satinwood is the *Xanthoxylum elephantiasis*. It is a somewhat larger tree than *X. flava*, and the wood is sometimes called zebra wood. The tree often attains a height of fifty feet and a diameter upward to four feet at the base. The wood is of a light yellow color, beautifully waved and mottled, and takes a very high polish. It is much esteemed for cabinet work and for interior ornamental work.

Thorny yellow wood (*Xanthoxylum brachyacanthum*) of northeastern Australia is often sold as satinwood. It is a tree from forty to fifty feet in height and from twelve to fifteen inches in diameter. The wood is bright yellow, silky, soft, close and fine-grained, and easily worked. In some of its qualities it is said to be equal or even superior to the West Indian satinwood. This wood is sometimes imported into England, but it rarely reaches American markets.

The West Indian satinwood (*Simaruba tulac*), known in Cuba and Porto Rico as aceitillo, the Spanish for "little oil tree," is a small tree of from forty to fifty feet high and from twelve to eighteen inches in diameter. It is found throughout the West Indies, Central America, and northern part of South America. While it grows at lower altitudes, it was formerly most abundant in the original forests at an altitude ranging from 1,800 to 2,500 feet. After many years of exploitation this wood has become very rare and little of it is now being exported. So valuable is it at the present time that in Porto Rico the stumps are being dug up and cut into veneer which is highly esteemed for making furniture. Until recently it has been cut and shipped in considerable quantities to England at \$2.00 per cubic foot. It is sold also by weight and the lower and medium grades sell for from \$15 to \$50 per ton. It was formerly used extensively in England for the interior

finish of parlor cars. The wood is now very valuable and regarded as one of the most ornamental of the tropical American woods. Its color varies in shade from a light to orange yellow. It is hard, heavy (about fifty-five pounds per cubic foot), very close and fine-grained, takes an excellent polish, and the most esteemed kind is that which possesses the curly or wavy grain. This latter property renders it one of the most valuable woods for fancy cabinet or furniture work. Practically all of the curly logs and stumps are cut into veneer.

There is a closely related tree (*Simaruba officinale*) in British Guiana, Central America, and parts of the West Indies, which furnishes a wood nearly similar to the West Indian satinwood. It is called simarupa in British Guiana, and acajon blanc in Guadeloupe. The tree grows to large sizes on sandy soil and on islands in the rivers of the northern part of South America. The wood is of a light color, very fine and even-grained, and is one of the most useful woods in the Guianas for interior finish and furniture. The average height of the tree is about ninety feet and produces logs

from ten to twenty feet long and squares twenty-four inches. The wood is said to repel insects, and it is quite likely that it will be substituted a little later for the valuable wood of *Simaruba tulae*.

British Guiana supplies another satinwood botanically called *Maba guineensis*, which has a whitish or yellowish colored heart-wood. This is obtained from a tree closely allied to our persimmon tree and yields a wood that has a satiny appearance and is excessively hard, heavy and very fine and close-grained. It has a very pretty pattern, which looks well when polished. In French Guiana this wood is known as satiné or satiné rouge, and in the Bahamas it is called yellow wood. This satinwood must not be confused with *Parinarium guianensis* which is a dark red or brown wood and is incorrectly called satinwood by the French. *Maba guineensis* grows abundantly and to a large size on a number of the islands of the West Indies. Formerly square logs and planks from nine to twenty inches wide were shipped to England and less extensively to the United States. This wood is sometimes confounded with the East India wood to which it bears a close resemblance.

Annual Crosstie Purchases

The Department of Commerce and Labor, in co-operation with the Forest Service, has published the report for 1911 showing the number of steam and electric railway crossties purchased in the United States. Similar reports have been published annually for some years. They show considerable fluctuations from year to year in the number of ties. Business conditions in the country govern the tie output. The demand from new roads varies, but the purchases for repairs of old lines are fairly constant.

There is a tendency to change in kinds of woods used, as is shown in detail in the statistics below. This change is largely due to the use of preservative treatment by which woods that are not naturally long-lasting are rendered immune to decay for a term of years.

An average railroad tie contains about thirty-two feet of lumber, and the total tie output of the country is equivalent to 4,320,000,000 feet board measure, or about one-tenth as much as the yearly output of sawmills. The sawed ties are counted with sawmill output, but the hewed ties are not so counted.

Following is a summary of the report just issued by the Department of Commerce and Labor:

While the total purchases of crossties by steam and electric railroads of the United States during the calendar year 1911, namely, 135,053,000, was less than that for 1910 by 13,178,000, or 8.9 per cent, it was larger than that for any other year since 1907, exceeding the total for 1909 by 11,302,000, or 9.1 per cent, and that of 1908 by 22,587,000, or 20.1 per cent. The steam railroads reported 126,155,000, or 93.4 per cent, of the crossties purchased during 1911, while 8,898,000 or 6.6 per cent of the total were reported by the electric railroads, as compared with 139,596,000 or 94.2 per cent reported by the steam railroads, and 8,635,000 or 5.8 per cent by the electric railroads for the preceding year. It will be noted, therefore, that the entire decrease from the figures of 1910 was in the number of crossties purchased by the steam railroads, while an actual increase of 263,000, or 3.0 per cent, is shown in the reported total purchased by electric railroads. In this connection the large decrease in the total number of crossties purchased for new track during 1911, as compared with the totals for the preceding years, with the exception of 1908, is also significant. The total purchased for this purpose in 1911 was 11,041,000, as against 22,255,000 in 1910, 16,437,000 in 1909, 7,431,000 in 1908, and 23,557,000 in 1907.

While oak, as in preceding years, supplied more material for crossties in 1911 than any other species, it is noteworthy that the decrease in the number reported from this wood in 1910 was 13.0 per cent, as compared with a decrease of 8.9 per cent in the total number of crossties cut from all species. Although there was an actual decrease in the number of southern pine crossties reported for 1911 as compared with 1910 of about 2,000,000, the percentage of decrease was smaller

than that for the total from all woods, being 7.6 per cent. A similar showing is noted for Douglas fir crossties, while an actual increase in 1911 over 1910 in cedar crossties of 710,000, or 9.7 per cent, is shown. There was little change in the number of chestnut crossties reported for the two years. While these five woods have contributed the bulk of crosstie material for many years, a significant and interesting fact is disclosed by the figures covering the purchases of crossties cut from gum, maple and beech. Prior to 1908 the number of crossties manufactured from these three woods was negligible, though in 1911 they supplied material for 3,591,000 crossties, or nearly 3 per cent of the total from all woods. Rapid increase in the use of these and other relatively low-priced woods during the last two or three years is due mainly to the fact that with an effective preservative treatment, crossties cut from this class of timber will last as long or even longer than untreated crossties made from the more expensive and so-called standard crosstie timbers, such as oak and southern pine. A substantial growth in this practice of treating crossties is indicated by the increasing total number of crossties reported as having been given some preservative treatment during the past few years. In 1907 this total was 19,856,000; in 1908, 23,776,000; in 1909, 22,033,000; in 1910, 30,544,000, and in 1911, 31,141,000.

The following statement shows, by species of wood, the number of crossties purchased in each year from 1907 to 1911, inclusive:

Kind of wood	1911	1910	1909	1908	1907
Oak	59,508,000	68,382,000	57,132,000	48,110,000	61,757,000
Southern pine	24,265,000	26,264,000	21,385,000	21,530,000	34,215,000
Douglas fir	11,253,000	11,629,000	9,067,000	7,988,000	14,525,000
Cedar	8,015,000	7,305,000	6,777,000	8,172,000	8,954,000
Chestnut	7,542,000	7,760,000	6,829,000	8,074,000	7,851,000
Cypress	5,857,000	5,396,000	4,589,000	3,457,000	6,780,000
Tamarack	4,138,000	5,163,000	3,311,000	4,025,000	4,562,000
Hemlock	3,686,000	3,468,000	2,642,000	3,120,000	2,367,000
Western pine	2,696,000	4,612,000	6,797,000	3,093,000	5,019,000
Redwood	1,820,000	2,165,000	2,088,000	871,000	2,032,000
Gum	1,292,000	1,161,000	378,000	262,000	15,000
Maple	1,189,000	773,000	158,000	151,000
Beech	1,109,000	798,000	193,000	192,000	52,000
All other	2,682,000	2,895,000	2,603,000	3,421,000	5,374,000
All kinds	135,053,000	148,231,000	123,751,000	112,466,000	153,703,000

American Business Methods Appreciated

The characteristic promptness with which American lumbermen fill orders is appreciated in Australia, and dealers in that country buy here rather than wait for the slow delivery from their own forests. "One of the great drawbacks to the use of Australian timber," says the Melbourne Age, "is that it is impossible to get it properly seasoned. Leading manufacturers buy their wood in the log, cut it up, and season it themselves, keeping it for years before they use it. It is easier to obtain timber from North America than from Queensland. An order can be given for American timber and it is supplied at once, but if an order is given for Queensland timber it is months before it is received."

Opportunity and Success

Some business men are prone to believe that only those with large capital can succeed today. It is not uncommon to hear it said that only the man who can go down South and put up a couple of hundred thousand dollars for timber can make much money out of the sawmill business, and that to be a wholesaler and succeed to a marked extent requires considerable more capital than the average man possesses.

It is undoubtedly true that large aggregations of capital, properly directed, will result in handsome earnings being made. But proper direction is not always available, and getting good executives often is a harder task than summoning the necessary financial resources. In the last analysis, "Big Business," spelled by the magazine writers with capital letters, is not capable of striking terror to the little fellow, unless he is small in intellect and courage as well as in rating.

Everybody in the hardwood business can call to mind at least one striking example of a man who has made a conspicuous success without having a particularly large investment of money and without having done an enormous volume of business. He has demonstrated, if a demonstration were required, that careful study of manufacturing methods, skill in organization, and study of sales and consuming conditions will bring success, no matter whether the business affected be a tiny one tucked back somewhere out of sight or an enormous enterprise involving millions and standing out in the most prominent position under the sun.

Ellert Hubbard's saying about the world making a track to the home of the master mouse-trap maker is hardly correct, for he would have to have a sales and advertising department to make good, and would have to run copy in "The Mouse-Trap Dealers Magazine" to get the necessary attention focused on his product; yet there is a large portion of truth in the suggestion contained in the aphorism that quality is back of success, and that those who have learned where to find quality usually go back for more.

The lumberman referred to has a sawmill located in a section of the country famous for the quality of its white oak. But most of the oak has been cut out, and most of the mills that once flourished have moved away. The hardwood manufacturing industry, as a whole, has moved a number of degrees of latitude south, and is a great many miles nearer the equator than when the center of the trade was near the mill to which attention has been called. But that mill has not moved, and there is no indication that it will do so in the near future. Ask its owner about the timber question and he will smile and say, "Oh, I always manage to get enough logs to keep going."

The truth of the business is that everybody in that part of the country knows the sawmill man, likes him, and calls him by his first name. Because he puts on a linen collar and a "biled" shirt, drives an automobile, and rides up to the city occasionally, does not mean that he has shut the farmers and others who own timber out of his circle of friends, or permitted them to shut him out. He can strike hands and talk crops with any of them, and has a sincere and cordial interest in all their doings. Thus, when a log-buyer from another place comes around and inquires about timber, the answer usually is, "Oh, I just guess I'll save those logs for Charley."

And the farmer knows, too, that he is going to get a fair price for them, and that there will be no jockeying around for the purpose of taking advantage of the other man or the seller. The price will be just what they are worth, and it will be paid, cash in hand, as soon as they are delivered. The people who have been selling logs to this mill have always done business with its owner, in person, and have always been well treated, and they expect to continue to deal with him as long as they have any trees to sell.

As the sawmill operator admits that the big problem is to get good logs, plenty of them and at the right price, the hold which this manufacturer has established on the people who supply him guarantees the success of that department of the business, at any rate.

Inside the mill there is a feeling of unswerving loyalty to the head of the house that comes from a knowledge that everybody in the business, from the sawyer to the youngest off-bearer at the veneer saw, is going to get all that is coming to him, and that labor is going to be

rewarded. The same superintendent, the same yard foreman and the same sawyers are working in that mill that were serving it a dozen years ago. Death is about the only severer of those business ties. Those who have remained have earned more money as time has passed, and have gotten it in their pay envelopes. It has not been necessary, fortunately, to adopt a piece-work system to insure every man doing his duty; for the "personal equation" is so well taken care of, and esprit de corps is so actual a force in the plant, that a mechanical method of computing the results of the efforts of each employe is unnecessary.

The art of building up an organization and then holding it together at top speed and maximum efficiency has not been mastered by many men. The mill which has been described is alone in its community, and perhaps has an easier problem than the plant which has several competitors bidding for the services of its best men; but even under conditions of sharp competition it is not likely that many of these veterans, who have been trained in the school of loyalty under an employer who has made it a pleasure to work for him, would leave.

The owner of the plant has a lot of ideas on the subject of cutting lumber so as to make it the best lumber possible, and these have been transmitted to everybody on the place. His mill has not a great capacity, so that he has seen the necessity of holding the quality up to the highest possible point. Thus the lumber that goes on his yard is manufactured just right, and is a proper offering for a discriminating customer.

This manufacturer is said to have been one of the first in the country to sort his lumber according to widths; in other words, to regard dimensions as something more than arbitrary divisions, but as conveniences for customers. He figured that if there were a furniture factory which wanted to buy only ten-inch lumber, he ought to be in a position to sell it a carload of just that variety; or if a chair man wanted to get strips of one size only, instead of running the entire range of widths provided in the usual classification, it would be worth while to have them ready to sell, and not have to dig them out of a pile.

Consequently his lumber is divided into more divisions as to width than that of nearly anybody else in the business; this, too, be it noted, in spite of his relatively small production. This means considerable difficulties about accumulating sufficient stock of each kind, but, by watching his customers' needs—upon which the entire scheme of piling is founded—he is able to adjust his operations and have something ready to offer to his trade all the time.

In his mill is a veneer saw which he uses for manufacturing quartered oak veneers out of choice logs which he secures. And here again, by a combination of care in purchasing, excellence of manufacture and attention to details of handling, he has an output that is really sought by consumers of veneer. He is able to go, in turn, to those who are seeking supremacy in the manufacture of panels and get a price for his stuff that is away above the market, because the panel man realizes that, with that kind of stock for his faces, he need not worry about competition when he goes to sell to the high-grade furniture builder.

This "scientific manager," who is scientific simply because he applies ideas which are familiar to everybody and are recognized as sound, and who deserves the title of manager because he has his finger on every department of his business, really studies his customers and their needs. He visits factories where his lumber is used; sees exactly what happens to it, and follows it from the ear to the finishing-room. He knows what the requirements of his trade are, and when he goes back to his mill he is in a position to furnish exactly what his customers can use to the best advantage. Isn't this a contrast with lumbermen who don't even know what their product is used for, and couldn't tell whether the consumer is buying a better or a worse grade than he ought to have?

"But how are you going to study your consumer's need if he won't let you into his factory?" is the retort that may be provided.

Right here is another interesting feature. This manufacturer—and let it be said here, lest the reader insist that he is a mythical character, that he is a flesh-and-blood lumberman—has succeeded in getting the information he wants, not by a sleight of hand, nor the use of hypnotism, but by proving that he is “on the level,” and has nothing to conceal. He has convinced his customers that he is trying to serve them, not to take advantage of them; and that he will give them the benefit of whatever advice he is capable of formulating. It is just a simple case of winning confidence by doing the things that are calculated to produce confidence. Result, he has the confidence of his

trade, and with it all necessary information about their peculiarities and requirements.

A fellow lumberman was recently commenting in admiring terms upon the really wonderful success of the subject of this sketch, and was comparing his situation with that of his own firm.

“We do ten times as much business as that lad,” he said, “and yet I am certain that we don’t make more than twice as much. And it’s easy to figure that on the capital invested our dividends are away below his. I wonder how he does it!”

I wonder!

The Filer Not Always the Goat

A thing of beauty is a joy forever, according to the views of one Mr. Keats, and while a good filer makes no claims to beauty, he certainly gets in line on the latter half of the poetical declaration. The sawmill man who is blessed with a good sawyer and a good filer develops the sort of disposition which enables him, as the Western philosopher put it, “to look every damned man in the face and tell him to go to hell.”

The filer is responsible to a great extent for the character and quantity of the output of a mill, and he usually realizes it. He isn’t permitted to forget the fact that it is up to him to have the saws in tip-top condition, and any defect in the lumber turned out is pretty sure to be charged up to poor work in his department. As a matter of fact, sawmill men are perhaps too ready to blame their troubles upon the filer instead of looking around for some other possible cause.

A mill in one of the big Ohio valley producing centers was having trouble with its lumber. The thickness of the stock turned out by its band mill was uneven, and some of it had gone through in rush orders to customers, and had resulted in kicks of sufficient consequence to stir things up from the front office to the filing room. Of course it was the proprietor of the latter department who came in for most of the blame. He took it all without saying much and worked a little harder on his saws, though he insisted that he had done his best to make them do their work properly. With all the increased care and watchfulness at that end, however, miscut lumber continued to be turned out, and the sawyer and the mill superintendent began exuding remarks which caused the atmosphere in the neighborhood of the plant to take on the pale blue coloring supposed to be characteristic of sulphuric fumes.

Then, of course, a hunt began for the hidden cause of the trouble. And it wasn’t so very hidden at that. Testing the tracks showed that they were out of alignment and that the defects in the lumber were due to this situation. You couldn’t expect a saw to cut evenly if the log weren’t brought against it exactly at right angle, and as the tracks carried the log off at a slight angle the effect was bound to be what had been attained—miscuts.

Tearing up the track and putting it down again with absolute accuracy relieved that part of the problem, and of course the occasional development of trouble later on immediately suggested this part of the proposition and didn’t permit the difficulty to continue as long as it had done in the first place. And of course the filer had a chance to prove his innocence when charges of poor work were brought against him.

The carriage itself is likely to get out of kilter and cause the same sort of trouble. The rough handling to which it is submitted makes it almost certain that at some time or other it will need fixing up, and when defects are found in the product of the mill it is just as well to take a look at the carriage before blaming it altogether on the saw.

A superintendent who is known as one who doesn’t overlook many bets said not long ago that just as a matter of preventing difficulties of this kind he subjects his tracks and carriage to inspection at brief intervals, and frequently finds that the alignment of the former or the latter has been disturbed and that by the expenditure of a few minutes’ time and labor at the noon hour or just after closing time, things can be straightened out and accuracy of manufacture assured.

“Anybody can take a look at the operations of a sawmill,” he said, “and figure with certainty that with the constant pounding and hammering on the carriage and tracks something is going to give sooner or later, and probably sooner. You can’t expect the timbers which support the track to hold forever without giving a fraction of an inch, and the only sensible thing to do is to take time by the forelock and examine your tracks and carriage just as regularly as you do your saw. Then you will know if trouble comes where to put the blame, and won’t have to saddle the burden on a filer who perhaps is keeping your saws in good shape.”

In spite of the fact that it is well recognized that trouble is likely to result from this source, one of the biggest lumber concerns in the country produced a lot of poor lumber, of a very expensive variety, before it was discovered that the tracks of its mill were not properly lined up. The company furnishing the saws had been called on the carpet for turning out equipment which produced no better results than that, and made a rigid inspection of the saws in order to determine if they were defective in any way. Finally one of the men in the mill suggested to the superintendent, who is not regarded as possessing a particularly keen intellect, that possibly the tracks weren’t exactly true. Examination proved that the millman was right; and matters were straightened out in a short time, the filer, the saw man and all others being exonerated, and happiness prevailing generally.

So while the operation of the sawmill to the best advantage depends to a large extent on the saws being kept in proper condition, they can’t do all the work; the complementary equipment must be equally accurate if properly manufactured lumber is to be the result.

Lumbermen and Forestry

The question of the application of the scientific principles of forestry, and notably the tree planting feature of the profession, has never been given very serious consideration by practical lumbermen. Forestry, as a possible money maker, has not been favorably thought of until within the last few years. There comes to light occasionally, however, instances of practical, hard-headed lumbermen making experiments along various lines with a view to trying out the teachings of the modern forestry school. These experiments are usually in the tree planting line, and within the last month two such instances have come up, one in Michigan and the other in Mississippi.

An incident was recently brought to notice by the suggestion of a large northern concern owning property in Mississippi that it is contemplating planting a considerable area of cutover land in that state to catalpa, the idea being to raise this tree for tie and pole purposes, and to intermix with it some suitable hardwood which will eventually attain large enough size to make saw logs. Whether or not the latter plan can be carried out practicably remains to be seen, but the fact is nevertheless apparent that this concern is giving the question of reforestation serious thought. These instances should mean a great deal in the direction of establishing a mutual basis of interest between the theoretical forester and the practical lumberman.

Meeting Michigan Manufacturers

The fall meeting of Michigan Hardwood Manufacturers' Association was held in the Pontchartrain hotel, Detroit, on October 24 with a large proportion of the members in attendance.

President Richardson presided. In a short and humorous speech he thanked the association for electing him president in his absence. He said he thought he was going to like the job.

The report of Secretary and Treasurer J. C. Knox, follows:

Secretary's Report

The report of the various committees which will be made to you today are so flattering and optimistic that it is hardly necessary for the secretary to endeavor to make an extensive report, and we will confine ourselves to the work of our office almost exclusively.

Our treasurer's report shows a balance on hand Oct. 15, of \$1,533.25, and we have to report on account of the forest fire fund a net balance on hand of \$4,099.80, Oct. 21.

Every member of the forest fire protection department has responded to the second assessment with one exception, and we are trusting to get that one. This will give us a fine start for that work next year.

Our Pacific coast rate case has now progressed to an order issued by the commission directing the railroads to check our claims and to appear before that body in January, 1913, to say why they should not make a refund on the basis of the eighty cent rate.

There are a number of important suggestions to be discussed today, among them present market conditions and the outlook for 1912-13; thicknesses for cutting hemlock; proposed changes in the grading rules on hardwood; employers' mutual liability insurance report; report of committee on advertising, and the market conditions committee report. The figures in the last report will be a surprise to many of our members in that they make the best showing since 1907.

It is customary at the fall meeting to provide for funds to carry us through the coming year and this should be cared for today.

Henry Ballou, chairman of the railroad committee, suggested that manufacturers could improve the car shortage condition by keeping cars moving promptly. Reports to his committee indicated that railroads were doing everything possible to keep traffic moving promptly by making large purchases of cars and motive power. He reported that they are also taking every precaution against starting fires from their locomotives.

D. H. Day of the grading rules committee reported that the members had unanimously agreed to submit to the consideration of the National Hardwood Lumber Association at its next annual meeting some important changes and additions to its' rules.

Chief Fire Warden Charles F. Hickok made an elaborate report on the successful work during the past year looking toward the prevention of forest fires.

J. A. Kennedy of Lansing, commissioner of the industrial accident board, made an interesting and comprehensive address on the subject of industrial accidents and the Michigan state law on the subject. He recommended co-operation with the state to work out the big problems involved.

J. N. Harris of Boyne City addressed the meeting on the value of an industrial insurance plan. On motion a committee was appointed to take up the entire matter with state officials and also to analyze insurance plans and methods for self protection. The chair appointed as such committee S. L. Richardson, C. A. Bigelow, G. von Platten, A. W. Newark and F. L. Nicholson.

Chairman Odell of the market conditions committee then read the report of that committee as follows:

Report of Market Conditions Committee

The stock report compiled by your secretary from reports furnished him by the members of his association shows a very marked decrease during the year Oct. 1, 1911, to Oct. 1, 1912, in both the total stock of hardwood lumber at the mills and the amount unsold; a decrease amounting to a shortage in some items that may work some hardship to consuming manufacturers and ultimate consumers; a shortage for which the lumber manufacturer is in no way to blame; a shortage that has been brought about by the policy of the railroads and consuming manufacturers during the past few years to purchase nothing until actually required for consumption, and to make the producers of not only lumber but of all raw materials carry the burden of stock, with the result that when an unusual amount of raw material is required, there is no reserve beyond that carried by the producer.

You will note from the stock report that the amount of stock at the mills and the amount of stock unsold is less than at any time since

1907, the stock at the mills being 183,000,000 feet—55,000,000 feet less than 1911, and 21,000,000 feet less than either in 1910 or 1909, while the amount of unsold stock for 1912 is 41,000,000 feet, as against 71,000,000 feet for 1911, 71,000,000 feet for 1910, and 74,000,000 feet for 1909.

Ash and basswood show total stocks of approximately what they were a year ago, while beech, birch, elm and maple divide up the 55,000,000 feet decrease shown. Beech has fully verified the prediction of your committee, there being 26,000,000 feet in stock now as against 35,000,000 feet a year ago and 44,000,000 feet two years ago, or approximating sixty per cent of the stock in 1910. Maple shows the greatest decrease in stock during the past year, the total stock being 114,000,000 feet Oct. 1, 1912, as against 154,000,000 feet Oct. 1, 1911, and the total stock of maple shows less than for either 1910 or 1909. With a decrease of 40,000,000 feet in stock and an unusually large amount of maple going into consumption, maple should be one of the strong items during the coming year. Maple shows up in better form than anyone had reason to expect. Judging from the amount of maple lumber on hand Oct. 1, 1911, and the condition of the maple flooring market at that time, it would have been reasonable to have expected it to require at least two or three years for the stock of maple lumber to work back to normal, but this and more has been accomplished in a year. The stocks of both lumber and flooring are below normal and the demand for flooring was never better. The stock of maple flooring is about 5,500,000 feet less than a year ago and the manufacturers of maple flooring have orders booked for more flooring than they have in stock. This, with the fact that they are shipping each month more than their production and that for some time new business booked each month has been in excess of production, promises a bright future for maple flooring, which ultimately will be shared by the lumber manufacturers.

The item of number three common hardwoods is the one showing greatest shortage and it is the one item that, because of the unusual shortage, may be sold at more than its real intrinsic value. The total stocks show 32,000,000 feet, as against 57,000,000 feet, 71,000,000 feet, 76,000,000 feet and 54,000,000 feet for the respective preceding years, while the amount unsold is less than one-fourth of what it was during the three or four preceding years. This item of low-grade hardwoods should receive just as careful consideration now as it ever did, as, like the poor, it is always with us and always will be just so long as we manufacture lumber. We should remember the years of 1907 and 1908, the prices at which this item sold then, and what happened to it. The same condition will prevail again if the producer and the consumer permit the price to go so high as to encourage the use of substitutes. It is natural for the manufacturer to reason that because he has been compelled to sell his low-grade lumber during the past four years from two to five dollars per thousand less than the actual manufacturing cost, he should endeavor to recoup these losses when the opportunity offers, but results have shown that the extremely high prices of 1907 may have been the direct cause of the extremely low prices of the past four years.

While higher prices are warranted for practically all of the northern hardwoods and higher prices must of necessity prevail during the present period of short supply, your committee would recommend that you endeavor to hold prices down to a reasonable level and thus avoid a slump that is sure to follow extremely high prices.

Just so long as supply meets demand and demand meets supply within a reasonable limit, prices will go on at a reasonable level.

A careful study of our report during the past six years will show that had the demand for northern hardwood lumber been as regular as the production, there would not have been the extreme shortage and large over-production with a consequent great fluctuation in prices that we have seen during this period. Because of the nature of his business and because he has built up an organization based on a certain production of lumber each year, it does not seem possible to the manufacturer of lumber to shut down his mill and cease operations because of a production of some items in excess of the temporary demand. While possibly not so difficult, it would be just as unwise for the manufacturer to try to increase his output to meet the temporary demand or to deceive himself into thinking that it will be possible for him to do so. If properly distributed during the past six years, the supply would have met the demand reasonably well and any attempt to increase the output to meet an unusual and temporary demand only increased the over-production later on.

We have been censured for the waste of our natural resources in our manufacturing methods, but most of this censure has come from people who are not familiar either with the methods of lumbering or the value of forest products. They have not taken into consideration that the lumberman has practiced forest conservation in so far as his means, his knowledge and profitable returns permit him to do so, and that at least a part of the lumber manufacturers have fought diligently for improved methods and a profitable market for what is now considered waste product.

The comparatively recent demonstration that maple, beech and birch, when properly treated by one of several preservative treatments,

makes a superior railroad crosstie, created a new demand for that class of timber that if sawed to lumber would produce a large proportion of low grade. Many tests of treated ties made of maple, beech and birch have proven the superiority of these ties, and several of our largest railroad systems have adopted them. Both the New York Central lines and the Pennsylvania system, because of the proximity of some of their branch lines to the supply of maple, beech and birch, are using these woods extensively for ties. The New York Central lines have ties treated at Toledo, Ohio., at Shirley, Ind., Rome, N. Y., and at Bradford Junction, near Pittsburgh. The Pennsylvania lines have ties treated at Philadelphia, Mount Union, Pa., Orrville, Ohio, and have contracted for the treatment of ties at some points on the G. R. & I., probably at Cadillac. Of these plants, the following treat birch, beech and maple: Toledo, Bradford Junction, Mount Union, Orrville and Cadillac.

While the test of treated beech ties commenced several years ago, the test of time is the real test, and it is only within a few years that the use of northern hardwood ties has been adopted to any considerable extent.

The records indicate that there was a great increase in the employment of beech, birch and maple ties from 1907 to 1911, and that the amount of ties that were chemically treated during the same period nearly doubled. The total consumption of treated beech and maple ties now constitute 7.38 per cent of all that are used by railroads.

Beech ties treated with creosote, which have been on the roadbeds in France, show a large proportion of sound ties after twenty-eight years. Beech ties treated with zinc chloride, one of the cheapest processes, which have been in the roadbeds of the United States, show a large proportion of sound ties after fourteen years.

Of the woods available and formerly used in this part of the United States for untreated ties, the species showing the greatest resistance to decay have been cedar, chestnut and white oak; but neither cedar nor chestnut has been considered long-lived ties for, because of their poor resistance to abrasion, they were not adapted to the heavy traffic of the main lines. Their use on the better roads has been confined to sidings and branch lines, where the traffic was not heavy. White oak will stand the heavy traffic, but it is an expensive tie. The supply is limited and when not treated the average life is estimated at only from eight to nine years. These ties cost the railroad in the rough eighty to eighty-five cents each. It has been proven by various tests and is conceded by the best informed authorities that beech and maple ties properly treated will last just as long as the treated white oak ties, and that they are the equal of white oak in every respect, even its superior in some respects, as the beech and maple ties hold the spikes better than white oak. Being the equal of white oak in every respect and costing much less, it is not surprising that the use of maple and beech ties has increased so rapidly in a few years. We shall see them specified in many more roads in a few years if we can demonstrate our ability to supply them.

The matter of economy and source of supply will compel the use of the maple and beech ties in many of the northern states. Untreated white oak ties cost the northern railroads, delivered on their lines, eighty to eighty-five cents, with an average life of eight to nine years; if treated with creosote, \$1.05 to \$1.10, with an average life of fifteen to twenty years. The beech and maple ties, with zinc chloride treatment, cost approximately seventeen cents each and have an average life of twelve to fifteen years, or about fifty percent longer than the untreated white oak ties; beech and maple ties treated with the creosote process at a cost per treatment of approximately thirty cents each, have an average life of thirty years, the same as the white oak tie. By deducting the cost of treating an oak tie, thirty cents, from \$1.05 to \$1.10, the cost of a treated white oak tie, and comparing the result, seventy-five to eighty-five cents, with what the railroads have been paying for treated beech and maple ties, you will readily understand why they will be in favor of the latter. Or compare the untreated white oak tie, at a cost of eighty to eighty-five cents and an average life of eight to nine years, with what the railroads are paying for the beech and maple ties, plus the zinc chloride treatment of seventeen cents and an average life of fifty per cent in favor of the beech and maple ties, and see where you land.

You will find the beech and maple tie most desirable, not only from the standpoint of reasonably satisfactory returns from the ties as compared to what might be realized for the stock if cut into lumber, but also from the standpoint of the influence the tie business has on the supply of and the price for both beech and maple lumber. As you will note from the statement of the number of beech and maple ties treated, it is only within the last two or three years that these woods have been used to any considerable extent and you will note also how rapidly their use has increased. In the opinion of your committee, the demand for beech, birch and maple ties will increase much faster than it is possible to increase the supply.

Taking northern hardwoods right through the list, there does not appear a weak spot anywhere. This condition is reflected not only by our own stock list, but by the stock list of the Wisconsin association, and in fact by reports from all other sources. In consequence of this, prices all along the line must necessarily advance. Even if we

were inclined to be benefactors by trying to hold prices down, it would be just as impossible for us to do so as it has been for us to prevent the extremely low prices for northern hardwood lumber during the past three or four years. The supply is short and the demand of the consuming manufacturers will force prices up regardless of what the producer thinks best to do or their efforts to control the situation.

We have gone into this price and stock condition more in detail at this time than usual for the reason that this is one of the best opportunities we have to exemplify the oft-repeated statement made by your committee that prices are controlled absolutely and completely by the laws of supply and demand, and that the only way prices may be controlled is by the control of the supply. Because of the thousands of sawmills throughout the United States, it will be just as impossible to control the lumber supply as it would for the farmers to control the supply of potatoes.

It is the opinion of your committee that, judging from the various stock reports, the prices that have been obtained for lumber recently and from general business conditions, present values are reasonably well indicated in the appended list. We do not pretend to forecast the future, but we do believe that we shall see higher prices on most items before we see lower prices on any of them.

The recommendations made by this committee on changes in values were comparatively slight but a few conservative advances in price were suggested. In a few instances the suggestions amounted to a two or three dollar increase a thousand on high-grade stock and a considerable number of items were reported as worth one dollar more.

On motion, the report was accepted and placed on file.

Bruce Odell, on behalf of the advertising committee, commended the work of the Northern Hemlock and Hardwood Manufacturers' Association in advertising birch and hemlock, but suggested that Michigan operators make chiefly maple and beech and recommended an advertising appropriation of not to exceed one cent a thousand to exploit these woods, especially in relation to their utilization as flooring materials.

President E. A. Hamar of the Northern Hardwood and Hemlock Manufacturers' Association addressed the meeting on the methods employed by his association in advertising birch and hemlock.

Secretary R. S. Kellogg of the same association, in an address elaborated on the same subject, reciting the specific methods pursued by it. He suggested financial co-operation of the Michigan manufacturers on the hemlock campaign.

Considerable discussion followed and the report of the advertising committee was adopted with the understanding that the initial fund raised should be turned over to the Maple Flooring Manufacturers' Association for expenditure.

On motion of Henry Ballou, an assessment on the hardwood output of members of the association of two cents per thousand was authorized to carry on the regular association work for the coming year.

On motion of C. A. Bigelow, Bruce Odell was authorized to consult with the Maple Flooring Manufacturers' Association to determine the amount of funds for the joint maple advertising campaign.

It was announced that by agreement effective November 1 next, the leading Michigan hemlock manufacturers had agreed to establish sizes in both sawing and finishing their product.

The meeting then adjourned.

American Saws in Germany

The popular belief that the German-made tools are cheaper in that country than similar tools imported from America is not well founded in the case of handsaws. An article recently published in a hardware dealers' magazine at Bunzlau, Silesia, shows that American handsaws are much cheaper than the home-made article. An American 20-inch saw costs thirty-three cents, the German fifty-nine cents; American 22-inch, thirty-five cents, German sixty-three cents. It is stated that the American saw is preferred, even when both sell at the same price. Much of the superiority is due to the workmanship, for the German saw manufacturers admit that some of the American tools which are capturing the markets in that country are made of German steel imported into the United States, here manufactured, and the finished product is exported to Germany.

Crosstie Evolution

One of the most interesting things about modern life, with its rapid development of new and revolutionary ideas, is the way in which standing predictions, which have reached the point where they are accepted, largely by force of repetition, as absolute truth, are smashed into smithereens. Some proposition which has been quoted and quoted and used as the basis of many a learned discussion, is suddenly knocked clear out of the situation by the interposition of a new and altogether unexpected factor.

A fine example of this is the cross-tie business. The field for the use of ties is immense, since the present mileage of the railways of the country, taking renewals only into account, requires the use of 125,000,000 ties a year. Owing to the rise in the price of white oak timber and the consequent increase in the cost of ties made of this material, the introduction of the concrete ties was followed by the announcement, from the interests concerned with the production of steel and cement, that soon nothing else would be used by the transportation companies. And that would possibly have been the case, if the wood-preserver hadn't come along and knocked those predictions into a cocked hat.

At present, with the development in the use of the treated tie the most phenomenal feature of the forest products situation (perhaps excepting the development of wooden block paving, which is in the same class) the chances favor the relegation of the concrete tie to the rear, for there is every argument against it. Those who dislike to face a heavy first cost refuse to use it, and, on the contrary, those who are looking for a low annual cost find in the creosoted tie a better proposition than one made of reinforced concrete.

The latter has not proved satisfactory in actual service, either, a recent wreck which occurred at a point where the rails were affixed to concrete ties developing the fact that, owing to the inability of the tie to absorb expansion and contraction, the bolts holding the rail to the tie had been sheared. Thus the big feature in favor of the use of wood ties—their resiliency and elasticity—is again emphasized. There are other features which make the concrete proposition less desirable, and consequently it is not likely to make much further headway.

Looking at it purely from the standpoint of dollars-and-cents, the comparison figures out favorably to the wooden tie. A steel and concrete tie, laid in place, costs about \$2.50. It will last, at a liberal estimate, not more than thirty years. This is an annual cost of eight and a third cents. A treated red oak tie costs, on an average, forty-five cents at the mill; thirty cents for the creosoted treatment; twenty-five cents for freight and twenty-five more for labor. This is the top price for labor and the other items, as ties can be put in place under favorable conditions for twelve and a half cents. The total cost, laid down, is \$1.25. It is estimated that red oak ties which have been creosoted will last for twenty years, and on this basis the annual cost is six cents a year, a reduction of about twenty-five per cent compared with concrete ties.

An interesting point about the use of preservatives on ties is that it has ruled out, for this kind of service, the material which was formerly used almost exclusively for tie purposes—white oak. The "pits" of its surface are closed and it is impervious to the action of the preservative, the very quality which makes it excellent as an untreated tie rendering it unsuitable for treatment by the preservers. Locust and heart pine (long-leaf), which are used untreated, cannot be satisfactorily creosoted, but hickory, which has come into some use since the preserving methods began to be generally favored, is susceptible to treatment with creosote.

Carrying the comparison of cost forward, and figuring the average price of white oak ties at seventy cents, the cost of the treated red oak tie, seventy-five cents, is a little greater and therefore the use of treated material involves a greater initial outlay than is necessitated by the purchase of white oak. For that reason many roads are still using white oak, though the average life of an untreated white oak tie is only eight or nine years (twelve years under favorable condi-

tions, and only six or seven in the South), and the treated wood is relied on to last for twenty.

The figures given in the latter connection, it must be admitted, are only estimates, because the first creosoted ties laid down in this country in quantity were put into service only nine years ago. Since these have shown no sign of decay since then, and since European experience has been exceedingly favorable, it is believed that the estimate is well within bounds.

Though the railroads have not all been converted to the use of treated ties, the enormous growth in the business shows that the carriers are coming over rather rapidly. It was stated that 125,000,000 ties are used annually in replacement work. In 1908 not more than eight per cent of these were treated ties. This year, it is stated by authorities, fully twenty per cent of the number will be of that character. There are seventy-five plants for creosoting purposes, and the number is growing rapidly. One company, established in 1904, is now building its fourteenth plant, thirteen of them having been put up since 1907, so that the big gains have all been within the past five years.

Those who are interested in the development of wood-preserving from an economic standpoint believe that it is working a remarkable change for the better. Heretofore ties have had to be cut out of white oak trees, and while many of them were produced from timber that could not have been made into high-grade lumber or used for other purposes, yet an enormous quantity of ties was converted from trees that could have been sawed into boards and made into all sorts of valuable and beautiful articles. And the tie manufacturers frequently forced into service small oak trees which, if they had been allowed to grow for fifteen years more, would have been easily convertible into much greater values in other forms.

Thus the entrance of wood-preserving methods has enabled many inferior woods, which under former conditions could never have been used for tie purposes, to be utilized for this work and has made it possible for white oak to be reserved for other purposes for which it is better suited. On the other hand, it has resulted in the timberman being able to work a tract clear, since he need not discriminate, for the most part, but can cut nearly all the timber his land carries, knowing that by the use of a preserving treatment he can make practically all of it useful in tie work. Thus, instead of leaving land cumbered with scattered clumps of relatively useless timber, it is all being worked up and put to good use.

Just contrast the situation, as far as utilization of woods is concerned, before treatment was introduced and after. In the first case the materials available were white oak, locust, bois d'arc, heart-wood of the long-leaf pine, swamp-cypress and chestnut. Chestnut that could be used untreated for tie purposes, however, was found principally in the East, the southern varieties giving relatively poor service. The harder chestnut of the eastern sections frequently lasted for eight or nine years. But the kinds named practically close the list.

Today, with preserving treatments used, the tie manufacturer and the railroad are able to utilize all of the black oaks, such as red oak, yellow oak, pin oak, jack oak, etc.; beech, birch, maple, elm, gum, ash, hickory, sassafras, hackberry, poplar and the cottonwood tribe; sycamore, and others of the broad-leaf species, and cone-bearing trees such as the loblolly, shortleaf pine, Douglas fir, tamarack, hemlock and white cypress. Some of these woods would have lasted from three to five years without treatment; with it, they give service of from twelve to twenty years. As many of the kinds named have little value for lumber or other purposes, it is a great economic benefit that they can be put to good use in the railroad tie field through the application of creosote and other preservatives.

Oil of creosote is the generally favored preservative at present, zinc chloride, which has been used to a considerable extent, not having been found altogether satisfactory. It is used by applying a bath containing the salt in solution, the evaporation of the water leaving it in the wood. It is an excellent antiseptic and preserves the wood,

but, being soluble, it is washed out by rains and thus permits the wood to disintegrate.

The process, generally speaking, consists of placing the ties on ears; putting them in hermetically sealed retorts; filling the retorts with oil, and subjecting the ties to heat and pressure, the latter frequently being as much as 170 pounds per square inch. Some methods involved heating the ties beforehand for the purpose of opening the pores as much as possible, but this was found to be hard on the wood and was consequently abandoned.

The industry of wood-preserving, and especially of creosoting ties,

appears to be in its infancy. With the impressive gains which have been made during the past five years, it seems logical to believe that ultimately the treated tie will be universally used. If this happens, the passing of the years and reaching the end of the period formerly allotted to the untreated tie will find a reduction in the requirements, which will possibly cut the consumption from 125,000,000 to 60,000,000 a year. From the standpoint of conservation this will be an advantage, and especially so since it will postpone still further the necessity for using substitute materials on account of the increasing cost of wood.

G. D. C., Jr.

Fancy Woods for Floors

The Timber News of London, recently gave some valuable hints on fancy woods for floors, from which the following extracts are taken:

The growing popularity of fine hardwood floors has stimulated the utilization of some of the fancy woods for that purpose, especially in the United States. What are known as the "grey woods" have come into fashion recently for flooring. The right tone of soft hue, with shaded streaks of green in it, is difficult to obtain except in Majagua, one of the favorite decorative woods of Cuba. Another fashionable wood for flooring that now enters largely into the trade is Italian walnut. This wood has a beautiful coloring, toned to a fashionable grey tint that forms an admirable background for handsome rugs. Teak is a valuable wood that has long been in general use both for floors and furniture. It is handsome as to grain, and lends itself admirably to the revival of Early English broad-planked floors. These floors have a dark, thin strip of wood inserted between the planks to imitate the ancient joints in old floors. It is being used also to considerable extent for wainscoting and beaming of expensive houses where every effort is usually made to get satisfactory color schemes in woodwork, hence the floors have to harmonize with the beams and wainscot, for which the Philippine teakwood, which strongly resembles Italian walnut in appearance, is used extensively, being an indestructible wood.

More varieties of fancy woods are used today in parquetry flooring than ever before. While the French cling to their oak for

floors, no matter what the surrounding furnishings may be, Americans love to get effects out of every variety of fancy woods to suit their tastes. Almost jewel-like lustre is obtained with some of these fancy woods. For instance, the floors of one mansion in New York are of vermilion color, bordered with a strange peacock-tinted Cubau wood. Another has one floor laid in dark teakwood, a second in oak, and a third in mahogany. Black mahogany is especially in demand in America for flooring in connection with rooms fitted up in Flemish styles. Immense quantities of white and red mahogany are used for floors, and oak and curled maple are popular. Fancy woods are used in a variety of styles of parquetry, including the block, cube, square, basket, Prima Vera, herringbone, and Fontainebleau effects, worked out sometimes at great cost. African tigerwood, African redwood, the greenish-gold Jalapa wood, red gold Courbaril, Sandwich Island walnut, golden ebony, rose red Majagua, and similar rare woods are also used for flooring, as well as for beaming and panelling.

Every effort has been made to imitate these fancy woods by the art of the stainer and painter. Even Circassian walnut, of which there is never much in the market, has a near-Circassian imitation that is frequently found. But imitation never quite succeeds in woods, for the lovely soft effects nature gives cannot be quite obtained by paints or stains. For instance, various kinds of wood have been stained through and through a deep rich mahogany shade, but the grain is always sure to give the imitation away. That is something that cannot be exactly imitated.

The Mail Bag

Any reader of HARDWOOD RECORD desiring to communicate with any of the inquirers listed in this section can have the addresses on written request to the Mail Bag Department, HARDWOOD RECORD, 537 South Dearborn Street, Chicago, and referring to the number at the head of each letter and enclosing a self-addressed stamped envelope.

B 321—Seeks Hardwood Molding

London, Eng., Oct. 12.—Editor HARDWOOD RECORD: We should be glad to be put in touch with some mills within low freight rate distance of Philadelphia, Norfolk or Newport News, who could undertake to produce plain moldings to our patterns cheaply, and smoothly finished in basswood, oak, walnut and possibly mahogany. Our experience has been that the high freight rate to the coast from the Chicago district militates against our purchases there. If the stock is dry and prices and finish satisfactory, we can place a large volume of business.

B 322—Seeks Hickory Flag Poles and Ash Oars

Boston, Mass., Oct. 17.—Editor HARDWOOD RECORD: I have an inquiry for hickory flag poles and also ash oars for export trade. Have

you on file anything that would help me out in this matter?

The writer of the above letter has been supplied with a brief list of manufacturers of ash oars, but we have no list of concerns making a specialty of hickory flag poles.—EDITOR.

B 323—Wants Lumber Measure Table

Evanston, Ill., Oct. 18.—Editor HARDWOOD RECORD: We are in want of a lumber measure table like the Houghton Measure Table or some other kind on the same principle. If you have such in stock kindly let us know by return mail, or tell us where to get one.

The writer of the above letter has been advised that we are unfamiliar with the Houghton Measure Table, but has been given the name and address of the publishers of Baughman's Buyer and Seller, and of the Expeditious Measurer.—EDITOR.

B 324—Seeks No. 3 Chestnut and No. 2 Spruce

Philadelphia, Pa., Oct. 18.—Editor HARDWOOD RECORD: We would be pleased to be put in

communication with anyone desiring to market one-inch No. 3 common chestnut and one-inch No. 2 box spruce in large quantities, for cash.

The writer of the above letter is a leading wholesaler of the Quaker City, and has been given a brief list of chestnut and spruce producers.—EDITOR.

B 325—Wants Wagon Stock

Portland, Ore., Oct. 15.—Editor HARDWOOD RECORD: Will you kindly let me know where I can get a list of factories manufacturing all kinds of wagon, carriage and auto woodstock, such as singletrees, poles, shafts, spokes, etc.? I contemplate starting in business handling such products on the Pacific coast, including hardwood lumber.

The writer of the above letter has been advised where he can secure the information he seeks.—EDITOR.

B 326—Wants Hickory Billets

New York, N. Y., Oct. 18.—Editor HARDWOOD RECORD: Can you put us in touch with manufacturers prepared to figure on prime second-growth hickory billets, perfectly white clear through, straight grained and free from all defects, 7 to 8 feet long x 4 to 4¼ inches wide x 1 to 1¼ inches thick?

B 327—Wants to Handle Output of Southern Mills

Springfield, Mass., Oct. 19.—Editor **HARDWOOD RECORD**: We have decided to supplement the handling of the products of our Vermont and New York mills by either jobbing or handling the stock on a commission basis, with oak, chestnut, poplar and gum. We maintain sales offices both in Springfield covering the New England states, and in New York covering New York state. We should be glad to be put in touch with good reliable manufacturers whose output we could either purchase or handle in this territory.

The above letter is from a well reputed hardwood manufacturing house having quarters in the states of New York and Vermont, and the connection should be a desirable one for several southern manufacturing houses producing the wood named.—EDITOR.

B 328—Wants Market for Cedar Sawdust

Manchester, N. H., Oct. 19.—Editor **HARDWOOD RECORD**: Referring to the recent article in **HARDWOOD RECORD** relative to the sale and uses of sawdust. Can you put us in touch with concerns buying Cuban and Spanish cedar sawdust, and also if you know of a machine for grinding small pieces of thin cedar into sawdust?

The writer of the above letter has been advised that a good many proprietary medicine houses and other handlers of bottled goods are large purchasers of cedar sawdust for packing purposes; and that he can secure a small and low-priced hog for reducing shavings and thin lumber into small particles from the Cadillac Machine Company, Cadillac, Mich.—EDITOR.

Company, Chicago, and E. W. Dierssen of the Chicago Sash, Door & Blind Manufacturing Company. An advisory board composed of one lumberman from each state in which the company operates will be maintained.

In the past the casualty insurance companies have indemnified the employer against damage claims for death or injury to employes. This service was often unsatisfactory and always expensive. In fact, it has been shown that under the old rate about sixteen cents out of every dollar finally reached the injured employe, the remaining eighty-four cents going largely to attorneys and agents.

Those employers of labor who have not elected to accept the provisions of certain state compensation laws are deprived of practically all of their former defences. As a result an injured employe is likely to be given an enormous award by a sympathetic jury. There is a recent case on record in Philadelphia where judgment was given for \$92,000 in a case of partial disability.

The offices of the Lumbermen's Mutual Casualty Company will be on the eighth floor of the Stock Exchange building in connection with the Lumbermen's Association of Chicago.

News Miscellany

Northern Association Cut and Shipments for September

A statement of the cut and shipments of lumber, based on reports of fifty-six members of the Northern Hemlock and Hardwood Manufacturers' Association as compiled by that association, shows that there is a decrease in cut from September, 1911, to September, 1912, of thirty-six per cent in hemlock, while there is an increase in hemlock shipments of twenty-one per cent. The hardwood cut fell off during this period eleven per cent, while hardwood shipments increased four per cent. Thus the total cut decreased thirty-two per cent during the year and total shipments increased fifteen per cent.

The following is a tabulated statement of these figures, showing the various woods:

	Cut, M feet.		Shipped, M feet.	
	1912.	1911.	1912.	1911.
Hemlock	31,579	49,090	43,028	35,490
Ash	239	379	783	905
Basswood	1,070	1,603	3,134	3,613
Birch	2,442	3,024	7,551	5,545
Elm	536	685	1,717	1,627
Maple	3,361	2,754	4,984	5,686
Oak	112	46	335	219
Mixed	428	753	3,084	3,260
All hardwoods...	8,188	9,244	21,588	20,855
Total	39,767	58,334	64,616	56,345

New Lumbermen's Casualty Company

The Lumbermen's Mutual Casualty Company is the style of a new incorporation in Chicago designed to write employers' liability and workmen's compensation insurance. The company is backed entirely by the local lumber trade, men prominent in the local business being officers and directors. The actual business of the company, however, will be handled by experienced insurance men. A policy against the employment of solicitors was adopted, it being decided to secure business only through the mails and through the efforts of inspectors. Thus a considerable item of expense will be entirely eliminated. It is intended to accept only preferred risks, thus keeping to a minimum the loss ratio. It is anticipated that the loss thus saved, together with natural profits, will accrue to the policyholders as cash dividends.

As in all lines of business, the tendency in insurance is toward specialization, the idea being to give greater efficiency in one particular line of risks rather than to cover a larger field not so thoroughly. Thus all the risks of this concern will be confined to the woodworking industries. Special service will be rendered by inspectors who will be so qualified as to show policyholders ways and means of reducing hazard and thus cutting down insurance cost. As the

company will write no business outside of the lumber trade, the lumbermen will not be compelled to make up to the insurance company any losses sustained on unprofitable businesses which it might have on other grades of risks.

The company will qualify as a regular incorporated mutual under the insurance laws of Illinois. These statutes require that a sufficient amount of business on enough separate risks to make the company sound from an underwriting standpoint, shall be secured before any policies are issued. The necessary volume of business has already been more than subscribed and the company will start out more auspiciously than did the very successful lumbermen's fire insurance companies. Admission will be taken shortly to both Wisconsin and Michigan, and other states that have compensation laws will be entered as it proves practicable. Many states that have not as yet enacted compensation laws will probably pass them at coming sessions of the legislature. As these laws go into effect, the already high rates on employers' liability insurance jump from three to five hundred per cent, making the burden on the business extremely heavy. To meet this condition, four millers recently organized a casualty company to write exclusively in that trade. It began business five months ago and, though the time has been too short to say just what the results will be, a very substantial saving in the cost of insurance will be effected by the company. Printers have already organized on this basis and other trades are considering similar steps.

Like the lumber mutual fire insurance companies, the policy of the Lumbermen's Mutual Casualty Company will be to maintain all reservations required of stock companies and a sufficiently large surplus to guarantee solvency, the officers and directors recognizing first, absolute security and second, cost.

The officers of the newly formed company are: President, F. L. Brown of Crandall & Brown, Chicago; first vice-president, James S. Kemper, manager of the Lumbermen's and Manufacturers' Insurance Agency, Chicago; second vice-president, E. F. Hunter of H. & E. F. Hunter, Chilli-cothe, Ill.; third vice-president, C. B. Moore of the C. B. Moore Lumber Company and the Alexander Lumber Company, Aurora, Ill.; treasurer, Murdock McLeod of the Oconto Company, Chicago; secretary, E. E. Hooper, secretary of the Lumbermen's Association of Chicago.

Elmer H. Adams, Chicago's prominent lumberman-lawyer, will act as general counsel for the company. In addition to the above mentioned officers, the directorate will consist of C. A. Flannagin of the Rittenhouse & Embree

Memphis Lumbermen's Club Consolidates With Business Men's Club

Indications are that the Lumbermen's Club of Memphis will become a department of the Business Men's Club at an early date. At the meeting at Hotel Gayoso Oct. 12, the first for the fall season, it was unanimously decided that the club would become identified with the Business Men's Club. The only objection urged against the proposed merger was the loss of the identity of the Lumbermen's Club of Memphis. It was pointed out that this organization had played quite an important part in hardwood lumber affairs, not only locally but from a national and international standpoint. However, the committee recommended that the proposition of the Business Men's Club be accepted, despite the fact that it means the loss of such identity.

As offsets to the loss of identity of the club it was pointed out that the consolidation would settle the question of permanent quarters for the Lumbermen's Club and that it would also solve the problem of securing free performance of the heavy work now devolving upon the gentleman who acts as secretary of the organization. It has become increasingly difficult each year to get anyone to accept the position of secretary because of the large amount of work falling upon him without remuneration.

Under the terms of the proposed merger the Lumbermen's Club of Memphis becomes a department of the Business Men's Club. It is, however, to maintain a separate organization. It is to have its own officers and directors and is likewise to operate under its own constitution and by laws. It is stipulated in the agreement that the club also has the right to revert to the present regime if at any time the merger should become unsatisfactory to the members.

The proposition as accepted was made by W. H. Fitzhugh, representing the Business Men's Club. He said that it was the desire of the Business Men's Club to be of greater service to the lumbermen as well as to all the other industries in Memphis and that it was the opinion of the directors that this could be accomplished if the organization representing the separate industries identified themselves with the Business Men's Club as separate departments. He referred to the splendid results that had followed the consolidation of the various organizations in other cities, notably Boston, Minneapolis and Cleveland.

It will be necessary to make certain changes in the by-laws of the Lumbermen's Club and a committee was appointed at this meeting to suggest these. After the committee has reported it will require notice of thirty days before a vote can be taken on the proposed change, with

the result that the consolidation can not become effective until the latter part of November.

C. D. Hendrickson, chairman of the river and rail committee, reported that during the interval between the last spring meeting and the first meeting for the fall season, he and his associates had completed the launching of the Lumbermen's Traffic Bureau and had also successfully opposed the proposed advance in freight rates to Canadian points, having secured an order from the Interstate Commerce Commission suspending the advance until later.

J. W. McClure, chairman of the special committee appointed to look after estimated weights on hardwood lumber shipments, said that the Interstate Commerce Commission had notified him that there would be a hearing in Memphis December 13-14, in connection with this subject. The committee was continued in power and was instructed to prepare the necessary evidence to be submitted to the commission.

James E. Stark spoke vigorously in behalf of the Lumbermen's Traffic Bureau, declaring that it would prove a big factor in the handling of the transportation problems of the lumbermen of Memphis and vicinity if they gave the proper support to those in charge thereof. He thought that it ought to be used on every possible occasion and that, if the lumbermen assumed this attitude, the results would be highly gratifying as well as extremely beneficial.

Mr. Stark also addressed the club in connection with the alleged high rates charged by the insurance companies. He declared that the rates were out of all proportion to the risks involved. In fact he said that some of the companies realized that they were charging entirely too much and they were adopting flat rates and substituting these for the regular schedules. He thought the law and insurance committee of the club ought to take this matter up with similar committees of other organizations throughout the country to the end that insurance rates might be placed on a level more just and equitable to the insured.

J. H. Townsend, general manager of the newly formed Lumbermen's Traffic Bureau, made a brief talk in which he said that it was his desire to do everything he could for the lumbermen from a traffic standpoint. He made an appeal to the individual lumbermen and lumber firms to call upon the bureau whenever it could be of service to them.

The club also adopted resolutions opposing the granting of a charter to the terminal company of the Rock Island System unless proper safeguards were contained therein on behalf of the city of Memphis. Special reference was made to the right of the city to collect taxes from the western roads. Emphasis was also laid upon the fact that, if such a charter is granted, the terminal company ought to guarantee that all roads seeking entrance into Memphis may have the use of these terminals. This action was taken because of the belief in some quarters that the Rock Island System and some of the other roads were seeking by means of this proposed terminal company to sever direct relations with the city of Memphis, transacting all business through the terminal company instead of through their own organizations. The club instructed the secretary to send a copy of these resolutions to the officials of the roads interested. In addition to this, the resolutions provide that the law and insurance committee of the club shall appear before the commissioners of the city of Memphis when the charter hearing comes up.

Two new members were elected: A. J. Tippler of Forrest City, Ark., manager of the Forrest City Manufacturing Company and the Wisconsin Lumber Company, and T. E. Jones of the F. T. Dooley Lumber Company.

Meeting St. Louis Lumbermen's Club

The Lumbermen's Club of St. Louis held its last meeting at the Planters hotel, on Oct. 15.

After the usual dinner, President Rolfe called the meeting to order and the minutes of the previous meeting were read and approved.

Julius Seidel, president of the Julius Seidel Lumber Company, gave a report of the National Conservation Congress meeting held at Indianapolis recently, to which he was appointed a delegate.

The following names were read by the secretary as having been passed on by the board of directors for membership. They were submitted by the membership committee and were unanimously elected to membership: J. F. Schneiders, Frost-Johnson Lumber Company; C. C. Mullen, Long-Bell Lumber Company; W. F. Biederman, National Lumber Manufacturers' Credit Corporation; A. V. Lashly, National Lumber Manufacturers' Credit Corporation; H. R. Asman, Colonial Lumber and Timber Company; A. C. Baird, Baird & Brown; Max J. Mosher, Mosher & Shields; W. B. Switzer, W. B. Switzer Lumber Company; B. O. Leftwich, Leftwich Lumber Company; J. K. Wesson, J. J. Newman Lumber Company; W. M. Stephenson, Scrivenoter, Concatenated Order of Hoo-Hoo; Charles C. Curry.

Secretary Kessler read the report of the special committee which had been named to revise the by-laws of the club. A minority as well as a majority report was submitted. Action on the report will be taken at the next meeting.

Resolutions on the death of Christian F. Liebke were then adopted by a rising vote.

E. C. Robinson offered a resolution, which was passed unanimately, extending the thanks of the club to the delegates to the National Conservation Congress, Julius Seidel and John B. Kessler. He also called the attention of the members of the club to the convention of the Federation of Retail Merchants, which will be held in St. Louis, November 19-21.

James E. Gatewood spoke of the error of the Interstate Commerce Commission in its decision in the eighteen-cent freight rate. He also spoke of other rates advanced by the railroads in spite of the orders of the commission and stated that other advances were contemplated by the railroads. Mention was also made of what the shippers in the Southwest had to go against.

W. E. Barnes then told of the lumber trade conditions as they were at the present time. This brought the meeting to a close.

Action Against Railroads

The first attempt of the National Lumber Exporters' Association to proceed against the railroads with terminals at New Orleans and against a number of others as well on account of their refusal to issue through bills of lading has resulted in failure, the Interstate Commerce Commission, which was asked to suspend the new tariffs filed with the commission because they eliminate the provision for through bills on lumber and logs, having refused to issue such an order. The National Lumber Exporters' Association will now go ahead and file formal complaint against the new tariffs as an unwarranted discrimination against lumber and logs, and the question will be fought to an issue on its merits. The association had sought by the first petition to prevent the new tariffs from going into effect on Oct. 15. It was unable to do this, but the Interstate Commerce Commission announced that its refusal to order a suspension was without prejudice to the National Lumber Exporters' Association, and that a petition asking for the cancellation of the tariffs at least in so far as they allow for through bills of lading on other freight and deny them on lumber and logs could be submitted. There is every prospect, however, that the action contemplated will be taken this week. In the first petition only the railroads west of the Mississippi river with terminals at New Orleans were included. The new complaint, however, will be general, applying to all of the railroads that carry export lumber, it being the purpose of the National Lumber Exporters' Association to

fight the discrimination against lumber and logs as unjust and as highly injurious in its effects upon an important division of commerce. There is also pending a petition against the Southern Railway, asking the Interstate Commerce Commission to issue an order requiring the railroad to comply with the provisions of its tariff which has been in effect for a number of years and to declare that the recent notification to shippers of lumber and logs that after a certain date no through bills of lading would be issued except under regulations practically prohibitive, is not in effect a tariff filed with the commission and does not supersede the old schedule. It will be observed that the two petitions filed differ, one charging discrimination, while the other asks that the railroad complained of comply with its tariff requirements. The association realizes that the commission has no authority to order railroads to issue through bills of lading, but it takes the ground that as the railroads have undertaken to do so with respect to other classes of freight, they can be compelled to grant the lumber exporters the same privilege. Efforts have been in progress a long time by President Harvey M. Dickson and Secretary J. McD. Price of the National Lumber Exporters' Association to get the railroads to give the shippers of lumber and logs fair treatment, but the railroads have persistently refused to meet a demand which the exporters feel is in every way equitable.

Philadelphia Lumbermen in Golf Tournament.

The Philadelphia Lumbermen's Golf Club held its regular meeting and tournament at the Huntingdon Valley Golf Club grounds, Oct. 16. The weather was ideal and the game was entered into with a hearty athletic zeal. As the tantalizing bunkers, sand holes and ditches were profuse on the eighteen hole course, the sharpest attention was required on the part of the player if a fair score would be made. Thirty-six golfers divided into eight foresomes and two twosomes started on a handicap game at one p. m. The contest continued with good natured rivalry until about half past five o'clock, when the last bunch handed in their score card.

The game resulted in the following net scores: Horace A. Reeves, Jr., 110; Frank Buck, 109; Eugene W. Frey, 99; W. Henry Smedley, 123; J. Deland Williams, 102; Eli B. Hallowell, 84; J. Craig Huff, 94; James Crowell, 109; John H. Schofield, 98; T. U. Nixon, 96; William P. Shearer, 109; Robert W. Schofield, 95; S. P. Bowers, 93; Thomas E. Coale, 94; William Allen, 102; Joseph P. Comegys, 115; F. A. Benson, 108; Edward Swenk, 90; John E. Howes, 88; George M. Spiegle, 86; Ben C. Currie, 96; W. H. Fritz, 93; W. L. Rice, score not given; J. W. Turnbull, 80; J. B. McFarland, 90; M. C. Burton, 97; H. W. Smedley, 91; Joseph W. Janney, 91; E. B. Humphreys, 91; H. R. Humphreys, 100; Harry Humphreys, 96; Frank E. Schofield, 93; William Meyer, 108; Frank R. Whiting, score not given; George W. Stoker, 117; Benjamin Stoker, 137.

The prizes awarded were: J. W. Turnbull, first prize, a cigar stand; Eli B. Hallowell, second prize, a golf ball marker. For best ball forward, W. H. Smedley and J. B. McFarland were awarded golf gloves.

After a sumptuous dinner, the meeting was called to order by President Frank Buck. The minutes of the previous meeting were read, after which the completed list of by-laws were unanimously adopted. A resolution was passed to hold the next and final tournament in November, at the Merion Golf Club grounds.

A Lively Entertainment at the Chicago Lumbermen's Club

Saturday evening, Oct. 12, was the date of a highly satisfactory effort on the part of the entertainment committee of the Lumbermen's Club of Chicago to demonstrate to the members what

a thoroughly live proposition the club is. The arrangement of the club rooms is particularly well adapted to entertainments of this sort, a temporary stage being erected at one end of the dining room, which stage was equipped with all the necessary appurtenances. Four or five features were provided by professional talent secured through the committee's efforts. A pleasant feature of the entertainment was the absence of anything distasteful in the efforts of the entertainers, which is not always the case at such functions. Light refreshments were served in connection with the show, and the members were provided with means of making a considerable quantity of smoke.

A hearty good feeling seemed to prevail and the programme went off without a hitch of any kind. The efforts of the long famous "Bill" Eager met with the usual warm reception. Wallace Kimball also caused considerable merriment by his imitation of animals.

Rebuilding Montvale Lumber Company's Plant

Work has been commenced on the reconstruction of the sawmill of the Montvale Lumber Company, an allied concern of the R. E. Wood Lumber Company, of Baltimore, at Fontana, Swain county, N. C., the idea being to enlarge the capacity of the plant. Though erected on the old site, the mill, when finished, will be virtually new, with concrete foundations, concrete and sheet iron boiler house, the improvement various poplars, such as aspen, Balm of Gilead, being of a more permanent character than the great majority of such plants. The chief idea in making the improvement was to augment the production, the demand for hardwoods having been so good this year as to render the enlargement necessary. Machinery of the latest improved type will be installed, the plant being what is called an eight-inch Clark band, with an output of about 50,000 feet per day. The work of construction is under the personal direction of G. L. Wood, general manager of the company, who has recently returned from an extended trip to western North Carolina, Mississippi, Louisiana, Tennessee and other states, studying sawmill conditions and other trade matters. The journey was attended with more than ordinary discomfort as Mr. Wood had the misfortune to fall down a steep bank in the mountains some weeks ago and badly wrench his left arm. R. E. Wood, president of the company, left for Fontana this week. The Messrs. Wood report that all of their company's mills are cutting more lumber than at any previous time this year and that the outlook is most encouraging.

Posts of Scrub Timber

A circular recently issued by the New York College of Forestry at Syracuse, gives advice to the farmers of that state which is valuable to the farmers of most other states. They are urged to make use of cheap and inferior woods for fence posts, first having treated them with creosote to hinder decay. The species which are pointed out particularly are soft maple, basswood, willow, and elm. Large amounts of these woods grow in scattered stands, or in waste places, and are not generally put to any good use, because it does not pay to bring them together. Often they are too small for any use except posts. As is well known, these woods last only a short time if set in the ground in their natural condition. They are among species which decay most quickly. Ordinarily, no one would make posts of them, because they last so short a time that their use is unprofitable. By means of a cheap treating plant which a farmer can equip in his barnyard, posts may be treated at a cost of from four to six dollars a hundred. The treatment makes them last two or three times as long as they will serve in their natural state. Many other woods of the same

class are found on the farms, along creeks, and in waste places in this country. They will respond to the treatment which preserves them. Among others are cottonwood and the various poplars, such as aspen, Balm of Gilead, Carolina poplar and Lombardy poplar; buckeye, sycamore and pine.

A Progressive Company

The Henry C. Patterson Company, reorganized some months ago with Frank R. Whiting, president, Chapin L. Barr, vice-president, and Albert W. Wasey, secretary and treasurer, has made considerable improvements in its yard. It has also changed the character of its business; instead of North Carolina and yellow pine, hardwoods and white pine are handled. However, the company will continue to ship the first named southern pine in carload lots. It carries 2,000,000 feet of hardwood and Wisconsin white pine in stock, and has a large dry shed with twenty-four dust proof bins for the protection of a quantity of hardwood flooring and several thousand feet of lumber. Mr. Wasey, who is known as one of the young hustlers in eastern lumber circles, is a hard man to catch at his office, as he is always on the job. He says the company has had very little trouble disposing of dry hardwoods, and its white pine stock is moving nearly as fast.

A REMARKABLY LARGE OAK LOG

A Big Oak Tree

The loggers of the Lamb-Fish Lumber Company of Charleston, Miss., in this region of big oak, recently encountered a remarkably large and fine specimen of the cow oak variety, which was felled and put into log lengths and transported to the company's big mill. A picture of the second cut of this tree is shown herewith. The log was seven feet in diameter. Manager Burke says that this sized saw-log does not particularly appeal to him as a source of money-making. The log haul-up took the log up to the head of the slide without difficulty, and then the first thing that happened was that the end of the sawmill had to be knocked out to get the log onto the log deck. After the nigger threw the log onto the carriage, it was found that there was not room enough between the wheels of a nine-foot band mill to permit the passage of the log between them, so it had to be returned to the deck, and with wedges and beetles split in half before it could be handled. Mr. Burke says it would have been economy to have left the tree in the woods as a monument to what northern Mississippi lands will produce in the way of oak, rather than to have accomplished its removal to the mill.

Foreign Trade Opportunities

A business man in the United Kingdom, listed as No. 9614 under Foreign Trade Opportunities in the Daily Consular and Trade Reports published at Washington, D. C., is in the market for hardwood, tool-handle stock and cooperage stock. He wants to be placed in touch with manufacturers and exporters of hardwood logs and lumber, tool handle stock and cooperage stock, and is in immediate need of 2 to 4-inch, 10 to 16-foot ash plank, and 5 to 12-inch white oak wagon plank.

A company in the United Kingdom wants to be placed in communication with exporters of pitch pine timbers and lumber, ash, oak and red gum lumber and logs. It is also desirous of investigating Montana larch and Pacific coast white and sugar pine lumber. The enquiry is No. 9616.

Under No. 9617 is a firm which wants to get in communication with manufacturers of oak barrel shooks for use by chemical manufacturers. These shooks must be 1 by 2½ to 5 inches by 44 inches long. Each shook must contain enough stock to produce a barrel with a circumference of 36 inches at the head and 44 inches at the bulge. The staves must be shaped and must be of white oak or any other close grained oak. The same firm wants 5 by 12 white oak wagon plank, and 2 to 4-inch and 10 to 16-foot ash plank.

A Change in Arkansas

The Leavitt Land and Lumber Company, Dermott, Ark., has appointed W. L. Briscoe secretary and manager in charge of its big band mill operations at that place.

Mr. Briscoe has been connected for some time with the Paepcke-Leicht Lumber Company, having been in its employ for the last eighteen years. He was assistant superintendent of the Blytheville, Ark., plant and subsequently manager of the Arkansas City and Greenville, Miss., operations. Mr. Briscoe left the employ of the Paepcke-Leicht company some time ago, with the idea of manufacturing a quantity of stumpage owned by his father. Negotiations were opened between him and the Leavitt Land and Lumber Company upon the completion of these operations.

Mr. Briscoe is not only an able and widely known lumberman, but is an ardent supporter of the Hoo-Hoo.

September Inspection of the National Association

The statement of hardwood inspection by the National Hardwood Lumber Association, issued from the offices of Secretary F. F. Fish, shows that the inspection bureau of the association inspected 20,639,850 feet during September, 1912. This establishes a new record and is an increase of 2,598,298 over August, 1912, the previous high month.

Ten new applications for membership to the association have been received since the last report. This brings the total of new members admitted since the convention of June 7 to forty-four.

The report deplored the practice which apparently is somewhat common among non members, to secure national inspection through members, thus avoiding for themselves payment of membership dues. The members were urged to decline such requests.

The report noted the resignations of inspectors W. H. Long of Pittsburgh, and C. H. Maddox of Savannah, Ga. N. W. Rice of 918 West North avenue, Pittsburgh, was appointed to take charge in place of Mr. Long. Inspector J. L. Benson, formerly at Alexandria, La., has been transferred to New Orleans as assistant to C. E. McSmith, whose address is 5252 Constantine street, New Orleans.

Creditors Victors in Cincinnati Suit

United States District Judge Hollister recently returned a decision in favor of the creditors of

the defunct I. M. Asher Lumber Company of Cincinnati, whereby the Farmers and Traders National Bank must turn over to the creditors a sum of \$10,500, which is the remainder after deducting from the original creditors' claim, \$6,000 loaned by the bank to the company, to which the trustee decided the bank was entitled. Thus, unless the decision is reversed in the court of appeals, the creditors will receive a considerable dividend on their claims.

At the time of its bankruptcy, the I. M. Asher Lumber Company owed \$25,000 and had assets of \$2,500. During the two years and a half during which it existed, the company had paid considerable money to the Farmers and Traders National Bank. After the liquidation of the company, the trustee sued the bank on the grounds that the checks as paid over to it by Mr. Asher were on account of his personal indebtedness to the bank, and not for any obligations incurred by the company. The trustee maintained in his suit that the payment of \$16,000 in this manner had so undermined the financial condition of the company that it necessarily had to liquidate.

A Hustler in the Trade

The Hadentine Lumber Company, Inc., 305 Market street, Camden, N. J., was recently

HARRY R. HUMPHREYS, PRESIDENT HADENTINE LUMBER COMPANY, CAMDEN, N. J.

reorganized with Harry R. Humphreys as president. Mr. Humphreys is recognized as one of the progressive young business men, both in his widening connection with the eastern lumber trade and his ability as a financier. A few years ago he owned the Hadentine Lumber Company, a trade style he assumed, with offices in the Arcade building, Philadelphia, where he also represented the Norva Land & Lumber Company of Baltimore. The business grew rapidly and recently the above new company has been formed under the old name style and capitalized at \$125,000. The officers are Harry R. Humphreys, president; Leroy Harvey, treasurer, and Wilfred B. Wilcott, secretary. The company will handle hardwoods, spruce, hemlock and North Carolina pine. The personnel of the new company is individually interested in lumber mills at Norfolk, Va., Sunburst and Trestmont, N. C., Horton, Dobbin and Laneville, W. Va., with an annual cut of over 200,000,000 feet of lumber. Headquarters will be continued for a time at the Camden address.

Mr. Humphreys is a director in the Merchants Trust Company, vice-president of the Camden Merchants Building Association, a member of the Board of Trade and is financially interested in several other institutions.

Baldwin Locomotive Works Active

Activity at the Baldwin Locomotive works, Philadelphia and Eddystone, Pa., continues without abatement. Orders are constantly coming in, and both plants are being worked to full capacity. Contracts were recently closed for twenty-five locomotives for the Erie Railroad, which will cost about \$500,000; six locomotives for the Lehigh & New England road; three for the Louisville, Henderson & St. Louis; five for the Washington Southern, and one for the Mobile & Ohio. It is evident that the railroads are determined to provide for the needs of next winter's heavy traffic.

Statement of Ownership and Management

Agreeable to the act of congress of Aug. 24, 1912, requiring publishers of periodicals to file with the postmaster general and the postmaster in the office at which such publication is entered, a sworn statement setting forth the names and postoffice addresses of editors and managing editor, publisher, business manager and owner, and in addition the stockholders, if the publication be owned by a corporation, and also the names of known bondholders, mortgagees, or other security holders, and that such sworn statement shall be published in such newspaper or other publication, the following sworn statement is herewith printed:—

HARDWOOD RECORD is published twice a month at Chicago, Ill.

The names and postoffice addresses of the editors are as follows:—

Henry H. Gibson, editor and business manager, 4649 Woodlawn avenue, Chicago, Ill.

Ilu Maxwell, 927 Asbbury avenue, Evanston, Ill., associate editor.

E. W. Meeker, 4758 Magnolia avenue, Chicago, Ill., associate editor.

Publisher: The Hardwood Company, 537 South Dearborn street, Chicago, Ill., the officers of which are Henry H. Gibson, president; E. H. Defebaugh, vice-president; Burdis Anderson, secretary and treasurer.

Stockholders holding one per cent or more of total amount of stock are Henry H. Gibson and E. H. Defebaugh.

There are no known bondholders, mortgagees and other security holders holding any bonds, mortgages or other securities of this company.

(Signed) Henry H. Gibson, Editor and Business Manager.

Sworn to and subscribed before me this 7th day of October, 1912.

J. S. Pennington, Notary Public.

My commission expires October 24, 1912.

The Demise of E. E. Goodlander

Universal regret, not only in his home city, but over a large portion of the United States, where he was known and most highly respected, was occasioned by the death on Friday morning, October 18, of E. E. Goodlander, at his home in Memphis, Tenn. His death was due to an illness of several weeks of meningitis. He was attacked by this dread malady while at lunch at the Peabody hotel about three weeks ago, and regained consciousness for only a few hours since that time. Early last week it was thought he was better, but death suddenly overtook him.

Mr. Goodlander was president of the Goodlander-Robertson Lumber Company, one of the foremost jobbing hardwood houses of Memphis, which has been built up to a substantial and important institution largely through the personal efforts of its founder.

The funeral services were held from the family residence on Saturday, and the remains placed in a temporary receiving vault in Forest Hill Cemetery. Later they will be transferred to a permanent resting place in a handsome mausoleum.

The popularity of Mr. Goodlander in life was attested by the many handsome floral offerings received at time of his funeral from both Mem-

phis friends and others outside of the city. One of the most beautiful of these tributes was given by the Lumbermen's Club of Memphis.

The active pall bearers were: F. E. Gary, C. L. Wheeler, C. T. Whitman, C. D. Gladden, F. E. Stonebraker, W. A. Ransom, A. N. Thompson and F. B. Robertson. The honorary pall bearers were: J. W. Dickson and the former presidents of the Lumbermen's Club of Memphis, as follows: J. W. Thompson, E. T. Bennett, E. E. Taenzer, Geo. D. Burgess, W. H. Russe, Geo. C. Ehemann, W. R. Barksdale, S. B. Anderson, W. L. Crenshaw, James E. Stark and S. C. Major.

Mr. Goodlander was born at Fulton, Ill., in 1861, but when a boy removed with his parents to Fort Scott, Kan. His first venture in business was in association with his father who was a prominent manufacturer of furniture. He continued in this line until 1889 when he came to Memphis as traveling salesman for I. M. Darnell & Son. In 1892-94 he was the manager of the Eaton-Darnell Table Company, and in 1895 again filled the position of traveling salesman for the former firm. In 1900 he and Frank B. Robertson formed the Goodlander-Robertson Lumber Company, of which he was secretary and treasurer. Mr. Robertson withdrew from the firm in 1907 when Mr. Goodlander became president, being

THE LATE E. E. GOODLANDER, MEMPHIS, TENN.

succeeded by L. W. Ford as secretary and treasurer. He continued at the head of the company until his death.

Mr. Goodlander was twice married. His first wife, who died in 1892, was Miss Elizabeth West, and three children survive that union, Misses Catherine, Sabra and Patience. His second wife was Mrs. Evelyn Knapp who had two children at the time of the marriage.

Mr. Goodlander was prominently identified with the Lumbermen's Club of Memphis, of which he was a charter member and which he served as president for one year. His house was a member of the National Hardwood Lumber Association, the National Lumber Exporters' Association and the National Wholesale Lumber Dealers' Association. He was also a member of the following other lumber organizations: Lumbermen's Club, Chicago; Lumbermen's Club, New York City, and the American Club, Mexico City. The Business Men's Club of Memphis also claimed him as a member as did the Tennessee and Chickasaw clubs, both social organizations.

Not a death has occurred in the ranks of the hardwood fraternity for years that has caused such universal sorrow in the trade as that of Mr. Goodlander. Such was his character, and such the appreciation in which he was held by all

elements of the trade, that it is doubtful if ever an unkind word was uttered against "Goody," as he was affectionately known to his familiars. He was a man of rare foresight and ability in his calling, and in the fraternity was regarded as an authority on every subject pertaining to both the purchase and marketing of hardwoods. His loss is not only a shock to the lumber trade, but constitutes a permanent bereavement from which both his home associates and the trade at large will not recover for a long time.

HARDWOOD RECORD voices the sentiment of every man who knew E. E. Goodlander in saying: "Adieu, old friend, we cannot say goodbye."

Building Operations for September and Preceding Nine Months

The American Contractor of Chicago, in its building report covering thirty-six cities throughout the country, establishes a decrease of 7 per cent for September as compared with September, 1911. On the other hand, the nine months including September showed an increase of 4 1/2 per cent as compared with the same period of last year. Memphis, Tenn., led for the month of September with an increase of 133 per cent. Other cities showing a decided gain for that month over September, 1911, were Birmingham, Ala., 95 per cent; Cleveland, with 55 per cent; Worcester, Mass., 71 per cent; Scranton, Pa., 67 per cent; Pittsburgh, 65 per cent. Toledo, O., shows the greatest increase during the first nine months of the year, building operations in that city being 60 per cent greater than for the first nine months of 1911. The detailed figures for September, 1911 and 1912, are shown as follows:

City.	September, 1912.		Per Cent. Gain Loss
	Cost.	1911. Cost.	
Akron	\$ 335,650	\$ 261,995	25 ..
Atlanta	668,587	487,087	16 ..

*Kansas City permit for Union Depot Sept., 1911, \$4,051,000.

Cutting the Cost of Clearing Logged-off Lands

The constantly increasing acreage of logged-off lands has made it imperative that some means for economically and rapidly cleaning these lands be available. Various devices have been employed with varying success but none has proved entirely efficient. It is now announced from the office of the Clyde Iron Works at Duluth, Minn., that that company has perfected a device for pulling stumps and clearing land, skidding the stumps to the machine and putting them in large piles, thus enabling the machine

to clear from three to six acres at one setting. The machine has been successfully demonstrated for the past two or three years and gives every promise of revolutionizing the attitude of the lumberman toward his cut-over holdings.

Each of these machines is designed as an independent power unit complete in itself and readily portable even over the roughest and most swampy country. It is mounted on broad steel runners which are part of the framework of the machine. Outside of this base the machine somewhat resembles an ordinary skidder as it is equipped with boiler, engine, drums and cable. Some of the types manufactured are the single line skidder, the double line skidder, the double line skidder with mechanical out-haul, and the right of way skidder. Any of these machines equipped with three drums may be used for pile driving and for handling orange-peel buckets for digging lateral ditches in drainage work and other excavation.

It has been demonstrated that the cost of clearing cut-over land with these machines is approximately half what it would cost under the same conditions with hand labor. In connection with the operation of the skidder, a specially designed steam stump puller has been put on the market. This machine is equipped with double cylinder three-drum engine. The main cable is geared to two speeds, the low speed with a maximum capacity of 112,000 lbs. and the high speed with a maximum of 16,000 lbs. Thus the engineer can pull his stump at slow speed and then skid it to the pile at as great speed as 300 feet a minute.

An Advanced Idea of Accident Prevention

It has been preached for years that the surest way of eliminating the wasted time and money contingent upon industrial accidents is to prevent such accidents themselves. By eliminating or at least reducing to a minimum the accidents to industrial workers, it of course follows that the question of expense and inconvenience will be reduced proportionately. It is with this in view that a number of states have inaugurated educational methods tending to increase the interest in this vital question and to establish uniform methods of controlling as much as possible the possibilities of industrial accidents.

The state of Illinois, however, is the first to establish an official state school for the study and prevention of industrial accidents and of diseases directly resulting from any particular occupation. The school was opened on October 14, having been established under the Illinois Occupational Disease Law and the Health, Safety and Comfort Law, which legislation compels the state factory inspector to see that every known health and safety device is installed wherever required throughout the state.

To carry out this new idea to a successful conclusion, it will be necessary that the state inspector be a proficient instructor as well as a mere policeman. The school will embody such features as a technological laboratory for the study of the causes of industrial accidents and ill health, and a lecture room for public lectures to foremen, superintendents and others directly responsible for accidents. Drafting rooms in which new ideas in woodworking machinery guards and other safety devices can be worked out will be provided by the state. In addition, bulletins of the department of state factory inspection will be sent free to manufacturers, workers and others interested.

The headquarters of the school are on the fifteenth floor of the Transportation building, Chicago, and are under the direct charge of the state factory inspector. The value of this unique innovation in industrial advancement is apparently without any grounds for argument. With the idea itself already established, it remains for those in charge to keep this department as free from political influence as possible in order to accomplish a high degree of efficiency and effectiveness.

Miscellaneous Notes

The Gray Lumber Company of Waverly, Va., recently suffered a loss by fire.

The Olney Cabinet Company, Olney, Ill., has been incorporated with a capital stock of \$50,000.

Lambert E. Barnes of Greenwood, Miss., has recently added a woodworking department to his plant.

Wm. P. Braun of Morrill, Me., is planning the establishment of a dowel factory in the near future.

The Boston Furniture Company has been incorporated at Boston, Mass., with a capital of \$100,000.

A new concern for Fonthill, Ky., is the Fonthill Spoke Company, incorporated with a capital of \$6,000.

The Ross Chair Company was recently incorporated at Louisville, Ky., with a capital stock of \$69,000.

The Maris Hardwood Company has entered the wholesale hardwood lumber trade at San Francisco, Cal.

The Maple City Manufacturing Company has recently commenced the manufacture of tables at Milford, Ind.

The Pine Bluff Spoke Company, Pine Bluff, Ark., was recently incorporated with a capital stock of \$30,000.

The Miller & Nickel Company was recently incorporated at New Albany, Ind., for the manufacture of vehicles.

A new concern to incorporate at Centerville, N. Y., is the Centerville Woodwork Company; capital stock \$10,000.

The Vincennes Novelty Manufacturing Company has been incorporated at Vincennes, Ind., with a capital of \$10,000.

J. Elwood Cox of High Point, N. C., has recently purchased a site on which he plans to build a shuttle block factory.

A new concern to enter the furniture manufacturing trade at Baltimore, Md., is the Chesapeake Manufacturing Company.

The Dorman-Eicle Manufacturing Company, Houston, Tex., has been incorporated for \$10,000 to manufacture woodwork, etc.

The Hardwood Manufacturing Company has been incorporated at Manchester, Tenn. The company is capitalized at \$35,000.

A new concern to incorporate at Boston, Mass., is the Hills Couch-Chair Manufacturing Company. It is capitalized at \$100,000.

A new concern to incorporate at McMinnville, Tenn., is the McMinnville Manufacturing Company, with a capital stock of \$20,000.

Fire recently damaged the plant of the Buffalo Maple Flooring Company, Chicago and Mackinaw streets, Buffalo, to the extent of \$3,000.

The Bovill Wood Products Company recently commenced business at Bovill, Idaho. The company will manufacture wood specialties.

The sawmill of the Napoleon Lumber and Handle Company, Napoleon, O., was recently destroyed by fire. The plant was fully insured.

John Obrecht Sons Manufacturing Company is planning the erection of a factory at Tell City, Ind., for the manufacture of wooden lawn swings.

The Arkansas Veneer Company of Helena recently filed an amendment to its charter, increasing its capital stock from \$20,000 to \$40,000.

The plant of the defunct Jamestown Veneer and Panel Company, Jamestown, Pa., has recently been purchased by Calfish Brothers of Union City, Pa.

The Shaw-Walker Company, manufacturer of filing cabinets, is planning the erection of a \$100,000 addition to its factory at Muskegon, Mich., in the near future.

The J. L. Pease Company, manufacturer of columns at Berwick, La., has been succeeded by the Pease-Gilmore Column Company, which is incorporated with a capital of \$15,000.

The Hardwood Flooring Company, Inc., was

recently organized at Roanoke, Va. S. D. Ferguson is president of the company; H. O. Spangler, vice-president; J. A. Martin, secretary.

The Hardwood Manufacturing and Supply Company at Smyrna, Ga., is moving its headquarters from that place to Dublin, Ga. The offices at Smyrna will be discontinued.

The plant of the American Wood Block Company has been leased by the Imperial Hoop Company at Bucyrus, O., and will be reopened for the manufacture of hoops and hub blocks.

The Walker Springs Lumber Company has been organized at Parkersburg, W. Va., to deal in timberlands and manufacture lumber. Its capital stock is \$5,000 and the incorporators are A. J. String, W. E. G. Reed, H. B. Hogg, John B. Hofmeier of Parkersburg, and W. E. Deegans of Glen Jean.

Articles of incorporation were recently filed with the secretary of state for the Madison River Lumber Company. The company is capitalized at \$30,000 and will cut and mill lumber in the upper reaches of the Madison river. Those backing the concern are T. M. Hodges, Wm. Wilcox, and J. H. Chapman.

The warehouse of the Lake Independence Lumber Company, Big Bay, Mich., was recently burned with a loss estimated at between ten and fifteen per cent of \$600,000 insurance. The plant had recently been purchased by the Brunswick-Balke-Collender Company, and over 100,000 howling pins were burned.

At a special meeting of the creditors of the Tomb Lumber Company, Philadelphia, Pa., held recently in the office of the referee in bankruptcy, Harry P. Dronney, the trustee, was given permission to sell the right, title, and interest of the bankrupt concern in its real estate and personal property to the Watoga Lumber Company for the sum of \$10,500 in cash.

The Varner Land & Lumber Company of Altheimer, Ark., has recently purchased 7,500 acres of white oak and hickory timber north of this city and is now building a new mill on the property. It will shortly move its plant now located at Altheimer to the new site and in addition install a Mershon 66-inch resaw, which will increase the capacity of the plant to about 40,000 feet daily.

The Virginia-Carolina Lumber Company, manufacturer and wholesaler of hardwoods and yellow pine, with headquarters at Lynchburg, Va., and mills in Virginia, North Carolina and South Carolina, recently filed a petition of bankruptcy with liabilities of \$89,972 and assets of \$123,996. The action was taken by the board of directors of the company in justice to all the creditors and by reason of the fact that banking facilities have not been sufficiently large to take care of the business. Richard T. Yates, president of the company, also filed a personal petition in which his liabilities are given at \$43,295 and assets at \$35,000, of which \$33,000 is stock in the Virginia-Carolina Lumber Company.

fer, N. Y., the new town site of the milling operations of the company in the Adirondacks.

The new electric-power concrete fireproof box factory of the Mengel Box Company of Louisville, Ky., which has been building on the Newark Meadows, N. J., the past year is fast nearing completion. It will be one of the most modern and largest box plants in the country and exceedingly well located in the matter of water and rail receipts and shipments, adjoining as it does the main line of the Pennsylvania railroad.

The sympathy of the lumber trade of the Metropolitan district is extended to Mr. Russell J. Perrine, president of the New York Lumber Trade Association and head of Johnson Brothers, Brooklyn, in the loss of his esteemed father, Duncan K. Perrine, retired, which occurred at his residence in Brooklyn, Oct. 10.

George D. Burgess of Russe & Burgess, hardwoods, Memphis, Tenn., spent several days in town during the fortnight in the interest of business. He reports hardwood conditions strong. The mills of this company are running double shifts and the sawmills eleven to twelve hours. The company finds a ready market at satisfactory prices for all it can produce.

The Hoban, Hunter, Feitner Company, wholesale specialist in cypress, Brooklyn, is just making a substantial addition to its lumber shed for the purpose of carrying more of the higher grades of cypress under cover. This house is one of the most successful in the local lumber trade and the facilities which it employs are being increasingly appreciated by the trade.

Theodore F. Dinkel, vice-president of the Dinkel & Jewell Company, large lumber and millwork house of Tarrytown, N. Y., died recently at Cornish Flats, N. H., where he had been spending the last two years on account of his health. Mr. Dinkel was widely known in the lumber trade. A host of friends mourns his loss.

W. W. Knight of the Loog-Knight Lumber Company, Indianapolis, Ind., was a prominent hardwood visitor during the fortnight in the interest of National Wholesale Lumber Dealers' Association affairs.

The Frank J. Parks Lumber Company succeeds to the wholesale business of Frank J. Parks, 1 Madison avenue, Manhattan.

The local wood-working machinery trade and many members of the lumber trade of this city and the Atlantic seaboard, were grieved to learn of the death of Lloyd A. Kimball, manager of the New York office of the Simonds Manufacturing Company, large saw manufacturer of Fitchburg, Mass., and a director in several other corporations. Mr. Kimball died at his residence in Brooklyn in the sixty-first year of his age. He had not been in good health since early spring.

Hardwood News Notes

CHICAGO

George D. Burgess of Russe & Burgess, Inc., Memphis, Tenn., was in Chicago the early part of the week, accompanied by his wife. Mr. Burgess had been taking a short pleasure trip in Wisconsin, after which he went to the East on business, returning to Chicago en route to Memphis.

D. E. Kline of the Louisville Veneer Mills, Louisville, Ky., was in attendance last week at the meetings of two of the veneer clubs. Mr. Kline called on some of his trade while in the city and was extremely optimistic as to conditions in the veneer business.

W. E. Johns of the Johns-Mowbray-Nelson Company, Cincinnati, O., was with the local trade a few days during the week.

H. S. Janes, president, and G. I. Jones of Boston, treasurer of the New England Hardwood Company of Wilmington, Vt., stopped at HARDWOOD RECORD offices between trains en route to Memphis on Tuesday of this week.

T. J. McDonald of Knoxville, Tenn., who conducts an extensive timber cruising business at that place, spent several days last week in Chicago in connection with some big cruising work which he has on hand in the South.

C. T. Jarrell, with B. C. Jarrell & Co., Humboldt, Tenn., was one of the prominent veneer manufacturers in attendance at the recent meetings in Chicago.

Ralph May of May Brothers, Memphis, Tenn., was one of the out of town members of the Lumbermen's Club of Chicago who attended the entertainment given on the night of Oct. 12, at the club rooms. Mr. May was in the city for several days and says the condition of trade with him is highly satisfactory.

C. M. Sears of the Edward L. Davis Lumber Company of Louisville, Ky., was one of the recent prominent out of town visitors to the local trade.

John Penrod, prominent veneer and fancy wood man of Kansas City, was one of the distinguished visitors locally during the last two weeks.

S. B. Anderson of the Anderson-Tully Company, Memphis, Tenn., has been in the city for the last week in connection with the veneer meetings and also on business.

E. H. Klann, hardwood wholesaler with offices in the Fisher building, is at work again after having been confined to his home for almost two weeks with a severe illness.

M. L. Pease of the Galloway-Pease Company, Saginaw, Mich., just reached Chicago after having spent several weeks at the company's mills at Poplar Bluff, Ark. Mr. Pease states that his chief difficulty at present is in getting a sufficient amount of dry hardwood lumber to meet his orders.

J. O. W. Danielson of Danielson & Pierce, hardwood wholesalers of Rhineland, Wis., spent a few days the latter part of the week with the local trade.

R. S. Kellogg, secretary of the Northern Hemlock and Hardwood Manufacturers' Association, spent Wednesday of this week in Chicago en route from Wausau to Detroit, where he will attend the meeting of the Michigan Hardwood Manufacturers' Association.

Harold Coppes of the Coppes, Zook & Mntschler Company, manufacturer of Indiana hardwoods, with headquarters at Nappanee, was in the city on Wednesday of this week on business in connection with that company.

C. L. Wallace has taken offices in the Peoples Gas building, this city, under the style of C. L. Wallace, agent. He will do a commission lumber business.

NEW YORK

W. L. Sykes, president of the Emporium Lumber Company, hardwood lumber operator in Pennsylvania, Vermont and the Adirondack region of New York state, recently visited Manager W. E. VanWert at the local sales office of the company.

W. C. Sykes, son of W. L. Sykes and head of the Adirondack operations of the company, was united in marriage recently to Miss Marlon I. Chappell, at Syracuse, N. Y. After their honeymoon Mr. and Mrs. Sykes will reside at Con-

BUFFALO

The Sparkman Mill & Lumber Company, Little Rock, Ark., of which L. H. Allen of this city is vice-president and manager of the Buffalo office, has become a member of the Buffalo Lumber Exchange. Mr. Allen opened an office on the twelfth floor of the Prudential building several months ago and is handling yellow pine and oak in this territory.

Anthony Miller states that his yard has lately been getting plenty of cars with which to fill orders, but that the chief difficulty at present is to secure labor.

O. E. Yeager reports the hardwood trade as showing much improvement.

Charles Perrin of Blakeslee, Perrin & Darling, with his wife and a party of friends, has been making an auto tour of southern New York.

J. B. Wall has returned from a trip of several weeks through the South, looking after lumber shipments. The yard of the Buffalo Hardwood Lumber Company is getting in a good stock of oak.

R. D. McLean has returned from the South,

where he found the mills of the McLean Lumber Company running in good shape. A feature noted by the company is stronger prices in quartered oak.

L. N. Stewart & Bro. state that oak prices have stiffened up considerably of late, especially in the buying end, and both plain and quartered are now holding very firm.

G. Elias & Bro. find the hardwood trade holding up well, with a large demand for building lumber, of which supplies are being received both by rail and by the lakes.

The National Lumber Company is selling a large amount of flooring, shipping direct from the mills. Quotations on oak, maple and birch flooring are higher and firmer than a few weeks ago.

The A. A. Engle Lumber Company is looking after shipments of hardwoods from Harriman and New River, Tenn., and President G. A. Corson is spending ten days at those two lumber points.

John Mahar, one of the most prominent men at Medina, died on the 16th. For thirty years he had been engaged in furniture manufacturing there. He was 57 years old and left three brothers and a sister.

PHILADELPHIA

The Philadelphia Wholesale Lumber Dealers' Association held its regular monthly meeting preceded by a dinner at the Union League clubhouse, Oct. 10, with President Horace A. Reeves, Jr., in the chair. As nothing of specific interest was on the boards, after transacting the routine business, the evening was devoted to a social business talk.

John W. Coles says business is running without serious hitch. Inquiries are increasing and orders are piling up. The car shortage which interferes considerably with shipping, is always an incidental obstacle.

James H. Campbell of Currie & Campbell reports steady trading. The mill at Berner, W. Va., is working full capacity getting out orders. William N. Lawton of the yellow pine department says that the principal difficulty now is to get the goods to fill orders.

Justin Peters, manager of the Pennsylvania Lumbermen's Mutual Fire Insurance Company, speaks complacently of conditions. Business continues as prosperous as when the semi-annual statement was made to the stockholders in July last, and from present indications the company bids fair to write more new business in 1912 than ever before in its history.

W. R. Taylor of the W. R. Taylor Lumber Company recently purchased the interest in the company of Otto Cluss, former secretary and treasurer. The present officers are W. R. Taylor, president; M. C. Taylor, secretary and treasurer. W. R. Taylor, who recently returned from a tour of New York and eastern Pennsylvania, reports business brightening up all along the line. Hardwood selling is easy providing prompt delivery of goods can be made. Roland Ferry, formerly of Mann & Parker, Baltimore, Md., has been secured as salesman, to cover New York and northern New Jersey.

Thomas E. Coale of the Thomas E. Coale Lumber Company says business has never been better. Both Pittsburgh and local offices are rushed with orders, with satisfactory prices.

T. Deland Williams of J. Randall Williams & Co. has just returned from an extensive tour of the lumber camps as far down as Tennessee, looking up stock. He says business with the firm is fine, everything running smoothly and prices holding firm.

Frank R. Whiting of Whiting Lumber Company reports increased activity in every branch of its extensive business. Liberal inquiries are resulting in good business, and the outlook is distinctly favorable for fall and winter trading.

Horace A. Reeves, Jr., says he is getting good business right along, and all signs are

potent for the continuance of a sound trading throughout the winter.

Joseph P. Comegys, manager of the Barker-Bond Lumber Company, says business continues brisk, car shortage being the only hitch. The New York office reports live trading all along the line.

PITTSBURGH

The Balsley & McCracken Company is now well located on the twentieth floor of the new First National Bank building, where that veteran, I. F. Balsley, is right at home to all his hardwood acquaintances. He started business by getting in a splendid order for chestnut and will have a fine line of cypress and also good connections in all hardwood stocks.

The Acorn Lumber Company has increased its force of salesmen by putting on Ralph B. McConnell of this city to work its eastern trade. H. W. Henninger of this company has lately been touring the West Virginia mills.

George L. Camp, manager of the Camp Manufacturing Company's Pittsburgh office, reports business strictly O. K. He took one order for over 200,000 feet last week and is well satisfied with prices received.

The Mutual Lumber Company, a new concern, is doing business right off the reel from its fine quarters in the First National Bank building.

W. W. Wilson, Jr., president of the Western Lumber Company, recently made a long trip through the Northwest in search of stocks.

The A. M. Kinney Lumber Company is starting another hardwood mill, which makes six it is now running in western Pennsylvania and eastern Ohio cutting oak and hardwood. Mr. Kinney and D. F. Dickson of this company spent two weeks hunting in Erie county, Pennsylvania, recently.

The McKeesport Planing Mill Company has been organized by A. W. Evans, Leonard S. Jones and others of that city, and has applied for a Pennsylvania charter.

The A. A. Engle Lumber Company of Buffalo has bought about 3,000 acres of timberland in the Ligonier valley of Pennsylvania for \$52,000. It will cut off the timber and market the lumber at once.

Joseph T. Reininger and M. L. Reimann of this city have bought from Somerset county parties several large tracts of timberland and propose to cut them off shortly.

The Green & Evans Company sold its lumber yard at Swissvale, Pa., to Harry E. William J. and Clarence McBride of Rankin, Pa. Hereafter it will be known as the Swissvale Lumber Company.

E. V. Babcock of the Babcock Lumber Company was last week elected vice-president of the Columbia National Bank of Pittsburgh, of which he has been a director for a long time.

The Meyers-Parsons Lumber Company reports it very hard to get shipments through. Yards are still furnishing a good lot of orders and as a rule wholesalers can name their own prices.

The Kendall Lumber Company has bought 20,000 acres of coal and timberland in Preston and Monongalia counties, West Virginia. It will operate a mill with a capacity of 50,000 feet daily and will also have two coal mines that will produce 500 tons per day each.

BOSTON

Arthur M. Moore of W. E. Litchfield, Boston, and assistant secretary and treasurer of the Massachusetts Wholesale Lumber Association, has returned from a trip to Washington.

The Merrill Chair & Manufacturing Company, Boston, Mass., and Stoddard, N. H., has been incorporated with a capital stock of \$200,000. The incorporators are Andrew Case, Henry R. French and Charles H. Merrill.

The John H. Bryant Lumber Company, Jef-

erson, Mass., has been organized with a capital stock of \$10,000. The incorporators are Moses Erskine of South Jefferson and John H. Bryant of Everett, Mass.

The Neuvo Mahogany Company, Hartford, Conn., has recently filed a final certificate of dissolution.

The business of the late Harry E. Baker is being liquidated. Mr. Baker was killed a few weeks ago in an automobile accident. He was well known in the Boston lumber trade, being organizer of the H. E. Baker Company.

BALTIMORE

Fire of unknown origin recently resulted in the destruction of the lumber yard of George Helfrich & Sons, Columbia avenue and Bayard streets. The loss is estimated at more than \$40,000, partly covered by insurance.

Thirty-one mahogany logs were among the cargo of the steamer Ulstermore which arrived here recently from Liverpool. The logs were consigned to the Williamson Veneer Company of Highlandtown, a suburb of Baltimore, and will be cut up into veneer. They came from Africa, being transshipped at Liverpool, and are of fine grain. The Williamson company has been making a number of such importations.

The Pioneer Hardwood Flooring Company, recently organized, began operations at its plant on President and Fleet streets, Oct. 6. The company will turn out oak flooring exclusively. All of the machinery will be electrically driven. The president of the company is Walter T. Startzman, vice-president and treasurer, John Ryan, and secretary, Felipe A. Broadbent, who is also president of the Felipe A. Broadbent Mantel Company.

The Champion Lumber Company, which some time ago purchased the timber and other assets of the Pigeon River Lumber Company along the Pigeon river in North Carolina, is constructing a mill at Sunburst, on the tract. The plant will have a capacity of about 125,000 feet per day, and will be equipped with all modern facilities. It will be connected by railroad with Canton, N. C., and with other points later on. It is expected operations will be commenced in a short time.

Richard P. Baer & Co. have moved their office from the Keyser building, Calvert and German streets, to the tower of the Maryland Casualty Company, Baltimore street and Guilford avenue, where they occupy the eleventh floor. The new location gives them more than twice the space of the old offices, and various additional conveniences. The suite of rooms has been equipped with entirely new furniture, and every device calculated to facilitate the work of the office force is being installed.

J. E. Morgan, president of the Morgan Company, of Oshkosh, was a recent visitor in Baltimore.

S. Robb Eccles, a popular lumberman of this city, has been named as viceregent snark of the Concatenated Order of Hoo-Hoo for another year. Mr. Eccles is planning to hold a concatenation about the time of the annual meeting of the Baltimore Lumber Exchange, the first week in December.

COLUMBUS

The Imperial Lumber Company of Columbus, O., has purchased the plant of the Butler Furniture and Equipment Company of Butler, O.

Owing to heavy traffic demands on the Toledo & Ohio Central Railway, orders have been issued to increase the switching facilities between Columbus and Toledo. This is being done in order to avoid congestion. All the switching facilities between the two cities will be enlarged to accommodate at least eighty cars.

Joseph Ramsey, Jr., formerly with the Wash Railroad Company, has opened another

railroad connection in Ohio and is now president of the Lorain, Ashland & Southern Railway Company, which runs from Lorain to Wellington and stops several miles south of Ashland. He plans to connect the line with the Pennsylvania and to penetrate certain points that are not touched by any other railroad company.

Energetic efforts are being made by the Ohio Public Service Commission to minimize the present car shortage and to prevent congestions at various transfer and terminal points throughout the state. A number of traffic officials, representing several of the leading railroad systems having offices here, were before the commission recently and questioned. From the reports obtained it was indicated that an actual car famine may develop in the state.

Judge Dillon has appointed H. S. Buskirk as receiver of the General Lumber Company, with offices in the Hartman building, upon the application of its president, Harry Putnam, who claims he is the largest stockholder in the concern and says the company's assets are being dissipated. He says two promissory notes for \$5,000 each, which were due Oct. 1, are unpaid. Mr. Buskirk, the receiver, gave bond for \$10,000.

The announcement is made that the firm of Powell & Rowe, located at 81 North Nelson road, has been dissolved. H. M. Rowe, junior member of the firm, has gone to Dayton where he has opened an office in the name of the H. M. Rowe Company. The business in Columbus will be continued in the same place by F. Everson Powell under the name of the Powell Lumber Company. Mr. Powell reports a good demand for hardwoods with prices ruling firm. He looks for a good business throughout the winter.

In a suit filed by Alex Brunner against W. K. Noble of Tiffin, O., application was made for the appointment of a receiver for the Tiffin Hoop Company. It is claimed that it is to the interest of all parties to keep the concern in repair and operation.

R. W. Horton of the W. M. Ritter Lumber Company, says the demand for hardwoods is good with the lower grades moving especially strong. Prices are ruling firm and the volume of business is all that could be expected for the time of the year. Both manufacturers and retailers are buying well, but the car shortage is becoming serious.

L. B. Schneider of John R. Gobey & Co., says hardwoods are in good demand, the only drawback to the active trade being the growing car shortage. He says prices are ruling firm and are inclined to advance.

George Malloch, sales manager for Bliss & Van Auken, Saginaw, Mich., was a recent visitor in Columbus.

W. L. Whitacre of the Whitacre Lumber Company says the demand for hardwoods is strong and prices are ruling firm.

INDIANAPOLIS

North, Frazier & Co., Portland, recently suffered a \$2,000 loss by fire in their planing mill.

H. M. Campbell, P. G. Cook and J. D. Wetz have organized the Greenfield Wood Turning Company, to manufacture handles, novelties, etc. The company has been incorporated with an authorized capitalization of \$10,000.

A new plant is being erected by the Wabash Veneer Company at Adams street and Massachusetts avenue.

Thomas W. Stewart, secretary and treasurer of the Eaglesfield-Stewart Company, manufacturer of hardwood flooring, and a heavy stockholder in the old Eaglesfield Lumber Company, died at his home in this city on Oct. 11. He had been ill two weeks from bronchial pneumonia. Mr. Stewart was seventy-seven years old and was born in Oneida, N. Y., coming to this city in 1859. The funeral was held from the family residence in the Blacherne and burial

was in Crown Hill cemetery. The widow and two daughters, Mrs. Addison Braun of Kansas City, Mo., and Mrs. Charles A. Burnett of Lafayette, survive.

EVANSVILLE

Weaver Haas of the W. E. Heyser Lumber Company, Cincinnati, O., visited the mills in the city recently.

Claude Maley of Maley & Wertz, Evansville, and Charles Maley of the Maley Hardwood Lumber Company, Yazoo City, Miss., have returned from Lexington, Ky., where they attended the races. F. M. Cutsinger of Young & Cutsinger returned early last week.

The case of Young & Cutsinger vs. the Louisville & Nashville Railroad Company is set for a hearing before Commissioner McCord of the Interstate Commerce Commission, on Nov. 4. The complaint is for refund on milling in transit shipments where the lumber was shipped from milling point more than six months from date logs were shipped to milling point, the tariff restricting the time to six months. The tariff was afterward reissued with a limit of one year.

H. J. Schaefer of Young & Cutsinger, Jackson, Tenn., was in the city last week. Mr. Schaefer reports things moving nicely at his plant and says he has a lot of fine white oak logs that will make quartered oak of which his firm makes a specialty.

The plant of the Jackson Lumber Company, Jackson, Tenn., was destroyed by fire recently. The veneer sheds and dry kiln were a total loss. The fire did not reach the sawmill. The Jackson Lumber Company is affiliated with the Evansville Veneer Works.

MEMPHIS

Local manufacturers of hardwood lumber are having considerable difficulty in securing enough cars with which to bring timber to Memphis. This is handicapping them to some extent in the operation of their plants because the stock of logs on hand is not large. It is also a source of anxiety to them because the timber must be sawn into lumber to prevent worm damage or deterioration from other causes. It is stated that the amount of timber on the right of way of the Yazoo & Mississippi Valley road is unusually large; it is likewise true that there is a very large amount of timber along the right of way of other roads South and West. A prominent manufacturer, who does not by any means operate the most extensive hardwood plant in this city, said recently that he had more than 2,000,000 feet of timber awaiting transportation to Memphis. Others say that they have a great deal of timber awaiting transportation and the difficulty in securing cars is the most serious handicap under which they labor.

At a conference held here last week between about thirty leading representatives of the hardwood manufacturing industry and the traffic officials of the Illinois Central Railroad Company, lumbermen made a very strenuous protest against the lack of cars and appealed for relief. The representatives of the railroad promised to do everything they could to relieve the situation. While practically every firm here is having more or less difficulty in securing enough cars with which to make shipments of lumber, conditions at Memphis are more favorable than at a number of the smaller points in the Memphis territory.

Although there have been no further special developments in the export movement of hardwood lumber, there is a serious handicap in the fact that the Illinois Central Railroad Company is requiring that freight room be engaged at New Orleans before bills of lading will be issued on export shipments. A prominent exporter

said recently that when this firm had lumber to ship to Europe it was making application to the commercial agent of the Illinois Central, and that through bills of lading were issued only in case the freight room was engaged. He stated, however, that this required more than a week, which necessarily entailed a great deal of delay. In cases where exporters are unable to secure freight room at a given date from New Orleans, the Illinois Central as well as some of the other roads are refusing to issue through bills in order that they may prevent a recurrence of such congestion as was witnessed in New Orleans last winter.

Indications are that the Lumbermen's Traffic Bureau will have much work to do this winter. The railroads are making preparations to advance hardwood rates to a point where they will be equal to the rates on yellow pine and then to advance the rates on both one cent additional. An advance is also announced as pending on shipments of hardwood lumber from Memphis to New Orleans. This was put into effect some years ago and was paid by lumber shippers for about two years, when it was ordered cancelled by the Interstate Commerce Commission, which ruled at the time that the advance was unjust and the new rates unreasonable. It remains to be seen what the decision of that body will be at present. There is also an advance to Canadian points on the cards, and the Traffic Bureau will have to handle this also. J. H. Townsend is in charge of the Lumbermen's Traffic Bureau. The Washington end of the hearing, however, will be in the hands of John H. Walker. The lumbermen do not believe that further advances in hardwood rates at this time are justified, and whatever may be the outcome, it is certain that a strenuous effort will be made to have the commission set aside the advances which have been proposed as well as the equalization of hardwood and yellow pine rates.

The exhibit of red gum by the Memphis Manufacturers' Association has been completed and makes a most creditable showing. In addition to red gum, which is shown in almost every style, there are a number of products made therefrom, including high class furniture. It is expected that the exhibit, which is intended to illustrate the beauty and utility of red gum, will prove of decided value from an educational standpoint.

The material enlarging of their yards in North Memphis will enable James E. Stark & Co. to take care of several times as much lumber as under the old régime. The yards are being graded and the necessary roadways are being constructed. This firm is engaged entirely in the wholesale handling of hardwood lumber.

Definite announcement is made that the shops of the Missouri & North Arkansas Railroad Company will be located at Harrison, Ark., and that at least \$200,000 will be spent in equipping.

The W. T. Peter Lumber Company, Madison county, Tennessee, has been incorporated, with a capital stock of \$30,000. W. T. Peter, W. F. Lamb and others are the incorporators.

M. C. Bunn has succeeded T. E. Griffin as general manager of the Southern Lumber & Manufacturing Company at Jackson, Miss. The company, under the new régime, expects to increase its output materially. The plant has not been operated steadily for some time.

W. L. Crenshaw, who sold out his interest in the Bellgrade Lumber Company some months ago, is spending a considerable portion of his time at his sawmill near George, Miss., in order that the plant may be placed in readiness for operation. Mr. Crenshaw has been prominently identified with the hardwood lumber business at Memphis for a number of years, first as a member of the firm of Crenshaw & Cathey, and later as president of the Bellgrade Lumber Company. He is also one of the officers of the Memphis Hardwood Flooring Company.

The Greble-Sine Lumber Company has made arrangements to handle the cut of several mills in Arkansas and Mississippi. W. H. Greble has been personally looking after these arrangements. The company is securing a very nice run of orders.

Advices received here from Paragould, Ark., are to the effect that the movement of timber in that section is the heaviest on record. One day recently there were 119 cars of heading and stave bolts on the tracks of the Iron Mountain there, besides a large number on the tracks of the Cotton Belt line. Owing to the fact that many of the factories at that point were unable to accommodate all the timber which was deliverable to them, it became necessary for the railroad companies to unload considerable timber on their right of way.

George D. Burgess of Russe & Burgess, Inc., has returned from an extended vacation trip which carried him to Chicago, New York, Boston, Philadelphia, Atlantic City and other points of interest. He was accompanied by Mrs. Burgess.

W. N. Wright of the Wright-Bachman Lumber Company, Portland, Ark., has been spending considerable time in Memphis recently. His firm has cut all of its timber on its tract of land near Portland and has suspended operations. It has sold the greater portion of this lumber but still has some to offer and is busy making deliveries on sales already effected.

Among the prominent visitors to Memphis during the past few days has been J. B. Wall of the Buffalo Hardwood Lumber Company, Buffalo, N. Y.

NASHVILLE

There is great interest in this state in forest conservation, this being one of the most important hardwood sections of the country. The Southern Commercial Congress, which met in Nashville last spring, appointed a committee to take steps looking to the formation of a commission to secure uniform and efficient legislation. J. H. Baird has been appointed chairman for Tennessee. At the January meeting of the legislature the Tennessee sub-committee will endeavor to secure a law creating a forestry commission, acquire land and put into operation an object lesson of the most scientific methods for the conservation of existing timber and encouragement of new forest growth.

J. W. Alford & Co., wholesale hardwood lumber dealers, have moved their yards and offices from Jackson street and First avenue to Michigan avenue, and in the new location will have larger yards and better shipping facilities.

The Nashville Lumbermen's Club is making determined efforts to secure the 1913 convention of the National Wholesale Lumber Dealers' Association. A committee consisting of Chas. M. Morford, chairman; T. B. Johnson, Olin White and J. H. Baird, has been appointed to press the matter before the executive committee of the association, and emphasize the cordial invitation issued, as well as to give assurance of co-operation of every member of the local club to make the convention a success.

The Nashville Lumbermen's Club has received notice from the Interstate Commerce Commission that there will be a meeting of the general investigation of weights being conducted by the commission at Memphis, Dec. 13 and 14. President Hamilton Love was authorized to appoint three men to represent the local club at the hearing, and other members will probably attend. The case involves the matter of over weights on car lots of lumber.

E. N. Ralston, secretary of the Ransom Hardwood Lumber Company, Hope, Ark., was a recent visitor in Nashville. Mr. Ralston's company is controlled by John B. Ransom & Co., this city. He reported important progress in the business in Arkansas.

W. A. McLean of the Wood-Mosaic Company, Louisville, made some important purchases for his company while in Nashville recently.

BRISTOL

A largely attended meeting of the creditors of the J. A. Wilkinson Lumber Company, Inc., and J. A. Wilkinson, was held in Bristol last week at the office of Referee in Bankruptcy H. H. Shelton. Mr. Wilkinson's second examination consumed two days and was largely with reference to business transactions with his several brothers and his wife, within a few months before his bankruptcy petitions. It was brought out that he paid his brothers about \$20,000; gave one of them a second mortgage on his large home in Bristol for \$7,500 and paid his wife certain sums of money during this period and that he paid only one other creditor. It was shown that he had given his wife property at Bluefield, W. Va., worth \$8,000 and had paid her money. The creditors are endeavoring to have these transfers nullified. Creditors of the corporation are contesting the \$53,000 claim against the J. A. Wilkinson Lumber Company, Inc., of Price and Pierce, Ltd., of London, contending that it is an obligation of J. A. Wilkinson. The same is true of an \$8,000 claim of the First National Bank of Bristol. Trustee Irving Whaley is getting the assets of the corporation in shape to be sold. They are appreciated at about \$50,000.

Some of the large mills in this section report that their log supply is running short. However, most of them are operating and expect to get in as much time as possible before the advent of the rough weather that makes operation very difficult. The same is true of the smaller mills which are much more dependent upon fair weather. The roads are now in only fair condition and consequently there is not as much hauling as there has been during the past few weeks.

The Tyro River Development Company is installing a new mill in Nelson county, Virginia, where it has purchased a tract of timber.

Work has been begun on the Black Mountain railway, in western North Carolina, which is being built to open up a new area of valuable hardwood timberland.

The band mill of the Peter-McCain Lumber Company is running regularly. The company is getting many fine logs from its timberland in the Holston mountains, twelve miles east of Bristol, and within the next year will cross into Carter county, Tennessee, where it recently paid \$50,000 for a new tract of timber.

Investigators representing the forestry department at Washington were here this week, accompanied by Congressman Sam R. Sells, in regard to timberlands in east Tennessee that are to be purchased by the government for the Appalachian Forest Reserve. Congressman Sells said that he was confident that the government would shortly make extensive purchases in Johnson county, which will be sufficient, he thinks, to justify an appropriation for a new macadamized road out of that section connecting with the highways leading to Bristol.

LOUISVILLE

J. E. Barton, the new state forester of Kentucky, who spoke at a recent meeting of the Louisville Hardwood Club, has been elected an honorary member of the organization. He is one of the few men outside the lumber business who have been so honored. As the state will establish a nursery in Louisville, Mr. Barton will probably have an opportunity to meet with the club frequently. The organization will have its annual meeting on Nov. 5. Edward L. Davis of the E. L. Davis Lumber Company, is regarded as a likely candidate for the presidency.

The Rotary Club of Louisville is a rather

unique organization, being one of a number of similar bodies scattered over the country. Its unusual feature is that only one representative from each business may be a member. The lumber and allied trades are well represented, however, among those elected recently being Edward L. Davis of the Edward L. Davis Lumber Company; S. E. Booker of the Booker Box Company; D. E. Kline of the Louisville Veneer Mills; Frank B. Russell, a leading stave manufacturer, and Alfred Struck, an interior finish man. G. D. Crain, Jr., secretary of the Hardwood Club, is also a member.

In view of the brisk demand for mahogany continuing, and the supply of African logs in the Liverpool market being unusually small, local mills are continuing to run day and night. The demand for mahogany veneers, which has been rather slow, has shown improvement, and this branch of the trade is now looking up. The effect of the mahogany boom has been to stimulate the demand for quartered oak, and also to help the status of Mexican mahogany.

Friends of Col. Clarence R. Mengel, president of the C. C. Mengel & Bro. Company, have congratulated him upon the fine recovery made by his son, Clarence R. Mengel, Jr., who was recently operated on for appendicitis.

One of the worst blows ever received by Mart Brown of the W. P. Brown & Sons Lumber Company, was the defeat of the Giants by the Boston Red Sox in the world's series. Always an ardent Giant fan, Mr. Brown was especially fond of Mathewson, and when Matty was beaten in the final game of the great series, Mr. Brown suffered almost as much as the big twirler.

C. M. Sears of the Edward L. Davis Lumber Company, who has returned from a trip to trade centers in the Middle West, reports an improved demand from the furniture factories.

R. Carnahan, the local timberman, is among those who have secured control of the Kentucky River Timber & Coal Company, which will develop 40,000 acres of timberland in Harlan, Leslie and Clay counties. The property will be opened for development in the near future.

ST. LOUIS

Thomas E. Powe, president of the Thomas E. Powe Lumber Company, accompanied by Mrs. Powe and their little daughter, left last week for Cheraw, S. C., on a visit to his parents. They will be absent for about two weeks. Mr. Powe, previous to his departure, stated that there was a good demand for ash, in fact his house is receiving about all the orders for this wood that it can take care of. Cypress conditions also are improving and orders are coming in nicely for this item.

W. W. Dings, secretary of the Garetson-Greaseon Lumber Co., states that the only thing that bothers his company is the car shortage. There does not seem to be any likelihood of a betterment in the situation. The company is getting only about ten per cent of the number of cars it requires at the mills. Mr. Garetson, who has been absent on the Pacific coast for the past three months, has arrived home from his trip.

E. W. Blumer, sales manager of the Lothman Cypress Company, has gone East on a selling trip. He will visit Pittsburgh, Cleveland, Buffalo and other large cities before returning home. Previous to leaving, Mr. Lothman said that the trade in cypress is splendid. Orders were coming in in good numbers and prices were satisfactory. The Lothman Cypress Company is well provided with stock and therefore is able to take care of all orders coming in. Mr. Blumer said that a great deal of business was coming to this market which generally goes to other points and since the fact that stocks are large here is pretty well known to the trade, dealers wanting cypress are looking to this market for their supplies.

E. W. Luehrmann of the Chas. F. Luehrmann

Hardwood Lumber Company reports that the company is quite busy, and nearly every item on the hardwood list is being called for. The company was very fortunate in having a good stock of everything on hand before the acute stage of the car shortage came so that it has little difficulty in filling orders.

A fairly good volume of business is reported by George Cottrill of the American Hardwood Lumber Company. He feels very much encouraged over the present situation and with the outlook for the future. Shipments from the local yards are going out all right and owing to the good sized and well assorted stocks carried the company is not bothered by the car shortage.

A luncheon was given at the City club by the Lumbermen's Exchange of St. Louis on Oct. 8, at which the improvement of the inspection of lumber was gone over and plans formulated for a continued improvement. It was decided at the meeting to hold monthly luncheons on the third Tuesday of every month, where affairs of the exchange could be discussed. Resolutions on the death of Christian F. Leibke were presented and adopted.

MILWAUKEE

The Western Parlor Frame Company has been incorporated with a capital of \$25,000 in Plymouth by George C. Maas, August Albrecht and Henry Clemens. The company will operate the former Peter Wolf plant at Plymouth.

The Tomahawk Box Company recently suffered the total loss of its plant at Tomahawk, by fire, which caused a damage of \$40,000. The insurance covers about \$30,000 of the loss.

The Plymouth Veneer Company of Plymouth has filed a voluntary petition of bankruptcy, giving its liabilities as \$38,801.84 and its assets as \$63,704.11.

The ownership of the Hankwitz Broom Handle Company of Merrill has been acquired by Clifton R. Lee of Lincoln, Neb. After an inventory has been taken, the plant will continue to run as heretofore.

The first steps to establish a course for forest rangers at the University of Wisconsin have been taken with the appointment of Frank B. Moody, assistant state forester of Wisconsin, to the position of assistant professor of forestry at that institution.

Improvements to the plant of the Northwestern Manufacturing Company's plant at Fort Atkinson, are being made at the present time. A fourth story to the chair shop is being erected, also a new dry-kiln. The individual motor system is being installed throughout the plant.

Mayor Robert Conuor of Marshfield, has just returned from an extended trip through Laona and Crandon with a report of continued activities in the lumber circles and increased demand

from all sources. The Roddis Lumber and Veneer Company of the same city is installing another \$4,000 dove-tail machine in its plant, which is running full swing.

DETROIT

Never before in the history of the city has the hardwood flooring trade been in such a booming condition as it is at the present time. Although working overtime the mills are away behind orders which continue to pour in from all sections of the country.

"For the first time in the history of this company, over forty years, we are now running a ten-hour day," said John Lodge, secretary of the Dwight Lumber Company, to a HARDWOOD RECORD correspondent. "At that we are from thirty to sixty days behind on orders, the demand for our special brand of thin flooring being such that we cannot keep up to it. The increase of from two to six dollars a thousand on rough stock has compelled us to increase the price of our finished product; but, although the increase on our three-eighth and half-inch stuff has averaged two dollars a thousand, the increase hasn't affected the demand. I don't see how business could very well be much better."

Thomas Forman of the Thomas Forman Company, reports that similar conditions prevail in the flooring mill at his plant. He says that prices are very satisfactory and the volume of consumption especially good. Mr. Forman says that his company's new mill at Heidelberg, Ky., will not be ready until about Feb. 1 next year, as there has been considerable delay owing to the difficulty in securing building material. The new mill will have a capacity of about 10,000,000 feet a year.

J. M. Clifford, the largest exclusive hardwood dealer in the city, is a busy man these days. In addition to supervising his large trade he has entered politics and is the Democratic nominee for Wayne county treasurer. Regarding the hardwood market Mr. Clifford said: "Hard and soft maple has been in steady and strong demand in Detroit the past two weeks. The price is about \$2.50 a thousand higher than it was the corresponding period last year and it is bound to go still higher. White oak is also in strong demand. Other lines are normal with prices satisfactory. The automobile factories are all very busy and are big buyers of hardwoods. The market generally is in very good shape."

George I. McClure during the past two weeks moved to his new hardwood lumber yard at Clark avenue and Plumer street and has given up his office in the Chamber of Commerce building. He reports that trade has been excellent. The demand has been strong for white oak, birch and maple.

desirably high figure. Quartered oak is generally reported as showing increased firmness. Red gum, on the other hand, is not one of the strongest articles on the local market, although sap gum is being taken wherever offered, by the box manufacturers.

The consensus of opinion among the local trade is that present favorable conditions and the present range of values will not show any unfavorable change for a good many months to come.

NEW YORK

The hardwood market at New York shows a strong condition with prices well held and tending upward on good grade lumber and supplies not over plentiful at both ends of the line. The car situation is preventing prompt shipment, while holders of stock are holding out for top prices and quick shipments. Such stock as is available at shipping points appears to be in strong hands and the entire market gives evidence of continued strength for the balance of the year.

BUFFALO

The hardwood trade is improved over a month ago and customers are buying much more freely now than they did at that time. The furniture factories are all busy, but the implement concerns have begun to slow down a little. Stocks in Buffalo yards are large and much better assorted than early in the season. The favorable railroad location of this market makes the car scarcity a lesser factor here than elsewhere.

Most all hardwoods share in the activity at present, oak to a larger extent than most others. Quartered has already begun to show more strength. It is aided by the stiff prices now prevailing in mahogany, which makes the trade turn to some other wood. It is difficult to find mahogany in any quantity except at a very high price. Birch and maple are in pretty good demand and beech has picked up, being used considerably for flooring. Ash is in improved sale. Poplar has become a little more active.

PHILADELPHIA

Lumber trading has maintained a stiff activity during the last fortnight, and a robust business is anticipated for the winter months. Buying shows improvement among the wholesale consuming industries, and there is no sign of diminished requisitions on the railroad boards. The box makers continue busy, which indicates a brisk business in other lines than those of lumber users.

An optimistic feeling as to the outlook prevails everywhere, regardless of the approaching presidential election. The hardwood market stands practically the same as it did a fortnight ago. Oak is the leader; red and white oak is scarce, with prices climbing; ash is making a stride forward; chestnut is in strong demand, especially in one inch No. 3 common; sound wormy chestnut keeps a good reputation; there are many calls for cherry, birch and beech, and prices hold firm. Poplar remains steady, with strong activity in low grades; hickory has numerous inquiries; cypress is more quiet, and a more vigorous trading is noticeable in mahogany and veneer.

PITTSBURGH

Hardwood lumbermen are feeling about forty per cent better than at this time last year. Things have been coming their way the past six months. It begins to put a little of the old-time spirit in their conversation and everybody is on the hopeful toboggan. Prices are O. K. Stocks are low and hard to locate where strictly

The Hardwood Market

CHICAGO

Representatives of out of town firms continue to be notably scarce in the local market. Reports from leading manufacturers and wholesalers in other hardwood centers indicate that in a great many cases salesmen are still off the road and are circulating among mills in an endeavor to locate sufficient dry stock to fill immediate demands.

A few members of the local trade state that there is still a tendency among some of the buyers to regard the present strength of hardwood values as temporary and that in some cases such buyers have expressed themselves as

believing that a few months will see a slump in hardwood prices. However, this idea is not prevalent and the majority of bigger buyers in the city are doing all they can to secure sufficient hardwood stock at present prices rather than run the risk of paying higher figures at a later date.

Building operations continue to be active, while the same can be said of flooring factories, piano factories, furniture houses and box manufacturers.

Main oak is bringing prices that in some cases rather stagger buyers in view of the easy market which they have been enjoying for several years. However, it can be said that oak still can go some distance before reaching an un-

fine lumber is wanted. This is particularly true of white oak.

The furniture manufacturers are making heavy call upon wholesalers for good stock and every bit of lumber of this kind is being grabbed up quickly and paid for with a vengeance. Purchasing agents are taking no chance on leaving their plants exposed to a shortage of consuming lumber this winter, and are making hard efforts to overcome the car shortage by getting in enough orders to assure their employers of plenty of material until spring. The yard trade has been good but easing off a little as the inventory season approaches. Mixed hardwood has been a big factor with the coal mining industry and is likely to continue so for a long time.

BOSTON

Opinions differ somewhat as to the condition of the hardwood market in Boston. Some dealers state they are in receipt of a good volume of business while others claim they have not been doing as much as they should. Although the shortage of cars is still a serious problem, the average buyer has not been willing to anticipate his wants in any way. Some large buyers in this section who placed orders some months ago, calling for from two to six cars of lumber a month, have not been willing to take in more than one-half of the lumber they contracted for. While this condition is found, it is also true that some buyers are asking for larger lots than they had previously placed orders for.

Generally speaking, furniture manufacturers are not busy, although a few of the plants are working full. The piano manufacturers in this section appear to be running full. They have been fair buyers of lumber. All reports from manufacturing centers indicate a small supply of hardwood lumber. Holders are not anxious sellers and insist upon asking prices. The offerings of plain oak are light and the demand has ruled rather active of late. In some cases for ones and twos, one inch, as much as sixty dollars is being asked, but buyers are not willing to pay this price with any freedom. Quartered oak is firm with a very fair demand. A fair demand is noted for both brown and white ash. Some manufacturers are asking slight advances but buyers do not appear willing to pay a higher price.

BALTIMORE

None of the favorable conditions that have developed in the hardwood trade in recent months is in the slightest degree modified. On the contrary, all the advantages gained are being maintained, and there are indications that the improvement will become even more pronounced, for the headway scored of late was made in the face of relatively small requirements, while the next few months are certain to bring out calls to meet the wants of the spring trade, when even greater activity may be looked for. The movement might be larger still but for the fact that high freight rates and other circumstances compel the millmen to adjust the quotations upon a new basis, which causes some of the intending buyers to hold off in the expectation that they may be able to get better terms. The millmen, on the other hand, express the fullest confidence in the future, contending that the range of values is likely to be higher than it is at present, and that the dealers are making a mistake when they wait. Oak and other woods in general use are in brisk demand. Even the lower grades of chestnut are sought and the distribution is rapid enough to dispose of the output of mills without the slightest difficulty.

With regard to the exports, the preponderance of opinion is favorable. Shippers report that they are getting many orders and that the current figures are such as to encourage shipments. The heavy forwardings to some of the foreign

ports due to a raising of the freight embargo, caused a slight easing off for a time, but the quotations have worked back to the former figures. What continues to trouble the exporters is the rise in the foreign freight rates. The advance cannot be absorbed by the shippers and must be borne by the buyers. The latter, of course, object to paying the advance, and there is some holding off, but the increasing requirements are forcing this element into the market, and there is every reason to expect that a good business will be done. Inability of the exporters to make contracts with the steamship companies for the next year tends to augment the uncertainty and has its share in retarding the movement, but this question must be settled before long, and as there is every prospect that the range of values in the domestic market will remain high and the demand free, the foreign buyers must come to terms or do without American hardwoods.

COLUMBUS

Activity in every variety and grade of hardwood still prevails in central Ohio, while the demand is good both from manufacturing establishments and retailers. Considerable inconvenience is caused by the lack of cars, and lumbermen believe there is little or no hope for an improvement in the situation. The pleasant weather which has prevailed for the fall has aided building operations, and as a result there is considerable activity in that line, which creates a good demand for many varieties of hardwoods. Manufacturers engaged in making furniture, implements and vehicles are in the market for larger stocks. Dry stocks in every locality are short and the outlook for the future is good.

The demand for the lower grades is good and sound wormy chestnut is especially strong. There is also a good demand for the lower grades of oak and basswood. Automobile factories are now buying the wide sizes of poplar for bodies. Quartered oak is in good demand and prices are fair. There is a very good demand for plain oak, both white and red, and firsts and seconds are quoted at the Ohio river at about \$52. Chestnut is one of the strongest points in the market. Basswood is moving well in all grades. The demand for ash is better and prices are firmer. Poplar is becoming better with the result that accumulated stocks are being exhausted. Other hardwoods are unchanged.

TOLEDO

The hardwood situation has not changed materially during the past month. Prices remain high with an upward tendency but dealers, although compelled to use up their yard stock more closely than is generally considered expedient, steadfastly refuse to buy more than is necessary for present needs, holding fast to the belief that prices will drop. Local yards are shorter than usual owing to this hand-to-mouth policy and the extremely heavy drafts that have been made upon their resources, but are still able to take care of orders in fair shape. The car shortage is being severely felt by local lumbermen, shipments coming in slowly not only from the South but from all points, even in local territory.

Toledo is still maintaining its good record of the summer in the building line and, regardless of the lateness of the season, new allotments are being opened and residences built. Houses are under construction in all parts of the city and some enormous investment structures are being projected which will be started this fall. The homes under construction are all of a high order and require large quantities of hardwoods.

Furniture and vehicle factories are running well and sending in good orders for hardwoods. This is also true of sash and door concerns.

Taken altogether there is little cause for complaint among local hardwood dealers.

INDIANAPOLIS

Trading has been active in the local hardwood market during the last two weeks, but there has been some delay in shipments and receipts owing to car shortage. The car situation is becoming acute, although the railways appear to be trying to keep cars moving promptly and to obtain as much efficiency as possible from each car.

Hardwood prices are stiff, particularly poplar and all grades of oak. Practically all lines are in fair demand. There is a good demand for hardwoods and veneers for interior finish, the building season being quite active owing to the excellent weather prevailing.

MEMPHIS

The hardwood market continues in a healthy position. Manufacturing operations have been on a somewhat elaborate scale during the past few weeks but the large amount of lumber shipped out has resulted in little or no accumulation. Consequently the market is well maintained as to prices and the tone is good. The demand is very satisfactory for the lower grades of cottonwood and gum which are being used extensively in box making as well as in other lines. The upper grades of gum, both red and sap, are in very good call and no particular difficulty has been experienced in effecting sales of the higher grades of cottonwood. Ash is in active call and prices are good. The automobile manufacturers as well as the makers of other vehicles are showing quite a preference for ash. A considerable portion of the local output is being shipped before it has had time to thoroughly dry. The quartered oak market is in satisfactory shape. Plain oak is in good demand and values are firm thereon. There is no big supply of either plain or quartered oak for sale. Activity in building circles throughout the West and Northwest as well as throughout the Central South are resulting in a good demand for cypress. The market on this lumber is in good shape. The lower grades, however, are relatively firmer than the upper. The export demand is good but the handicaps imposed upon lumber exporters by the transportation companies, including those handling freight by both rail and water, have restricted this business to some extent.

NASHVILLE

The demand for hardwoods continues good in the Nashville market, and manufacturers and shippers are kept busy taking care of the wants of their customers. The car shortage on all railroads is interfering with the inbound and outbound movement of logs and lumber. There is a good demand for the various lines of oak, the main difficulty being in securing supplies to meet demands of customers. Ash, hickory, chestnut and other hardwoods are in fair demand. Poplar is moving better. Prices are steady.

BRISTOL

Hardwood lumbermen of Bristol report trade somewhat brisk. There is a scarcity of stocks and many of the mills are oversold. It is believed that prices will now steadily advance and that much better conditions for the lumbermen are just ahead. About all the mills are running and shipments are fair. The railroads say that traffic is now heavier than it has been for several years and all are getting more transportation equipment as rapidly as possible, to avoid serious car shortages, but new equipment is

coming in slowly. It is now difficult to get an adequate supply of cars.

LOUISVILLE

Business with local hardwood concerns continues excellent, and the demand is holding up right on the eve of the national election in even better shape than had been expected. The prospect of a scarcity of material and a congestion of traffic is having more influence with the buyers of hardwoods than the question as to whether the shooting of Col. Roosevelt will swing the election in his favor. Stocks are not nearly so plethoric as they were a few months ago, and items which were comparatively plentiful then are really hard to get now. The mahogany people have been shipping lumber green from the saw to consumers who demanded it as soon as it was manufactured, and while condi-

tions in the domestic hardwood trade are not that stringent, they are "tight" enough to suggest that consumers who want their lumber just so as to age, widths, etc., will have a harder time filling their wants satisfactorily than heretofore. There has been a fine call for quartered oak, which remains one of the pleasant features of the situation. The demand for quartered oak strips, which was not particularly good until a few months ago, has cleaned local concerns almost completely, and with the flooring manufacturers active strips of all kinds, both plain and quartered, have found a ready outlet. Poplar is reported to be moving actively, and cottonwood and chestnut are also good sellers at present. There is hardly a dull item on the list. Prices are satisfactory and strong.

ST. LOUIS

The hardwood market is quite active at this point, in fact it might be said to be enjoying a boom. The improvement which has been going on for some time has now reached a high point. Nearly every item on the hardwood list is being called for, especially the lower grades of oak, cottonwood, gum and poplar. This is particularly pleasing to the hardwood dealers for there is no trouble in disposing of the upper grades. With the increase in the demand, prices have gone up. The big trade in St. Louis is attributed to the car shortage in the South, which has been diverting trade to this center, where stocks are in pretty good condition and where shipments can go out without much delay. Although mills in the South report that their stocks of dry lumber are very low, mill operations are going on while the weather is pleasant. The cut is fairly large, but available dry lumber will be scarce until next spring.

NEW ORLEANS

Hardwoods, especially in the lower grades, continue strong and in good demand, and as stocks are low, good prices are obtainable. The car shortage is felt to some extent, although not as seriously as by the pine and cypress trade. Factory buying is active, particularly by the furniture manufacturers.

In the export trade the continued heavy movement indicates that the accumulation of delayed old business is greater than estimated, and the apparent progress in cleaning it up is to a considerable degree due to the fact that the cotton movement in the territory tributary to New Orleans is two or three weeks later than anticipated. Demand and possible business is abundant, and practically unlimited in the sense that it exceeds the capacity of any possible steamer service. The rush of forest products to the port in excess of the facilities for lifting them creates such a congestion in the railroad yards as to induce the roads to place restrictions on the movement from the interior. The result is that shippers are compelled to take orders and rely upon their ability to get them forward, and in many cases disappoint their customers.

The outlook for the hardwood log business is even more discouraging as that traffic is even less tempting to the steamers than lumber, and the favorable business abroad which is in sight has its logical time of shipment just at the time when the cotton movement is in full swing.

MILWAUKEE

The scarcity of stocks and the shortage of cars are causing considerable concern in the local hardwood trade at the present time. Business is entirely satisfactory, but prompt delivery on orders seems to be next to impossible. Wholesale lumbermen say that stocks on hand at the northern mills are unusually light, while

it seems that dry stocks at the local manufacturing plants and in dealers' hands are at a low stage. Prices are holding firm and in some instances are higher.

Fall building operations are fully up to expectations and as a result the local sash and door concerns and interior finishing plants are busy. Much fall building is going on in the country districts, now that farmers are nearly over with their rush of fall work, and dealers are placing good orders for stocks. The local furniture concerns are doing a fine business and are placing some good orders. General industrial conditions in Milwaukee have been showing considerable improvement recently and this is resulting in a better factory trade.

Birch is in good demand and is moving freely, but stocks are decidedly low. Maple is active and is holding firm. Stocks of southern hardwoods are hard to get, although demand is brisk for plain red oak and quarter-sawn white oak.

DETROIT

The local hardwood market is in very good condition. Dealers report a very fair volume of business with satisfactory prices prevailing. The demand for hard and soft maple continues, with indications in favor of a further increase in price. There is also a healthy demand for white oak while birch is also moving more freely. The automobile factories, large buyers of hardwoods, are busy and this prosperity is shared by the dealers. One of the big features of the market is the boom existing in the flooring trade. The big mills are working overtime, but are unable to catch up to orders. Prices on hardwood flooring have advanced an average of two dollars a thousand, owing to a corresponding boost in the price of rough stock. The increased price of the finished product, however, has not diminished the flood of orders.

LIVERPOOL

Business keeps wonderfully good and prices are still advancing. Stocks are moving promptly and several of the yards have never before been seen quite as empty as at the present time. The mahogany position is exceedingly firm—quite the firmest spot—and there is every sign that even higher figures will be attained at the next auction sales. The question asked by almost every one is "How much longer will these advances go on?" The consensus of opinion among the leading lumbermen seems to be that they will keep on at least all of next year. So much depends upon the freight charges and as most of the shipping companies are booked far in advance for all their available freight room, there does not seem to be any prospect of an early fall.

Round ash logs are exceedingly firm; the second growth logs are fairly well stocked, and all logs are being promptly sold at good values. First growth logs are practically non-existent in first hands; only a few logs of wormy wood are being offered, and even this stock is selling remarkably well. Some large orders for ash lumber are being placed, 1½", 2" and 3" being the thicknesses most in favor.

Very few logs of round hickory are on the market but good values are realized on whatever is offered. Birch is good, though a fair stock of Halifax wood is on hand. Prices are exceedingly firm. Pitch pine is being sold at almost incredible figures and the market is practically without any stock of prime quality.

Round oak logs are being sold in large quantities, especially if really white in color. The market for quartered oak lumber also seems good and prices are exceedingly firm. Dimension oak is coming forward better, though the orders are very old ones. Wagon specifications are wanted very badly and buyers are anxiously awaiting shipments.

LUMBER WANTED

4/4 & 5/4 No. 3 and 4 Com. Poplar.
4/4 No. 3 Basswood.

WHY DO more than 320 of the most prominent and successful lumber manufacturers exchange nearly \$26,000,000 of indemnity against fire loss at

Manufacturing Lumbermen's Underwriters

B E C A U S E !

BECAUSE it is the oldest and strongest inter-insurance association among lumbermen, being now in its fourteenth year.

BECAUSE \$728,910.41 cash savings have been returned to members.

BECAUSE \$756,787.21 cash surplus, owned entirely by the members, has been accumulated.

BECAUSE \$2,012,427.96 has been paid in losses under prompt and equitable adjustments without resort to quibbling or technical controversy.

BECAUSE it was the first to settle lumber losses on a market value basis.

BECAUSE the regular, frequent and thorough inspections given the plants of all members help them to prevent fires, thus materially reducing both the fire waste and the cost of indemnity.

MISCELLANEOUS

BAUGHMAN'S BUYER AND SELLER

The twelfth edition of the handy book for lumbermen just out, revised, improved. See the new side tables, the metric system, tapering timber, to figure narrow flooring, moulding, box work, etc. Five sections, each indexed and a separate work. Every page worth the price of the book. The book that talks to lumbermen. Not millions, but more than seventy-five thousand copies have been sold to lumbermen. Bound in red flexible cover, \$2.50 per copy prepaid. Orders filled day received. Address

H. R. A. BAUGHMAN, Indianapolis, Ind.

OAK, POPLAR, ASH

and all other hardwoods, in all grades and thicknesses, can be readily sold if advertised in the Wanted and For Sale section of HARDWOOD RECORD. If you have a large stock you want to sell try a few lines in this department and see what a lot of inquiries they will bring you.

WANTED—HARDWOOD LUMBERMEN—

to try the Gibson Tally Book. The three-throw aluminum tally ticket cover accommodates any form of ticket desired. The use of the special triplicate tally ticket supplied, printed on waterproof paper with carbon backs makes tallies unalterable. For durability, convenience, accuracy and for systematizing the inspection of lumber the Gibson tally method can't be beat.

Special forms of tally tickets mailed on application. Covers sold on approval to responsible concerns.

HANCHETT 218 BAND SHARPENER—Back View
(Solid—Rigid—Free from Vibration)

THE FILING ROOM

Are you after results?
Do you want to increase your earnings?
No matter what your present equipment may be you can not saw good lumber and a lot of it unless your saws are kept sharp and in good condition. To have good sharp free cutting saw teeth a minimum saw kerf at a

maximum speed requires thoroughly modern saw fitting tools.

Remember, we have equipped a majority of the largest modern saw mills including the U. S. and Japanese Governments. There is a reason why these Governments specified Hanchett Filing Room Machinery.

Ask for Catalog No. 11, Just Out. 104 Pages

HANCHETT SWAGE WORKS, Big Rapids, Mich., U.S.A.

Hanchett Swage Works, Big Rapids, Mich.

Please send me your catalog and a 1 oz. bottle of Brazing Fluid, free of all expense to me.

Employed by _____

Equipment needed in filing room _____

Name _____ State _____ City _____

If you attempt to dry two-inch oak in your kiln in fourteen days the result will probably resemble the above illustration.

The lower picture is from a photograph of two-inch oak dried by the Grand Rapids Veneer Works Process in fourteen days, and every plank as sound as the sample.

The absence of checks is not the only saving due to this process. The lumber is straight, soft and free from sap or acids.

For a small sum of money your old kilns can be converted to G. R. V. W. Process Kilns, with a guarantee to give the results above described.

veneers AND PANELS

Ahnapee Veneer & Seating Co.

HOME OFFICE, FACTORY AND VENEER MILL, ALGOMA, WIS.
 VENEER AND SAWMILL, BIRCHWOOD, WIS.

We manufacture at our Birchwood plant single ply veneers of all native northern woods and deliver stock that is in shape to glue.

From our Algoma factory, where we have specialized for twenty years, we produce panels of all sizes, flat or bent to shape, in all woods, notably in Mahogany and Quarter-Sawed Oak.

We make no two-ply stock, and do not employ sliced cut quartered oak. Our quartered oak panels are all from sawed veneer.

Every pound of glue we use is guaranteed hide stock. We do not use retainers. Our gluing forms are put under powerful screws and left until the glue has thoroughly set.

If you seek a guaranteed product that is the best, based on results accomplished by most painstaking attention and study of every detail, combined with the use of the best stock and an up-to-date equipment, our product will appeal to you.

If you are a "price buyer" we probably cannot interest you.

Custom Mill Work, Storage, Inspection

ON

Foreign Fancy Woods, Mahogany, Cedar, Circassian

We receive the logs, store or warehouse them, manufacture them into lumber, cut or saw veneers, pile and store the product, and ship via any railroad. Also furnish inspection returns on logs or lumber. Can furnish accommodations and economies which it is impossible to secure elsewhere.

While we do not buy or sell for our own account, we always have on our yards parcels of plain and figured African, Mexican and Cuban Mahogany, Circassian Walnut and Cedar logs, placed here for sale by direct foreign shippers, from which advantageous purchases can be made.

**“Everything in Lumber—
Hardwood a Specialty”**

J. GIBSON McILVAIN & Co.
1420 Chestnut Street PHILADELPHIA

Take a Look at What The World is Doing

Include in your survey the timber field of the West. In the great out-of-doors on the Pacific Slope and Inter-mountain country are millions of acres of the finest timber that ever grew. It can be bought at low prices.

Your survey will show great fleets of cheaply operated steam schooners engaged in carrying lumber to the world's markets.

Broadening the scope of your vision you will see the builders of the Panama Canal are completing their work, the greatest engineering feat of history.

There is a connection between the forests of the west, the lumber carrying vessels, the Panama Canal and the world's lumber requirements.

Lumber is now being shipped from the Pacific Coast to the Atlantic Seaboard by rail, the freight charge being about \$20 a thousand feet. After the Canal has been completed and opened for traffic it can be carried at a cost of \$6 to \$8 a thousand feet and the voyage will not take any more time than the transcontinental rail trip.

The timber you buy during the next eighteen months will share in the great rise in value that will follow the completion of the Panama Canal.

Now is the time to repair previous neglect of western opportunity. We are convinced an investigation by you will be followed by an investment.

We will help you investigate.

"It is not what lumber costs you, so much as what you can get out of it, that decides its value for your work."

OUR OWN MANUFACTURE

**Something New
For Your Factory Floors**

Utility Joined With Economy

We are now manufacturing what we call a No. 2 Factory grade of Hardwood Flooring which can be used successfully in factory buildings where good wearing qualities rather than appearance are required. This Flooring is made from the hardest portion of the log, and while the Flooring shows the heart defect to a considerable extent, nevertheless it will wear with wonderful durability.

It is 13 1/2 x 2 1/4" face, and the Flooring is kiln dried, hollow backed, bored, end matched, steel scraped and bundled.

Write us about it. This is a grade of Hardwood Flooring you should know about. Address MITCHELL BROTHERS COMPANY, Sales Department, CADILLAC, MICHIGAN.

A floor to adore

For thirty-three years Wilce's Hardwood Floor-
ing has been among the foremost on the market
and because it stands today "unequaled" is the
best evidence that its manufacturer has kept
abreast of modern methods and the advanced de-
mands of the trade. To convince yourself of the
above statements, try our polished surface floor-
ing, tongued and grooved, hollow backed, with
matched ends and holes for blind nailing—you'll
find it reduces the expense of laying and polishing.

Our Booklet tells all about Hardwood Flooring
and how to care for it—also prices—and is free.

500 Copies Sold Within a Week After Prospectus Was Issued

Hardwood Record announces the issue on January 1,
1913, of an Authoritative Commercial and Scientific Book

American Forest Trees

By Henry H. Gibson, Editor *Hardwood Record*
Edited by Hu Maxwell, Wood Utilization Expert

The Work Involves :

First: A botanical description of the more than 300 species of American forest tree growth.

Second: A physical description of the wood of these species.

Third: A recital of the chief uses of all important American woods, together with suggestions of advantageously broadening their uses.

Fourth: Complete information concerning the range of growth of all varieties.

Fifth: Related trees are logically grouped according to families and spe-

cies; important species covered in substantial detail, and brief mention of the woods of minor importance.

Sixth: Scientific name of each tree is recited, as well as the various common names by which it is recognized in different parts of its range of growth.

Seventh: The properties of the various woods are carefully analyzed, particularly weight, hardness, stiffness, strength, elasticity, toughness, color, figure, and seasoning and lasting properties.

☐ The book will contain between 650 and 750 pages, will be printed on the best quality of enameled paper, and handsomely bound in half leather, dark green roan back and corners, with basket cloth sides, silk head-bands, gold stamping on the back, and gilt top.

☐ The work will be illustrated with more than 100 full-page pictures on plate paper in sepia, outlined in orange, from photographs, covering all the chief commercial varieties of virgin forest timber growing in the United States; and also with numerous engravings, from drawings and photographs, showing leaf and flower forms, etc.

☐ The price of the work is \$6.00, delivered by express or mail, and is sold only on subscription.

☐ An order blank, and a prospectus, showing the character of the paper, size of page and style of printing will be forwarded on application.

Address Book Department, HARDWOOD RECORD

Put the Hardwood Club On Your Mailing List

When you are in a hurry to get lumber, and want it just right as to price, grade and other features, don't waste time and effort sending out a big batch of inquiries to dozens of firms; make sure of getting quick action by letting the Louisville Hardwood Club handle it.

When you ask for quotations from the club, you get prices from all its individual members who handle that particular kind of stock, thus assuring yourself of receiving offers from everybody in this, the leading market of the Hardwood Belt, who is in a position to supply your wants.

Of special items, which a single firm may have trouble in quoting on, you can always get a car or two in Louisville, for by our co-operative service the stocks of various members may be drawn on to make up the necessary quantity of lumber. It is handled through one house, however, thus making the transaction simple and convenient for you.

There are a lot of points about Hardwood Club service that it would pay you to find out about. Don't be too bashful to let us know when you are in the market.

machine on the market today. This, in itself, proves that DEFIANC machines are what their advertising claims them to be. From our advertising in its very incipency we claimed them to produce results at a lower cost of production, to turn out clean, smooth work, and no waste of raw material, to cause less trouble to their operators, and to cost less in proportion to their actual worth than all kindred tools.

**ECONOMY IN PRODUCTION
MEANS INCREASED PROFITS**

We are ready to stand by all our advertised claims and have done so for all these years. That's why DEFIANC machines are found wherever wood is worked.

Write us TODAY for catalog and prices

Room 1230 Corn Exchange Bank Bldg., Chicago, Illinois

SAVE YOUR MONEY BY USING THE

RED BOOK Published Semi-annually in February and August

It contains a carefully prepared list of the buyers of lumber in car lots, both among the dealers and manufacturers.

The book indicates their financial standing and manner of meeting obligations. Covers the United States, Alberta, Manitoba and Saskatchewan. The trade recognizes this book as the authority on the lines it covers.

A well organized Collection Department is also operated and the same is open to you. Write for terms.

YOU pay a *little* more for our hardwood lumber than you do for many others, but it's worth *much* more.

With our modern and first-class equipment and expert operatives, we couldn't make bad lumber if we tried to, because the *quality* and *size* of our virgin tough mountain white ash, red birch, yellow poplar, buckeye, maple, red oak, cherry and basswood, averaging less than three logs to the thousand, and 95 per cent sixteen feet, is the best type of hardwood timber growth in the United States, and shows a larger percentage of *firsts*.

If you are a discriminating buyer let's get acquainted.

Review and Outlook

General Market Conditions

Trading in hardwoods the country over goes on with great activity. Any variety of lumber of anything of desirable manufacture and dryness finds a ready market at a highly satisfactory valuation. About the only two items that manifest any weakness, and this not seriously so, are firsts and seconds red and sap gum and No. 1 common and better poplar. Practically every other item is scarce and strong.

The car shortage is the one serious thing that militates against a highly satisfactory state of affairs in the entire range of the hardwood business. Several of the southern lines have absolutely refused the use of box cars for lumber shipments and are unable to supply flats and gondolas in sufficient quantities to move half the stock offered. It is anticipated there will be a relief from the car shortage pretty soon, but until this obtains, difficulty will be encountered in making deliveries.

Plain oak of all grades continues to be the scarcest item in all trade centers of the country, and very substantial advances for desirable lots are being asked and obtained.

Nearly all the northern hardwoods in shipping condition are pretty well out of the market. The same situation obtains with a good many varieties of southern hardwoods.

The veneer and imported wood business is active and quite a number of plants are running overtime to take care of their business. Prices are fairly satisfactory, but comparatively are still much lower than lumber values.

Mahogany lumber of all varieties is remarkably scarce and in active demand, and high-class Cuban wood is practically out of the market. There is a good demand for Circassian as well as the majority of other fancy woods.

Hardwood flooring manufacturers have the situation well in hand. There is a good demand at satisfactory prices and in place of the usual over-stock in factory warehouses, the market is over-sold in both oak and maple flooring to a considerable extent.

The handle trade is in a fairly satisfactory condition.

Building operations for October in the chief commercial centers, as shown in the news columns of this issue, are highly satisfactory, as they show, as compared with October of a year ago, an increase of eight and three-quarter per cent, and for the first ten months of

the year an increase of four and one-fifth per cent. There is every reason to believe that building operations will continue active throughout the winter.

Even a greater increase in demand is manifest in the furniture and kindred trades, and there is no reason to assume that an active demand for hardwoods is not assured for months in advance.

Growing Fence Posts in Indiana

A few years ago Speaker of the House Joseph G. Cannon was widely quoted as saying that Indiana then had more growing timber than when he was a boy. That was taken as a text by those who undertook to show that private parties were growing timber to meet the country's need, and that there was no occasion for the government to take up similar work.

A different view of the situation in Indiana is taken by Charles C. Deam, secretary of the Indiana State Board of Forestry. He does not think that even the growing of fence post timber in that state is a paying business. In a recent letter to HARDWOOD RECORD he said:

"We are not in possession of facts to tell us what it will cost to grow a fence post in Indiana. The greater part of the land in this state is suitable for agriculture and on such land I would estimate that it would cost more than twenty-five cents to grow a fence post. In fact, I have visited forest plantings in this state that were started for the purpose of growing fence posts, in which I would judge, if they were able to mature fence posts, they would cost the owner anywhere from fifty cents to fifty dollars. I know of a man who had a ten-acre tract of locust, who will not be able to mature a single post. I know of a catalpa planting that is over forty years old, and many of the trees are not yet large enough for posts. The land on which this planting is located is worth one hundred and fifty dollars per acre. You can figure for yourself what the posts this man reaps will cost him."

If farmers of Indiana are raising timber on land worth one hundred and fifty dollars an acre for other purposes, they are making a mistake. That land is too valuable to be given up to timber growing. Woodlots should be maintained on rough, poor, cheap land. Odd corners and waste places will grow trees, often

SUBSCRIPTION TERMS: In the United States and its possessions, and Canada, \$2.00 the year; in foreign countries, \$1.00 extra postage.

In conformity with the rules of the postoffice department, subscriptions are payable in advance and in default of written orders to the contrary, are continued at our option.

Instructions for renewal, discontinuance, or change of address, should be sent one week before the date they are to go into effect. Both old and new addresses must be given.

Both display and classified advertising rates furnished upon application.

Advertising copy must be received five days in advance of publication dates.

Entered as second-class matter May 26, 1902, at the postoffice at Chicago, Ill., under act of March 3, 1879.

as well and sometimes better than the most fertile land. While Indiana farms contain a large per cent of agricultural land, it is equally true that not all the land in the state is of that class. If all the thin and rough tracts are devoted to tree growing and the best kinds are planted, it is reasonably certain that fence posts can be produced cheaply and in quantities sufficient to supply the market, with a good deal of timber left for other purposes.

The Mahogany Situation

As early as last June a prominent Liverpool mahogany broker predicted that no material alteration in market conditions on this wood were likely to obtain until October. This prediction has been well fulfilled, because receipts of all varieties of this wood have been light until September, when they came forward in large quantities. In the face of this fact prices have not fallen, and are even firmer than they were in the early summer. The excellent condition of trade generally is more than taking care of the increased import.

In the October auctions the rooms were crowded with a large number of buyers, notably from this side of the Atlantic, and keen competition took place over nearly every lot offered. Even low-grade wood attracted active buying. A fresh record was made in the speed of selling, as in the first two and a half hours 750 lots were offered and sold. Prime lumber logs averaged 5½d per foot Liverpool measure, while figured logs ranged from 1s to 9s 7d, or about \$2.30 per foot. Liverpool mahogany measure averages about thirty per cent in favor of the purchaser, when compared with actual log contents. Catalogues containing more than 3,250,000 feet were cleared without the slightest difficulty.

Good authorities concur in the belief that while the November Liverpool auction sales will comprise fairly large catalogues, imports will fall off and only moderate quantities will be offered for some months to come. There is not the slightest possibility of any reduction in prices as the absolutely known requirements to the market will prevent this.

The market of the world is absolutely bare on some varieties of mahogany, and the wood is surely "coming into its own," to which its remarkable merits fully entitle it.

Lumber Exports and Imports

The Department of Commerce and Labor in its monthly summary shows that for August last the total value of exports of wood and manufactures thereof involved a value of \$137,702, as compared with \$67,073 of August, 1911.

The cabinet wood imports for August, 1912, were 121,483 feet, having a value of \$2,124,007, as compared with 102,128 feet and a value of \$1,812,590 for the corresponding month of 1911.

The total value of foreign woods imported during the first eight months of 1912 was \$10,303,275, which was nearly \$2,000,000 in excess of the corresponding period for 1911.

Rush Work Expensive

The manufacturer is fortunate who makes money out of a rush order. Hurry work is not necessarily profitable, though to all outward appearances business may seem unusually good. The maker of furniture, vehicles, boats, interior finish, or any other commodity in the production of which labor is an important item, or expensive machinery is used, can bear testimony to the fact that anything which disturbs the even, healthy operation of the shop, mill or factory increases cost rather than profit. Extra men put on a job to hurry it through

are seldom as efficient as the man whose employment is steady; nor have they the same interest in the work. They understand very well that they are temporarily on the pay roll, and it is no more than human nature for them to try to make the most while they have the chance. It is not to their interest to hurry through the work and finish the job, nor does painstaking care especially appeal to them.

In addition to the extra force put on while the rush lasts, it is often found necessary to keep the regular force working overtime. That is expensive in two ways—overtime calls for a higher rate of pay, and men who are working extra hours are unable to come up to the same efficiency for the whole time which they attain while working only regular time.

Rush work disconcerts plans. It breaks in and dislocates, and when the rush is over and the regular work is once more resumed, it is generally felt that something has been lost by the interruption. Fits and starts consume energy without accomplishing as much as the steady pace.

Rush work is not necessarily undertaken without fully matured plans, but it often is, and that is liable to lead to loss. In the hurry to get the job and to take care of it, other matters on which profits depend may be slighted or overlooked, and in the final balancing of the account a good many things may be found charged up to the rush order which were not thought of at first.

Hurry work wears and tears machinery more than steady use. That is due to the temptation to neglect small repairs until they create the necessity for larger ones. When work is going on steadily, and everything is normal in the shop, the mending and repairing are not shoved off until some other time, but are looked after at once, and "a stitch in time saves nine" in the factory as well as anywhere else. This is particularly true when the plant is being crowded beyond its normal capacity. As speed increases in arithmetical ratio, energy must increase in geometrical ratio. It is a law of physics. That is what tears and breaks the steel machine as well as the human

machine in all lines of endeavor.

Well managed shops recognize that moderate business, well watched and carefully executed, is preferable to rush orders which must be carried out under high pressure.

The Eucalyptus Game

HARDWOOD RECORD several times has taken occasion to express unqualifiedly its opinion of the unscrupulous promoters who are engineering eucalyptus planting and land sales in California. This game very largely has been made possible by untruthful statements, not particularly concerning the rapidity of eucalyptus growth, but as to the quality and value of the wood for high-class purposes.

One of the more recent legends emanating from some of this cult is the statement that the Pullman Company is employing eucalyptus to the exclusion of mahogany, oak and other high-class woods for the interior finishing of its sleeping and passenger cars, and is substituting eucalyptus with a pretense that it is mahogany. This statement is absolutely without foundation in fact.

HARDWOOD RECORD is indebted to William L. Hall, assistant forester of the Forest Service, United States Department of Agriculture, for a digest of what statements the Forest Service has published, and will publish on the subject of eucalypts. It may be possible, as Mr. Hall thinks, that some varieties of this wood are not without value, but so far as the experience of the editor of HARDWOOD RECORD goes in a close analysis of numerous specimens of this material, and scores of experiments with the wood, that he has either

American Forest Trees

Attention is called to the announcement on page five of this issue HARDWOOD RECORD of the forthcoming book entitled "American Forest Trees."

This work is the result of a life-study of American forest tree growth by Henry H. Gibson, editor of HARDWOOD RECORD, and an equally long study of wood utilization by the foremost expert of the United States, Hu Maxwell, who is the editor.

It is intended that this book shall constitute a compendium of all that is worth knowing in both a scientific and commercial way concerning the forest tree growth of this country.

No expense is being spared in the mechanical execution of the work, and the large sale already made emphasizes the fact that it is a book demanded by scientists, and all interested in the practical end of tree growth and wood utilization.

witnessed or has seen results on, he never has encountered in commercial quantities any variety of this wood that possesses any high value. This publication would therefore repeat its warnings against making investments in eucalyptus planting with expectations of securing any profit therefrom.

Mr. Hall's letter follows:

Washington, D. C., Nov. 4, 1912.

Editor HARDWOOD RECORD: I have obtained from the branch of silviculture in the Forest Service, a memorandum which shows the work which has been done by the Service upon eucalypts and the publications issued during the last few years. In order that you may be fully advised on what has been done I include a large part of the memorandum below:

In January, 1907, Circular 59, Forest Planting Leaflet on Eucalypts. This circular in addition to suggestions in regard to planting speaks of yields which probably may be secured from plantations of blue gum. A comparison of these predictions with actual measurements made subsequently and published in other bulletins shows that they are not excessive. Because of the predictions of excessive yield made by eucalyptus companies in order to induce people to buy stock in eucalyptus companies and to invest in lands to be planted to eucalypts, the Forest Service during the summer of 1910 made a series of measurements covering a large number of older groves in the state of California. The results of these measurements were published in the fall of 1910, as Bulletin No. 1 of the California State Board of Forestry, which mentions on its title page the co-operation with the Forest Service. A comparison of some of the yields determined under this co-operation and published in the bulletin with the statement of yields for the same groves in a privately published circular of the fall of 1910, may be of interest:

Grove No.	Yield	
	given by private circular	given by co-operative bulletin
	Feet, B. M.	Feet, B. M.
Grove No. 1.....	64,360	1,280
Grove No. 2.....	33,170	1,510

The maximum yield stated in the private circular is 213,796 feet, B. M., for a grove twenty-four years old. The maximum yield given in the co-operative bulletin is 57,820 feet, B. M., for a grove thirty-two years old.

In December, 1910, Circular No. 179, "Utilization of California Eucalypts," was published. A considerable part of this bulletin is devoted to a statement of results obtained in strength tests which were made in Forest Service laboratories. This circular calls particular attention to the fact that information furnished by the Forest Service has been quoted in such a way as to convey misleading impressions and sometimes even to falsify the original meaning.

Forest Service Bulletin No. 57, "Eucalypts in Florida," was issued April 29, 1911. Pages 31-33 of this bulletin call particular attention to the uncertainty of large returns from commercial plantations.

Circular 210, "Yield and Returns of Blue Gum (eucalyptus) in California," is now in page proof and will be issued within a comparatively short time. The object of this circular is to interpret and make even more clear the meaning of the statements of yield made in Bulletin No. 1 of the California State Service.

In reply to inquiries regarding the future of eucalyptus plantations the Forest Service has always stated that our present knowledge of the timber produced by plantations in this country does not justify a too sanguine estimate of returns where it is proposed to produce material other than fuel woods, which require a much longer period to reach marketable size. Our belief has been stated that a eucalyptus plantation will yield under favorable conditions a revenue equal to any forest plantation.

The Service does not take the position that eucalypts are without value. Neither so far as I know do any of our men who have intimate knowledge of eucalyptus growing and eucalyptus wood hold that opinion individually. We are in fact confident that several of the species of this tree will prove valuable additions to the forest growth in certain sections of the United States. Practically every recent publication of the Service on eucalypts has, however, carried a warning against the over-claims as to yield. Circular 210 soon to be published undoubtedly contains the strongest statements of warning regarding investments in eucalypts yet given to the public.

Very sincerely yours,

WM. L. HALL,
Assistant Forester.

Advanced Lumbering

A new thought in lumber methods applied to this continent is suggested by F. L. Barledt, a British capitalist holding large interests in forestry and wood manufacturing enterprises in Germany and Russia. This gentleman recently obtained a concession of a large area of forest lands in northern Ontario. He has familiarized himself with the timber resources of that section, and has established a location for a system of forest industries. The area when operated will be managed on principals of modern forestry, under which the

poor timber and dead trees will be cleaned out first, and every part of the tree from the roots up utilized in the manufacture of various wood products.

A system of reforestation will be pursued and the standing timber protected from diseases, and cared for by experts. If a sufficiently large area can be obtained, a corps of trained foresters and experts in woodworking industries from Europe will be imported and will have steady employment in the new enterprise.

"Kraetzer Kured" Lumber

The apparatus known as the Kraetzer preparator, a steam cylinder of large capacity in which lumber is treated with steam under pressure immediately after being manufactured, and which has been installed in connection with several sawmills in various parts of the United States during the last year, is accomplishing almost marvelous results in the prompt and accurate seasoning of lumber.

Among the more recent installations of this equipment are those at the Bennett Hardwood Lumber Company, Memphis, Tenn.; the Lamb-Fish Lumber Company, at Charleston, Miss., and the Forman-Earle Company, Heidelberg, Ky. Another installation is being made at the present time at the big lumber and veneer plant of C. L. Willey, Chicago, for the handling of mahogany, black walnut and other high-class hardwoods.

E. T. Bennett of the Bennett Hardwood Lumber Company, reports the unqualified success of the apparatus at his plant. Without in any wise injuring the strength and texture of the wood, he has succeeded in reducing the weight of green one-inch gum two thousand pounds within two hours, and has shipped this stock nine days from the saw, reduced to a weight within two hundred pounds as light as he has ever achieved with stock in the yard on sticks for twelve months. He holds he is able to blow out three-eighths gum and oak to good shipping condition in twenty-four hours, although the common practice of other users is to employ about five days on thin stock; ten to fifteen days on inch lumber, and about thirty days on two-inch stock.

One of the remarkable features of the results of this steam-treated wood is the fact that there are practically no seasoning defects developed in the process, a shrinkage so slight as to be almost nil, and a uniforming of color that makes every board look as though it came from the same log. This last feature is notably true in gum and red oak product. The color of white oak, maple, birch and other woods that are not rich in tannic acid, remains unchanged.

The Lamb-Fish Lumber Company at Charleston is treating all its red and sap gum and oak in this apparatus, and is then kiln-drying the resultant product. This company expects to fully treble the output of its kilns, through which it formerly has been handling 600,000 feet of lumber monthly.

The employment of the Kraetzer process, under handling in its highest efficiency in connection with sawmill operations, contemplates the abandonment of the lumber yard *per se*. The lumber is stuck on an equivalent to a dry-kiln truck at the sawmill chains, and by means of transfer tracks is moved forward to the steam cylinder, shoved therein, steamed, pulled out, and on the same trucks shoved out onto a series of storage tracks, at the extremity of which it is loaded onto cars when dry, or transferred to dead piling storage sheds.

This system constitutes simplicity itself, and spells an economy, it is alleged, between the mill and the loaded car of between three and four dollars a thousand feet. This economy is made up of less labor cost, eliminating lumber yard planking, foundation timbers and roof boards; less investment in stickers; saving in interest on large investment; less insurance cost; minimizing seasoning defects and shrinkage; and altogether securing both higher efficiency and better seasoned lumber in a short space of time.

Undeniably the Kraetzer process spells a most remarkable evolution in lumber seasoning methods, and it is suggested to those who wish to secure a manifest economy, much higher efficiency and infinitely better results in lumber seasoning, that they visit one of the plants where the equipment is employed, and witness the results obtained.

Pert, Pertinent and Impertinent

Keepin' Busy

Some fellers just has au awful time,
 A-keepin' busy,
 Loadin' round in clubs ain't no place
 Fer keepin' busy;
 Seems to me there's mischief brewin'
 In them fellers sittin' there stewin'.
 Shame they ain't got work ter
 Keep 'em busy.

Us fellers in the lumber game
 Is always busy.
 A-sellin' stock and hustliu' cars
 Keeps us busy;
 We're on the job from morn till six,
 Sortin' piles that's in a mix.
 Us fellers just has got to stick—
 Au' keep busy.

Now just look at them financeers
 A-keepin' busy,
 Makin' money easy as not by
 Keepin' busy;
 There's Morgan and there's Rockefeller,
 And the piles of coin they got is yeller,
 Why, that just ought to make a feller
 Keep busy.

My rich friends say as I should rest
 From keepin' busy,
 An' finish my work and stop my quest
 Of keepin' busy;
 Why, I'm always in an awful fix,
 Collectin' accounts or settlin' kicks,
 Don't never see no chance at all
 From keepin' busy.

When night comes 'round I'm tuckered out,
 Fer keepin' busy.
 An' the hay seems soft an' restful like,
 After keepin' busy;
 As my eyes they close and I starts to doze,
 I wonder's if the idle folks ever knows
 What fun a feller has as shows
 He's always keepin' busy.

Now comes the man with hard luck tale,
 With orders scarce and few.
 Some customer must help him out,
 Is his appeal to you.
 His method doesn't sell the goods
 To you or other men,
 And he leaves without an order,
 Vowing ne'er to come again.

ON TRIAL

Uncle Sam: I'm entrusting this business to you and your friends—it's up to you to make good and hold your jobs.

A Fitting Pair

American Forest Trees

NINETY-NINTH PAPER

LOGGEPOLE PINE

(*Pinus Contorta*—Loud.)

The common name of this tree was given it because its tall, slender, very light poles were used by Indians of the region in the construction of their lodges. They selected poles fifteen feet long and two inches in diameter, set them in a circle, bent the tops together, tied them, and covered the frame with skins or bark. The poles were peeled in early summer, when the Indians set out upon their summer hunt, and were left to season until fall, when they were carried to the winter's camping place, probably fifty miles distant. Tamarack is a common name for this pine in much of its range; it is likewise known as black pine, spruce pine, and prickly pine. Its leaves are from one to two inches long, in clusters of two. The small cones adhere to the branches many years—sometimes as long as twenty—without releasing the seeds, which are sealed within the cone by accumulated resin. The vitality of the seeds is remarkable. They don't lose their power of germination during their long imprisonment.

The lodgepole pine has been called a fire tree, and the name is not inappropriate. It profits by severe burning, as some other trees of the United States do, such as paper birch and bird cherry. The sealed cones are opened by fire, which softens the resin, and the seeds are liberated after the fire has passed, and wing their flight wherever the wind carries them. The passing fire may be severe enough to kill the parent tree without destroying or bringing down the cones. The seeds soon fall on the bare mineral soil, where they germinate by thousands. More than one hundred thousand small seedling trees may occupy a single acre. Most of them are ultimately crowded to death, but a thick stand results. Most lodgepole pine forests occupy old burns. The tree is one of the slowest of growers. It never reaches large size—possibly three feet is the limit. It is very tall and slender. A hundred years will scarcely produce a saw-log of the smallest size.

The range of this tree covers a million square miles from Alaska to New Mexico, and to the Pacific coast. Its characters vary in different parts of its range. A scrub form was once thought to be a different species, and was called shore pine.

The wood is of about the same weight as eastern white pine. It is light in color, rather weak, and brittle, annual rings very narrow, summerwood small in amount, resin passages few and small; medullary rays numerous, broad, and prominent. The wood is characterized by numerous small knots. It is not durable in contact with the ground, but it readily receives preservative treatment. In height it ranges from fifty to one hundred feet.

The government's estimate of the stand of lodgepole pine in the United States in 1909 placed it at ninety billion feet. That makes it seventh in quantity among the timber trees of this country, those above it being Douglas fir, the southern yellow pines (considered as one), western yellow pine, redwood, western hemlock, and the red cedar of Washington, Oregon, and Idaho.

Lodgepole pine has been long and widely used as a ranch timber in the Far West, serving for poles and rails in fences, for sheds, barns, corals, pens, and small bridges. Where it could be had at all, it was generally plentiful. Stock ranges high among the mountains frequently depend almost solely upon lodgepole pine for necessary timber.

Mine operators find it a valuable resource. As props it is cheap, substantial, and convenient in many parts of Colorado, New Mexico, Wyoming, and Montana. A large proportion of this timber which is cut for mining purposes has been standing dead from fire injury many years, and is thoroughly seasoned and very light. It is in excellent condition for receiving preservative treatment.

Sawmills do not list lodgepole pine separately in reports of lumber cut, and it is impossible to determine what the annual supply from the species is. It is well known that the quantity made into lumber in Colorado, Wyoming, Montana, and Idaho is large. Its chief market is among the newly established agricultural communities in those states. They use it for fruit and vegetable shipping boxes, fencing plank, pickets, and plastering lath.

Railroads buy half a million lodgepole pine crossties yearly. When creosoted, they resist decay many years. Lodgepole pine has been a tie material since the first railroads entered the region, and while by no means the best, it promises to fill a much more important place in the future than in the past. It is an ideal fence post material as far as size and form are concerned, and with preservative treatment it is bound to attain a

high place. It is claimed that treated posts will last twenty years, and that puts them on a par with the cedars.

In Colorado and Wyoming much lodgepole was formerly burned for charcoal to supply the furnaces which smelted ore, and the blacksmith shops of the region. This is done now less than formerly, since railroad building has made coal and coke accessible.

In one respect, lodgepole pine is to the western mountains what loblolly pine is to the flat country of the south Atlantic and other southern states. It is aggressive, and takes possession of vacant ground. Although the wood is not as valuable as loblolly, it is useful,

A TYPICAL FOREST GROWTH OF LOGGEPOLE PINE IN MONTANA

SECTION OF BARK OF LODGEPOLE PINE

and has an important place to fill in the western country's development. Its greatest drawback is its exceedingly slow growth. A hundred years is a long time to wait for trees of pole size. Two crops of loblolly saw-logs can be harvested in that time. However, the land on which the lodgepole grows is fit only for timber, and the acreage is so vast that there is enough to grow supplies, even with the wait of a century or two for harvest. The stand has increased enormously within historic time, the same

as loblolly, and for a similar reason. Men cleared land in the East, and loblolly took possession; fires destroyed western forests of other species and lodgepole seized and held the burned tracts.

If fires cease among the western mountains, as will probably be the case under more efficient methods of patrol, and with stricter enforcement of laws against starting fires, the spread of lodgepole pine will come to a standstill, and existing forests will grow old without much extension of their borders.

CONE AND NEEDLES OF LODGEPOLE PINE

New System of Quarter-Sawing

When quarter-sawing oak was first introduced, so as to show the remarkably beautiful flake and figure of this king of American hardwoods, the waste was so considerable on small logs that it was not regarded profitable to quarter-saw logs less than twenty-eight inches and upwards in diameter. Many attempts have since been made to quarter-saw small oak logs, but manufacturers generally

oak production on a large scale, to solve the problem of producing quarter-sawed oak lumber in a highly satisfactory way from not only its large timber, but from its smaller logs as well.

A previous article, with colored illustrations in *HARDWOOD RECORD*, exhibited the splendid figure that the Yellow Poplar Lumber Company was attaining in its quarter-sawed oak production, but

SIDE VIEW MERSHON HORIZONTAL BAND RESAW ADAPTABLE FOR SAWING LOG SECTIONS

conceded that the loss in quarter-sawing small logs more than ate up the difference in price that could be obtained from plain sawed stock.

With the growing scarcity of oak timber, and the increasing demand and higher prices obtainable for quarter-sawed oak strips, numerous efforts have been made to utilize the smaller and equally high-class logs into a quarter-sawed product made on a profitable basis. It has remained for the Yellow Poplar Lumber Company in Coal Grove, O., which this year for the first time entered into

no specific reference has hitherto been made to the methods of manufacture by which this desideratum was obtained.

The Yellow Poplar Lumber Company saws its large logs in regulation fashion to quarter-sawed stock on its two big band mills, and its small logs are reduced to eighth log sections also on its big mills; and the eighths are then transformed into boards and strips by the use of a modification of a horizontal band resaw. The sections are fed to the machine four or five at a time, turned over and returned to the feed end of the machine by means of

live rolls; again put through the rig; again flopped and returned; and so on until the piece is reduced to a small wedge-shaped section.

The specific method of handling these logs is exhibited by the drawings accompanying this article. The logs are split one side of the heart, and the minor section dropped back to the log deck. The boards are then sawed from the larger section through and across the heart. The section remaining on the carriage has a minor quarter section sawed from it, which is dropped back to the log deck. Four or five boards are then taken out of the center section, and the remaining quarter is turned on edge and split with the big saw. The third quarter is then split, and the first half log dropped to the log deck follows the same process. The eight wedge-shaped sections of the log are then forwarded by live rolls to the horizontal band resaw, and are reduced to boards and strips.

A first-class horizontal band resaw of a type similar to that shown in the half-tone accompanying this article, which incidentally is produced by Wm. B. Mershon & Co., Saginaw, Mich., is capable of reducing these small flitches to inch lumber and strips at the rate of from thirty to thirty-five thousand feet in ten hours.

This particular illustration represents a side-view of a Mershon horizontal resaw. The machine consists of a framework of structural steel about twelve feet long, carrying six driven rolls, which form the feeding bed of the machine. This arrangement of rolls is very similar to the live rolls used for conveying stock in a saw-mill. The machine is mounted on a heavy bed plate, which also carries the band wheels. The saw blade passes over the center of this train of feed rolls, and is supported by means of so-called crowding wheels or rotary guides, so as to present a relatively short-supported cutting section of the saw to the stock. This construction makes it possible to feed stock of either regular or irregular dimensions, and remove any thicknesses up to four inches

SHOWING HOW LOG IS SAWED FOR LUMBER AND FLITCHES ON THE BAND SAW

from the bottom surface. Pressure rollers ride on top of the stock, and are so designed as to adapt themselves to any irregularities, no matter what they are.

The experience of the Yellow Poplar Lumber Company in manufacturing its quarter-sawed lumber with the supplemental horizontal band resaw equipment has been so satisfactory that several other producers of quarter-sawed stock have purchased a similar rig. The

cost-records made by this house prove that it can produce quarter-sawed stock by this method with a loss of only about twenty per cent; that its stock is perfectly quartered, and the resultant product is absolutely accurately sawed. In width of stock involving logs down to eighteen inches in diameter, it is showing an average of better than eight-and-a-half inches, which is a remarkable width for quarter-sawed oak lumber. In general cost of production the company is effecting a manifest economy over any other concern engaged in quarter-sawing lumber by the older approved methods.

The new system is entirely worthy of a thorough investigation by those engaged or desiring to engage in producing quarter-sawed lumber from any variety of wood.

SHOWING HOW THE SECTIONS ARE TRANSFORMED INTO BOARDS AND STRIPS BY MEANS OF HORIZONTAL BAND RESAW

River Birch for Cooperage

River birch (*Betula nigra*) has never been prized for any purpose. It is the softest of all the birches and is devoid of figure and attractive color. Consequently lumbermen take it only when of large size or quite convenient. River birch occurs from Massachusetts and New York southward east of the Allegheny mountains to western Florida; west in the Gulf states to Texas and north through Mississippi to eastern Oklahoma, eastern Nebraska, central Minnesota, southern Wisconsin and Ohio. In addition to the name river birch it is also known as red birch, water birch, and occasionally as blue birch and black birch. It does not form forests but grows in clumps or scattered mostly along streams.

The tree rarely attains very large dimensions, though in good situations a diameter of two feet and a height of seventy-five feet are not uncommon. The bark is rough and shaggy, giving the tree a ragged appearance. The wood is light and soft and fairly uniform in texture. The pores are scattered throughout the growth ring—diffuse-porous. While inferior to the other birches the wood is beginning to have a value for cooperage.

There is no question about the suitability of river birch for cracker, flour and similar barrels. It is probable that it will be found satisfactory for packing house barrels for the shipping of pork and lard. The revision committee of the Chicago Board of Trade has issued a revised list of woods for use in the packing house trade and birch is included. As no species is mentioned all may be tried including paper birch, western birch, black or sweet birch, yellow birch and gray birch. The western and gray birch are too far from the trade to be available. Other woods included in the revised list are white oak, red oak, burr oak, and white ash.

River birch is said to make high-grade barrel hoops—at least one farmer in New Jersey has made a good living out of the cutting of such material. He has a small plant for making hoops and his first experiments with river birch were made rather secretly. He was surprised to find that dealers preferred the new hoops to any other in the lot. This set the farmer to thinking, and as a result he bought for a song all the river birch for miles around. His neighbors were glad to get rid of it and he has a bigger demand for his product than he can fill. River birch hoops are said to be tough and strong and very durable. As there is considerable of the timber scattered along the streams throughout the East and South, there seems no reason why the material should not be more widely employed for this purpose.

Some of the fruit and vegetable basket makers in eastern Maryland work river birch into bands around the tops of the baskets, and it is said to be as satisfactory as elm.

The Middleman in Lumber Business

Editor's Note

The following article is by a well-known wholesale hardwood operator, and presents sundry reasons "why the wholesaler is," and why he will continue to be an important factor in the distribution of lumber. It is published without comment, and communications in like or contra-argument on the same subject are solicited.

Ideas are created each day and service is nearing perfection. Better service costs more in proportion. Express charges, for instance, are more than freight charges on account of quicker delivery. This is the day of service. There is a great demand for it. People demand it, yet it is indirectly responsible for the increased cost of living. For instance, it is stated that traveling costs much more than it used to and yet most people prefer to save time by taking the fast trains on which an extra fare is charged. That is service and they are paying for it. Food is much higher in price than it was years ago, but remember that the housewife went to market with a basket, selected the things she wanted and brought them home herself. Now she calls the grocer by telephone, orders what she wants and the grocer delivers it. Of course prices are much higher because the grocer has to go to the market, bring it to his store and then deliver it to the customer's home. Service charges only. The grocer has to keep wagons, drivers, telephone girl, etc. Who pays? You, always! Why? Because you are being saved all the time, labor and worry of marketing—you simply spend three minutes on the telephone ordering. The grocer, then, is your servant and his charges are added to the original cost of the goods. Are you willing to go back to the days of inconvenience, the days of slow travel, slow service, work twice as hard and save a little only on the cost of living? There is hardly one out of a thousand that really would.

Ever stop to think of the chaotic condition this country would be in if all the wholesalers and middlemen were to be eliminated? The writer is speaking not only of his own business but of every commodity. Take produce—eliminate the jobber of farm produce, and the farmer would have to sell his own stuff. In turn this would mean peddling it out to the consumers—a traveling market. In other words, we would be about thirty years back of the game. Then again it takes the farmer's time, which is more valuable right on the farm looking out after his growing crops and where he is absolutely needed all the time. If he puts a man on the wagon to sell it, that man's time costs money—and it doesn't bring the results. The jobber of farm-produce simply gets what the farmer would pay a man or less—more often the latter. A large sale is made instead of piecemeal. Why go any further? The middleman sells his stuff and the farmer gets his cash. This is an explanation of the middleman that leaves no questions unanswered, nor is there any room for argument.

What applies in the produce business applies in general to all other lines—understand, I say general, because the trade-channel may be longer or shorter, depending on the business.

I heard a lumber millman say recently, "But if we sell through wholesalers, we lose our identity with the trade." So you do, Mr. Millman, with the consumers, but let me say to you that your identity is far more valuable to the wholesaler than it ever will be to the consumer. If you were manufacturing a trade-marked article I would not say this, but you know right well that no two cars are alike, even from your own stock. What you are after is to sell your stock to the best advantage in the most economic way. The wholesaler is vitally interested in you. In many cases he finances you. Remember that he serves a community of people. He is watching out for the new points in connection with your manufacture and your product that will improve his sales and that will interest his community, which in turn knows him and relies on what he says. Now how about that, Mr. Millman? Are you a community specialist? Are you here or there in this community, in that one? Are consumers here interested in you in some far off place. Could you expect them to be?

If you don't believe this, Mr. Millman, just take your stock-sheet and visit some consumers in a far off section where you are unknown. Unless you sell under the market price or unless there is a tremendous shortage of lumber, you will not make sales. Of course if you do sell for less than the market, this argument won't hold, because I can

send out a "dispenser" with a stock-sheet and low prices and he'll get all the orders wanted. You won't need a salesman in that case.

Consumers live in a little world of their own. Access to them is had by the "concentrate"—the wholesaler in their section who looks out after their interests; who knows just what is going on in their plants all the time; who knows their financial standing and how much they are to be trusted. Can you, Mr. Millman, in a far off place keep in touch with consumers scattered all over the country?

Now understand me rightly. I'm talking from an economic standpoint. I claim that the wholesaler represents the lowest sales cost per thousand feet. Of course you can put a man on in every section, but the salary, office expenses, traveling expense, etc., will be more in proportion than what you would pay a wholesaler by selling for a little less. So get that straight—economic handling.

On being asked why he preferred to buy from wholesalers rather than direct from the mills, one of the largest buyers in the East said, "Well, they are right here on the ground. I can get them on the 'phone and don't have to wait days for an answer. The wholesaler is in close touch with his mills; he understands conditions where I haven't the time to study them; the wholesaler gives me splendid service and it more than pays when you consider the little more in price over the general mill's price. Most of the mills charge about what the wholesaler does anyway. Perhaps I may be used to dealing with a certain mill. Suppose it is out of the stock I want. Perhaps I have been dealing with it only and don't know where to get the stock. That's the wholesaler's business and he keeps posted so that when I want a car of lumber he can get it. I haven't the time to look around. Yes, I get stock-sheets from the mills, but what do I know about their stock, especially the value of it? I leave it to the wholesaler; he knows, for he visits the mills and sees what it is and the value of it." That hits the nail on the head, especially the "value" part of it. Consumers haven't time to spend looking into these things. They leave it to the wholesaler. In other words, "service" again.

Here's what one of the largest mills in the country says—this from the sales manager: "Consumers? No, sir! We do business with the wholesaler in his respective market. We get cash always and are nearly always sold up. The wholesaler gets good service from us—we always give the percentage of 14-foot and 16-foot, the widths and average width, dryness, special points, prices and rates—all the information he could possibly ask for. That saves his writing up and we having to answer. All he must do is to send the orders. We keep them fully posted, however. Would it pay us to have salesmen? No, indeed! That would mean an increase of many thousands of dollars on the payroll and the little extra we'd get wouldn't anywhere near pay for it. Anyhow, we couldn't keep in as close touch with the consumer as the wholesaler does. We're specialists in manufacturing; the wholesaler is a sales specialist. We're content and—making money."

There are the two sides and both from representative men in their respective lines of operation. This is a progressive age. Start the mill-to-consumer idea and you're not progressing. You're going backwards.

Watch the wholesaler at work. Suppose one of his mills writes that the block of oak will average 11 inches and will run eighty per cent 14-foot and 16-foot. The wholesaler gets out about fifty letters describing the stock to his community. He knows every man that will be interested. He knows every man who wants long lengths. From an economic standpoint again, could a millman circularize a list of names in a community and get the results that the wholesaler in that section could? That's answered already—the mill couldn't do it. Why? Well, in the first place every section contains men of a different business type and each man has his individual character-

istics. They must be approached in different ways. A Bostonian must be approached from one standpoint, a New Yorker from another, and so on. Personal contact with his community tells that wholesaler just how to do it—and he sells the oak to those who use it. Sure, it's psychology if you want to call it that. I'd call it specialization.

Consumers know the wholesaler and take his description any way he puts it. I'd like to gamble that half the letters you write to consumers, Mr. Millman, do not bring results. Not because they are unbusinesslike but because you have not appealed to the buyer in the right way. Yes, the wholesaler reads every word of your letters with interest; no matter how you put it, he understands you, for he understands mill conditions, etc. Furthermore, it is to his interest to sell all he can and the more selling and interest-creating points he can get the more stock he will sell. For every car you sell to a consumer you could sell five to the wholesaler in that section—and without half trying.

Now can you, Mr. Remanufacturer, afford to buy your lumber log-run for your work? Eliminate the middleman or jobber and in most cases you will have to. Why? Well, suppose you must have a grade of No. 1 common for your work. Most of the wholesalers today, in taking the cut of a mill, buy the lumber log-run and have it graded out, giving you, for instance, the No. 1 common and arranging for another to take the 1s and 2s and still another consumer to take the No. 2 common. Even now, when lumber is scarce, some of you have to take some No. 1 common in with your 1s and 2s. In the above case what will you do with the No. 2 common which is too poor for your work or the 1s and 2s which would make your product so high in price as to lose business? Millmen will take exception to the above statement. They say that they can find out the trade for each grade and kind of wood. But how about the enormous expense of going all over, finding out this trade, making contracts (which cannot always

be done at the first or even second visits, etc.) and then perhaps not getting it or not being able to keep it?

Again, if the consumer has been dealing only with a mill and it is out of the stock, where does he look? To the wholesaler. The consumer knows that the middleman is in touch with many mills and at once the stock he wants can be had. And after one experience of this kind he is pretty likely to stick to the wholesaler.

Do you realize that the wholesaler keeps prices where they ought to be? Do you realize that there would be from five dollars to ten dollars a thousand difference in price if he were not on the ground? Do you ever realize that an advance by the mills is general?

The wholesaler, the lumber magnate, the lumber baron, the reaper of immense profits as some of our worthy (?) government officials chose to call him through ignorance is the most important factor in every community. He is firmly entrenched in his position and his fortifications are being strengthened every day. He cannot be dislodged because he is necessary. He is just as important to the trade channel as the telephone central is to the telephone exchange. Neither can be done away with without chaos. The wholesaler is also the judge and sometimes dictator of values.

Some day the millenium will come. That is the day when each manufacturer will appoint a wholesaler in his respective market as his representative; when the millman realizes that this is the lowest sales cost per thousand feet; when the millman will refer all inquiries for quotation to the wholesaler in his section; when the selling price of each grade and thickness is approximately the same; when the millman will spend his entire time manufacturing and making his product more salable and of better value; when specific details are furnished the wholesaler by the millman in answer to inquiries, and when there will be one set of inspection rules. That is the day the wholesaler will come into his own.

Bird Peck in Hickory

Every user of hickory is familiar with the dark reddish brown or black streaks and spots which are so common in the wood. These discolorations are due to the work of birds—sapsuckers—which drill through the bark and into the young wood in search of sap, which furnishes a considerable proportion of their food. Sapsuckers by no means confine their attentions to hickory; on the contrary, they are quite promiscuous in their choice, so that hardly a species of tree is immune. In no case, however, is the resultant damage greater than in the hickory, not so much on account of the mechanical injury as from the consequent discoloration and blemishing of the wood.

The sapsuckers are a distinctly marked group of woodpeckers and are limited to three species. They do not dig into a tree to get out insects as is the case with the true woodpeckers, of which there are twenty-one species in the country, but to drink the sap and eat bits of the inner bark and soft cambium layer. The cambium is the formative tissue of the tree and lies just beneath the bark. It is by division of its cells that wood is formed and any injury to it appears later as a defect in the wood.

The true woodpeckers do some damage to timber, but since their borings are for the purpose of locating insects and their larvæ and eggs, the good they do far outweighs the evil. The sapsuckers, on the other hand, haven't the right kind of tongues for pulling out insects, though they balance their vegetarian diet with a considerable quantity of ants. They appear to be birds with few redeeming features.

The results of sapsucker attacks on trees are so uniform as easily to be distinguished from the work of other woodpeckers. The holes of the former are drilled clear through the bark and cambium often into the wood, and generally are arranged in rings or partial rings around the trunk, though often in rows up and down. When one finds deeply cut holes arranged with such regularity he may be sure they were made by sapsuckers.

While in many trees, particularly conifers, the holes made by the birds go only to the sap-wood, in maple and hickory, which furnish at

certain times of the year a profuse flow of sweet sap through the sap-wood, the outer ring of wood is usually punctured. This hole cuts off the flow of sap and a brown or black streak (known as iron streak) from one-eighth to three-eighths inch wide extends from a few inches to several feet above and below the wound along the line of the vessels affected. This discoloration is due to oxidation and other chemical changes in the substances in the wood, and appears to have no serious effect on the strength and other mechanical properties of the timber. It is a blemish and materially reduces the grade and market value of the material.

The damage is not confined to the streak. The puncture in the sap-wood means a break in the continuity of the fibers, a very undesirable defect in wood prized for its great toughness and resilience. Moreover, the attempt of the tree to heal the wounds produces in each hole a small knot-like projection. These affect materially the smooth working of the wood into handles because of the tendency of the grain to rough up and splinter in the immediate vicinity of the former injury.

The total damage done by sapsuckers is immense and is estimated to amount to at least ten per cent for the entire United States, rising in some localities to thirty per cent. The money value of this loss amounts to about \$600,000 per year, not counting the loss sustained by the producer or dealer on the cut timber graded out by the manufacturers' requirements in regard to bird pecks.

That such loss should occur is especially unfortunate in the case of hickory, which fills a place for which it seems there is no substitute. No other commercial wood combines to so great a degree strength, stiffness, toughness and resilience. With the supply in danger of exhaustion every effort should be made to prevent unnecessary waste. Perhaps some time it will become necessary to get rid of the birds, but only when man has eliminated the much greater sources of waste due to his own carelessness and inefficiency can he claim any real grievance against his feathered neighbors.

S. J. R.

The Wood of the Ashes

There are over thirty species of ash scattered over the northern hemisphere of the old and new worlds, of which approximately one-half are American. It is not possible to state the exact number since botanists and dendrologists are not fully agreed in all cases whether a tree belongs to a new species or is merely a varietal form of an old. Of the total number in the United States, seven are of more or less economic importance, the remainder being of only local value. They are white ash, black ash, red ash, green ash, blue ash, pumpkin ash, and Oregon ash. Probably sixty per cent of the total cut of ash in this country is the true white ash and thirty per cent black ash. On the market it is customary to distinguish only two kinds, namely white and black or brown.

As a rule the wood of ash is fairly heavy, with a density ranging from .57 to .79 that of water, the majority falling between .60 and .70. An exception is found in the water ash (*Fraxinus Caroliniana*), a small and wholly unimportant tree found in deep river swamps along the southern coast region. Its wood, unlike that of other species, is light, soft, weak, fine-textured, difficult to work on account of its sponginess. The pores in the springwood are very small, indistinct and rather widely separated in a single row. The pores in the summerwood are scarcely if at all visible without a lens and then show the characteristic arrangement of the genus. Mention is made of this tree only because of its totally different character from that of the other members of the genus. Botanically it is an ash, but no woodworker would admit it.

Taken as a whole the wood of the ashes is strong, tough, straight-grained, easy to work, odorless and tasteless, and of high economic importance. The sapwood is white, making up a large proportion of the tree, especially of those growing in the open; it is preferred to heartwood for most purposes. The wood is perishable in contact with the soil. It is highly esteemed for vehicle construction, handles, implements and bent wood. It also makes excellent interior finish when sawed tangentially or in the case of veneer, rotary cut, the white summerwood producing a pleasing contrast with the darker springwood of the growth layers. Burls are not uncommon which make up into valuable veneers.

The amount of ash lumber sawed in 1910 was a little more than 246,000,000 board feet, 45,000,000 feet less than in 1909 and nearly 21,000,000 feet more than in 1908. It is one of the most widely distributed of all woods and was reported in 1910 as cut by nearly 7,000 mills located in 39 states. The value of the lumber was more than \$6,000,000. The southern states have advanced in the production of this lumber more rapidly since 1906 than any other section, Kentucky, Louisiana, Arkansas, and Missouri showing a considerable increase, while New York, Michigan, and Pennsylvania show a decrease.

In the production of slack cooperage staves, ash ranked seventh in

1910, with a total of 65,234,000. Ash staves are more extensively used for butter and lard tubs and packages than any other kind, and the major portions are made in Arkansas and Missouri. For tight cooperage heading ash ranked a poor sixth, with 470,248 sets or less than 2 per cent, to over 17,000,000 or 70 per cent from white oak. A total of 2,356,000 board feet of ash wood was consumed in 1910 in the manufacture of veneers, which was a considerable decrease over the three previous years.

From the following table can be had a fair idea of the comparative size of the mature trees and the average weights and densities of their woods:

Common Name	Average Diam., Ft.	Maximum Diam., Ft.	Average Height, Ft.	Maximum Height, Ft.	Specific Gravity	Weight per Cu. Ft.
White	2.5	6	80	120	.65	41
Black	1.5	3	70	90	.63	39
Red	1.1	2	50	70	.62	39
Green	1.5	2	50	65	.71	44
Blue	1.5	3	65	120	.72	45
Pumpkin	2	4	80	125	.64	40
Oregon	2	4	75	90	.57	36

Structurally the wood of the ashes is decidedly ring-porous, the large and conspicuous pores of the early portion of the growth ring being collected into a rather broad zone of from three to ten (rarely one-half) rows in width. The pores in the summerwood are small and distributed singly, in groups, or in mostly short broken (occasionally continuous) more or less tangential lines. They are surrounded by wood parenchyma which often extends winglike from them, in many cases, uniting them into irregular tangential lines. It is in the comparative development of these lines that one looks for points of distinction between the woods of the species, though in some cases the color and weight of the material permits ready separation.

The true white ash (*Fraxinus americana*) is widely distributed throughout the eastern half of the United States, in mixture with other species on moist soil. The center of its production is the Ohio valley. The tree grows tall, straight and free from branches, producing clear, straight-grained wood. The wood is hard, heavy, very flexible, but ultimately brittle, splits easily. The heartwood, which is light brown sometimes tinged with red, does not develop until the tree is seventy years old. The sapwood is nearly white and is lacking in natural luster but takes a high polish.

The growth rings are clearly marked by several rows of large, open pores, which in slow growth occupy nearly the entire width of ring, thus resembling black ash in weight and strength. The lines of pores in the summerwood are short and narrow, being composed of a few open pores and considerable wood parenchyma; they are most commonly found near the outer limit of the growth ring, though more prominently developed in wood of rapid growth. The lines are best seen with a hand lens magnifying ten to fifteen diameters, but can often be made out with the unaided eye.

The wood is used for wagon and carriage stock (poles, shafts,

GOOD PIECE OF BLACK ASH (*FRAXINUS NIGRA*)

Cross section showing a part of two growth rings. Note the large pores in a wide ring in the springwood, and the small, isolated pores in the summerwood rarely joined by wood parenchyma into lines. The relative width of summerwood to springwood is greater than usual in this species. Magnified fifty diameters.

frames, particularly in the form of bent wood), frame work of street cars, agricultural implements (handles and frames especially), ball bats, tennis rackets, oars, gymnasium bars, boats, furniture, cabinet work, interior finish, flour and sugar barrels, hoops, baskets, firkins, etc. It makes excellent fuel.

Blue ash (*Fraxinus quadrangulata*) derives its common name from the fact that a blue dye is obtained by macerating the inner bark in water, and its specific name because its twigs are four-angled and more or less four-winged. The tree is nowhere abundant and reaches its largest size in the basin of the lower Wabash river, Illinois, and on the western slopes of the Big Smoky mountains, Tennessee. The wood, which is not distinguished in the market from the true white ash, is as a rule heavier and harder than the other species of ash and takes a higher polish. The lines of pores in the summerwood are long, narrow, prominent, composed of abundant wood parenchyma and inconspicuous pores; they are usually well distributed. The wood is used for the same purposes as the white ash.

Red ash (*Fraxinus pennsylvanica*) is found on low moist soil near the banks of streams and lakes and, while quite widely distributed throughout the eastern half of the United States, is most common and reaches its best development in the north Atlantic states. Its common name comes from the color of the twigs and bark. The wood is very much like white ash though on the whole not so strong and valuable. It is always sold as white ash. The arrangement of the pores in the summerwood is almost identical with that of the less common blue ash, but the wood is not so hard or heavy.

Green ash (*Fraxinus lanecolata*) is by some authorities considered merely a variety of red ash. It is found along the banks of streams from the Allegheny mountains to the Rockies, being most abundant in the Mississippi basin. In the eastern part of its range it appears quite a distinct species, but in the West it grades into the red ash, so far as the appearance of the tree is concerned. The common name, green ash, is probably in reference to the lustrous bright green of both sides of the leaflets. The pores in the early wood are not numerous and are in a rather narrow zone, thus distinguishing it from the other species. The lines of pores in the summerwood are quite long and conspicuous and well distributed. The wood is sold as white ash and has the same uses.

Pumpkin ash (*Fraxinus profunda*) is found in deep river swamps often inundated during several months of the year, in southeastern Missouri, eastern Arkansas, and the valley of the lower Appalachian river, Florida. One of the most prominent features is the much enlarged and buttressed base so characteristic of tupelo. The wood is rather soft, brashy, and brittle and not fitted for the exacting uses to which white ash is put. The common name probably refers to the comparatively soft character of the wood in the same way as pumpkin pine is applied to soft, homogeneous old white pine.

Black ash (*Fraxinus nigra*) is a tree of the northeastern quarter of the United States, especially in deep cold swamps and the low banks of streams and lakes. Its name refers to the dark color of the heartwood. It is also known as brown ash. The wood is lighter in weight, softer and weaker than white ash. The pores in the springwood are in a very broad zone, commonly making up one-half or more of the growth ring. This accounts for its lessened weight and strength. The pores in the summerwood are isolated, few, large and rarely joined by wood parenchyma, thus distinguishing the wood from that of the preceding species. The wood is extensively used as core for veneers as it glues well. On the market it is usually considered merely a poor grade of white ash. The darker color makes it considerably less perishable in contact with the soil than the wood of the other species.

Oregon ash (*Fraxinus oregona*), while nowhere abundant, is most

common and reaches its largest size on the bottom-lands of the rivers in southwestern Oregon. It also extends into California and Washington. Because of the scarcity of hardwoods in that region it is highly prized for many purposes such as handles, furniture, interior work, fixtures, vehicles and saddles. The wood is pale brown, quite hard and strong, rather light, tough and resilient. The sapwood is nearly white, but usually with a reddish tinge. In structure the wood is more like black ash than white ash. The pores in the springwood are in a zone of medium width, commonly composing one-third of the growth ring. Pores in the summerwood appear as though subdivided radially into two to five, and near the outer edge of the ring are somewhat tangentially grouped. The ray cells are larger than those of black ash. About one-half million board feet of Oregon ash lumber is consumed annually in Oregon and is worth from \$28 to \$60 per thousand feet.

There are few woods which resemble ash even superficially. Chestnut has somewhat the general appearance of black ash, but is darker colored and coarser textured. If examined closely it will be noted that in chestnut the small pores in the summerwood are in radial lines branching more or less toward the outer edge of the ring, while the wood parenchyma is in fine tangential lines. This structure is quite distinct from that of ash.

Sassafras is sometimes confused with black ash, but if smoothly cut cross sections are compared it will be readily seen that the rays of the sassafras are much more distinct, and

that the pores in the summerwood are in more numerous small groups than in ash. A fresh cut surface of sassafras usually gives off an aromatic or spicy odor that is quite characteristic. The sapwood is thin and distinct, while that of ash is thick and often the boundary line between it and the heart is not clearly defined. If a radial section is examined under a compound microscope the ray cells of ash will be found to be all alike, while in sassafras some of the marginal ray cells are very large, ovate or round.

The waxy exudations from the trunk and leaves of a certain ash (*Fraxinus ornus*) of southern Europe and Asia Minor furnish the manna of commerce used in medicine as a gentle laxative; and the Chinese white wax is obtained from branches of species in eastern Asia.

Note the peculiarly developed cells on the margin of the ray which crosses the middle of the section. Magnified fifty diameters.

Hardwoods Used for Matches

In Germany, most of the four-sided matches are manufactured from veneer sheets of linden (basswood), cottonwood and willow. Rather extensive experiments have been made to determine the adaptability of other woods for the purpose. These consisted for the most part of taking four-sided matches and noting the time they required, when placed horizontally, to burn down to one inch, both with and without paraffin impregnation.

Without paraffin the duration was longer in hardwoods than in conifers, the flame more even and less sputtering, which in conifers makes it necessary to turn the match to prevent its extinguishment. Impregnation with paraffin hastened the progress and illuminating power of the flame by from four to six seconds, on the average. With such impregnation the following scale, gauged by duration, luminosity and size and regularity of flame, i. e., quality, was obtained: linden, cottonwood, willow, yellow poplar, alder and walnut. Of the conifers the white pines gave best satisfaction, as they threw fewer sparks and spluttered less than the others.

When the auto people want the best thing for spokes they hunt wood. That's a good way to get the best things for bodies.

You can spoil your trade by shipping stock that is above grade just as easily as you can spoil your reputation by shipping stock that is below grade. A grade is a good thing to stick mighty close to.

The "Good Will" Emissary

It is generally agreed by business men, as well as by students of economics, that good-will is the most important asset of a commercial institution. In some cases good-will is represented principally by trade-marks or trade names which have become of such familiar use that the public demands articles by that name without knowing that they are asking for the product of a single concern. "Kodak" and "vaseline" are examples of trade names which have attained a place in the common vocabulary and are now immensely valuable to their owners and a stumbling-block for competitors.

But good-will means more than the value residing in the continued use of a trade name. It means the accumulation of interest on the satisfactory transactions handled by a concern until the favorable opinions held by its customers assume almost a tangible and measurable force. Certainly the result of honest dealings and right treatment of one's patrons is sure to be felt at one time or another in the development of good-will, or the lack of it. The average lumberman must store up good-will not in a trade name but in his own name, which, to be of value as a business asset, must stand for the square deal and for the correct practice of the principles upon which every trade and calling is based, even if only in theory.

The development of good-will, then, may be conceded to be of importance to the lumber concern, just as it is to the manufacturer of breakfast food or talking-machines. How to develop it is another question. The answer may often be found in the most effective use of the selling organization of the house, as well as in the proper care of the orders placed with the concern by its customers.

The value of the salesman from this standpoint is of special interest just now when business is good and when many concerns which have sold up to the limit of their supply are planning to call in their representatives and withdraw themselves from the market. It is a question as to whether this is good business policy. Apart from the fact that the salesman is one of the best possible advertisements that a concern can have, and that the lumber firm which is not represented in the markets where its product must be sold is likely to be speedily forgotten, it must be remembered that the able representative of the company in the selling field does more than merely take orders—he is creating good-will.

This idea was exemplified recently in the East during the anthracite shortage. It was noticed that the big operators did not withdraw their salesmen, even though they were unable to accept business for immediate delivery. It appeared to be an unnecessary expense to keep salesmen on the road if they could not actually sell, and to be taking money out of the profits account and putting it into the expense account without any satisfactory reason. But there was a reason, and it consists of the idea developed above, that the business concern, in order to maintain pleasant relations with the people with whom it has dealings, should not suffer the personal connection between them to be interrupted or broken, even temporarily.

A spokesman for one of the anthracite concerns put it this way:

"For years past our salesmen in eastern territory have been used largely for the purpose of keeping in touch with the trade, rather than striving for orders. This policy is regarded as a wise expedient, since it practically eliminates credit losses and serves for gathering much useful information up and down the line. We expect to keep our salesmen in active service constantly, even though orders are coming in freely. Sometimes the unsolicited order is very properly the subject of investigation, which can be made more appropriately by the salesman in charge of the territory from which the order comes than anyone else."

As it happens, additional evidence of the value of the salesman from the good-will standpoint was brought to the attention of the writer recently when a manufacturing concern, not in the lumber business, remarked upon the advantages of the plan it uses of sending to each salesman a copy of every letter that is sent to a buyer in his territory. This is done not so much that the salesman

shall thus be made more efficient in order-getting, although this result is realized; but so that the representative of the house in the field shall be in the best possible position to look after matters affecting the business of the customer.

In the lumber trade salesmen frequently dodge the disagreeable duty of calling on concerns to whom they have sold lumber, for the purpose of settling kicks. The reason they assume this attitude is not merely because of a distaste for performing what is always a distasteful duty, but for the reason that the lumber concern frequently fails to carry out the agreement made by the salesman with his customer. Some lumbermen complain that their salesmen are too often inclined to take the part of the customer when a complaint comes up; and while it may be true that sales representatives should lean towards their employers rather than in the other direction, it can hardly be affirmed that this should be the case in every instance. If a lumber salesman promises one thing, and puts it down in black and white, and his house does another, it is putting more than a small burden upon him to tell him to go see the customer and "straighten the matter out." And certainly he is not in a fit position to create much good-will.

Many of the errors that are developed in the handling of lumber business are the fault of misunderstanding in the office or the yard. The salesman may fail to express himself as explicitly as he should have done, and may have assumed that his house understood the details of the requirements of the customer as well as he himself did. Thus honest mistakes may have occurred which appear inexcusable to the purchaser of the lumber, and which would have been avoided by the use of the plan mentioned above, that of furnishing copies of the correspondence passing between the house and buyers to the salesmen interested.

The salesman who is earnestly endeavoring to serve his employer and build up good-will by serving the customer as well—performances which in the light of modern business ideas are not at all incompatible—is unquestionably handicapped by occasional interference by the office with arrangements which have been made with the customer. No man of spirit likes to have business go "over his head" when it should pass through his hands, especially when it comes to a matter affecting one of his customers, since the salesman who is made of the right stuff feels a sort of proprietary interest in the people who buy from him, and rightly so, for his personal connections are in effect the good-will which he himself has to sell when he puts his services on the market to be sold to the highest bidder.

Hence the friction that occurs between the salesman and the office and between the concern and the customer, when the salesman fails to be given an opportunity to explain his end of it. Perhaps he made a verbal agreement with his customer that there should be a certain percentage of long lumber in a car which had been ordered. If the salesman forgets to put this into the contract and the lumber is shipped without the required percentage, the consumer has a right to feel that the policy of the square deal has not been carried out; while the office, on the other hand, has a good legal right to object to a complaint based on a condition which was not inserted in the contract.

If the salesman who made the agreement, knowing the price at which the lumber was to be sold, was permitted to explain that he had promised the extra lengths, the company would doubtless find it good policy to deduct a sufficient amount from the face of the bill to make up for the failure to include them, since the price was doubtless sufficient to take care of the cost of the special dimensions.

If the customer happens to be a difficult person to deal with, and has to be "handled with gloves" by the salesman, the latter knows that an order to deliver on the fifteenth does not mean delivery on the first preceding nor the first following, and is the best judge of whether a car of lumber the firm is specially anxious to get rid of ought to be unloaded on the consumer without more

formal notice than a line to the effect that "we are this day shipping you car 90178," etc. If a letter of that kind were to be mailed, with a copy going to the salesman, the latter would have a chance to get to his customer, explain that a mistake has been made and settle the questions before, and not after, the irate buyer had a chance to unlimber his batteries against the house.

There are scores of occasions in which permitting the salesman to see the correspondence would not only aid in reducing the friction which seems inevitable in the operation of a business of any size, but would give the men on the road a chance to be real business-builders in the sense of building up the good-will of the concern in the

mind of the customer, since good-will is a purely mental proposition.

The fact that the salesman supplies the missing link between buyer and seller in the form of personal contact, which can be made the most effective lubricator of the wheels of business, seems to suggest that the statement which is occasionally heard from those who have set "efficiency" up as the only thing to be striven for, that the salesman will one day be eliminated when the machinery of distribution is more nearly perfected, is not likely to be realized. Perhaps the day may come when he will not be called the salesman, but will be an ambassador extraordinary. But even then he will sell the firm itself, if not its products.

Tests of Structural Timbers

Bulletin 108 has just been published by the United States Forest Service. It was prepared at the government laboratory at Madison, Wis., by McGarvey Cline and A. L. Heim, and deals with the strength and seasoning of wood. Much of it is strictly technical, and is of interest chiefly to architects and engineers; but certain points are of value to any one dealing with timbers of large sizes, or lumber of any size.

It is shown that small pieces of a wood, as they are used in practice, are proportionately stronger than large beams. The reason for it is that a large beam is liable to have more defects, in proportion to its size, than a small stick. In other words, it is more difficult to find a large, clear beam than a small, clear piece. Defects govern the strength of timbers in most cases. A beam is no stronger than its weakest point, and a knot or a check may make one point much weaker than another. When a large and a small piece are both clear, and other things are equal, they are of the same strength, in proportion to size.

The bulletin gives interesting data in regard to the moisture in wood. Measurements were made of the amount in different parts of heavy beams, that is, the outer shell, the intermediate part, and the center. They were tested both green and air-dry. The following table, compiled from figures in the bulletin, gives the moisture in percentages of the dry weight of the wood. For example, if the center of a green longleaf pine beam shows thirty per cent moisture, it means that the contained water weighs thirty per cent of what the air-dry wood will weigh. The width of beams tested was twice the thickness, that is 8 by 16 inches.

MOISTURE CONTENT OF BEAMS 8x16 INCHES IN PERCENTAGE OF DRY WEIGHT OF THE WOOD.

Species—	Outer portion		Intermediate portion		Central portion	
	Green.	Air-dry.	Green.	Air-dry.	Green.	Air-dry.
Longleaf pine	23.4	17.2	28.6	19.1	30.8	21.2
Douglas fir	32.1	14.4	33.3	17.8	34.1	19.7
Shortleaf pine	59.4	13.9	45.5	16.5	34.4	17.3
Western larch	44.0	15.3	54.5	18.2	55.4	20.1
Loblolly pine	31.5	16.4	36.0	18.1	35.7	19.3
Tamarack	37.8	16.3	43.2	19.7	45.0	28.4
Western hemlock	46.9	16.4	48.4	17.8	47.4	19.0
Redwood	82.5	15.8	89.1	21.2	91.	25.7
Norway pine	63.7	15.4	43.8	15.6	39.4	16.0

In general, timber 8 by 16 inches must season through two entire summers before it reaches a thoroughly air-dry condition. If seasoning is started in the hot summer months, the loss of moisture at first is very rapid, even though the timber is protected from sun and wind. The loss in weight in a stringer 8 by 16 inches, and 16 feet long in three months varies from forty to sixty pounds, the loss being proportioned in a general way to the amount of sapwood, which often contains much more water than heartwood. Checking is less serious when the timber contains a considerable amount of sapwood than when it is all heartwood.

The heartwood of each species of timber has a characteristic color, due to the presence of gums, tannins, and other substances due to the process of growth. Coloration from such causes apparently does not affect the mechanical properties of the timber; but marked variation from the characteristic color often indicates incipient decay, particularly when it produces a streaked or spotted effect. Some

fungi which produce stain do not injure the timber, because they live on the organic matter contained in the sap and do not attack the cell walls. Many of the blue stains noticeable in sapwood are from this source.

Sapwood, except from old, over-mature trees, is as strong as heartwood, other things being equal. It is not apparent that the position of the pith in timber bears any relation to the strength of the timber, but checks developed on account of the position of the pith may affect the strength. It was shown by the tests that the mechanical properties of a wood vary directly with its dry weight, and, other things being equal, the heavier the timber, the greater its strength.

The presence and position of knots in timber are a great source of weakness, and it is not unusual for the presence of a knot in a beam to lower its strength more than half.

Burls are described as "local disturbances in the grain of the timber, usually associated with knots or produced by the healing of wounds during the life of the tree."

Forests in Chile

In view of the interest which many lumbermen are taking in South American forests, the following statements, condensed from a recent consular report, will prove interesting:

The estimated area of Chile's natural forests is about seven million acres, and in addition there are about thirty thousand acres of planted forest. The Chilean government is taking measures to stop the destruction of timber, and to plant trees in certain arid regions where little wood of any kind exists now. The forested area of Chile is about one-half that of West Virginia.

Most of the Chilean timber is very heavy and will not float. This has stood in the way of operations in the interior where railroads are few. At present there is no prospect of more railroads through the timbered regions. United States dealers last year shipped 34,000,000 feet of lumber to Chile, and paid import duties on it amounting to \$20,000.

Utilization of Timber in Mexico

The Sierras which traverse the western part of the state of Durango, Mexico, are plentifully wooded on both east and west exposures. While pine is the most important of the tree species, there is a considerable quantity of cedar, oak and other hardwood, while far down on the Pacific slope there are many valuable cabinet woods. In all there are thirty-six separate and distinct varieties of timber noted in the timber production statistics of the state.

The timber area of Durango is approximately 6,250,000 acres which has been scarcely touched on account of lack of transportation. New railroads either actually being projected or under consideration will open up this vast territory to exploitation. Some of the best timber tracts in the state will be made available, which will mean that Durango will be one of the most important lumber producing states in the northern part of the Republic. The industry at present is entirely local.

A WOODLOT FROM WHICH THE BLIGHT-DAMAGED CHESTNUT HAS BEEN CUT INTO CORDWOOD

Uses for Blight-Killed Chestnut

In a recent issue of *HARDWOOD RECORD* a number of uses for blight-killed chestnut timber were discussed. To that list should be added several others of considerable importance. The damage already caused by the disease is so great that every reasonable effort should be made to salvage as much of the material as possible to prevent its waste. Everyone has been hoping that the blight would not penetrate the valuable southern forests of chestnut, but recent investigations disclose that it is rapidly gaining a foothold there. So far as known no plant has ever been exterminated by disease and it seems unlikely that chestnut will be exterminated. On the other hand the history of this blight is unparalleled in the annals of plant pathology and no one can predict the outcome. The menace is so great that every owner of chestnut trees should be thoroughly alive to the situation and take such steps as will best protect him from unnecessary loss.

On account of its durability, chestnut is well suited for piles, posts and rails. In southern New England piling is sold by the running foot to an upper diameter of seven inches. Twenty cents per running foot is the common selling price for forty to forty-five-foot piles. Specifications for chestnut fence posts usually call for material sound and free from shakes and rotten knots, seven and a half to eight feet long, with six inches top diameter, and with bark removed. They sell for from fourteen to thirty-five cents a piece, depending on the demand. The average life of a chestnut post is ten years, exceeding that of white oak and being about half as great as locust and Osage orange. Posts treated with creosote last twice as long. Railing sells for about three cents per running foot, delivered along the road. It is used to a diameter at the smaller end of about four inches.

Nearly two and one-half billion board feet of timber is used every year in the United States in connection with mining. Chestnut is well suited to this purpose because of its durability, and as Pennsylvania leads all other states in the use of mine timbers it is

apparent that a good market is at hand for much blight-killed material in event the disease becomes virulent in the western part of the state. Sound dead timber is just as good for this purpose as timber cut from live trees. Props and posts are from six to ten feet long and have a cross-sectional area of not less than sixteen square inches at the top. Timbers may be used in the round or sawed. The average life of a chestnut mine prop, so far as decay is concerned, is five years, equalling white oak. Where treated with creosote the life is considerably more than doubled. Ties for mining trams are mostly five feet long and vary from four to six inches in width and thickness.

While a large amount of chestnut wood is used for fuel, as a rule the sale price barely covers the cost of getting it to market. The cost of cutting the green wood is about ninety cents per stacked cord of four-foot wood. Dead material is harder to cut and the cost is increased accordingly. The selling price varies from \$3.00 to \$4.25 a cord. For ordinary purposes chestnut is not prized as a fuel as the wood is light and burns up quickly; it crackles and throws sparks too much for open fire places. If split fine it makes excellent kindling. In some localities there is considerable demand for chestnut for use in lime and brick kilns. In places where there is no market for cordwood the small-sized material can often be made into charcoal at a small profit. While the returns are in no case large they do afford a fair wage at a time when other employment is slack.

For the annealing of brass no other wood has been found so satisfactory as chestnut. The brass bars or plates are placed in a furnace so as to be exposed to the direct flame of the burning wood. If hard wood like oak is used the fire is so hot that there is great danger of burning the metal, while soft woods like pine contain so much resin that the resulting soot blackens it so much that subsequent cleaning is very difficult. In localities where there are no chestnut trees pine, especially the refuse from box factories,

is used, but the process of annealing is more difficult than where chestnut is used. Attempts to substitute oil have only recently proved successful, and because of the greater ease of controlling the temperature it is probable that oil will largely supplant wood for this purpose in the future.

In the Naugatuck valley in Connecticut the brass industry is very important and large quantities of cordwood are consumed. It is a common practice for the operators to buy up large tracts of sprout woods and cut them over for cordwood, all sizes being taken. In buying from farmers, only chestnut is wanted though small quantities of other woods are sometimes permitted. The companies sometimes find it profitable to sort out oak and hickory for sale in the towns. The use of chestnut for fuel fortunately permits the disposal of small-sized and poorly formed material for which there is no other market.

It is important that owners of blight-killed or threatened chestnut utilize it before it deteriorates. Spare time in winter can profitably be devoted to cutting the largest and best trees into logs, the tall and slender ones into poles, others into ties or such other products as the market requires. Pole cutting is much the simplest and cheapest form of exploitation per unit of volume. It consists simply of felling the tree, sawing off the top to an inside diameter of seven inches, trimming the branches close, and peeling. The cost of this is usually figured at one cent per foot in length for poles from twenty-five to thirty-five feet long and thirty-five cents apiece for lengths between thirty-five and fifty feet. Pole cutting of green timber is more expensive in winter when peeling is more difficult, but most companies prefer winter-cut poles on account of their reputed greater durability. The number of poles which can be hauled at a load varies from six of the twenty-five to thirty-foot size to one of the fifty-foot length. The selling price increases rapidly with the length. In southern New England a twenty-five foot pole brings from \$1.75 to \$2.00; forty-foot, \$5.00 to \$5.75; fifty-foot, \$8.00 to \$10.00 apiece, while a sixty-five foot pole is worth \$20.00. Formerly buyers specified that poles should be cut from green timber, but most of them are now accepting blight-killed material if it is in good condition.

The cost of tie-making varies chiefly with the distance of haul, but also with the method of manufacture. To hew chestnut ties usually costs from nine to ten cents apiece, depending on whether hewed on all four sides or only two. In the latter case the bark has to be peeled off. From twenty-five to forty ties, depending on the character of the haul, make an ordinary wagon load; usually about thirty-three first-class or thirty-eight second-class ties can be hauled at one trip. A first-class tie is eight feet long, six inches thick and with a six-inch face; a second-class tie has only a five-inch face. Usually not over ten per cent of the latter are acceptable in a delivery. The usual selling price of first-class chestnut ties is fifty cents apiece delivered along the track, but in some places it has dropped to forty-five cents. Second-class ties bring about thirty cents apiece. For extra length ties as for switches special prices are paid. From these facts the owner of chestnut should be able to figure out approximately the returns from such timber as he may wish to convert into ties.

Large trees should usually be cut into lumber. The farmer can usually do his own logging during the winter months and small portable mills can be engaged to do the sawing. Mills such as

these can ordinarily be moved for from \$40 to \$50 and a stand of 50,000 to 75,000 feet will warrant a set-up. The cost of sawing will vary from \$2.50 to \$4.00 per thousand board feet, while cutting, skidding and piling will require from \$3.75 to \$5.00. With these figures as a basis the owner can calculate the probable cost of the lumber and by comparing it with other products determine what course will afford the best returns. Chestnut lumber properly piled and protected may be kept for a long time if considered desirable on account of market conditions.

S. J. R.

Tree Fern Columns

Shown in the accompanying cut are two columns, each of which was manufactured from the trunk of a tree fern from ten to sixteen feet high and about ten years old. They came from the heights of Fort de France, from the place called "Balata," near the Pitons du Carbet, Martinique, French West Indies. They show ash-colored marks from volcanic cinders which have penetrated under the action of the rain into the fibrous tissue of the tree. The columns have also been pierced with vines, the exposed light-colored wood of which shows in contrast with the dark brown of the fern.

The tree fern (*Fougère arborescente*) grows in great quantities in the forests of the island of Martinique, especially in damp places and at a considerable altitude, where it attains a height of from forty to fifty feet and sometimes more. The trunks of these trees, when old and fully seasoned, are cut square and used as posts for arbors, or as piles, or as beams for houses in the country. When fully matured it is a very durable wood, and is considered incorruptible when exposed to humidity.

Some artisans fashion from the roots flower pots and various novelties which are more or less artistic, and have, as a rule, an original style of their own.

The newspapers announce that muckraking is going out of fashion, but, since they didn't use wooden rake handles anyway, the handle trade still prospers.

If the south pole were only a good hickory tree, some handle man would bring it in before the winter is over, for there is a great scouting for hickory handle timber.

Unless the car builders make a pretty strenuous demand for car stock this winter, there will not be much excuse left for the railroads when another car shortage arrives.

They are making a sort of houn' dog of our real quartered oak by calling the printed imitation "American" oak, and it's about time for the dog to turn.

There never was a time when the chances were better for getting the right kind of price for small dimension stock. It is simply a matter of getting at it right.

There may be some pumpkin ash, but there is some other ash that is some pumpkins right now, too.

Maybe the worm holes were made in chestnut so that it would be saved for body work in veneering.

When the discriminating builder wants real quality in interior trim for anything from floors to picture molding, he calls for hardwood.

A few more planers at the hardwood sawmills would save some freight and help sell some lumber at a higher price.

Oak casing and base should make good items to go with oak flooring.

TREE FERN COLUMNS FROM MARTINIQUE

Varying Problems in Production

It is a truism in business that the thing that works well for one man may be a colossal failure for another. It is equally true that the system which is a success in one sawmill may fall down flat somewhere else. It's all in the individual conditions, of course—but it takes a kind of genius to determine which are the essential factors bearing on a given proposition.

For instance: One of the leading hardwood manufacturing concerns of the country had a big sawmill in Tennessee. Its production was large and as a means of reducing handling costs in the yard its engineer devised a system of tramways by means of which distribution was accomplished more quickly and economically than was possible under the old system. The lumber was put on trams, shoved out on the tracks to the piles, stacked and disposed of in so short a period that the old scheme seemed hopelessly out of place. The idea was really a great success, and the saving made in handling expenses was more than enough to make the investment in the tramways a profitable one.

Not only was the plan successful when it came to handling, but also in loading. The tramways were built between rows of piles, so that lumber was stacked on each side of the tram, with the rear toward the tramway. Between the piles were railroad tracks, which meant that as soon as the material was ready for shipment it could be handled directly into the car. Taking it from first to last, there were just two handlings, from the saw to the pile and from the pile to the car. Under the old system this is the nominal number, but as a matter of fact it is from the truck to the pile, from the pile to the truck and from the truck to the car. And the latter is slower, more expensive and much more time-consuming.

The same company decided to erect another sawmill a little further south. The mill was to be one of the finest in the whole hardwood country, and the engineer who had worked out the tramway idea was told to go ahead and build a mill that would stand any kind of criticism. He did. He put up a reinforced concrete, steel and brick structure that from an engineering standpoint as well as the practical view, was a model. It was so substantial in construction that there was no danger of excessive vibration of the machinery producing imperfectly cut lumber, and the materials going into the building were not combustible, so that it was unnecessary to insure against fire.

The sawmilling machinery was placed on the second floor, and, carrying out the idea which had proved successful at the other plant, tramways leading from the mill into the yard were constructed. The mill floor was about fifteen feet above the ground, and this height was maintained in planning the platforms and carrying tracks. The same plan of distributing lumber to stacks on each side of the tramway, with railway tracks in between so as to enable lumber to be loaded directly into the car, was used as in the other plant. This feature was made a good deal of, and apparently rightly so, since it had been one of the prime causes contributing to the success and economical operation of the other plant.

A few months ago the manager of the second mill got an o. k. from the president of the company on an order to tear out the tramways and go back to the discarded system of distributing by teams and trucks. The scheme, which had looked so good on paper, and which had been a practical success in another plant, had failed. Why?

In the first place, consider for a moment the nature of the two businesses. The Tennessee mill was making principally gum, cottonwood and ash, as well as oak. It was shipping practically its entire cut to a large consuming factory with which it had connections. Owing to the uniform nature of the product of this factory, all of the lumber cut at this mill, as a general rule, was of one thickness.

The second plant was intended to manufacture lumber for general sale. Oak was the chief product manufactured, though there was some gum and a little ash. In view of the nature of its business, thicknesses had to be varied to suit the needs of the consuming trade.

When it came to using the system which had proved successful in the first instance, it was found that the very difference in the character of the chief product turned out was a big obstacle in the way of the success of the plan. Oak is much heavier than cottonwood or gum, and when the sawmill man began stacking his oak 150 courses high, and getting it up twenty-five or thirty feet off the ground, trouble was the sequel which followed quickly. The great weight of the lumber stacked on the lower courses caused uneven shrinkage in seasoning, and checks and cracks developed almost as a matter of course.

In the other mill the ability to pile lumber high, involving as it did a smaller outlay for the construction of foundations for piles—which in this instance are of concrete and very expensive—was one of the chief economies secured. The foundations were just twice as good an investment as when the piles were half as high. But the excessive weight of the oak knocked that plan into the proverbial cocked hat, and it was seen that it would be impossible to use the extreme stacking methods which had been successfully practised before.

Another feature which was soon brought out was that oak, especially thick stock, dries slowly, naturally, and needs every facility for seasoning that can be afforded. With tramways fifteen feet high back of each pile, a shadow was cast on at least half of the lumber for a considerable portion of the day. This appears to be a small factor, but in practise it meant the consumption of much additional time in the seasoning of the lumber, involving an investment charge on the stock thus tied up. And that was another black mark against the system.

Another difference which obviated against the success of the plan was the fact that owing to special orders being taken care of, it was often necessary to lay out boards which did not belong in a given car. Then it was discovered that there was no place to put this material. The piles had been built closely together, with the tramways back of them and the railway tracks between, and there was simply no provision for the disposal of lay-outs. This proved a big inconvenience, since it meant that these boards had to be passed up to the platform above, placed on trams and carried to some other pile. The old-fashioned way would have been better here.

Another point that came up was in the distribution of the various dimensions. In the old plant the tramway had been designed to take care of the piling requirements of a mill cutting practically nothing but inch stock. The tramways and the pile foundations were laid out accordingly. In the new plant there was a great addition to the number of piles needed, owing to the additional number of thicknesses cut, and the tramway system, elaborate as it seemed, was not sufficiently extensive to take care of all the requirements of the mill. This made for confusion, since the lumber had to be handled in some fashion; and as provision had been made only for tramway handling, the cost of taking care of it in any other way was excessive.

A disadvantage which was more apparent in handling heavy oak lumber than in relatively light cottonwood was the extreme height of the piles. It had been figured that much labor would be saved in distributing lumber from tramways fifteen feet off the ground, because gravity would assist in the operation, and it is easier to load lumber down than up. But when it came to taking down a thirty-foot pile of lumber, the difficulty of handling it increased enormously, and several more men were needed for the job than are required in a yard laid out in the usual way. Consequently the prime advantage turned out to be a disadvantage.

Thus a plan which in theory is most excellent proved in practice, "the acid test" of theories, to be ill-suited to the special requirements of a new operation. It would be going too far to say that the differences in the situation should have been taken into account and the difficulties thus created anticipated, for there was no reason to believe that apparently minor questions such as a difference in the weight of lumber, variation in thicknesses and a slight alteration

of selling plans would cause a system which had shown its value in one plant to fall down in another.

The experience of this concern, which is one of the most progressive in the business, merely emphasizes the fact that is often overlooked: that success is like genius in that it is a matter of taking pains and of studying details. Broad principles of operation are all right

as a general guide, but it is a dangerous matter to attempt to apply them to individual propositions, until an analytical study of the situation has demonstrated beyond question that the two fit. Making a plan and then running your mill by it, instead of building a plan to suit the mill, is a good deal like buying a \$9.99 suit; there is likely to be a misfit.

G. D. C., Jr.

Willow, a New Substitute Wood

When beech came into use among the hardwoods of the northern forests and tupelo in the South, it was generally supposed that the last important substitute woods had been found. However, there was another to come in, and it is now coming. It is the black willow.

This is not a new tree lately discovered. It is familiar to most people who are acquainted with forests, and it is generally called willow without a qualifying term. It has been customary with most people to think of all species of willow as practically the same and nearly worthless. No good reason could be given for distinguishing one species from another. Few persons, even among those fairly well posted on the different kinds of trees, took the trouble to distinguish the willows.

Twenty odd species are native in the United States, besides several foreign which have been introduced and are running wild. About half of these develop trunks large enough to be called trees, but most of them do so only under most favorable circumstances.

Black willow (*Salix nigra*) is the largest of all native willows. It may attain a height of from eighty to one hundred feet and a diameter of six, but that size is unusual. Heights of from sixty to seventy feet and diameters from two to three are fair averages of mature trees, but such sizes are reached only where conditions are favorable.

Its range covers the eastern half of the United States, including the whole Mississippi valley westward to the semi-arid regions. It extends west into Texas, flanks the Rocky mountains by passing into New Mexico and Arizona, and thence northward six hundred miles to central California.

It reaches its highest development in the lower Mississippi valley, including the lower Ohio. It is not a swamp tree to the extent of cypress and tupelo, but it does best in wet, fertile land. Occasional overflow helps rather than harms it.

Dry black willow weighs 27.75 pounds per cubic foot. That places it in the weight class with yellow poplar. It is rather low in strength and elasticity. The wood is very porous, but the pores are exceedingly small. It splits with difficulty, and nails easily. The wood varies in color, but if dry is generally brown, with a tinge of blue. When freshly cut it is often quite blue, or it may be nearly black; but the color soon changes to a brown. The blueness does not appear to be the result of fungus, however an expert report on that matter has not been made.

The rapidity with which willow is coming into use is shown by figures of output. The federal census for 1908 gave the sawmill cut of this wood in the entire country at 302,000 feet, with Pennsylvania and Mississippi as the largest producers. Three years later Louisiana alone was credited in a wood-using report with a cut exceeding 6,000,000 feet. A report of fence posts in Iowa in 1909 credited willow with 88,113, but posts are not a new use.

The rapidity with which willow is coming into use is due to its fitness for many purposes. It reaches northern markets in large amounts, as much as 200,000 feet in a single shipment, and it goes also to other markets. Thorough tests of its suitability for panel cores in piano making have been made with results highly satisfactory. It is further contemplated that it will be used as back and bottom boards for pianos. It shows no tendency to warp at any time. One concern which employs it as panel cores uses stock twenty-seven inches wide, which affords a pretty severe test. A shipment of willow lumber was recently made averaging eleven inches wide. Trees are not only large but usually are sound. They frequently have trunks of clear

lengths thirty or forty feet. A large shipment recently showed 50,000 feet No. 2 common and only 6,000 feet No. 3 common, while 150,000 feet were the better grades.

A large mill in Louisiana rafts its willow logs down the Mississippi from points above. Its yard contains numerous willow logs from two to three feet in diameter, and some four feet. Many of them are as sound and smooth as yellow poplar. When the lumber cut from stock like that is thoroughly seasoned, its shipping weight is from 2,300 to 2,500 pounds per 1000 feet. It is, therefore, an economical wood from the freight standpoint.

Under favorable circumstances the growth of black willow is probably equal to that of any other American timber tree. Instances have been cited, apparently on good authority, of willow stands on some of the abandoned cottonfields in the Mississippi flood plain, which have produced 100,000 feet of willow logs per acre in sixty years. That is, of course, more than can be expected under ordinary conditions, but it shows what the possibilities are for this wood which is just now attracting attention because of its many excellent qualities. It is known to exist in rather large amounts in many parts of the country; and the rapidity with which it grows assures it a place in future supply. The abundance and lightness of its seeds favor natural planting in all vacant spaces within considerable distances of trees. It is largely a waste land species, which gives it additional value.

The history of the uses of black willow fully uphold the claims now made for it. Two hundred years ago willow planking for small boats was used because it was a wood which resisted dents and bruises without splintering. The same quality today gives it a place in the manufacture of baseball bats and other athletic goods.

Before labor-saving machinery had so largely replaced hand labor, willow was in almost universal use as lapboards and cutting boards by shoemakers, cobblers, and harness makers, first because it was light, but chiefly for its peculiar and spongy softness. It did not dull the workman's knife, nor was the surface of the wood scarified or chipped by the use of the knife on it. That identical quality is still valued by artisans who use cutting tables.

It is one of the best woods for ironing boards, sleeve boards, and others where heat is applied to the surface, for it will not warp, check, or split in high temperatures. Its ability to resist intense heat has long been known. That it is difficult to burn seems strange, because willow charcoal is the best known for gunpowder and the value of the powder is due to its quickness to burn. The first railway trains used wooden brake blocks, and experience showed willow to be the best, because it was almost impossible to set it on fire by friction, while most other woods quickly kindled into blaze when brought in contact with revolving car wheels.

Wooden brake blocks are no longer used, but willow's resistance to heat still creates a demand for it. The thick wooden-soled shoes worn by workmen in rolling mills and glass factories, who must stand on hot floors, are usually of willow; and the wheelbarrows which carry ore, ashes, and other material to and from the doors of red-hot furnaces are of willow, because it can stand fiery ordeals which would char or kindle into blaze most other woods.

It is one of the best materials in this country for wooden shoes. Persons unacquainted with that industry would be surprised to learn how many wooden shoes are made and worn in the United States. They are literally sold by the cord in Chicago and other large cities. In Europe alder is considered the best material, but in this country

willow heads the list, in quality of wood if not in quantity. It meets two requirements—it is light, and is waterproof. Though willow wood contains tens of thousands of pores to the square inch, they are too small for water to pass through, and at the same time they make the wood light.

Slack coopers know the value of willow for staves. The quantity used in 1808 was about four and a half million in the United States. A large part went into flour barrels.

Willow's resistance to checking leads to its employment by the manufacturers of such woodenware as bowls, scoops, ladles, large spoons, and trays.

It was formerly much used for wagonbox boards and is still occasionally so used. Such boards are practically indestructible, as might be expected of a wood which does not splinter, warp, check, and wears out very slowly. Yellow poplar and cottonwood supplanted willow to a large degree years ago, but they are now much higher in price than willow, in grades suitable for that use, and willow is likely to come back to the wagon factory.

Probably the largest use of black willow is for shipping boxes. Meat packers of Chicago, Kansas City, and Omaha are the largest buyers. The box shooks are made in the lower Mississippi valley, and the willow often passes under the trade name "brown cottonwood."

Experiments in staining willow in imitation of mahogany have been successful enough to render it probable that this opens a new field for willow in furniture filing cabinets, interior finish, bank and office fixtures, and for many other commodities.

What makes the study of uses of willow particularly interesting is the fact that it grows very rapidly, flourishes in many parts of the country, is a waste land tree, and will plant itself naturally, quickly, and abundantly. It is not one of the species now on the decline with the end in sight.

In marketing any new commodity it is necessary that it be persistently pushed by those interested. One of the largest handlers of this stock at present is the Faust Brothers Lumber Company of Paducah, Ky., and Chicago, Ill.

B 329—Wants Market for Black Locust

Somerville, N. J., Oct. 31.—Editor HARDWOOD RECORD: Can you advise what commercial use is made of black locust lumber other than for insulator pins?

The writer has been advised that about the only commercial use for black locust is involved in its consumption for insulator pins and for policemen's clubs. The larger quantity of black locust is converted into fence posts, for which there is a ready sale, as this wood is regarded as the best growing in the United States for that purpose. The writer has been referred to a possible buyer of fence posts.—EDITOR.

B 330—Seeks Sap Poplar Strips and Quartered Sycamore

East Cambridge, Mass., Oct. 31.—Editor HARDWOOD RECORD: We are in the market for some 1-inch by 2½-inch to 3-inch poplar strips, sap no defect; also ¾-inch, 1-inch, 1¼-inch, 1½-inch and 2-inch quartered sycamore. If you can refer us to anyone you think would have this stock, we would appreciate it greatly.

The writer of the above letter has been referred to four possible sources of supply for the stock named.—EDITOR.

B 331—Cyanamide

Chicago, Ill., Nov. 1.—Editor HARDWOOD RECORD: What is cyanamide? Can you also advise us whether the production of this chemical will have any deleterious effects on adjacent timber?

The writer of the above letter has been advised that cyanamide is a product formed by the fixation of atmospheric nitrogen. It is an important ingredient in the manufacture of commercial fertilizers, and its usual form is crystalline, and known as calcium cyanamide. Much chemistry is involved, but the principal apparatus is an electric furnace through which a current of air is passed in contact with lime and carbon. The chief cost in its manufacture is the power for generating the electricity for heating the furnace. I am told there is a plant at Niagara Falls, and others in

Europe, particularly in Italy, which are producing this chemical.

I know of no reason why such a plant would be injurious to plant or animal life in the vicinity.—EDITOR.

B 332—Wants Market for Dogwood and Persimmon Offal

Memphis, Tenn., Oct. 29.—Editor HARDWOOD RECORD: We would like to find a market for the offal of dogwood and persimmon from which we make shuttle blocks, and believe that spools from this wood would be satisfactory. Can you give us any information for the disposition of this material?

The writer of the above letter has been advised that HARDWOOD RECORD is unable to suggest a market for dogwood and persimmon offal.—EDITOR.

B 333—Seeks Various Items of Lumber

Camden, N. J., Nov. 2.—Editor HARDWOOD RECORD: Can you assist us in securing a source of supply for a carload of 6/4 No. 1 and No. 2 red birch? Also want 4,000 feet each of 5/4 and 6/4 No. 1 and No. 2, and No. 1 common chestnut, 16,000 feet altogether. We also want straight or mixed cars of 10/4, 12/4 and 16/4 firsts and seconds quartered white oak, and very likely can use a percentage of No. 1 common. Also one straight carload of 10/4 tough plain firsts and seconds white oak, and a carload of 6/4 tough white ash, not dry, for bending purposes. Philadelphia delivery sought on all the above.

The above inquiry is from a leading eastern wholesale house, and it has been referred to several possible sources of supply.—EDITOR.

B 334—Wood Alcohol Plant

Springfield, Mass., Oct. 28.—Editor HARDWOOD RECORD: Would be glad to have you kindly advise us of any parties who you think might be interested in locating a wood alcohol plant. We have a good proposition to present to anyone experienced in the manufacture of this material.

B 335—Disputes Record's Analysis

Chicago, Ill., Oct. 26.—Editor HARDWOOD RECORD: I was not a little surprised in your recent issue to note an article entitled "The Metal Bedstead Craze." Not so much the article for that matter, for I realize the insane attempt to manufacture cheap on the part of some of the

manufacturers, has given cause to extend the above reflection to the industry, but some manufacturers are endeavoring and do put out mighty fine pieces of art.

I refer particularly to the insane statement that the metal bed sale had dropped off fifty per cent. You are pushing hardwood, of course, slamming metal cars as well, but before letting such a statement slip through, I would suggest that you stop and get facts. You must know that more metal beds are sold today than ever, giving your fifty per cent less statement an odor that doesn't smell very good, and is strongly in contrast with your otherwise valuable and trite articles.

The writer of the above letter is advised that the article on metal bedsteads, to which he refers, appeared in HARDWOOD RECORD, March 10, 1912, and that he evidently is not a very close student of the paper or he would have discovered it long before this. His letter was probably inspired from some other source than a personal reading.

The information that reached me on this subject I considered authoritative and so published it. The writer is advised that if he can present any substantiated facts other than the bare statement that there are more metal beds sold today than ever before, I shall be very glad to give him space in HARDWOOD RECORD for the publication of his statement. In the face of the evidence I have to the contrary, I can not accept the writer's statement as authoritative.—EDITOR.

B 336—Hickory and Ash Sucker Rods

Calro, Ill., Oct. 28.—Editor HARDWOOD RECORD: We are looking for a market for hickory and ash pump sucker rods. We shall be very glad if you could put us in touch with parties interested in this class of material. We will be able to furnish a large quantity of this kind of stock within the next six months.

B 337—Seeks Names of Railroad Purchasing Agents

Millett, W. Va., Oct. 28.—Editor HARDWOOD RECORD: I would like to get a book showing the names of the purchasing agents of all the railroad and electric lines. I sell most of my ties direct to these lines, but sometimes find it difficult to secure the names of the purchasing agents.

The writer of the above letter has been advised that he can secure the names and addresses, corrected up-to-date, of the purchasing agents of all the steam and electric railroad lines in the country by buying a

copy of the Official Railroad Guide, wherein he will find listed the officers of all the railroads, together with the names of all purchasing agents.—EDITOR.

B 338—Wants Tie Plugs

New Orleans, La., Oct. 25.—Editor HARDWOOD RECORD: We will appreciate it if you will put us in touch with someone from whom we can buy hardwood squares, wedge point, to be used as tie plugs, the size to be $\frac{5}{8}$ inch by $\frac{3}{4}$ inch by $4\frac{1}{2}$ inches long.

B 339—Wants Gum Box Boards

Omaha, Neb., Oct. 24.—Editor HARDWOOD RECORD: We have a place where we could use about 350,000 to 400,000 feet of thoroughly dry surfaced gum box boards. Want price f. o. b. South Omaha, Neb., less usual commission.

B 340—Seeks Paper Birch Lumber or Squares

Syracuse, N. Y., Oct. 23.—Editor HARDWOOD RECORD: Kindly give us the names of lumber manufacturers who either manufacture lumber or squares of bolts of silver white birch. This birch is used by bobbin and spool manufacturers. If you can give us this information it will be gladly received.

The writer of the above letter has been advised that the birch he refers to is paper birch, most of which is cut in the state of Maine. There are some little shipments of logs and dimension of the same material from nearly all the northern New England States, and from northern New York. He has been supplied with a list of birch manufacturers, from some of whom he would be able to obtain the paper birch in question.—EDITOR.

B 341—Wants Quotation on Maple and Oak

Detroit, Mich., Oct. 14.—Editor HARDWOOD RECORD: I would like to have a price on 300,000 feet of 4/4, 6/4 and 8/4 No. 2 common and

better West Virginia or southern soft and hard maple. Also on 250,000 feet of 4/4 and 6/4 No. 1 common and better sound wormy oak, F. O. B. Detroit.

B 342—Wants Hickory Dimension

Chatham, Ont., Oct. 12.—Editor HARDWOOD RECORD: Can you tell us where we can find dimension stock in hickory suitable for spring-bars, head-blocks, etc.? The pieces are not large and it should be a very desirable bill to fill.

B 343—Seeks Source of Supply for Veneers

Frazee, Minn., Oct. 13.—Editor HARDWOOD RECORD: I wish to learn where I can purchase the different kinds of veneer of hard and some soft woods. I will want to use it in different thicknesses. The use will be for the building up of different articles. I will expect it to be built up in such a manner as to prevent warping and cracking. The thickness will vary from $\frac{3}{16}$ to $\frac{1}{2}$ inch.

I will be grateful for any other information along this line that you will give me.

The writer was advised where he can secure the veneers he seeks.—EDITOR.

B 344—Seeks Oak Table Tops

Indianapolis, Ind., Oct. 11.—Editor HARDWOOD RECORD: We are open for a large quantity of oak table tops. If you can put us in communication with anyone who is able to furnish these, we will greatly appreciate it.

The above inquirer has been given a few sources of supply for the material sought.—EDITOR.

B 345—Wants Market for Persimmon

Memphis, Tenn., Oct. 1.—Editor HARDWOOD RECORD: We are accumulating in sawing persimmon blocks a considerable quantity of black heart. This takes a nice finish and would be especially adapted for small ornamental purposes. Would like a market for it.

News Miscellany

Meeting of Memphis Lumbermen's Club

The special committee, appointed to investigate the proposed merger of the Lumbermen's Club of Memphis with the Business Men's Club, submitted its report at the semi-monthly meeting held at the Hotel Gayoso, Oct. 26. It said that it had discussed with the Business Men's Club an affiliation agreement by which the Lumbermen's Club might secure all the benefits accruing under the merger plan without the necessity of losing the identity of the former. There was considerable objection to the merger when the subject first came up because of the unwillingness of the members of the Lumbermen's Club to see the identity of that organization lost. It will be necessary for the Business Men's Club to make certain changes in its constitution and by-laws before the affiliation agreement can be ratified, but the present outlook is for the adoption of this agreement. The Lumbermen's Club of Memphis is to secure permanent headquarters and is likewise to have its clerical work done without cost and its stationery furnished free. It is also to have the backing of the Business Men's Club in the handling of all of its principal problems. The report of the committee was made in the form of resolutions.

A campaign for lower insurance rates on lumber was launched at this meeting. James E. Stark said that it was his positive conviction that the lumbermen were paying out of all proportion to the risk involved and he urged that

the club take steps to secure the table of experience showing the ratio as between premiums paid by the insured and losses paid by the companies. He was under the impression that the former were many times as large as the latter. On motion the secretary was instructed to write to the Western Union of Chicago for the desired information along this line and he was likewise authorized to write to the commissioner of insurance of Tennessee. It developed in the discussion that requests had been made before for this table of experience but that it had not been forthcoming. The information was volunteered by several members that discussion with insurance men had led them to believe that, if the club took an active and positive stand in this matter, it would be possible to secure a reduction of twenty-five to thirty-three per cent in insurance rates. Emphasis was laid upon the fact that rates below the Ohio river were very much higher than those above that stream. Due stress will be laid upon the very decided improvement in fire fighting facilities here and upon the reduced rates to which this condition entitles the insured. The subject will be handled through the secretary and through the law and insurance committee of the club.

The following resolutions were adopted in connection with the recent death of E. E. Goodlander, a charter member of the Lumbermen's Club of Memphis and also at one time president of that organization.

WHEREAS, God in His infinite wisdom, has seen fit to call from the scene of his earthly labors Elmer E. Goodlander, president of the Goodlander-Robertson Lumber Company, and

WHEREAS, the Lumbermen's Club of Memphis has lost one of its oldest and most valued members and each of us a true friend and lovable companion, and

WHEREAS, his business associates have been deprived of his wise counsel, and his wife and children of the ministrations of a loving husband and devoted father, therefore be it

RESOLVED, That we, the Lumbermen's Club of Memphis hereby express our deep sorrow over his death, and be it further

RESOLVED, that these resolutions be spread upon the minutes of this club and that copies be sent also to his business associates and to the members of his bereaved family to whom our most sincere sympathy is thus tendered.

F. B. Robertson was in New Orleans Saturday and C. B. Dudley, first vice-president, presided. The attendance was reasonably large. The meeting was a very satisfactory one and the usual luncheon was enjoyed.

New Lumbermen's Club

At a luncheon at the Hotel Baltimore, Kansas City, during the last week of October, the Kansas City Lumbermen's Club was formally organized and launched. Provision was made for a monthly dinner, and dues fixed to cover all necessary expenses. The initial purpose of the organization is to promote sociability and a friendly spirit among local lumbermen, but it is anticipated that after its membership increases, matters requiring concerted action will add to its scope of usefulness.

Membership is confined to members of firms, officers and stockholders of corporations, and department heads engaged in lumber pursuits.

The second meeting of the club was held Oct. 30 to complete the organization and elect officers.

Cincinnati Lumbermen's Club Meeting

The regular monthly meeting of the Lumbermen's Club was held at the Business Men's Club, Tuesday evening, Nov. 5. The regular meeting night of the club is the first Monday of each month but owing to the fact that the next day was election day, the executive board changed the night this month so that members could receive the returns from the election during the meeting. A table d'hôte dinner served at 6:30 p. m. was enjoyed by about sixty members. Many returns were read between the courses and much good-natured fun made of several disappointed members whom the result of the election did not particularly please. There was not very much business attempted as a very important rate question was to have been brought up for general discussion as to just what action the club cared to take, but the committee investigating the matter not being quite ready to make a full report and the general spirit of election time prevailing so strong, President Shiels preferred to wait until the December meeting to place the matter before the members for action. It is quite certain that a strong effort will be made soon by the club to settle some of the rate questions now before the lumbermen.

Timberland Purchase of New Jersey

The governor of New Jersey has approved of an act to purchase 100,000 acres of timberland, including water rights, in south Jersey, based on the enabling act passed by the legislature of that state last winter authorizing it. The price of the property is \$1,000,000, and the area will constitute the future water supply of all New Jersey, south of the Raritan river. The area is capable of developing 4,000,000 gallons of water daily.

This is a movement in which Harry R. Humphreys, president of the Hadenline Lumber Company, Inc., Camden, N. J., and who is a member of the board having the matter in charge, has been enthusiastically urging on the legislature of New Jersey for several years. Mr. Humphreys is to be congratulated that he has contributed to this most desirable piece of law-making.

The Truth of the Matter

In Oklahoma not long ago a man went into a store to buy a saw. He saw the kind he wanted, and asked the price. It was \$1.65, the dealer said.

"Good gracious!" said the man. "I can get the same thing from — & Co. for \$1.35."

"That's less than it cost me," said the dealer, "but I'll sell it on the same terms as the mail-order house just the same."

"All right," said the customer. "You can send it along and charge it to my account."

"Not on your life!" the dealer replied. "No charge accounts. You can't do business with the mail-order house that way. Fork over the cash."

The customer complied.

"Now 2 cents for postage and 5 cents for a money order."

"What?"

"Certainly. You have to send a letter and a money order to a mail-order house, you know."

The customer, inwardly raving, kept to his agreement and paid the 7 cents.

"Now 25 cents expressage."

"Well, I'll be!"—he said, but paid it, saying, "Now hand me that saw and I'll take it home myself to be rid of this foolery."

"Hand it to you? Where do you think you are? You are in Oklahoma, and I'm in Chicago, and you'll have to wait two weeks for that saw."

Whereupon the dealer hung the saw on a peg and put the money in his cash drawer.

"That makes \$1.67," he said. "It has cost you 2 cents more and taken you two weeks longer to get it than if you had paid my price in the first place."

A Growing Business

Another illustration of the good results of modern business methods is seen in the accompanying illustration showing the increased plant of the R. S. Bacon Veneer Company of Chicago. This concern was incorporated in 1900, starting on a small basis, and since that time has grown steadily, greatly increasing the scope and volume of its business year by year. A short while ago this company erected a veneer mill in connection with its Chicago plant and has just now completed a large addition to its warehouse at the same place. The new mill enables the company to turn out a great deal of its own stock on its own machines, while the new warehouse, which increases the floor space by a third, will provide a great deal more room for the storage of the complete line of fancy wood veneer carried by the Bacon company.

Mr. Bacon is considered a shrewd and competent buyer of logs and has made numbers of trips across the ocean in search of good timber for his mills. The company now has en route

a large quantity of fine Circassian logs, it being the intention to stock up pretty heavily in this line in anticipation that the hostilities among the European nations may eventually close up the Dardanelles. As Circassian walnut logs come by way of the Dardanelles, such an event would prove disastrous to handlers of this stock. A large assortment of high-grade mahogany logs is also on the way and, judging from appearances and from what Mr. Bacon states, his company is doing a very active business.

The R. S. Bacon Veneer Company has an annual output of 10,000,000 feet of sliced veneer, including mahogany and Circassian walnut mainly, other woods being rosewood and similar fancy woods and native oak.

New Manager National Lumber Manufacturers' Association

The resignations are announced of Manager Leonard Bronson and Secretary George K. Smith of the National Lumber Manufacturers' Association, and the appointment in their places of Jobu E. Rhodes, recently of Tacoma, Wash., as manager-secretary to take office on Jan. 1 next. While both the incumbents resigning from this organization have performed good service for the association, the appointment of Mr. Rhodes seems to receive the universal approbation of members of the allied associations, which go to make up the parent organization.

Hitherto the manager's office has been located at Chicago, and the secretary's at St. Louis, and the interests of both offices have at times seemed to be in conflict. The office of the new manager-secretary will be located at Chicago.

The National Lumber Manufacturers' Association is made up of the following subsidiary organizations, including the stronger element of the producers of the chief wood manufactured in this country: Northern Pine Manufacturers' Association, Northern Hemlock and Hardwood Manufacturers' Association, Michigan Hardwood Manufacturers' Association, Hardwood Manufacturers' Association of the United States, North Carolina Pine Association, Georgia-Florida Saw Mill Association, Yellow Pine Manufacturers' Association, Southern Cypress Manufacturers' Association, Western Pine Manufacturers' Association, West Coast Sugar and White Pine Manufacturers' Association, and the Pacific Coast Lumber Manufacturers' Association. The president of the association is E. C. Griggs of Tacoma.

Mr. Rhodes brings to his office a ripe and competent experience in both lumber and association affairs, and incidentally has the reputation of being a pretty good newspaper man. He is a graduate of the University of Minnesota; was engaged in railroad work from clerkship to assistant general superintendent for some years; has been purchasing agent for railroads and log-

ging companies; as a newspaper man has occupied sundry positions from reporter to manager, and was allied with the Mississippi Valley Lumbermen's Association. Mr. Rhodes acted as secretary for Frederick Weyerhaeuser for several years, and more recently has been manager of the Tacoma Tribune.

Mr. Rhodes will certainly put some forceful and intelligent work behind the National Lumber Manufacturers' Association, and his success in his new vocation is assured from the start. At the present time he is touring the lumber manufacturing districts of the West, and will reach Chicago about Christmas to take up his work.

Elm in England

The London Timber News says that probably never before were elm timber and elm planks at such a discount as is the case at the present time, and coffin boards of this timber are not only plentiful, but remarkably cheap, this due wholly to the large quantities that are being sent in from abroad at ruinously low prices. Even the coffins are being sent in ready for use, and if not so, will be made and delivered during the same day, and at prices which defy the London maker with the most approved and up-to-date manufacturing machinery. This is the usual case, however, although all timbers of foreign extraction have not taken so well as elm when placed on the London market.

Terms of Sale Adopted

The National Wholesale Lumber Dealers' Association has definitely adopted logical terms of sale, which hereafter will be attached to the sales tickets of members of that organization. The form is herewith appended:

The terms hereon are those agreed on by both buyer and seller and are a part of the sale agreement.

Settlement to be made promptly on receipt of each car. Freight, net cash. Balance by note at 60 days from date of invoice or less 1½ per cent discount for cash if paid within 15 days from date of invoice; or 1 per cent for cash if paid within 30 days from date of invoice.

No discount allowed after 30 days.

If car is not received within the above discount times, and discount is desired, prepayment on account will not be held as acceptance of the shipment and the right to make corrections and complaint will not be forfeited thereby. In making delivered prices, cost of goods delivered at destination is guaranteed, but not against delay in transit.

Claims for count or quality must be reported as soon as car is unloaded and tally proven. No claims allowed if not reported within 10 days after unloading.

All contracts and agreements are made contingent upon strikes, fires, floods, inability to secure cars, delays of carriers and other delays unavoidable and beyond our control.

In making delivered prices we simply guarantee the cost of goods at your place, but are in noway responsible for their safe delivery.

F. S. Underhill at Philadelphia is chairman of the committee which drafted these terms of

PLANT OF THE R. S. BACON VENEER COMPANY, CHICAGO.

sale, and like all the association work handled by this gentleman, it is manifestly fair to both buyer and seller. In his report commending the adoption of this form, the chairman says he believes the time has come when a firm stand should be taken with those who habitually disregard terms of sale, and by united action endeavor to bring about a better order of things by insisting upon settlement in accordance with the terms under which lumber is sold.

The National Wholesale Lumber Dealers' Association, through its office at 66 Broadway, New York, is prepared to execute order forms embracing the new terms of sale for its members.

Forestry in Missouri

The University of Missouri at Columbia, midway between St. Louis and Kansas City, has added a school of forestry to its course, and is prepared to take up the work in a scientific way.

Over half the state of Missouri, an area of 25,000,000 acres, is still covered with natural forest growth. However, only a small portion of this forested land is commercial timber. The greater part consists of cutover land or brush land and land from which the better kinds of

The school of forestry proposes to take up the work of growing wood in Missouri for Missourians. It is proposed to check the outgo of \$7,000,000 a year to other regions for lumber which the state can produce. A long period of time will be required to reach the desired result, but that result will be held steadily in view, and foresters will be trained to lead the movement. The state owns 50,000 acres of forest land which will be used as part of the college equipment, and the students will be amply provided with practical experience by the time they graduate.

New Hardwood House

The Reynolds Brothers Lumber Company, it is announced, has been organized at Franklin, N. C., by G. E. and J. W. Reynolds, well-known Tennessee lumbermen, who were formerly allied with George C. Brown & Co., at Proctor, Ark.

The Reynolds Brothers Lumber Company has purchased the mills and equipment of George C. Brown & Co. at Franklin, N. C., together with considerable lumber on their yards. The equipment is being overhauled, and a new mill installed to cut not only oak, ash and poplar lumber, but oak and hickory dimension stock as well. The mill will be stocked by logs purchased in the surrounding territory along the Talulah Falls railroad. The company has already purchased enough timber to insure a two years' run. The stock produced at the principal plant will be supplemented with the product from portable mills in the region, lumber from which will be brought to Franklin and yarded.

The Messrs. Reynolds, from their thorough acquaintance with all details of lumber manufacture and distribution, should meet with unqualified success in their new venture.

Change in Personnel S. A. Woods Machine Company

Announcement is made of a change in the personnel of the officers of that foremost woodworking machinery house, S. A. Woods Machine Company of Boston, Mass. This is brought about by the retirement of Frank F. Woods, whose health for the last year has been so precarious that he finds it necessary to permanently retire from business, which will be a matter of sincere regret to the patrons of his company.

The new president of the S. A. Woods Machine Company is H. C. Dodge, who will act as secretary also. The vice-president is C. W. H. Blood, who also occupies the position of treasurer. To introduce these two gentlemen to HARDWOOD RECORD readers seems scarcely necessary, as both have been allied with the Woods company for many years.

Mr. Dodge has been connected with the company for about ten years. He was born at Woburn, Mass., is a Harvard man, and since entering the business has devoted practically all his time in the study of lumber and woodworking affairs. His original connection with the Woods company was in charge of the business in the southeast and southern part of the United States. Eventually he had charge of the company's New Orleans office, and his territory extended from Texas to the Atlantic coast and as far north as the Ohio river. During the last two years he has been general sales manager of the company, and for the last year has filled the position of secretary also.

Mr. Dodge has grown rapidly both in his knowledge of machinery and lumber affairs, and has a wide acquaintance in the lumber trade. To him is given a great portion of credit in the revolution of dressing lumber, which is now enjoyed by the planing machine users of the world, as it was largely through his initiative and energy that the S. A. Woods Machine Company undertook to enlarge the usefulness and the possibilities of the planing machine.

C. W. H. Blood has been connected with the Woods corporation about twenty-one years, dur-

ing all of which time he has filled the position of head designer and engineer. His original mechanical training was obtained at Cornell, from which college he graduated in 1892. Mr. Blood is a native of Kalamazoo, Mich., and his early business years were spent in lumber operations in that state. He is an active member of the American Society of Mechanical Engineers and is associated with other prominent engineering and mechanical organizations. His record as an inventor in connection with planing mill machinery is scarcely equalled by any other mechanical engineer in the country. The United States patent office has issued to him, personally, since he has been actively engaged in his profession, forty patents covering various tools, woodworking and planing mill machinery appliances and improvements on such machines. During his connection with the company he has personally supervised the designing and construction of every machine that it has put upon the market.

The two gentlemen named have purchased the interest of Frank F. Woods, and it goes without saying that there will be no change in the high-type of the Woods' planing machinery, or in the systematic, careful and painstaking way

H. C. DODGE, PRESIDENT AND SECRETARY, S. A. WOODS MACHINE COMPANY, BOSTON, MASS.

C. W. H. BLOOD, VICE-PRESIDENT AND TREASURER, S. A. WOODS MACHINE COMPANY, BOSTON, MASS.

trees have been heavily culled. Owing to repeated forest fires which destroy reproduction and to the fact that no provision was made in cutting the timber for re-stocking the land by leaving seed trees of valuable species, much of this land is in an unproductive condition or has grown up to useless kinds of trees.

It is estimated that the commercial forests that still remain contain not more than 25,000,000,000 board feet of timber. Since the annual cut from these forests in lumber, ties, etc., amounts to over 1,000,000,000 board feet each year, it will not be many years before Missouri becomes dependent on other states for her supplies of saw timber. Even at the present time a large percentage of the lumber used is imported from other regions. In 1911 the wood-using industries of the state bought 443,272,993 feet of lumber for further manufacture into various commodities. Less than thirty-six percent of this grew in Missouri. The total amount paid for the lumber was \$10,689,962, and more than \$7,000,000 of it went outside of the state. A small part was paid for woods which do not grow in the United States, but most was spent for species which might be produced in Missouri, and which once grew there in commercial quantities.

in which the business of the company will be conducted in the future.

The S. A. Woods Machine Company's product has always stood for the best that inventive talent, money and close application to details could produce, and there is no woodworking machinery house in the country that has delivered a product that has any nearer approximated steel and iron working tools than has this company.

HARDWOOD RECORD wishes to congratulate Messrs. Dodge and Blood on securing control of this great institution, which is only a just recognition of their long service and high talent in connection with the house and the woodworking machinery industry as a whole.

October Issue Blue Book

The National Lumber Manufacturers' Credit Corporation of St. Louis, Mo., has recently delivered to its subscribers the October issue of the "Blue Book," which is the eighteenth volume published by this company. The publishers advise they have taken the utmost care in preparing the book to make it as complete and accurate as possible, and the capital and credit ratings contained therein are based on information obtained from sources deemed reliable.

In the book will also be found double page, colored maps, which are placed before each state for ready reference, and an index of railroads appears at the beginning of each state, and shows the roads operated in each respective state.

Building Operations for October

Building statistics from some fifty cities throughout the country compiled by the American Contractor, Chicago, show a gain for October of 8 $\frac{3}{4}$ per cent, as compared with October, 1911. Reports for the past ten months show a gain of 4 $\frac{1}{2}$ per cent in the same cities, as compared with the same months of the past year. Taking political disturbances into consideration, the showing is more than satisfactory. For the month of October over fifty per cent gain is shown in the following named cities: Akron, 67 per cent; Atlanta, 530; Baltimore, 89; Buffalo, 76; Des Moines, 117; Detroit, 67; Evansville, 83; Ft. Wayne, 61; Manchester, 436; Memphis, 97; Minneapolis, 55; Norfolk, 247; Paterson, 56; Philadelphia, 55; Shreveport, 77; Wilkes-Barre, 64. Twelve cities scored a gain of over 25 per cent for the past ten months, as compared with the same period of the past year. Particulars will be found in the following table:

City.	October, 1912. Cost.	October, 1911. Cost.	Per Cent. Gain Loss
Akron	\$ 490,845	\$ 293,436	67 ..

Mahogany in Canada

The use of mahogany in Canada is on the increase, and now amounts to about three million feet a year. The imports of this wood into Canada have risen slowly but steadily for many years. It is employed principally for furniture of the best class and for bank and office fixtures.

The wood comes from Central America, West Indies and from western Africa. It costs more than any wood growing in the United States and is employed only in high-grade work. An increasing quantity of mahogany is used yearly in Canada by the manufacturers of sleeping cars.

Change of Headquarters

The George Webster Lumber Company, with sawmills at Malone, N. Y., and at various points in Vermont, has moved its general and sales office from Swanton, Vt., to 21 Besse place, Springfield, Mass., and in addition to handling the output of its northern mills, will take on the merchandising of white and red oak, chestnut, poplar and gum. The company also has a New York branch sales office at 25 West Forty-second street, which handles the New York City and New York state trade, while the Springfield office handles the New England business.

A Public Spirited Citizen

At the last session of the legislature of Michigan a bill was passed creating a commission to secure a site for a permanent encampment for the National Guard of that state. R. Hanson of the Salling-Hanson Company, Grayling,

R. HANSON, GRAYLING, MICH.

Mich., an unusually public spirited citizen of that state, as well as one of its foremost lumber operators, has offered to donate to the state for the purpose of a great public park and game preserve, and for the location for a permanent encampment for the National Guard, 75,000 acres of land contiguous to the town of Grayling, and three miles north of the present forest preserve of the state, which contains 36,000 acres.

The land offered by Mr. Hanson is varied in topography and includes a beautiful lake, hills and valleys partially wooded and partially open country, abounding in game. The state military board has just inspected the tract and, while Mr. Hanson's offer has not yet been formally accepted by the state, it undoubtedly will be as no conditions are imposed in the tender.

Booklet on Birch

The Northern Hemlock and Hardwood Manufacturers' Association, of Wausau, Wis., has issued a booklet in which the many fine qualities of yellow birch as a finishing wood are shown. The two species of birch employed in this country for flooring, furniture and finish are yellow birch (*Betula lutea*), and sweet birch (*Betula lenta*). The former reaches its best size and character in the lake states, and is justly classed as one of the most artistic, reliable, and versa-

tile of the hardwoods of this country. The admirable wood has lost nothing by the manner in which the booklet presents it to the public in a series of pictures and drawings showing how it may be used to best advantage. A sample of the wood, showing both light and dark finish, accompanies the booklet, which was prepared by R. S. Kellogg, secretary of the association. The booklet is being mailed to architects and builders throughout the country, and should prove a good advertising medium for the exploitation of birch.

Forest Planting by New York School

The New York State College of Forestry at Syracuse University has undertaken this year to furnish illustrated lectures on practical forestry in all the high schools of the state, and the State Conservation Commission has arranged to provide a thousand or more seedling trees to each high school that will plant them in a woodlot. It is proposed that the schools shall secure a vacant hillside or other piece of waste land and plant and maintain a bit of forest land. A million and a half seedling trees are now coming on in the state nurseries.

New River Route

Admission of railroads that they are crowded with business and that the car shortage now existing may continue to increase as the years advance, has caused the formation of a new \$3,000,000 corporation in Pittsburgh which has for its object the operation of large freight and passenger boats between Pittsburgh and New Orleans. In order to take care of the immense freight traffic that will result from the operation of through Pittsburgh-New Orleans boats the new company, which has just applied for a charter, has had plans drawn for two 300-foot steel bottom boats, which it will place in the southern trade as soon as completed.

There has been more or less trouble in past years in Pittsburgh-New Orleans waterways transportation because of the fact that several transfers of freight had to be made—at Cincinnati and Memphis. All transferring of freight from one line to another will be done away with hereafter.

The first Pittsburgh-New Orleans boat will leave the Pittsburgh harbor early in December. Hundreds of tons of freight are assured the first boat.

From the South, where vast lumber interests are located, inquiries concerning reservations for space for large lumber shipments into the Pittsburgh market are being received.

This new river transportation company will place at the disposal of lumber shippers, and all other large interests, barges and lighters, which may be loaded at local shipping points, and then they will be picked up on trips, either south going or north bound. By this method the lumber shipper is guaranteed a speedy means of transportation, at a greatly reduced freight rate, and on a basis of time that will beat the rail shipment to the same destination.

A battery of boats has been secured for the starting of this service, and the fleet will be greatly increased within the coming six months. In addition to the boats of high power, one hundred barges and lighters are to be placed in service. These, in turn, are to be at the disposal of lumber shippers who have large accounts and selling agencies in the upper part of the Ohio, Allegheny and Monongahela valleys. These barges and lighters will be towed upon their arrival at Pittsburgh to the various yards without any additional cost to the buyer or shipper.

With the improvement of the Ohio and Mississippi rivers assured, the transportation of lumber and other freight by water is bound to grow by leaps and bounds.

English View of American Lumber Trade

The London Timber Trade Journal of October 19, in reviewing the crop situation in the United

States, drew the following conclusions of its effect upon the lumber business:

"With the above facts before us we have at once evidence as to the hum of prosperity in the States, which is clearly reflected in the lumber trade reports before us, which show that the consumption more than balances production, and the anxiety to secure stock in fairly dry condition is extremely keen in every section of the trade, especially in hardwood. In many cases advances of two dollars per thousand are easily obtainable, and this state of things is extremely likely to become accentuated, especially consider-

Louis, seems to be taking hold of the work of the order in a forceful way, and if members will thoroughly co-operate with him, Hoo-Hoo should be made an institution with which every lumberman might be proud to be allied.

American Hardwood Exporters' Difficulties

American lumber exporters are having all sorts of trouble this season, says the London Timber Trade Journal. They are confronted with the probable withdrawal of through bills of lading on export shipments on the part of the eastern roads. The western roads have announced their

tice has been for carloads sent to New Orleans and other ports for shipment to remain loaded until put on board, but in consequence of a shortage of cars in America demurrage is now charged on them at the rate of a dollar per day.

On top of all of the foregoing troubles the lumbermen are threatened with an advance of from two to six cents per hundred pounds on north-bound shipments of lumber, as well as an advance of about two cents per hundred pounds on shipments to ship side to New Orleans and other ports. This is a result of an effort on the part of the railroad companies to bring about uniformity of rates as between hardwood and yellow pine shipments. It is certain that this proposed advance will be vigorously contested.

New Double-End Tenoner

The double-end tenoning machine was first conceived and patented by the H. B. Smith Machine Company of Smithville, N. J., in 1866. Since then the development of this machine has been rapid and in accordance with the demands of the manufacturing trade. The company now makes forty different styles and sizes of this machine, one of which is illustrated in connection with this story.

The extra heavy machine will work as short as four and five-eighths inches and as long as one hundred and twenty inches between shoulders. It will feed stock as wide as forty-eight inches. The feature of the machine is the patent scoring attachment designed for working veneer stock without marring the shoulders of the tenons.

The machine is fitted with a parallelogram frame so designed as to minimize vibration between the cutter-heads and thus insure the highest possible grade of work. For feeding, the tenon is equipped with two endless chains composed of laminated steel, which chain is drawn, not pushed through its motion. Thus no dirt nor dust can enter the bearing or joints to disturb accuracy. The rates of speed of this machine vary from six to twenty feet a minute, the feed being operated by a lever that is within easy reach of the operator. An adjustable gauge at the left or fixed end serves to start the work in the proper direction. The

VARIOUS TENONS PRODUCED BY THE SMITH TENONER

ing the higher values which mahogany is commanding at every point. All evidence tends to show these will be fully maintained, and it is probable they will go still higher.

"Hence, whilst mahogany as an imported wood is extremely fashionable, the inevitable tendency must be in the States to more and more revert to domestic woods for furniture. Of course, the mere statement of such facts may in the abstract be regarded as a matter more affecting the Americans than ourselves, but it must be obvious that international commerce is so intertwined that any advance in prices must in the long run be reflected in our markets, especially when this is considered in connection with the already admitted car shortage in the States, along with the abnormal freights now current.

"It must be admitted that the position is most exceptional, and those who are fortunate to have landed or afloat substantial stocks need have no anxiety to sell, because it is inevitable that available stocks are bound to be extremely limited for an indefinite period, and in computing selling prices the holders should not merely consider the actual cost, but should rather base them upon the figures it would cost to replace them."

Hoo-Hoo

Frank W. Trower, Snark of the Universe, and other members of the Supreme Nine, have issued an important letter to all Vicegerents, urging upon them earnest, faithful and enthusiastic work for the order. The latter also urges a most rigid enforcement of the laws of Hoo-Hoo, rather than the enactment of new laws. Particular attention is demanded covering the eligibility and character of initiates, and in the conduct of initiations.

The latter also calls attention to the rule against permitting intoxicants to be served at concatenations or on-the-roof sessions. It urges soliciting the interest of all old members of Hoo-Hoo in concatenations, and getting the order again together into enthusiastic and commendable work, which shall tend to build it up into a medium of good fellowship, enthusiasm and advantage to its members.

The new scrivener, W. M. Stephenson of St.

intention of withdrawing such bills of lading by Oct. 15. Through bills of lading are issued on cotton shipments, and the exporters do not see why it would be just for the railroads to withdraw through bills on lumber and allow a continuance of such bills on cotton and other freight. The withdrawal of such bills will make the handling of export shipments of lumber a very serious matter, and will embarrass some firms in the financing of their business because of making it impossible for them to realize on the face of drafts on export shipments until such

DOUBLE-END TENONING MACHINE, MANUFACTURED BY H. B. SMITH MACHINE COMPANY, SMITHVILLE, N. J.

shipments have been placed on board the steamships and a "master's bill" is held therefor.

Another feature of the export situation is to be found in the requirements on the part of the railroads that exporters name the date of the sailing of vessels by which shipment is to be made to Europe or other foreign countries. This is an entirely new requirement, and is one which is giving lumber exporters considerable trouble. A prominent exporter said recently that, owing to his inability to name the date of sailing of the vessel which he intended to use, it had been necessary for him to unload several cars of stock which had been prepared for export. The prac-

movable end is adjustable either by power or by hand, an index or pointer in front always indicating the length between the shoulders of the machine is cutting.

Other features are crucible machinery steel spindles and vertically and laterally adjustable cope spindles. The tenon heads have a seven and one-half inch cutting circle with a smooth drawing cut. Double cut-off saws are placed in front. The pressure bars are attached direct to the uprights and not to the head stocks.

All these machines are fully tested before leaving the works.—Advertisement.

Miscellaneous Notes

The Sterling Furniture Company has incorporated at \$50,000 at Greensboro, N. C.

The Merrill Chair & Manufacturing Company has incorporated at Boston, Mass., for \$200,000.

The Hardwood Flooring Company was incorporated at Roanoke, Va., with \$50,000 capital stock.

The Dryola Veneering Company has incorporated at Charlotte, N. C., with a capital of \$125,000.

The Bienvenue Lumber & Manufacturing Company has recently begun operations at Baton Rouge, La.

A new concern for Malden, Mass., is the Malden Woodenware Company, recently incorporated at \$10,000.

It is announced that a receiver has been appointed for the Suffolk Lumber Company at Jacksonville, N. C.

The W. E. Smith Lumber Company of Memphis, Tenn., has decreased its capital from \$100,000 to \$10,000.

The Winston Handle Company of Winston-Salem, N. C., has recently sold out to the Kelly Handle Company.

The B & B Lumber Company has recently incorporated at Scottsville, Ky., with a capital stock of \$6,000.

The Ackels & Perkins Lumber Company has recently incorporated at Charleston, W. Va., with a capital of \$50,000.

A \$100,000 addition will be built to the factory of the Shaw-Walker Company, manufacturer of filing cabinets, at Muskegon, Mich.

Sam Evans, Hillsboro, O., is starting the building of a complete up-to-date veneer manufacturing plant at Washington Court House, O.

J. Donald Roberts has been added to the sales staff of the Hadentine Lumber Company, Inc., of Camden, N. J., and will cover eastern Pennsylvania.

William Rider & Son, Ltd., London, E. C., announce they have recently moved from 164 Aldersgate street to Cathedral House, 8-11 Paternoster Row, E. C.

The Anderson Lumber Company has recently entered the lumber manufacturing trade at Waycross, Ga. It is incorporated with a capital stock of \$100,000.

The Truckers' Manufacturing Company of Wiliston, Fla., has recently incorporated with a capital of \$10,000, and will manufacture fruit and vegetable crates.

The Great Western Veneer Barrel Company has recently incorporated at Chicago with a capital of \$20,000, for the general manufacturing and merchandising business.

The Rhinelander Woodenware Company of Rhinelander, Wis., has been incorporated at \$10,000 to manufacture broom handles. The manufacture of other woodenware articles will probably be added soon.

It is announced that the Robinson Brothers Lumber Company of Robinwood, Miss., has sold its mill located at Monticello to J. J. Baskette of Henderson, Ky. The mill is a single circular mill cutting hardwoods.

It is announced that Turner, Day & Woolworth Company, the chief handle producer of the country, has arranged for the installation of a new handle mill at Beaumont, Tex., which will be conducted under the name of the Gates Handle Company.

The Pioneer Pole & Shaft Company of Piqua, O., recently purchased the plant of the W. H. Dewitt Company at Oakland City, Ind., for a consideration of \$100,000.

The Southern Hardwood Lumber Company of Richmond, Va., has recently been incorporated at \$50,000 to manufacture lumber, with J. K. Gruner, president; E. P. Murphy, vice-president; P. T. Murphy, secretary and treasurer.

The Batavia Land & Lumber Company has recently been incorporated at Ladysmith, Wis., with a capital of \$15,000 by Emma C. Haag, William Emley and Walter C. Wangerlin.

The veneer plant of the Jackson Lumber Company, Jackson, Tenn., which was recently damaged by fire, will be rebuilt. The plant was valued at \$30,000 and insured for \$25,000.

Announcement is made that H. M. Campbell, B. C. Cook and J. F. Wetz have organized the Greenfield Wood Turning Company at Greenfield, Ind., to manufacture handles and wood novelties. The company has an authorized capitalization of \$10,000.

The Jefferson Wood Working Company, Louisville, Ky., is erecting a one-story building of concrete for the manufacture of table rims. This will be operated in connection with its table slide business, which has the largest output of slides in the country.

The Dickson Planing Mill Company, Dickson, Tenn., has placed an order with the Grand Rapids Veneer Works, Grand Rapids, Mich., for remodeling two of its eighty-foot kilns. The order was secured by F. H. Kelly, manager of the company's Memphis office.

The plan of Frank Anderson, Mawawan, N. J., was totally destroyed by fire, causing a loss of about \$4,000. Mr. Anderson is erecting a new and larger plant, with new machinery, for the manufacture of beech, birch, maple, oak and chestnut trim, also wagon stock and gum rollers.

President Frederic Wilbert of the Southern Cypress Manufacturers' Association announces the semi-annual meeting of that body, to take place at the Hotel Grunewald, New Orleans, at 10:30 on the morning of November 20. It is announced that a number of important matters will be up for discussion.

Charles F. Felin & Co., Philadelphia, announce that they have moved their purchasing, accounting and credit departments to their new offices at York Road and Boston street, and that their present sales department will be continued at 322-324 Land Title building.

It is announced that the Southern Hardwood & Tie Company has filed articles of incorporation at Paducah, Ky., with a capital stock of \$25,000. The company is organized for the purpose of buying, selling and manufacturing hardwood lumber and ties. The incorporators are A. B. Smith, W. K. Smith and J. E. Bugg.

The Prendergast Company of Marion, O., recently acquired a site from the Big Four Railroad at Cincinnati, O., for a storage and assorting station with a capacity of 18,000,000 of lumber. The company gets six acres and it is estimated will require 2,000 freight cars annually. The terms of the lease have not yet been made known.

The Norwood Manufacturing Company of Utica, N. Y., has recently opened a branch office at Fremont, Ala., where it has acquired the output of a mill with a capacity of 60,000 feet daily. The branch is in charge of R. E. Boyd and will manufacture timbers and dimension, choice high-grade finish and some boards and flooring. The company is prepared to handle rush orders.

Jeffries Brothers of Chicago have recently purchased the entire plant and timber of the Manchester Lumber Company, operating about six miles from Jasper, Ala. They have not bought the railroad nor farm lands, but simply the mill output and timber in connection therewith. The Manchester company has recently increased the output of the mill by installing a new band mill with a capacity of about 75,000 feet daily.

The Michigan Forestry Association will hold its annual meeting at Saginaw on Nov. 21 and 22. President Charles W. Garfield of Grand Rapids, Mich., is arranging the programme, which will involve addresses by Professor Roth of the forest department of the University of Michigan; Professor Baker of the state agricultural college; Comfort Tyler of Coldwater, field agent of the Michigan Agricultural College; and others.

Hardwood News Notes

CHICAGO

J. M. Attley of J. M. Attley & Co., spent last week at northern sawmills in which his concern is interested.

C. M. Clark, sales manager of the Swan-Day Lumber Company, Cincinnati, spent Friday and Saturday visiting his trade in Chicago.

E. Harvey Wilce, president of the F. Wilce Company, the big hardwood flooring house of Chicago, arrived in Chicago the middle of last week from the northern Michigan operations which he has been conducting during the last year. He will be in Chicago for some weeks.

Sam W. Richey of Richey, Halsted & Quick, Cincinnati, was a Chicago visitor last week.

John Attley of J. M. Attley & Co., returned a few days ago from a visit to southern mill points.

J. S. Stearns of J. S. Stearns Salt & Lumber Company and other important interests, Ludington, Mich., made one of his regular Chicago visits last week.

A. H. Ruth, director and Chicago manager for the G. W. Jones Lumber Company, Appleton, Wis., visited the home office a few days ago.

F. J. Kuny of the Williamson-Kuny Mill & Lumber Company, Mound City, Ill., was a recent Chicago visitor.

E. C. Tully and W. B. Morgan of the Audercon-Tully Company, Memphis, were at the recent poultry convention held at the Hotel La Salle in this city. They were not so much interested

in the "ben convention" as they were in the crates which they produce in immense quantities for shipping poultry.

J. M. Cheeley, in charge of sales in this district for the Kentucky Lumber Company of Cincinnati spent the greater part of last week in Chicago.

Z. Clark Thwing of the Grand Rapids Veneer Works, Grand Rapids, Mich., spent several days in Chicago last week in the interests of the dry-kiln branch of his business.

Theodore Schneider, in charge of the Big Bay sawmill plant of the Brunswick-Balke-Collender Company, spent several days in Chicago last week.

Lewis Doster, secretary of the Hardwood Manufacturers' Association of the United States, Cincinnati, was one of the Chicago visitors last week.

R. M. Carrier, president of the Carrier Lumber & Manufacturing Company, Sardis, Miss., came up to Chicago last week to assist Lewis Doster to buy a new suit of clothes, and incidentally to secure some sartorial adornments for himself.

Henry Ballou, manager of Cobbs & Mitchell, Inc., of Cadillac, Mich., came over to Chicago from the Detroit convention week before last, where he was joined by his wife and daughter, and the trio spent several days on a shopping tour.

W. B. Heineman of the Heineman Lumber Company, Wausau, Wis., was a recent Chicago visitor.

J. C. Cremer, president of the Cremer Lumber Company, St. Louis, spent a few days with friends in Chicago last week.

Gearhart Knapp, Hamburg, Germany, one of the foreign representatives of the Paepcke-Leicht Lumber Company of Chicago, spent several days in consultation with the principals of this institution last week.

B. F. Dulweber of The John Dulweber Company, Cincinnati, was a welcome Chicago visitor a few days ago.

Walter H. Crim of C. M. Crim & Sons, hardwood manufacturers at Salem, Ind., spent a few days in Chicago last week.

R. van Metre of the Joyce-Watkins Company, Chicago, is home from a recent sales trip.

D. E. Kline, head of the Louisville Veneer Mills, Louisville, Ky., spent a day in Chicago last week en route home from a sales trip to Grand Rapids.

W. E. Heyser of the W. E. Heyser Lumber Company, Cincinnati, was in Chicago a part of last week visiting his trade here, and as usual captured a satisfactory number of orders.

John C. Spry, the timberland magnate, whose offices for several years have been located in the Corn Exchange Bank building, will move to larger and more attractive quarters on Nov. 25, in suite 1003 Harris Trust building, on Monroe street, between Clark and La Salle streets.

The Lumbermen's Club of Chicago announces that it will pull off a pool and billiard tournament, commencing Nov. 4. The prize to the winner, it is announced, will be a gold medal, and other prizes will be offered for high runs. Pool and billiards are getting to be quite a specialty with many members at the Lumbermen's Club, and are developing some very good players. A. C. Quixley, Ben Collins, Jr., and F. M. Baker constitute the committee having the tournament in charge.

The Hayden & Westcott Lumber Company has removed its offices from the fifth floor of the Railway Exchange, Michigan avenue and Jackson boulevard, this city, to suite 822-825, on the eighth floor of the same building. Every room of this suite commands a view of Grant Park and Lake Michigan, and comprises a reception room, private offices for H. S. Hayden, Charles Westcott and the traffic manager of the house, as well as a general clerical and stenographic office. The new quarters is one of the best arranged and best located lumber offices in Chicago.

The Lumbermen's Club announces a German song night, a function which will be held in the club quarters on the evening of Saturday, Nov. 9. Members are invited to bring their steins along. Undeniably there will be "something doing" on the evening in question.

The Penrod Walnut & Veneer Company, with general and sales offices at Kansas City, Mo., favors the trade with a handsome circular covering its various enterprises, involving its Kansas City plant, where American and Circassian walnut lumber and veneers are produced; its Helena (Ark.) plant, where it manufactures rotary-cut southern hardwoods; and its Brasfield, Ark., mill, in which is produced red gum and oak lumber. Of these allied institutions J. N. Penrod is president, Alexander Lendrum, vice-president and general manager Helena plant, R. L. Jurden, secretary and general manager Kansas City plant, and S. F. Prouty, treasurer.

Eugene F. Perry, secretary of the National Wholesale Lumber Dealers' Association, New York, was welcomed by a host of his Chicago friends during his visit here a few days ago in the interest of his organization.

NEW YORK

There was a hot meeting of the creditors of the Charles R. Partridge Lumber Company during the fortnight at the office of the trustee in Jersey City, at which meeting the creditors,

through the valuable assistance rendered by the bureau of information of the National Wholesale Lumber Dealers' Association, succeeded in preventing the passage of some excessive claims for legal services. One attorney put in a claim of \$3,200 on which he was allowed \$2,000, while another attorney claimed the sum of \$15,000 for services and was finally allowed \$750, or about one-fifteenth of what he asked. The trustee's report showed cash in hand of \$129,500, same being sum total of bid for entire assets accepted previously by the creditors; also liabilities of \$60,000, and claims filed of \$450,000, of which \$150,000 is held up for further consideration. A dividend of fifteen per cent. was declared and it is expected that creditors will ultimately receive about twenty-five per cent.

The schedules in bankruptcy of Gouverneur E. Smith & Co., show liabilities of \$695,915. of which \$306,318 is secured, and assets of \$81,368.

Frank B. Affick, for many years engaged in the wholesale hardwood and storage business in this city, died recently at his rooms in the Empire hotel, this city. The funeral was held from the residence of his brother in Yonkers.

The annual meeting of the New York Lumber Trade Association will be held November 13, at the headquarters, 18 Broadway. The meeting will be preceded by a Delmonico luncheon. A large attendance is anticipated.

The Hausbeck Brothers Company has been incorporated at Elizabeth, N. J., with offices at 215 Broad street, and a capital of \$15,000, to conduct a general lumber business. The incorporators are Lillian, Joseph J., and Franklin Hausbeck.

C. W. Manning, wholesale hardwoods, white pine and veneers, 66 Broad street, has just returned from a lengthy tour of the southern mills where he reports business conditions as very satisfactory. Mr. Manning picked up some desirable stocks for his trade.

The new wholesale house of Meigs & Mackay has just been formed in this city with headquarters at 131 Nassau street. It is composed of E. K. Meigs, Jr., of the E. K. Meigs Company, wholesale lumber, this city, and M. S. Mackay, head of the banking house of Mackay & Co., city. Mr. Meigs retains his interest in the E. K. Meigs Company, but will devote his entire attention to the new firm.

The Doscher-Gardner Company interests of 11 Broadway and Jacksonville, Fla., have organized the Jasper Cypress Company at Jacksonville, with a capital of \$25,000. The output of this new company will be controlled by the Doscher-Gardner Company which enjoys a large trade in the New England and middle states in dressed cypress lumber and finish.

C. W. Witte, wholesale and retail hardwood lumber, 110 Nassau street, Manhattan, has removed his storage yard from Fremand street, Brooklyn, to Chapman's Docks, Brooklyn, and will carry a full line of materials suitable for the local trade.

Monroe & Co., hardwoods, headquarters Baltimore, Md., have opened a New York office at 225 Broadway, Manhattan.

The sympathy of the trade is extended to John W. Hussey in the loss of his wife who died recently at her home in this city. Mr. Hussey was for many years prominent in the domestic and export hardwood trade, but retired from active business several years ago. Mr. and Mrs. Hussey celebrated their fiftieth anniversary on the day previous to Mrs. Hussey's death.

Bush & Fassett, 1123 Broadway, have added a hardwood department under the management of Warren O. Cawley, who has been identified with the local hardwood trade for many years.

The Norfolk Lumber Company, specialist in hardwood flooring, has opened a warehouse at 245-9 East One Hundred and Thirty-seventh street, Bronx, to which location it has transferred its office. It will carry a complete line

of stock, including maple, birch and beech stock, parquet squares, herring bone and strips 5-16 and 13-16 inch thick, etc. The warehouse is equipped with steamheating apparatus which keeps the stock in fine condition.

BUFFALO

H. A. Stewart of I. N. Stewart & Bro. has gone on a month's trip to West Virginia to look after shipments of hardwoods. The office reports a general scarcity of low-grade poplar.

Hugh and R. D. McLean, who have been spending some time recently at their southern mills, where inventory has been taken, returned in time to cast their votes here.

The Standard Lumber Company is filling its new yard on Baitz avenue with a good stock of oak, chestnut and other lumber. The improvements to the new office are now completed.

The yard of O. E. Yeager is selling quite an amount of quartered oak, on which prices have taken an upward turn lately. Business is reported good in this lumber.

G. Elias & Bro. state that the hardwood trade is in normal condition at present and has not shown any particular boom. Hardwood receipts have lately been coming in all-rail.

M. M. Wall states that the Buffalo Hardwood Lumber Company finds a pretty fair amount of trade at present and that orders are placed to a larger extent without solicitation than formerly.

The National Lumber Company has closed up its lake receipts of hardwoods for the season, having brought in a good assortment of maple and birch. Flooring is holding very strong.

Anthony Miller is getting in stocks of several hardwoods and states that trade at his yard is holding up satisfactorily and the volume is not far from that of a month ago.

T. Sullivan & Co. report that tonnage for bringing in lumber is scarce and high-priced this month.

W. Clyde Sykes, son of W. L. Sykes of the Emporium Lumber Company, was at the family home here a few days last month, before removing to his new home at Conifer, in the Adirondacks.

Lumbermen gathered at the Chamber of Commerce rooms on election night to join in the crowd assembled to receive the returns. A special wire service had been arranged for, and it was expected to hold out until midnight, whichever ticket won. With the lumbermen divided between three parties, instead of two, there was quite a diversity of political opinion expressed during the present campaign, and some members of the trade took an unusual interest in the subject of politics.

PITTSBURGH

The Aberdeen Lumber Company has 150 cars of gum and cottonwood on sticks at a Mississippi river port in Louisiana and is waiting patiently until it can get a barge down to bring this stock up to Joppo and other towns in the Middle West for distribution. This company was elected a member of the Pittsburgh Wholesale Lumber Dealers' Association last week.

The Western Lumber Company had the largest shipment in October of any month in its history. Hardwoods are showing up well in its orders and its eastern trade is looking good. President W. W. Wilson, Jr., recently made a long trip through the Northwest.

The Kendall Lumber Company shipped an average of twenty-five cars of lumber per day in October. Of this amount seventeen cars are hardwood. Its secretary, G. M. Chambers, reports a strong demand for good hardwood and believes that prices are going to be higher.

The Henderson Lumber Company says shipments of hardwoods are hard to get. It cannot get enough posts and mine stuff to supply the general demand, for all coal mining companies are buying heavily. Oak bill stock, according to President J. F. Henderson, is extremely scarce.

The Allegheny Lumber Company says this is the sawmill man's market and that the wholesaler needs to use great caution in quoting on future deliveries. The company's officials note a pretty strong call for all kinds of good hardwood stock, but complain much of a car shortage.

The Northwest Lumber Company of Humboldt, Cal., which is composed principally of capitalists of Kane, Pa., has sold its holdings to the Redwood Lumber Company of Eureka, Cal., for about \$700,000. The officials of the company are as follows: President, W. Campbell of Warren; vice-president, David Howells; treasurer, Dr. E. J. Sweeny; secretary, Franklin E. III, all of Kane, Pa.

I. F. Balsley, president of the Balsley & McCracken Company, the new hardwood firm in the First National Bank building, announces a fine business. He recently booked a big order for chestnut at a good price.

The Mutual Lumber Company is another new hardwood firm in the First National Bank building which is coming right to the front. Their trade with the industrial concerns and factories is starting off very nicely.

Manager Brown, of the hardwood department of the American Lumber & Manufacturing Company, reports a little dropping off in demand, due chiefly to election time. He believes that trade will be uniformly good all winter and feels that the scale of prices must be advanced if stocks do not increase any more than at present.

The Pittsburgh Wholesale Lumber Dealers' Association held a very successful bachelor dinner at the Fort Pitt hotel the evening of Oct. 29. President Louis Germain, Jr., was in the chair. More than that, he was in his element. Every member of the association—and there are now twenty-nine—had to make a speech. The worst of it was that most of them had to sing a song. Other really good music was provided, but the general hilarity caused by the efforts of the members themselves was the big asset of the meeting.

The joint quarterly meeting of the Pittsburgh Retail Lumber Dealers' Association and the Pittsburgh Wholesale Lumber Dealers' Association will be held the evening of Nov. 11 at the Hotel Henry.

PHILADELPHIA

Wistar, Underhill & Nixon have recently organized the Penn-Sumter Lumber Company. The officers are: R. Wyatt Wistar, president; Samuel Roberts, vice-president; Frederick S. Underhill, treasurer; Jacob Eisenberger, secretary. The company has acquired 4,000 acres of timberland in Clarendon county, South Carolina, with a probable yield of 30,000,000 feet of excellent short and long leaf yellow pine. Mr. Wistar has recently returned from South Carolina, where he has been superintending the erection of the firm's mill which is expected to commence operation about the middle of November. Wistar, Underhill & Nixon promise prompt filling of orders as they have excellent facilities at this point for quick shipments. Frederick S. Underhill reports good incoming business. He says their hardwood yard at Basic City, Va., which will soon be in proper shape, will enable them to carry a stock of about 2,000,000 feet of oak, poplar, chestnut, maple and basswood.

Schofield Brothers report a humming business. Robert W. Schofield, who recently returned from Schofield, S. C., where the manufacture of their lumber is carried on under the name of the Saltkeatchie Lumber Company, says the mill is

pushed to the limit. As there is very little competition in their immediate neighborhood, they have not been hampered by the car shortage and consequently are in a position to make prompt shipments.

Harry Sayer of the Walterboro Lumber Company, Walterboro, S. C., made a short stay in Philadelphia recently, calling on his old friends.

J. Gibson Mellvain, Jr., of J. Gibson Mellvain & Co., says except for the protracted difficulty in obtaining cars at shipping points, business is running smoothly. Mills are running full capacity and prices are firm. The firm recently engaged Walter W. Kelley, formerly of the Rock Island Railroad, as traffic manager.

George F. Jance of the Schofield-Lance Company, Reading, Pa., recently paid a visit to the Philadelphia office. He says trade conditions are eminently satisfactory. The car shortage does not affect the company in Reading, goods being shipped as fast as orders are booked.

Howard B. France, secretary and treasurer of the Monarch Lumber Company and of the Had-dock-France Lumber Company, has returned from the company's mill at Sterling, N. C., and reports that the plant is rushed filling orders, but it is next to impossible to obtain adequate cars to ship stock. Inquiries are increasing, resulting in good orders, and the outlook is bright for continued prosperity.

Edwin B. Malone and Augustus J. Cadwallader have returned from their annual moose hunting trip through the Maine woods. It is to be inferred that the inconspicuous moose saw these brave nimrods first and, objecting to a closer interview, wisely took to their heels. The sportsmen, however, brought back seven fine deer and lots of pheasants.

Jerome H. Sheip, who is well known in lumber circles, and Mrs. Sheip recently celebrated the twenty-fifth anniversary of their marriage and incidentally the fiftieth birthday of Mr. Sheip. A goodly number of friends gathered at their home to tender their congratulations. It goes without saying that it was a big time, for wherever "Jerry" Sheip is host one may look for an entertainment long to be remembered. Mr. Sheip is about to make a visit to his cigar box plant at Mobile, Ala., which he reports rushed with orders. He expects soon to get back in the hardwood lumber business.

Samuel H. Shearer of Samuel H. Shearer & Son says business keeps lively. There is no trouble selling goods, but delivering the stuff at this time is another proposition. William P. Shearer is traveling through North and South Carolina, looking after shipments and incidentally closing some contracts.

W. J. Mingus of Mingus & Rutter says there is nothing the matter with business at this time. They can sell all the stuff they can cut, but the car shortage is greatly interfering with prompt delivery.

George P. DeWitt of the Maris-DeWitt Lumber Company says the fall trading is excellent and the winter business promises to be good. All that is lacking now is adequate car service.

Thomas B. Hammer of the Hammer Lumber Company reports mills pushed to the extreme on orders. A large portion of the product is shipped by water, and as the company is disposing of a vast amount of stuff it has trouble obtaining vessels.

The Foster Creek Lumber Company, New York, was recently incorporated with a capital of \$500,000.

The Wilkinson Timber Company, New York, was recently incorporated under Delaware laws with a capital stock of \$400,000.

BALTIMORE

Secretary J. McD. Price and J. Craig McLanahan in behalf of the National Lumber Exporters' Association, last week filed with the Interstate Commerce Commission at Washington a complaint against thirty-two railroads both east

and west of the Mississippi river because of their refusal to issue through bills of lading on export lumber and logs except under conditions that are practically prohibitory. The commission is asked in the petition to issue an order requiring the railroads named to issue through bills of lading as is done on other commodities, and charging that lumber and logs are being unfairly discriminated against.

Among foreign representatives who have visited this market recently are A. Temple Dobell and Robert Lyle Dobell of Alfred Dobell & Company, London and Liverpool. They visited a number of the hardwood exporters here, then went on to Pittsburgh and Cincinnati, from whence they plan to go to New Orleans. Mr. A. Temple Dobell stated that trade conditions on the other side were very encouraging and that an excellent inquiry was in progress.

G. Mertens, representing F. W. Barth & Co., Hamburg, Germany, was another visitor in search of suitable stocks. He reported that the outlook in Germany was most promising, with an active demand prevailing.

Gearhart Knapp, representing Richard Koller of Hamburg, Germany, recently came to Baltimore for the purpose of establishing American connections with his firm. He was especially after walnut, poplar and oak logs, and intended to visit a large part of the country.

Robert McLean, a well-known Baltimore lumber exporter, returned last week from a trip abroad, which was unusually protracted by reason of the illness of his wife. Mrs. McLean's condition, however, has now greatly improved. Mr. McLean arrived in New York on Monday of last week. While abroad he visited a number of ports, getting in touch with buyers and obtaining information about the state of the lumber trade which confirmed his former impression, that the inquiry is active and that the future looks bright.

J. Tallafiero Bridges, a lumber dealer at Hancock, and his wife, Sarah I. Bridges, made a deed of trust last week to J. Augustine Mason and F. Wilbur Bridges, attorneys, for the benefit of the creditors of Mr. Bridges. The trustees were required to give a bond of \$100,000, about half the estimated value of the assets.

Norman J. Warner, who is in charge of the Asheville office of Richard P. Baer & Co., Maryland Trust building, Baltimore, was here for several days last week, having come up to confer with the members of the firm.

Joseph T. Steinacker, Jr., only son of Joseph T. Steinacker of the J. T. Steinacker Lumber Company, Baltimore, died at his home here recently. He was born in Baltimore twenty-six years ago, and after finishing his education entered the business of his father, being made secretary-treasurer of the company. His health gave way, however, and he had been traveling extensively in Switzerland and other parts of Europe in the hope of regaining his physical vigor.

COLUMBUS

Innis Creighton, general sales manager for the W. M. Ritter Lumber Company (Limited) of England, is a visitor at the Columbus office of the concern. Mr. Creighton spent a considerable time in the lumber business in the state, although he is an Englishman by birth. He is at present located at Liverpool and also has a branch office in London. Mr. Creighton says trade conditions in England show good improvement and he expects a big year in the export trade.

According to the report of city building inspector, there were 265 permits issued during October, as compared with 283 for October, 1911. The valuation of the buildings projected in October, 1912, was \$341,000, as compared with \$421,000 for October, 1911. Since January 1 building permits to the number of 2,370 have been issued for a valuation of \$4,269,000, as

compared with 2,427 permits in the corresponding period in 1911 and a valuation exactly the same.

L. B. Schneider, sales manager of John R. Gobeys & Co., reports a good demand for all hardwoods, with prices ruling firm in every particular. He says the car situation is about the same and he expects very little relief at this time.

F. B. Pryor of the W. M. Ritter Lumber Company says orders in all lines of hardwoods are holding up steadily, with a good run from all sections. Stocks are very much broken and the jobber can pick out what he wants to sell. Factories are buying better than yards at this time. Car stocks are in good demand and railroads also are buying better.

R. W. Horton of the W. M. Ritter Lumber Company left early in November for a business trip to Pittsburgh and Buffalo.

A. C. Davis of the A. C. Davis Lumber Company says trade in hardwoods is good and prices are well maintained.

W. L. Whitacre of the Whitacre Lumber Company says orders are a little slow now because of the approach of winter and the high prices which prevail. He says dealers are not inclined to carry heavy stocks through the winter.

M. A. Hayward & Son say trade is good in all lines of hardwoods, especially oak flooring. There is a good demand for all grades and prices are firm to the extreme.

The Sowers-Leach Lumber Company says hardwood demand is holding up well with every indication of a continuation of the high prices.

CINCINNATI

S. W. Richey of Richey, Haksted & Quick says "Business with us never was better—in fact we have had no complaint to make any time this year except in the early spring when it was difficult to get prompt shipments from the mills. We look for a continuation of present conditions." John Byrns of the Conasauga Lumber Company is optimistic regarding future business conditions. The mills of his concern never were busier and they have more orders at present than can be promptly filled. The car shortage is somewhat to blame for conditions at present but Mr. Byrns is of the opinion that the demand for all kinds of hardwoods and white pine, which is the company's specialty, will increase.

Walter E. Johns of the Johns-Mowbray-Nelson Company, which is handling the output of a couple of large gum mills, making this class of wood its specialty, states that it has been doing very well and business is growing steadily better.

The big poplar mills of the Swann-Day Lumber Company are running extra time and have been for the past several months. C. M. Clark, the local representative of the company, when asked his opinion of the prospects said, "We are not pushing for business, but merely taking care of trade as it comes and expect next year's business to go ahead of 1912, which is more than satisfactory so far."

Ben Dulweber of the John Dulweber Company, which conducts one of the largest hardwood yards in the city, is well pleased with prevailing conditions. The company has been doing a little better each month this year and at the present time is doing a capacity business. Its band mill in Kentucky is running extra time.

Mowbray & Robinson are doing the biggest business in their history. At both of their big hardwood yards in the city stocks are none too heavy and the three big band mills at Quick-sand and Irvine, Ky., are being pushed as much as possible.

Fred Mowbray is spending a good part of his time at the mills and Ed Robinson looks after the yard end of the business here.

W. A. Bennett of Bennett & Witte is still on the road making a northern trip. Mr. Bennett's main object on this trip is introducing

his new son-in-law, Mr. R. A. Betts, Jr., to the trade. Mr. Betts is to go over the territory regularly as soon as he becomes acquainted, thus relieving Mr. Bennett of much road work.

TOLEDO

Work will be begun within a few days on the construction of a large addition to the plant of the Haughton Elevator & Machine Company, Huron and Lafayette streets, Toledo. The building will adjoin the rear of the present plant and will have a frontage on Erie street of 80 feet and a depth of 114 feet. The structure will be one-story, brick, and will be used by the company as a woodworking department. This concern is one of the largest and most prominent of the independent elevator manufacturers in the country and has expanded so rapidly that the addition is imperative.

A fine tract of walnut timber, said in fact to be the finest in the country, was sold near New Burlington, O., recently, the Francke Lumber Company of Cincinnati, being the purchaser. The price paid was \$27,000. Firms from all over the United States and Europe have tried for years to buy these trees without avail. Men are now on the ground removing the trees, many of which are being taken out by the roots. The lumber will be shipped to Germany.

R. P. Burkhardt, Sr., president of the Stomps-Burkhardt Company, chair manufacturer of Dayton, O., died recently at his home in that city, aged sixty-seven years. He began his business career at the age of thirteen years as an errand boy for the Cabinet Makers' Union at \$1.25 a week. When in 1890 G. Stomps & Co. were reorganized he was made vice-president and general manager, and a year later, following the death of Mr. Stomps, became president of the concern. Four children survive their father, two boys and two girls. The boys, Richard P. Jr., and William M., hold responsible official positions with the firm of which their father was the head.

MEMPHIS

The movement of timber to Memphis during October was perhaps the largest on record for the corresponding month. Certainly it was the heaviest recorded for several years. The Valley Log Loading Company has not made up its complete returns, but Mr. Dickson is authority for the statement that the amount of logs loaded for Memphis mills during the month was more than 1300 cars. He is also authority for the additional statement that the quantity of timber awaiting transportation is rather large, totaling several thousand cars for Memphis. The foregoing figures are confined entirely to the Yazoo & Mississippi Valley line of the Illinois Central system and do not have any bearing on the other roads entering this city. It may be noted, however, that the quantity of timber brought in by the other roads is limited as compared with that handled by the Yazoo & Mississippi Valley.

There has been a slight improvement in the car situation and this is reflected in a little more prompt movement of both lumber and logs. The situation at Memphis proper has been very serious so far as outbound shipments were concerned, but there has been considerable trouble at interior points and also in securing cars for transportation of lumber and logs to this city. Lumbermen believe that there will be more or less car shortage and some delay in the movement of lumber for the next few weeks.

A very striking feature of the local situation is to be found in the fact that, despite the free movement of logs to Memphis during the past few weeks and despite the steadiness with which the mills have operated, there has been no increase in local stocks. As a matter of fact there is an actual scarcity in some directions and

stocks are quite badly broken in some lines. Every effort has been made by lumbermen both here and through the Memphis territory to replenish their stocks against the expected heavy winter demand, but only moderate progress has been made in this direction. Wholesale dealers are making efforts also to increase their stocks, but they likewise are meeting with indifferent success.

Owing to the fact that there has been a failure in the efforts to pile up lumber against the expected demand, it is anticipated that the market will be very firm during the next few months. The promised larger log supply made some members of the trade believe that there would be a lower market when the lumber manufactured from these logs was placed on sale. The indications along this line, however, have not been borne out by actual developments and there is not only a good demand for practically all kinds of hardwood lumber but prices are well maintained, with every promise of continued firmness.

Advices have been received by J. H. Townsend, manager of the Lumbermen's Traffic Bureau, from the Interstate Commerce Commission at Washington informing him that the St. Louis Southwestern (Cotton Belt), the St. Louis, Iron Mountain & Southern, and the Rock Island systems had filed tariffs with that body giving an advance of two cents per hundred pounds on hardwood shipments from points in Louisiana and Arkansas to Memphis. The bureau, through Mr. Townsend, has already requested the commission to suspend the proposed advance until such time as the lumbermen here and throughout the affected territory may be given a hearing. The principal contention to be made by the lumbermen here, through the bureau, is that present rates are high enough and that the proposed advance will carry them to a level which is both unreasonable and unjustifiable.

S. B. Anderson of the Anderson-Tully Company, has sold his handsome home at Poplar Avenue and Waldran Street to A. E. Jennings of Greenwood, Miss. The consideration is understood to have been approximately \$45,000. Mr. and Mrs. Anderson will temporarily make their home with their son, H. B. Anderson.

Building operations in Memphis during October were slightly in excess of \$750,000 or more than double the corresponding month last year. There has been marked activity during the first ten months of the current year, with the result that the figures up to this date have been \$6,199,285, an increase of \$1,154,550 over the same period last year. It is anticipated that the figures for the year will easily surpass other previous records.

W. H. Russe of Russe & Burgess, Inc., F. B. Robertson of the Anderson-Tully Company, Elliott Lang of R. J. Darnell, Inc., O. M. Krebs of the McLean Hardwood Lumber Company, W. A. Ransom of the Gayoso Lumber Company, Mr. Lear of the Green River Lumber Company and F. F. Fee of Dermott, Ark., spent some time in New Orleans the latter part of the past week. They went to that point to hold a conference with the officials of the railroads and steamship lines entering that port. The steamship and railroad companies have made a number of new regulations governing export traffic, and the conference was held for the purpose of ascertaining just exactly where the lumber exporters stood. These gentlemen represented, as a committee, the National Lumber Exporters' Association. W. H. Russe was chairman. The conference was entirely informal and no information has been given out by the committee as to what was accomplished.

The hearing before the Interstate Commerce Commission here some days ago, involving milling in transit rates, brought out very clearly the contention of the plaintiffs that they preferred a lower flat rate into Memphis than the present system of refunding part of the cost of inbound shipments of logs when the lumber

NASHVILLE

manufactured therefrom has been shipped out over the lines by which the inbound shipments were made. Elliott Lang and several of the representatives of the plaintiffs, May Brothers et al., contended that it would be much fairer to lumber interests at Memphis if the rate were made lower and lumbermen were left to ship their products over any line they saw fit. Very particular emphasis was laid upon the fact that it was frequently either inadvisable or undesirable to make shipments of lumber out over the same line that brought in the logs and that in all such cases the shipper lost the benefit of the refund. It was also pointed out that it was necessary frequently to use the longer instead of the shorter haul in order to secure the refund. The Interstate Commerce Commission has taken the case under advisement.

The Bellgrade Lumber Company has cut out much of its timber at Cathey, Miss., and is looking to the future. It has already purchased about 3200 acres of land near Isola, Miss., and will remove its mill and logging outfit from Cathey to Isola within the next few months. The company has cut some ten to twelve million feet of hardwood lumber a year at Cathey and Belzoni during the past several years. The site for the mill at Isola has already been secured.

The Interstate Commerce Commission has again awarded decision in favor of local lumbermen in the Pacific coast cases. The trans-continental roads announced some months ago that they proposed to advance rates from seventy-five to eighty-five cents per hundred pounds. The freight bureau and the Lumbermen's Club of Memphis took up this subject and went before the Interstate Commerce Commission. That body has just decided that the advance to eighty-five cents is unreasonable and unjustifiable and has ordered that the present rate of seventy-five cents be retained. The ruling affects Memphis and all Mississippi river points. This is the second time the Memphis lumbermen have been successful in restraining this advance. They won a similar victory several years ago in the case of George D. Burgess et al. vs. the Trans-continental Freight Bureau.

INDIANAPOLIS

T. R. Lewis of the Burnet-Lewis Lumber Company has returned from a southern trip.

C. F. Gray, a lumberman of Meridian, Miss., was in the city for a few days recently.

T. A. Winterrowd, city building inspector, reports that permits issued by the city in October amounted to \$757,445 as compared with \$777,325 in October 1911.

In October the value of walnut, rosewood and mahogany logs passing through the Indianapolis custom house was \$26,540, which is above the average. They went to various piano, veneer and furniture manufacturers over the state.

Fred C. Gardner, treasurer of E. C. Atkins & Co., expects to make his final report soon as receiver for the Atlas Engine Works. Mr. Gardner has sold the Atlas property and business to the Lyons-Atlas Company, composed of Chicago men, for a consideration of approximately \$1,500,000.

The Indianapolis Trade Association will make its twelfth trade extension trip Nov. 12, 13 and 14. A special train has been arranged for and merchants and dealers in thirty-nine Illinois cities and towns will be visited. The association has just adopted a new reciprocity plan. When the salesman for one line of goods finds a merchant in the market for something the salesman's house does not handle, he will notify the association, which will turn the information over to concerns handling the line in which the merchant is interested. About twenty lumber concerns belong to the association, which includes more than 250 manufacturers, wholesalers and jobbers representing all lines of trade.

Some of the best virgin forests in the South are involved in the fate of the Bon Air Coal, Iron & Lumber Company, which has been in the hands of a receiver for more than a year. The case was to have come up recently in the chancery court, but was postponed, as efforts are being made by some of the largest stockholders to effect a reorganization of the company, which has combined properties to the value of \$6,000,000 or \$8,000,000. Gen. Robert Vaughn, clerk and master, and one of the receivers, had a measurement of the timber on the lands of the company made by order of the court. Two tracts of 15,000 acres each in Wayne county have by measurement 102,672,000 feet of timber, 501,000 oak railroad ties, 75,000 pine ties, 14,900 cords of chestnut bark and 6,500 chestnut telephone poles. Between 45,000 and 50,000 acres in White, Cumberland and Van Buren counties have 152,000,000 feet of lumber, according to the report of the expert. The timber includes large quantities of red and white oak, ash, hickory, walnut, poplar and other native hardwoods of Tennessee. No steps have yet been taken in development, the company's attention having been devoted to coal and iron.

Lumber trade in the Nashville market is feeling the effect of the car shortage. Cars are more scarce on the branch railroads, which furnish many logs to this market, than here. Shippers get fairly satisfactory service in moving out lumber, but there is much difficulty in getting inbound freight from the branch lines.

The building permits at Nashville for the month of October amounted to \$66,518, against \$73,632 for the same month last year.

The Hardwood Manufacturing Company, recently incorporated with authorized capital stock of \$35,000, is making active preparation for future business. The company is putting in a 5½-foot band mill at Tullahoma, Tenn., where it will have headquarters. The mill will be used to supply material for a large furniture factory there. Harry Parker, general manager, and Frank P. McDowell, superintendent, have been connected with the lumber trade at Tullahoma many years.

A. E. Wiede, representing the Antoine-Govers Company, Antwerp, Belgium, has been in Nashville, coming here to make some purchases of hardwoods for his company. It is understood that he closed some contracts for oak.

Fire destroyed the big sawmill of the Graves-Gilliland Company in east Nashville, causing a loss of \$7,000, with \$5,000 insurance. The company is now taking steps to rebuild, and arrangements have been made for a seven-foot modern band mill. The company has a large custom sawing business.

J. Barthell Joseph, a popular Nashville lumberman, has accepted a position with the M. B. Farrin Lumber Company of Cincinnati. He will be connected with the buying end, and will have headquarters in Nashville. He was formerly with the Tennessee Hardwood Lumber Company of this city.

The Davidson, Hicks & Greene Company has been gradually increasing its holdings of timberlands in Franklin county, and now has acquired about 15,000 acres on which it is estimated that there is 75,000,000 feet of hardwood timber.

LOUISVILLE

Friends of A. E. Norman, president of the Norman Lumber Company, have extended condolences following the recent death of his mother, Mrs. Lucinda Van Dyke Norman, who passed away at an advanced age. Mrs. Norman was a member of a pioneer family of Kentucky, and had numerous prominent connections.

The Falls City Lumber Company, of which Charles H. Stotz is the head, has moved its

offices from the Keller building to the new eighteen-story Inter-Southern Life building, which has just been completed. It is the largest office building in Louisville.

The Vou Behren Manufacturing Company of Evansville, and the Himmelburger-Harrison Lumber Company of Cape Girardeau, Mo., were the principal complainants in a case heard in Louisville by C. C. McCord of the Interstate Commerce Commission, involving the reasonableness of Frisco rates from southeastern Missouri, the movement chiefly involved being from Morehouse, Mo., to Thebes, Ill. At the same hearing Young & Cutsinger, Evansville sawmill operators, presented proof in their petition for refunds on log shipments which they received during the time the Louisville & Nashville had a milling in transit arrangement allowing only six months in which to move the lumber manufactured. This was later increased to one year, and the lumbermen showed that the six months allowed constituted too brief a period for the completion of the movement. They also presented an agreed case whereby the Illinois Central is to refund part of the freight charge on logs shipped from a blid siding, the tariff applying to which did not state, as it should have done, that the milling in transit arrangement was to be used.

The New Albany, Ind., Veneering Company has been forced to run its panel plant over-time of late on account of the large increase in the demand. The furniture trade especially is active, according to the report of President and General Manager E. V. Knight.

By a recent purchase of timberland adjoining its holdings at Holly Ridge, La., the Norman Lumber Company of Louisville, has now sufficient timber to insure the continuance of its operations there for at least twelve years, and possibly longer. It purchased 7000 acres, containing oak, gum and other wood. The mill is now running steadily, cutting about 35,000 feet a day. E. B. Norman, vice-president of the company, will give practically his entire time and attention to the Holly Ridge operation.

The Louisville Hardwood Club has supplied to the bureau of foreign and domestic trade commerce of the Department of Commerce and Labor statistics requested by the bureau for use in compiling a national directory of commercial organizations of the United States.

ST. LOUIS

A falling off of \$160,024 in the cost of the buildings authorized during October by the building commissioner as compared with the same month last year was shown in the summary given out on Nov. 1.

Receipts of lumber last month were 16,294 cars by rail and none by river. Receipts for October last year were 13,757 cars by rail and none by river or 2,537 cars more by rail this year than last. Shipments by rail last month were 11,310 cars and none by river. Shipments during October, 1911, were 9,615 cars, showing an increase of 1,695 cars.

W. D. Reeves, head of the W. D. Reeves Lumber Company, one of the largest manufacturers of hardwoods in Helena, Ark., was a visitor in the city. He brings a good report on the present conditions of the hardwood business in his section of the country.

Thomas E. Powe, president of the Thomas E. Powe Lumber Company, who with his wife and daughter has been on a visit to his old home at Cheraw, S. C., has returned home from a most enjoyable stay.

W. W. Dings, secretary of the Garetson-Grease Lumber Company, says its three mills have practically been compelled to go out of business on account of the car shortage. The company is getting very few cars and can not fill the orders it is receiving. Inquiries are most numerous, and if the company could get out only half the orders it receives, it would be quite busy.

G. P. Shehan of the Berthold & Jennings Lumber Company, says it is very hard to get the number of cars required for shipping purposes, although the company is doing its very best to secure them.

The Charles F. Luehrmann Hardwood Lumber Company is receiving quite a number of orders and has been very successful in being able to get cars. The company is filling the orders from its local yards, where it has a good stock on hand and ships with very little delay.

Business has been very satisfactory with the Thomas & Proctz Lumber Company. Charles E. Thomas says his company's business during the month of October was very satisfactory and considerably ahead of any October for a long time. It has a big stock of the very best of hardwood lumber down at its mill at Belzoni, Miss., and is nicely fixed to take care of the fall and winter business which Mr. Thomas feels sure will come.

E. W. Blumer, sales manager of the Lothman Cypress Company, states that business has been quite good during last month. His company has a splendid stock of cypress on hand and the mill in the South is working full time. It has been quite fortunate in getting cars, as the road running to its mill has not been as much crippled for lack of cars as some of the other lines.

The Lumbermen's Club of St. Louis will hold its November meeting and dinner at the Planters hotel on the evening of Nov. 12. The entertainment committee has secured Rev. Martin S. Brennan, a well-known local astronomer, as the principal speaker. He will give a lecture on "The Starry Way." Rev. Mr. Brennan is well known all over this country and in Europe as a lecturer on geology and astronomy. In addition to the lecture, there will be a musical programme. The meeting promises to be a most enjoyable affair.

MILWAUKEE

The Milwaukee building department has just issued its annual report for 1911, which shows that there were erected during that time buildings, the total cost of which aggregated \$6,113,086. The building operations for 1912 are expected to exceed those of last year by far. During the first nine months of this year the building operations exceeded those for the same period of last year by \$2,420,440.

D. L. Van Auken of Milwaukee, representative of southern Wisconsin and northern Illinois for the John D. Mershon Lumber Company of Saginaw, Mich., has returned from a two months' trip on the Pacific coast, where he visited the mills of the Pacific Lumber Company at Scotia, Cal., and the shipping centers at Oakland and Wilmington. Mr. Van Auken is enthusiastic over the big hardwood prospects here.

The Gidding & Lewis Manufacturing Company of Fond du Lac has had improvements made on its plant in which it manufactures a well-known line of sawmill machinery. The concern has now one of the most up-to-date plants in its line and is prepared to handle orders of any size.

Two new lumber plants are rapidly nearing completion so that work can be started very soon. The Heineman Lumber Company at Merrill is erecting one of the largest sawmills in the country, most of the buildings having been completed and machinery now being installed. The new Tomahawk Box Company's plant now in course of erection is to replace the one destroyed by fire early this summer.

The sawmill of the Peshtigo Lumber Company was completely destroyed by fire on October 27, causing a loss of \$100,000. It was one of the largest mills in this section. The power was derived from a dynamo run by water power. An overheated journal box is said to have caused the fire. Nothing authoritative in regard to rebuilding the mill has as yet been announced. Wm. Templeton is president.

CADILLAC

Superintendent L. Van Meter of the A. L. Dennis Salt & Lumber Company's mill at Dighton, twelve miles south of Cadillac, has moved his family to Whitney Ont., where he will manage the operations of the Dennis-Canadian Lumber Company, an out-growth of the A. L. Dennis Salt & Lumber Company of Grand Rapids, Mich. Mr. Van Meter is well up in his line and the well wishes of his former employes and friends in this vicinity go with him.

W. B. Barrows and George W. Polhemus of the United States Forest Service, Washington, D. C., are taking measurements of beech and maple at Cummer-Diggins camp No. 13 with a view of compiling a series of tables for the Forest Service department at Washington.

The Cummer-Diggins Company's sawmill has after several days' shut down resumed operations again. This company has opened a new camp in Colfax township, known as Camp No. 13, and will log in that vicinity the entire winter. In addition to this a large amount of timber will also be put in for the company by contract.

The Cadillac Handle Company's mill is closed down for three weeks when a general overhauling will be made after which its logs will be forwarded in train loads over the G. R. & I. during the entire winter.

The Du Roy Manufacturing Company, Park Lake, Osceola county, is enjoying unprecedented activity. Starting with a force of less than ten men, it has increased its pay roll to fifty. This company turns out 150,000 pieces of wooden ware specialties daily. It has purchased some automatic machines that have a capacity to turn out from 40,000 to 60,000 pieces daily. It manu-

factures almost everything in the line of wooden novelties and is one of the best equipped plants of its kind in the country. Irving R. Du Roy is the manager.

The State Railroad Commission has approved the proposed line of Boyne City, Gaylord and Alpena, with the exception of one crossing in Alpena. Its approval has been withheld from this with the desire of obtaining a union depot with the Detroit & Mackinac Railway.

On account of increased orders the Michigan Buggy Company's plant at Kalamazoo has been compelled to build a large addition. 180 feet in length by 650 feet wide, and three stories high, in which three hundred additional men will be installed. In order to keep up with orders it will be necessary for the company to make twenty-five cars per day. Their 1913 "Michigan" car is considered to be among the best of forty-horsepower machines on the market.

The State Industrial Accident Board reports 2,000 accidents the first two months of its existence, a large proportion of which were minor. The insurance feature of the new industrial compensation act will save the employers of labor thousands of dollars, from the fact that a manufacturer or an employer of labor can go to the commissioner of insurance and arrange for mutual insurance for the actual cost less many overhead charges, such as office rent, heat, light, solicitors, etc. This has forced many of the Liability Companies to greatly reduce their rates. Under the scheme of insurance proposed by the state, the cost of insurance is pro-rated among subscribers according to their risk; it also allows members to withdraw upon thirty days notice at the end of a year, providing they have paid their pro rata share of the expenses during the year, as the act provides that the estimates shall be adjusted at the end of each year.

The Hardwood Market

CHICAGO

Hardwood trading in the local market goes on with unabated vigor. The demand is heavy and there seems to be an active demand for nearly every item of hardwood lumber. Some remarkable stories are told of extraordinary profits being obtained on odd lots, but, on the whole, a very conservative system of buying and selling is going on. Plain oak in all grades is the scarcest item, although many varieties of northern woods are almost as impossible to obtain in quantity.

Heavy local purchases for car materials on the part of railroad and car companies is the feature of the past fortnight.

NEW YORK

The hardwood market at New York continues to show strength. Supplies are not over plentiful and prices are firm with a constant upward tendency, especially on good lumber. Car shortage is holding up shipments in many instances, which tends to curtail actual transactions, but as far as demand is concerned and its relation to available supplies, there is every indication that there will be a firm market throughout the winter.

BUFFALO

The demand for hardwoods continues satisfactory and dealers state that not much pushing has been needed to keep business going in fair

shape. Inquiries have been coming in more freely and for a larger variety of woods. The yards are well supplied with stocks and forehanded dealers laid in a large amount of lumber in anticipation of a car shortage. There are usually cars enough in Buffalo to keep shipments going without much delay.

Plain oak is stronger than it has been for some time, and moves out about as fast as it comes in. Stocks are hard to get in quantity. Quartered oak is stronger and furniture factories are placing a fair number of orders. Even common quartered oak, which has been slow for a long time, is now selling to some extent. Other woods are generally firm in price, with poplar forming the chief exception, although low-grade poplar is scarce and holds up better in price than formerly. Both maple and oak flooring are now bringing an unusually stiff price.

PHILADELPHIA

Instead of the minimum activity so often coincident with the presidential election, the hardwood lumber business in this section has continued brisk during the fortnight. An increasing number of inquiries are resulting in good orders, the only problem of the manufacturers being how to get cars to ship the stuff. Many dealers say they can get plenty of orders but are in a quandary as to where to find the stock. Yards are stocked to only about three-fourths of their capacity, and, as the consuming industries are buying more freely, the pile is rapidly diminishing, with but little hope of an early replenishing of vacant spots because of the existing traffic congestion. Under these conditions it is only natural that prices should advance, and the

man who neglected to secure his stock ahead will now be obliged to pay considerably more money for his goods.

Stocks generally continue below the present demand and values are moving upward. Oak continues a leader, and quarter-sawed oak is advancing; chestnut is stronger, the call for sound wormy increasing; gum is said to be piling up at the mills and weakening in value, but a careful investigation in the eastern market does not sustain a report of a break in this wood, the demand being strong and prices well maintained; cherry is increasing in demand; cypress is stiffening, and basswood holds firm. There is a free call for birch and beech. Mahogany and veneer trading shows the best record for a number of years and prices are well sustained.

PITTSBURGH

Hardwoods are right at the front of the procession. If anybody ever saw white oak in better demand than just now he will have to "show" his lumber friends. Wholesalers have almost stopped bidding on bill oak because it is so scarce. In furniture lumber and also stock for the vehicle and implement companies there is a mighty strong demand. The tendency is toward higher prices in all these stocks. Gum and cottonwood are going up and manufacturers through the middle west are increasing their orders with Pittsburgh agencies. Hardwood mills are very busy. Many of them complain of a scarcity of labor, while others have been handicapped somewhat by bad roads and a lack of teams. Yards are buying a fair supply but are pretty well stocked up now for winter. Trade with the factories and railroads is first class.

BALTIMORE

The advent of election day has brought no change in the hardwood trade, which retains its active character and continues to present a most encouraging aspect. While the advances that have taken place in the range of prices are not notably large, there has been a stiffening all along the line, with some decided marking up of the figures, and with the demand sufficiently brisk to take up the output of mills, so that there are practically no unsold stocks in the hands of the manufacturers. Of course, this is to be accepted with allowance for the maintenance of adequate selections and the seasoning of lumber. In many instances the time of seasoning is cut decidedly short and stocks are often sent out when not quite ready for the market.

The only item which has not responded to the general improvement is extra wide poplar of good quality, for which prices are materially below what such stocks, in the opinion of the millmen, should bring. Oak is holding its own in a highly gratifying way, and the current figures are so attractive that there is a general tendency on the part of the mills to increase their output. New plants are projected and old ones are being enlarged, but so far the production is being taken care of without the slightest difficulty. Chestnut is firm in all its divisions, even sound wormy stocks commanding prices that dispose the manufacturers to take orders. Ash is very steady, and much the same can be said with regard to all other woods in common use. The yards are buying with comparative freedom, finding now that the requirements of the trade are greater than at first seemed likely. For a time there was more or less deferring of orders until it became apparent that recessions of a material character could not be hoped for, since which time the orders have been coming in quite freely.

As a whole the export business is in satisfactory shape. The car shortage is causing trouble both in the domestic and in the export trade, but apart from this drawback and the re-

fusal of the railroads to issue through bills of lading there have been no unfavorable developments. Oak abroad is going up, and the expectation in the United Kingdom that when a certain price has been reached, domestic oak would enter the market to compete with American woods, has not been realized. The English oak, in fact, advanced with the rest, and the buyers abroad are now showing considerable eagerness to place orders. The whole export situation is viewed with satisfaction, and a continuance of such conditions is expected, although the question of ocean freight rates yet remains to be settled in part.

COLUMBUS

Hardwood trade in central Ohio is ruling strong in every particular. The demand both from dealers and factories remains good and, with stocks very light, prices are ruling strong. There are no indications of weakness in any direction and every change has been toward higher levels. The volume of business is good and since the weather has remained pleasant building operations are still active.

One of the best features is the demand for all grades and varieties. The lower grades are moving well, but not to the exclusion of the better grades. There is a good demand for all varieties and as a result there is no accumulation in any place. Dry stocks are generally scarce, and this presages high quotations for some time to come.

Factories engaged in making automobiles, vehicles, furniture and implements are in the market for stocks. The car shortage is bad and inclined to grow worse, and as a result efforts to stock up have not been very successful. There is no hope for an improvement in the car supply in this section, according to traffic managers of railroads.

Quartered oak is gaining in strength and the surplus stocks are being depleted. There is an extraordinary demand for plain oak, both red and white. Ash is stronger in every way. Poplar is gaining in strength and automobile factories are buying the wide sizes. Basswood is very strong. Chestnut is moving well and sound wormy is especially in good demand.

CINCINNATI

There is a very strong tone to the hardwood market and all stock is very scarce. All of the big mills are full up on orders and are accepting business only at top prices. Dealers who depend largely upon the smaller country mills for most of their stock find great difficulty in securing same as the extraordinary demand the country over for all kinds of hardwood lumber has made the buyers on the road in the producing territory so active that small producers have simply to sell to the buyer making the best offer. This competition has made prices of all items very strong.

The market in poplar is in a very satisfactory condition. Low-grade stock is in strong demand and an increased call is noted for high grades. No. 1 common and better has been somewhat of a disappointment this year and wide stock has done poorly, but dealers making a specialty of wide poplar have strong hopes of a better market. Prices on all grades are held up well and there is not much accumulation of the slower moving stock even in the face of a light demand.

Chestnut is going as well as anything at present; thick ash is in active demand and hard to find; plain oak is so strong as to need no particular mention and is the leader; quartered oak is doing nicely, better prices being obtained. Low-grade cottonwood is simply out of the market—dealers cannot secure any. There is an active demand for all grades of cypress and prices are being well maintained. No. 1 shop is

very strong in all thicknesses and the low-grade stock sells readily. Selects have a very good call.

The remarkably fine weather that has prevailed for the last few weeks has made possible the starting of much new work in the building field. Building contractors, with the object of supplying plenty of work for mechanics during the cold weather, have taken advantage of these conditions and are holding back on interior work in order to get new work enclosed.

There is much complaint among dealers of the light receipts due largely to the car shortage, which appears to be growing worse as shipments during the last week have been very light.

Cincinnati factory trade is very good, particularly the furniture trade and box factories.

TOLEDO

The hardwood situation has not changed greatly during the past month and there is certainly no weakening nor, so far as can be seen, is there any tendency in that direction. Dealers, however, are holding firmly to a hand-to-mouth policy, refusing to buy except where compelled to do so. It is contended by retailers that prices have reached the climax and cannot possibly go higher while there is a possibility of a break. At any rate they are willing to take that chance and in the meantime are supplying the trade from their yard stocks which have been holding up fairly well considering the drain that has been made upon them. Regardless of inclination, however, the wholesalers declare that it will be impossible for the retailers to hold out much beyond the first of the year and they are patiently awaiting that time.

Shipments continue very slow from all points, especially the South. In many instances orders placed months ago remain unfilled and there is no degree of certainty as to when orders placed now will be delivered.

Building in Toledo continues heavy. Never in the history of the city has there been so much building and especially so much building of an important character.

Furniture and vehicle factories are running normally for this season of the year and taken all in all hardwood dealers are finding but little to complain about.

INDIANAPOLIS

There has been no particular change in the local hardwood situation in the last two weeks. Prices are still steady and while a number of orders are coming in, deliveries are uncertain owing to car shortage. Most of the hardwood concerns report a large number of orders on hand which are unfilled on account of a lack of cars.

Lumbermen are doing their part toward relieving the car situation by loading and unloading cars as promptly as possible. It is thought that the car shortage will be relieved very materially within the next three weeks.

All grades of hardwoods appear to be in good demand. Factories using hardwoods have been busy for several months.

ST. LOUIS

The hardwood market is not showing as much activity as it did a couple of weeks ago. Still there is enough business being done to overtax the supply of salable items on the hardwood list. There is a steady demand for gum, cottonwood and ash, and lower grades of these items have nearly been cleaned up in the producing district. There is no particular change in the demand for poplar, and quarter-sawed red oak is going nicely.

Since the fall demand has started stocks of hardwoods in this market have gotten very low, and it is hard to fill all the orders offered for all of them, particularly plain oak. The car shortage has prevented much coming in to take the place of the items that have been shipped out and very little is expected to arrive in this market until there is a let up in the equipment needed for the movement of cotton.

Prices are firm on all items and an upward tendency prevails for the items most in demand. The call for cypress has fallen off somewhat but is still good. A big business has been done by the St. Louis dealers, and shipments continue to go out in good volume. The car shortage has greatly benefited the market. Cypress dealers are considering the matter of securing stocks as much as they are that of filling orders. The large yards, however, still have a good supply on hand and can fill nearly all orders coming to them. Prices are steady and firm.

LOUISVILLE

White oak is the "one best bet" at present, both plain and quarter-sawn varieties selling equally well. This is a noteworthy condition, this being the first time in over a year that quartered white oak is moving as briskly as plain. Manufacturers of quartered assert, how-

ever, that they are completely sold up, and some advances in price have been reported, although for the most part former quotations have ruled, the chief improvement being as to demand. Plain red oak is also selling briskly, though quartered red is not in particularly good demand. White ash is a big feature of the situation, and is moving well. Chestnut, cottonwood and gum are all in good call, while the better grades of hickory have been in surprisingly good demand.

NASHVILLE

The local hardwood lumber market continues unusually active. The demand is brisk for plain and quartered oak. Some of the dealers are compelled to decline orders for these lines. There is a generally good demand for other lines. The brisk business for several months has considerably reduced the stocks in the Nashville district, the total ordinarily running around 100,000,000 feet, but present stocks in this district would probably not go over 80,000,000 feet. Local hardwood flooring plants are operating at capacity, with a good demand. Some export shipments are mentioned. Box factories are also doing a good business.

MILWAUKEE

Despite the lateness of the season, the local hardwood business is holding up fairly well. Active building operations here and about the state, a brisk demand from farm implement concerns and box manufacturers, and a fair request from the sash and door plants and furniture factories are doing much to keep up trade.

Stocks at most points are still light and jobbers are complaining of the delay experienced in most instances in effecting deliveries on orders. The northern mills seem to be turning out only about enough to meet present requirements and the supply of dry stocks is exceedingly light. The car shortage is causing some trouble, especially in regard to southern shipments.

Maple is strong and prices for inch stuff have advanced one dollar during the past four weeks. Three-inch maple stocks are practically exhausted. Red birch is in especially brisk demand, while the furniture manufacturing concerns are calling for a considerable amount of No. 1 and No. 2 common. Stocks of No. 3 common birch are exhausted at most points. The interior finish plants and sash and door concerns are looking for all the unselected birch that they can get. Basswood prices are strong and low grade stuff is in good demand. In the southern woods plain and quartered oak leads the demand.

CADILLAC

Market conditions were never better in this vicinity than at the present time, taking hardwoods and hemlock as a whole. There are no large excess stocks of any kind. A year ago there was a surplus of maple flooring, but this has been taken up, first by the increased demand for maple flooring, second by the diversion of a considerable quantity of the flooring lumber to other purposes than into manufacture of flooring and the hemlock has been pretty well cleared up account excessive demands for both boards and piece stuff and because of the scarcity, prices have materially advanced in both woods.

LIVERPOOL

The market position is again exceedingly firm and almost everything at this port has taken a big bound upwards. Of course the larger portion of the rise in values is covered by the in-

creased freight charges which are now higher than has ever before been known here. The lucky holders of stock at this port are reaping a very rich harvest, especially those who have imported on the old basis of sea freight. However, there are not many so fortunate as to hold stock to any appreciable extent.

From all accounts before lumbermen, it is predicted that values will continue to advance firmly for at least another twelve months in the mahogany section where record prices were realized at the last sales. The market for hickory is again bare and some talk is heard of very high prices, contracts having been made for next year's shipments at prices which are higher than any sales during last year. Sound ash is in a similar position. Oak logs have sold well also. Although there have probably been more round oak logs imported this year than in any other year, there is not a log to be seen now. Birch logs have also been going well; in fact, there are very few prime logs left from last year's shipments. Oak planks to wagon specifications are snapped up as quickly as they arrive.

Prices of all the cheaper grades of stocks—saw gum, cottonwood and tupelo—are also exceedingly firm. Wide stocks are very firm indeed and there is a keen demand for all classes of wide hardwoods. Cypress seems to be much in favor as a substitute for poplar stocks, which has now reached a price making it prohibitive for many trades.

GLASGOW

Business at present is conducted on fair lines, no special briskness in any particular line taking place. Though prices are well maintained, they should be higher to give some compensation to shippers.

Pitch pine continues firm, the upward tendency still being adhered to. Freight room is exceedingly difficult to obtain at present, so that little business is being done and that at prohibitive prices. C. I. F. values show no sign of weakening, as these will be held so long as freights retain their present level. Everything at present points to values in spruce becoming still stronger. As importers know that prices are certain to advance still further, they are using the utmost caution and will not enter into engagements for delivery ahead. Any stock held at present is not sold except at greatly increased prices.

Several large cargoes of oak boards and planks have recently arrived from Baltimore. With the exception of one or two cars, the quality of these does not seem to be up to the usual standard. Prices realized, however, have been full, considering that the grading is down. It is not the least surprising that shippers have been lowering the grades to induce buyers to take up the lumber at lower prices. This is the direct result of the freight situation, but it is not desirable, even with the high freights prevailing, to lower the grades. It would be much better if shippers adhered strictly to the gradings and advanced prices accordingly. It is in the interest of shippers themselves and also agents here that greater care should be exercised in the selection of the planks.

A large quantity of southern oak logs are presently held in second hands and it seems that these are practically unsalable in spite of the good demand for oak logs. Thus it will be seen that the old remarks regarding southern oak logs are still applicable. Shippers are only storing up trouble for themselves when they persist in sending these logs forward. Had these logs been from West Virginia they would have been cut into dimensions ere this.

Packing case makers at present are brisk and furniture makers moderate, the difficulty in obtaining supplies making business difficult. Shipbuilding continues busy.

CLYDE IRON WORKS

Manufacturers at **DULUTH**, Minnesota, U.S.A. of
CLYDE-GRADE Logging and Hoisting Machinery.

Are your saws standing up to their work as they should?
Are you getting the most service—at the least expense?

MANAGER—"Riley, our records show a decreased cost in production last month. How do you account for it?"

SUPERINTENDENT—"It's those SILVER STEEL SAWS, Mr. Bossman. We only change Saws twice a day now as against three times with those other Saws. Just touch them up on the automatic and they're ready for another run. I had no idea how much difference this would make in our output."

MANAGER—"Better put in a requisition for SILVER STEEL BAND SAWS for the 10" Mill and Re-Saw right away. We can't make money any easier than that."

Not "Fairy Tales," but facts, gentlemen. These are actual experiences of the biggest mills everywhere. You cannot afford *not* to use

ATKINS SILVER STEEL SAWS

SILVER STEEL costs more than any other Saw Steel and it's worth every cent that it costs. It's almost positive insurance against cracks because it's so tough and then the teeth hold their points and the blades their teeth and tension. Why not become curious and make us prove these statements?

Order from your usual source. Just specify ATKINS SILVER STEEL. Or write to the nearest address below—we'll see that you get them to the best advantage.

HAND SAWS—CIRCULAR SAWS—CROSS CUTS—GANG SAWS—A Perfect Saw for Every Purpose. MACHINE KNIVES General Agents Covell Filing Room Machinery.

Woodworking Machinery

A New Surface Planer

REAR-END NO. 61-A SURFACE PLANER

The halftone represents a New Single Surfacer which is made in two sizes, to plane 24" x 8" and 27" x 8". The machine is regular, as per cut, but it can be fitted with **Sectional Feed Rolls** and **Flexible Chip-breaker** for fine work, or equipped with **Round 4-Knife Head** for speed.

Send for Special Circular

H. B. Smith Machine Co.

Smithville, N. J., U. S. A.

New York Chicago Atlanta San Francisco

If you attempt to dry two-inch oak in your kiln in fourteen days the result will probably resemble the above illustration.

The lower picture is from a photograph of two-inch oak dried by the Grand Rapids Veneer Works Process in fourteen days, and every plank as sound as the sample.

The absence of checks is not the only saving due to this process. The lumber is straight, soft and free from sap or acids.

For a small sum of money your old kilns can be converted to G. R. V. W. Process Kilns, with a guarantee to give the results above described.

THE RUSSEL COMBINED SKIDDER AND LOADER IN OPERATION

Russel Logging Cars are built to stand severe service, of any capacity desired or to suit any length of log.

Logging Economy

will interest you

The most convincing proof of any machine's efficiency, next to a personal trial, is the expression of those who have used them.

We shall be pleased to furnish you with the proofs or the names of the operators who will be glad to show you the machines in operation.

The Russel Combined Skidder and Loader has demonstrated itself to be superior in design and construction. The great decrease in cost and increased efficiency of logging is bound to appeal to the operators.

Russel Wheel & Foundry Co., Detroit, Mich.

Custom Mill Work, Storage, Inspection
ON
Foreign Fancy Woods, Mahogany, Cedar, Circassian

Mills, Log and Lumber Storage Yards, Astoria Veneer Mills & Dock Company

We receive the logs, store or warehouse them, manufacture them into lumber, cut or saw veneers, pile and store the product, and ship via any railroad. Also furnish inspection returns on logs or lumber. Can furnish accommodations and economies which it is impossible to secure elsewhere. While we do not buy or sell for our own account, we always have on our yards parcels of plain and figured African, Mexican and Cuban Mahogany, Circassian Walnut and Cedar logs, placed here for sale by direct foreign shippers, from which advantageous purchases can be made.

Astoria Veneer Mills & Dock Co.

Long Island City, New York

Veneered Panels

It is obvious that a veneer panel making plant, equipped with every facility to produce in large quantity panels of every description, can produce panels at far less cost than any individual manufacturer can make them for his own use.

This is the important fact we want to impress upon you. We can supply the panels you use in two, three and five-ply quarter-sawed oak, quarter-sliced oak, figured mahogany, plain mahogany, red birch, plain oak, yellow pine, gum, basswood, ash, maple and elm at less cost than you can produce them.

Drop a line to us and mention your panel needs and we will submit samples and quote prices that will settle the question.

Veneer Panel making is our specialty, and we claim that the panels we make are cheaper in the long run for they

Do you see the point?

VENEERS AND PANELS

Ahnapee Veneer & Seating Co.

HOME OFFICE, FACTORY AND VENEER MILL, ALGOMA, WIS.
VENEER AND SAWMILL, BIRCHWOOD, WIS.

We manufacture at our Birchwood plant single ply veneers of all native northern woods and deliver stock that is in shape to glue.

From our Algoma factory, where we have specialized for twenty years, we produce panels of all sizes, flat or bent to shape, in all woods, notably in Mahogany and Quarter-Sawed Oak.

We make no two-ply stock, and do not employ sliced cut quartered oak. Our quartered oak panels are all from sawed veneer.

Every pound of glue we use is guaranteed hide stock. We do not use retainers. Our gluing forms are put under powerful screws and left until the glue has thoroughly set.

If you seek a guaranteed product that is the best, based on results accomplished by most painstaking attention and study of every detail, combined with the use of the best stock and an up-to-date equipment, our product will appeal to you.

If you are a "price buyer" we probably cannot interest you.

1420 Chestnut Street PHILADELPHIA

On the Upturn

Prosperity in the United States comes in recurring waves which rise in obedience to the dynamic force of an energetic people and carry property values to new heights.

This is especially true of their effect on timber values.

It is remarkable, also, that timber values remain at the high point to which the waves of prosperity carry them. The temporary exhaustion of the force that moves values leaves them stationary until the next tide.

Those who do not own timber are not benefited by this force. The waves have nothing to carry for their account.

This oversight on your part may be remedied very easily. Timber may be bought on good terms now. The tide will carry any load.

The force of the next tidal wave of prosperity is now being felt.

Secure particulars of some of the attractive bargains we are offering in western lands.

Let the next wave of prosperity work for you.

6/4 Cadillac Gray Elm, No. 1 and 2 Common.....	20 M

"It is not what lumber costs you, so much as what you can get out of it, that decides its value for your work."

OUR OWN MANUFACTURE

**Something New
For Your Factory Floors**

Utility Joined With Economy

We are now manufacturing what we call a No. 2 Factory grade of Hardwood Flooring which can be used successfully in factory buildings where good wearing qualities rather than appearance are required. This Flooring is made from the hardest portion of the log, and while the Flooring shows the heart defect to a considerable extent, nevertheless it will wear with wonderful durability.

It is 13/16 x 2 1/4" face, and the Flooring is kiln dried, hollow backed, bored, end matched, steel scraped and bundled.

Write us about it. This is a grade of Hardwood Flooring you should know about. Address MITCHELL BROTHERS COMPANY, Sales Department, CADILLAC, MICHIGAN.

A floor to adore

For thirty-three years Wilce's Hardwood Flooring has been among the foremost on the market and because it stands today "unequaled" is the best evidence that its manufacturer has kept abreast of modern methods and the advanced demands of the trade. To convince yourself of the above statements, try our polished surface flooring, tongued and grooved, hollow backed, with matched ends and holes for blind nailing—you'll find it reduces the expense of laying and polishing.

our Booklet tells all about Hardwood Flooring and how to care for it—also prices—and is free.

The T. Wilce Company
22nd and Throop Sts. CHICAGO, ILL.

Going up—Hardwood Timber

We have the following hardwood and pine timber for sale at prices that have not as yet been advanced with the rise in value on timber lands. For a short time we offer—

150,000,000 FEET HARDWOOD IN SOUTHEAST ARKANSAS — A SPLENDID OPPORTUNITY.

7,600,000 FEET OF HARDWOOD IN SOUTHWEST ARKANSAS

We also have timber in British Columbia and on the Pacific Coast and Oregon.

SAVE YOUR MONEY BY USING THE

RED BOOK Published Semi-annually in February and August

It contains a carefully prepared list of the buyers of lumber in car lots, both among the dealers and manufacturers. The book indicates their financial standing and manner of meeting obligations. Covers the United States, Alberta, Manitoba and Saskatchewan. The trade recognizes this book as the authority on the lines it covers.

A well organized Collection Department is also operated and the same is open to you. Write for terms.

MAKE US PROVE IT
HARDWOOD RECORD, CHICAGO

500 Copies Sold Within a Week After Prospectus Was Issued

Hardwood Record announces the issue on January 1,
1913, of an Authoritative Commercial and Scientific Book

American Forest Trees

By **Henry H. Gibson**, Editor *Hardwood Record*
Edited by **Hu Maxwell**, Wood Utilization Expert

The Work Involves :

First: A botanical description of the more than 300 species of American forest tree growth.

Second: A physical description of the wood of these species.

Third: A recital of the chief uses of all important American woods, together with suggestions of advantageously broadening their uses.

Fourth: Complete information concerning the range of growth of all varieties.

Fifth: Related trees are logically grouped according to families and spe-

cies; important species covered in substantial detail, and brief mention of the woods of minor importance.

Sixth: Scientific name of each tree is recited, as well as the various common names by which it is recognized in different parts of its range of growth.

Seventh: The properties of the various woods are carefully analyzed, particularly weight, hardness, stiffness, strength, elasticity, toughness, color, figure, and seasoning and lasting properties.

☐ The book will contain between 650 and 750 pages, will be printed on the best quality of enameled paper, and handsomely bound in half leather, dark green roan back and corners, with basket cloth sides, silk head-bands, gold stamping on the back, and gilt top.

☐ The work will be illustrated with more than 100 full-page pictures on plate paper in sepia, outlined in orange, from photographs, covering all the chief commercial varieties of virgin forest timber growing in the United States; and also with numerous engravings, from drawings and photographs, showing leaf and flower forms, etc.

☐ The price of the work is \$6.00, delivered by express or mail, and is sold only on subscription.

☐ An order blank, and a prospectus, showing the character of the paper, size of page and style of printing will be forwarded on application.

Hill Bros. Tie & Lumber Company
Charleston, W. Va.

Variety is the Spice—

Specialization is one of the necessities of modern business, affecting somewhat the human truth of the declaration regarding variety. The problem usually is to provide the variation without scattering one's shot too much.

In Louisville is found variety without weakness and concentration without narrowness. In other words, Louisville has the most general line of hardwood stocks of any producing center in the country. Some towns are strong on poplar; others long on quartered oak and a few good in gum. Some have fine offerings in veneers and fancy woods; some shine when it comes to ash or hickory; but few of them do much outside their specialty.

There isn't an item in the list just named which cannot be had, in quantity, in Louisville. This means, for the buyer, that when he comes to Louisville he need "shop" no longer. He can mark everything he needs off the list, for he can get it—at a satisfactory price—right here. And for the buyer who wants a mixed car of lumber, involving three or four items, "club service" cannot be surpassed.

Try us out at either end of the proposition and see how it works.

Review and Outlook

General Market Conditions

Even the elements seem to be working to the interests of the lumber business in that the long spell of fair weather has resulted in a continuance of the general building activity all over the country. As a result, this large market for all kinds of lumber has been another contributing factor to the continued shortage of hardwood stocks. With this is coupled a consistent and unusual activity in the wholesale consuming factories, most notably in the furniture trade. All lines of consuming plants, however, are either working to the limit of capacity on ordinary run or are doubling their shifts and running overtime to meet orders. While the fall rush for furniture buying seems to be on the wane, still the furniture factories will have their hands full in filling orders already on their books.

There seems to be a pretty general disposition among the large hardwood buyers to stock up as fully as is consistent when they are able to do so, and not be again caught with a shortage of dry stock which has been so serious with a number of them during the last few months.

While the car shortage continues to be a serious menace and is unabated in some sections, particularly in the South, other large markets report a slight easing of the situation. The chief trouble in shipments is on stock coming from southern mill points, particularly in the lower Mississippi valley section. While there is some scarcity of cars from all northern points, the chief trouble in this territory is the extremely broken condition of stocks.

Stock conditions in fact are entirely unimproved during the last fortnight, and buying seems to be the most important feature of the market. The opinion has been expressed that the combination of car shortage and stock will squeeze some of the smaller jobbing houses who have no first-class connections pretty closely during the coming few months. In fact, it is not at all improbable that these conditions will result disastrously in some instances.

The number of foreign buyers reported in the various exporting sections of this country would indicate that foreign importing houses are realizing the seriousness of the stock condition. There is some little disposition on the part of domestic buyers to take up large quantities of stock whenever offered in order to offset the loss of shipments through delays in cars and nonarrivals on account of inability

to secure stock. On the whole the export business, in the East particularly, seems to be in a somewhat better condition. The ocean freight rate situation is somewhat better as reported from such points as Baltimore. Most of the large lines have announced rates which, however, are so high that in most cases shippers have not contracted for 1913 on this basis, preferring to take chances on rates as prevailing at the time of individual shipments.

While, as two weeks ago, all stocks are strong but wide poplar and high grades of gum, the leaders in the market at the present time are oak, ash, chestnut, birch and maple. Considerable advances are being noted from all sections of the country on prices of both plain and quartered oak. The condition of the latter stock particularly is encouraging as furniture buyers are evincing a decidedly greater interest in it. The call for ash and chestnut in sound wormy and other grades is one of the most decided features of the present market conditions.

It seems to be the concensus of reports from important sections of the country that present conditions will prevail for a considerable time. The car shortage has seemingly reached its highest point, and while immediate relief is not probable, it is reasonable to believe that a gradual lessening in the tenseness of the situation will be felt. There will probably not be any great influx of stock to fill up the unusual shortage in the next few months.

The indications are that certain territories will purchase more stock in 1913 than they have during the past year, the consuming trade undoubtedly being well booked with orders.

That the favorable condition of the lumber market is not in any way confined to that industry is shown by reports from commercial and financial institutions in all parts of the country. Money has unquestionably been very tight for some little time, but financial reports would indicate that there will be some easing up within the next three weeks.

Prospects for 1913

Lumbermen in the United States will do well to keep themselves posted on the views of European markets on trade prospects for the immediate future. It is not necessary to give undue importance to old world opinions and predictions, for America holds a somewhat

Entered as second-class matter May 26, 1902, at the postoffice at Chicago, Ill., under act of March 3, 1879.

independent position; yet there are shrewd traders on the other side of the sea who are close students of commercial affairs. As the present year draws to a close and 1913 approaches, lumber journals in England and elsewhere are publishing reviews of the past and prospects for the future. The consensus of opinion is that next year will show a larger volume of business in lumber transactions than any year in the past.

That opinion is based on an analysis of conditions. The year which is near its close has been satisfactory, and it leaves a good impression. Markets have been good, supply and demand have been nicely balanced, but demand in many lines is now stronger than supply. There is an abundance of raw material, but most of it must yet be manufactured before it reaches the consumer. That insured good business for the logging crews, the sawmill men, the transportation companies, the middlemen, and the ultimate user of the forest products. Yards have run low to meet increased demand, but there is plenty to fill them. There is no indication anywhere of a slump in demand. Everybody appears to believe that good business will continue, and that is the surest sign that it will continue.

European markets have refused to grow panicky over the war in the Balkans. Although nobody has had any doubt that it is real war, yet it has been generally believed that it will be localized, and that no danger to the general peace of Europe exists. That feeling has caused German, English and French traders, and traders of other nations, to plan a year of good business for 1913. The confidence exhibited on the other side of the water has had its counterpart on this side, where a presidential election and a change of administration have not shaken the confidence of business men, who are preparing to make next year one of the best in the history of this country.

The Real Object

Now that the country has had ample time to settle itself after the excitement of the presidential campaign, business men can afford themselves a little reflection upon the effect of its results upon the nation's business.

Probably every written comment upon the complexity of the national political situation this fall has contained some reference to the phenomenal and entirely unusual apathy on the part of business to the result of a presidential campaign. For the first time perhaps in the history of national politics business has demonstrated that it can entirely divorce itself from the political question and that it can maintain a uniform effort to stand on its own merits.

The real object of the business man of the country has seemed to be not to advocate or oppose any particular candidate whose election might have any particular bearing upon business itself, but to do everything possible to continue the sentiment which has prevailed all over the country that good times are with us again, and that the business man should do everything possible to estrange business from the influence of politics.

The evidence that this sentiment would prevail was seen long before the election, and it has certainly been maintained without faltering straight through the campaign, and shows no symptoms of dissipation now that the question is settled. The so-called "calamity howlers" have tried desperately to make their voices heard predicting all kinds of dire results in the election of this or that candidate. It is probable that the predictions as to the downfall of business in the

event of a Democratic election were more numerous than regarding the election of either of the other candidates, but now that a Democratic president is actually to take the presidential chair, the business man seems very much inclined to continue to devote his entire thought and effort toward maintaining the highly satisfactory condition of business throughout the country.

The business men have practically as a unit adopted the attitude toward politics which would indicate that as long as politics evince no desire to interfere with business, business will run along in its own groove with an increasing degree of activity. There doesn't seem to be any sentiment that would indicate any great anxiety. The business man seems quite ready to forget the possibility of any kind of disastrous results from the recent election until such time as the Democratic party might see fit to affect some desperate and drastic legislation. It hardly seems possible, however, that such an attempt will be made.

In considering the recent vote the fact is very apparent that the government was made Democratic entirely because of the split in the opposition, and not because of any great wave of public endorsement of the Democratic principles. Therefore, its foothold upon the national administration is not so strong but that it can very easily slip if its policies are too jarring upon the public taste. In view of the fact that Mr. Wilson's actual vote was much less than that of William Jennings Bryan in the previous election, it hardly seems possible that anything of a drastic nature will be attempted.

Business men can safely play their own game in the gallery, merely keeping an eye occasionally on affairs at Washington as a matter of patriotic pride rather than business anxiety.

An Opportunity

It is seldom that lumbermen are aligned with railroads in any fight for a cause which would result in mutual benefit or detriment to these two important branches of industry. An opportunity which has just been presented to them to work together for the common good of both should be readily and enthusiastically embraced by both.

By consistent and persistent effort lumbermen operating under Western classification have been successful in maintaining on shipments from the west coast eastward, a different classification for goods packed in fiber and similar containers than those packed in wooden boxes. In other sections of the country, particularly in the East on west-bound freight and on any freight shipped between eastern points, the uniform classification on goods shipped in both types of containers has resulted in serious detriment to the box manufacturers of that territory, and hence to the producers of box material selling to eastern box manufacturers.

While Washington, Oregon and California lumbermen have in the past enjoyed the benefits of this reasonable classification, these benefits are seriously threatened at the present time by a petition which puts the issue squarely before the Interstate Commerce Commission for decision. The question is of specific importance to that territory inasmuch as the products of the forest there run extensively into the lower grades used for boxes, and the footage sold would be seriously reduced if the fiber packages were permitted to be carried under equivalent rates.

Based on an appeal from George X. Wendling of San Francisco to

UNSOLICITED TESTIMONIAL

Vestal Lumber and Mfg. Co.

Incorporated

Manufacturers of

Quartered White Oak, Plain Red and
White Oak, Poplar, Black
Walnut, Etc.

Knoxville, Tenn., Nov. 9, 1912.

HARDWOOD RECORD,
Chicago, Ill.

Gentlemen: We are enclosing you a sample of some of the letters we have received, which shows that our advertisements in your paper are widely read.

Very truly yours,

VESTAL LUMBER & MFG. CO.,

E. M. Vestal, V. P. & Sec'y.

The letter enclosed was from a leading Anvers, Belgium, dealer in American hardwoods, asking for quotations on three-eighths inch, one inch and inch-and-a-half quartered and plain white oak.—Editor.

President Griggs of the National Lumber Manufacturers' Association, the latter organization has been instrumental in getting the question before the trade as a body. It has printed in its November bulletin the entire letter from Mr. Wendling showing the status of the question and the grave menace in the petition.

The petition is instituted by the fiber box people specifically against all the western roads, and if it is decided in favor of the complainants, uniform classification on goods packed in fiber and wood boxes will be general throughout the country.

The object of the appeal to the members of the trade is a broad one and is not designed specifically for the sake of benefiting the western element. If such a petition is decided favorably to the fiber box people, it will make practically impossible any successful appeal on the part of members of the trade in other parts of the country. However, if the railroads win a favorable decision from the Interstate Commerce Commission and are allowed to continue to charge greater rates for goods in fiber packages, it will mean that the restoration of equitable rates on similar stuff will be rendered more easy in other parts of the country.

As the hearing will probably take place within sixty days it is necessary that the defendants have their petition prepared expeditiously. Therefore, the National Lumber Manufacturers' Association appeals to all lumbermen to do everything in their power to get hold of information that would tend to prove the superiority of the wooden package over the fiber package for the shipment of all classes of goods, and hence to demonstrate the equitability of charging a greater rate for goods packed in fiber containers. Such evidence would have to consist of photographs of goods which have been damaged in transit when packed in fiber and similar containers, showing specifically the injury to the containers and information as to the manner in which damage was done.

While this is the first time the box classification matter has gotten before the Interstate Commerce Commission, it appears that the decision will be final and will have a definite bearing on the entire question for all time to come. Therefore, it behooves the entire lumber trade in any way interested in the production of box material to do everything possible to assist in defeating the fiber box people in their efforts to secure uniform classification.

Proposed Freight Rate Advance

The next step of the railroads to secure increased revenue will be an increase in freight rates on hardwoods in southern territories on all lines east and west of the Mississippi river to Ohio river crossings and western territory. These roads have already checked in advances and probably the first effort will be to replace the special rate on box material of gum and cottonwood, putting these on an equal basis with other hardwood rates. The railroads claim that they are not justified in differentiating between these two different classes of hardwoods. An increase of this nature would mean that shippers of box material would have to put up with a straight advance of two cents.

It seems that it is further proposed to equalize the figures on shipments of hardwood with the rates on pine lumber from the South. The result of this movement would be an increase on all hardwood shipments of one cent. But the roads will not stop here. It seems that their policy will be then to carry box material right along with the regular line of hardwood, putting all shipments of hardwood lumber on an equal basis with pine. There would then be added to present rates on box material a straight increase of three cents.

The usual plea of "insufficient funds" is the excuse for this advance, and the railroads have stated that they will check in advances and let the Interstate Commerce Commission decide the question.

An analysis of the question, going beyond the mere controversy as to whether or not the roads are actually in need of increased revenues, brings up the query of whether there is not some deeper motive behind the advance than the mere desire to equalize rates on pine and hardwood shipments. An authority on the question recently suggested that this is but one move in a step to advance rates on lumber shipments generally. He suggested that the probable course of the railroads would be, after securing the present proposed hardwood ad-

vances, to eventually enter the old plea that hardwood and pine should not be shipped on an equal basis, but that pine should take a greater rate. This, of course, if successfully carried through, would mean that both pine and hardwood shipments would cost considerably more than at the present time figured in the same proportion.

The plea of insufficient returns from shipments from the territory in question seems at present to be particularly inappropriate in view of the tap-line decision as recently handed down by the Interstate Commerce Commission. As those familiar with the tap-line cases are undoubtedly aware, the arrangement under which these so-called "railroads" operated with the through-lines allowed them a division of through-rates on shipments of their own stock originating on tap-lines. This division was in varying proportion, but in every instance noted the tap-line companies enjoyed a very considerable percentage of the total through rate. The decision of the commission prohibiting a continuance of this practice, which it adjudged to be a form of rebate, will mean that the railroads will now be entitled to the entire freightage on such shipments rather than merely a proportion of it. This will mean a very decided increase in their revenues from this territory, and it seems reasonable to suppose that this increase should more than offset any increase in operating expenses.

However, the question is one that can not be decided off-hand by any individual or group of individuals and, judging from the many protests which have been submitted to the Interstate Commerce Commission, the railroads will have to demonstrate the justice of their claim for increased revenue pretty thoroughly if they are to be granted the increased rates.

This is merely one of the many problems which are constantly coming up to relieve the monotony of the lumberman's existence. He should find considerable interest in contributing his share to the endeavor to ascertain the right of the situation.

The Eucalyptus Game

Harry D. Tiemann, technologist of the Forest Service, has a brief article on the subject of eucalyptus in the November number of American Forestry, which endorses practically what HARDWOOD RECORD has alleged for years concerning the spurious character, as a commercial lumber proposition, of eucalyptus. This article is particularly timely right now as many promoters of the eucalyptus game are engaged in selling tracts of land in southern California to credulous investors for eucalyptus planting on such specious representations as to be practically fraudulent.

One prominent promotion company sends out a glittering prospectus from the title-page of which the following is quoted:

"Will you work and wait seven years for a pension for life? Absolutely no gamble. Not a speculation. A sure, safe investment that will average one hundred per cent annual dividends."

Mr. Tiemann's article is herewith reproduced in full:

Eucalyptus for California is a proposition worthy of hearty endorsement, but it should stand upon its own merits and not upon some fictitious attributes. Otherwise vast disappointment and losses to the hundreds of small investors who are counting upon the eucalyptus as a timber producing tree are in store. In your July number appears an interesting article upon San Diego's Municipal Forest. The statement is there made that "eucalyptus is an acceptable substitute for almost any of our American hardwoods." In the same issue there appears a news note entitled Fast Growing Eucalyptus, to which has been subjoined, apparently by the editor, a comment that "it is almost unbelievable that trees growing so rapidly produce a timber as hard and tough as hickory." Unquestionably these statements have been made in all good faith, but evidently without a first-hand knowledge of the kind of lumber which these quickly growing trees less than half a century old will produce. As this lack of understanding is very general and is likely to lead to serious consequences, I would like, Mr. Editor, with your assistance, to sound a note of warning, since I have had considerable experience in drying the wood from these trees.

While much that has been claimed as to the marvelous growth of this tree is indeed true, the rapid growing species, particularly the blue gum, *E. globulus*, which is the one of most consequence, is not to be considered a timber producing tree during its early life of thirty or forty years, for reasons about to be given. It is true that the old trees of Australia which are of great age and size produce lumber of good quality which can be seasoned and utilized as other hardwood lumber, but not so with the young trees such as are growing in California, less than forty years old. This is just where the fallacy in the arguments of the eucalyptus promoters comes in. The trees actually produce in volume of green wood

what is claimed, but only a very small portion of this is convertible into useful lumber. The main troubles with the wood are first, that the trees themselves while living contain internal stresses which cause the logs to check as soon as the tree is cut, and the boards to warp directly from the saw. Then in drying the shrinkage is not only very unequal, but it is three or four times as great as hickory, and unlike other hardwoods, it begins to shrink with the first loss of moisture as high as eighty per cent of the dry weight. Moreover the dry wood will not hold its shape well. In air drying the wood either checks badly, honeycombs, or warps, generally all three. Small specimens and occasionally a larger piece of lumber and very carefully selected material have dried successfully, but this represents so small a proportion of the standing timber that the profit is gone. In some experiments in drying this lumber in a special kiln of my own invention I have succeeded in turn out some really fine boards which will compare favorably with oak and other hardwoods, but it must be remembered that this represents selected material, and probably from less than one per cent of the standing trees, and even so less than half of the scale measure of the logs from which cut. For small articles, such as tool handles, good material can be had by selection, and some concerns in California are now manufacturing these, but the market for this material is necessarily limited and such small stock does not require a very great stumpage.

Mr. Watson in his article does not state what species he is planting at San Diego. It is possible that some of the slower growing eucalypts, the value of which for lumber has not been tried, such as *E. resinifera*, might prove good, but then on the other hand their rates of growth are so slow as to be of little or no advantage over other hardwoods.

This matter should be made very plain for the benefit of the great number of people who are investing in eucalyptus planting. For fuel, wind-breaks, and soil protection, as well as for many other purposes, the value of eucalyptus trees for California can hardly be over-estimated, but the fictitious claims which are sometimes made for the blue gum and other species as a lumber producing tree in less than half a century of growth should be refuted so clearly that "he that runs may read."

Apparently a Success

The lumbermen's mutual fire insurance companies, under which lumbermen and the woodworking plants throughout the country have been enabled for years to purchase their insurance at an absolute minimum of cost, have long since demonstrated their practicability and their ability to greatly reduce the cost of fire insurance to such concerns. This business has long since passed beyond the experimental stage, and in spite of violent and unjust opposition on the part of stock companies, has gained a prominent and increasing strong foothold in the insurance world.

The various liability laws which have gone into effect during the last year or two in different states have effected a greatly increased insurance rate. As a consequence the owners of industrial plants have revolted at the idea, in embracing such laws, of being forced to pay exorbitant insurance costs to the old companies. As a result of this workingmen's compensation legislation a number of mutual casualty companies have been started in various parts of the country. The success of none probably has been so decidedly marked as that of the recently incorporated Lumbermen's Mutual Casualty Company, organized a few weeks ago in Chicago for the benefit of Chicago lumbermen.

This concern secured the services of an able and experienced insurance man as manager, and already in the five weeks it has been in operation has secured a half million dollars more in subscriptions than the law requires for the incorporation of such a company.

If the mutual companies had no other feature to offer industrial plants than that of cheaper rates, it should certainly prove a sufficient inducement to effect the hearty support on the part of the industries which embrace it. Business men are well aware of the ridiculously high cost of securing insurance from the stock companies, which cost must necessarily be attributed to the exorbitant administrative cost of the business, including immense salaries, the maintenance of luxurious offices and similar charges, which must naturally come from the policyholders' pockets. The very fact that these costs are entirely eliminated from the mutual companies would certainly present sufficient argument in itself considering that the other features of the company are equally advantageous as those of the stock company.

That this is true is forcibly illustrated in the support which the mutual companies have received, both in fire insurance and in casualty insurance. There is undoubtedly a big and useful future for such corporations.

One Phase of Association Benefit

There are four classes of trade association members which classes are particularly distinguished between in the lumber business. They are the scoffers at association value; those who are indifferent; those who dutifully attend meetings but never do any active work, and those who furnish the entire motive power which keeps the association in its forward progress. By far the greatest number are those who are indifferent, and it is very probable that their indifference is due for the most part to their lack of effort to ascertain the possible benefits to them of association work.

The big lumber associations of the country have been created and owe their continued existence probably more to specific work which they are carrying on than to any general and less definite benefit to the trade. There are, however, a vast number of small associations made up of members of local trades which are designated as city lumber clubs and lumber exchanges, and community lumber organizations of various kinds, which have a more intimate bearing upon the lumber business probably than do the larger associations.

The active work of these smaller bodies has been confined mostly to the last few years, during which time their growth and activities have been distinctly marked. They are, of course, continually faced with various problems dealing with different phases of business transactions as encountered in the handling of the lumber business, but one of the most definite benefits derived from such association work comes not from any concerted effort on the part of the members as a body to secure this or that reform, or to combat this or that evil. It comes, on the other hand, rather from the close contact among members, which necessarily results from a local organization of the character, for instance, of the Lumbermen's Association of Chicago, the Lumbermen's Club of Memphis or Cincinnati, and similar organizations in various parts of the country.

All old-timers can recall the condition which prevailed in the old days when every man's competitor in business was carefully watched with a suspicious eye and was more or less looked upon as being naturally an evil influence in the trade, and as an individual he would do everything in his power to freeze out a man in any deal rather than work with him for the mutual benefit of both. There has been a gradual transition due to club work which has resulted in just the opposite attitude.

It is not at all uncommon under present market conditions to hear one wholesaler ring up a competitive wholesaler in his own town, call him familiarly by his first name, and open up negotiations on certain lines of stock which he believes his competitor has, and which he himself has not, which trade probably results in profit to both.

While this condition has been true ever since the good efforts of close association through local lumber organizations have been felt, it is notably true at present with the prevailing scarcity of different kinds of stock throughout the country. The wholesaler never knows when he will be placed in the embarrassing position of turning down an order from a regular customer because of his inability to secure the stock from his regular mill connections. He, however, might know of several wholesalers in his own town who could supply the stock, but under old conditions a transaction between these two men would be entirely out of the question.

Deals of this sort are being constantly put through in all the hardwood centers of the country, and the fact that the trade has acquired this state of mind is certainly a strong recommendation for a continuation of the local lumber organizations, merely because they throw the members of the trade in each town closely together, and make them intimately acquainted with each other so that they become well aware of the fact that each is an individual with his weaknesses and his good points, and usually with a vision broad enough to make him capable of appreciating that it is poor business for him to live entirely within his own shell and ignore entirely the interests and opinions of his competitors.

Pert, Pertinent and Impertinent

A BIG PROBLEM

The President-Elect: It occurs to me that possibly these Platform Builders have gotten me into the deuce of a scrape. I am pledged to reduce the cost of living, and NOT to reduce the price of items entering into the cost of living. I wish I had paid more attention to higher mathematics in my college days.

A Thanksgiving

Deepest Thanksgiving I do give,
Because I didn't chance to live
In what they call the "good old days"
Of homely fare and simple ways.

I like the days that we have now,
Instead of broom and churn and plow;
I like to have a bed with springs,
And telephones and vacuum things.

Those "good old times," so praised in song!
How *did* the women get along?
No bridge or suffrage or bead bags,
No motor cars or gladsome rags!

I'm very glad "old-fashioned cheer"
Will not be offered *me* this year;
No squash or pumpkin pie for me—
I much prefer *pâtisserie*.

I can't see how they lived at all
Without a cab or music hall;
Oh, earnestly I do thanks give
That our times are not primitive!

—Carolyn Wells in *Woman's Home Companion*.

Tramp's Compliment

"Will your dog bite us?"
"I shouldn't be surprised, miss. 'E's got a
oncommon sweet tooth."—*London Opinion*.

American Forest Trees

ONE HUNDRETH PAPER

FRASER FIR

(*Abies Fraseri*—Pursh)

The people who are acquainted with this interesting and somewhat rare tree have seen to it that it does not want for names. Some of these names are both definite and descriptive, while others are neither. Tennessee, North Carolina and West Virginia furnish the names. Within the tree's range in Tennessee and North Carolina it is often known as balsam without any qualifying word, and that is quite sufficient, for no other fir or balsam grows within its range. In the same region it is called balsam fir. That is the common name of its northern relative, but there is little likelihood of confusing the two species, for their ranges do not overlap much, if they touch at all, which they probably do not. In Tennessee the name is reversed and instead of balsam fir it is fir balsam. It is likewise known as double fir balsam, but why "double" is added to the name is not clear. Similar mystery attaches to the name "single spruce," which is applied to the balsam fir in the interior of British America. The southern Appalachian tree is called she balsam and she balsam fir. These names have no scientific basis, and they appear to have originated in a desire to distinguish this tree from the red spruce with which it is associated. The spruce is called "he balsam." Artificial names like these are not necessary to distinguish red spruce from Fraser fir, as very slight acquaintance should enable anybody to tell one from the other at sight, and to see clearly that they are not of the same species. Mountain balsam, a North Carolina name for this fir, is well taken, for it is distinctly a mountain species. The name healing balsam is given in acknowledgment of the supposed medicinal properties of the resin which collects in blisters or pockets under the bark of young trees and near the tops of old. In West Virginia, where this tree reaches the northern limits of its habitat, it is called blister pine, on account of the resin pockets. In the same region it is called stack-pole pine, because farmers who mow mountain meadows use straight, very light poles cut from this fir round which to build haystacks.

This tree is decidedly an inhabitant of the high, exposed localities, being found entirely in the upper elevations of the southern Appalachian mountains, either forming extensive pure stands or growing in the company of red spruce (*picca rubens*), with a scattering of various stunted hardwoods, as birch, mountain ash, cherry and usually with an undergrowth of rhododendron.

Fraser fir's range extends from the high mountains of North Carolina, where it grows 6,000 feet above sea level, northward into

West Virginia, within a few miles of the Maryland line, at an altitude of 3,300 feet. The tree is not found in all regions between its northern and southern limits. Its best development is in the southern part of its range.

On the upper limits of its growth the tree presents a decidedly picturesque appearance, being gnarled and twisted and plainly showing the results of its long struggle for life and development. It is always noticeable that on the exposed side the limbs are so short as to be almost missing and on the opposite side they grow out straight and long, appearing to fly before the wind. These limbs are sometimes of as great a girth for five or six feet of their length, as any part of the main stem and have a singular look, seeming to be all out of proportion to the rest of the tree. The older trees are vested in a smooth, yellowish-gray, mossy bark, which is quite different from that of the balsam fir. The bark is thin, about one-fourth of an inch on young trunks, and half an inch near the ground on old ones. The leaves are usually half an inch long, sometimes one inch, and their lower sides are whitish, which tint is due to abundant white stomata. In that respect they resemble leaves of balsam fir and hemlock.

The cones, like those of other species of fir, stand erect on the branches, and average about two and a half inches in length. They are smoother than the cones of most pines. They mature in September. The winged seeds average one-eighth inch in length, and are fairly abundant. The Fraser fir grows as tall as balsam fir, from forty to sixty feet, and the trunk diameter is greater, being sometimes thirty inches, though half of that is nearer an average. When of pole size, that is, from five to eight inches in diameter, Fraser fir is often tall, straight and shapely. Its form, however, depends upon the situation in which it grows. If in the open, it develops a relatively short trunk and broad, pyramidal crown. This fir differs from balsam fir in its choice of situation. The

latter, though not exactly a swamp tree, prefers damp ground, while Fraser fir flourishes on slopes and mountain tops.

On the mountains of western North Carolina fir grows in mixture with red spruce. Sometimes the fir is fifty per cent of the stand, but usually it is less, and frequently not more than fifteen per cent. Few fir trees in that locality are two feet in diameter. They grow with fair rapidity in their early years, but decline in rate as age comes on. It may be observed in traveling through the stands of

FRASER FIR IN THE SOUTHERN APPALACHIAN MOUNTAINS

mixed spruce and fir among the high ranges of the southern Appalachian mountains that the proportion of spruce is much higher in old stands than in young. That is due to the greater age to which spruce lives. Trees of that species continue to stand after the firs have died of old age. On the other hand, fir outnumbers spruce in many young stands. That is because fir reproduces better than spruce, and grows with more vigor at first. In stands of second growth the fir often predominates. It depends to some extent upon the conditions under which the second growth has its start. Fir does not germinate well if the ground has been bared by fire and the humus burned. Consequently, old burns do not readily grow up in fir. The best stands occur where the natural conditions have not been much disturbed further than by removing the growth. Fortunately conditions on the summit and elevated slopes of the southern Appalachians do not favor destructive forest fires. Rain is frequent and abundant, and the shade cast by evergreen trees keeps the humus too moist for fire. To this condition is due the comparative immunity from fire of the high mountain forests of fir and spruce. Sometimes, however, fires sweep through fine stands with disastrous results. The destruction is more serious because no second forest of evergreens is likely on tracts which have been severely burned.

A report by the State Geological Survey on forest conditions in western North Carolina, issued in 1911, predicted that spruce and fir forests aggregating from 100,000 to 150,000 acres among the high mountain ranges, will become barren tracts, because of the destructive effect of fires stripping the ground of humus.

The cutters of pulpwood in the southern Appalachian mountains take Fraser fir wherever they find it, mix it with spruce, and the two woods go to market as one. Statistics show the annual cut of both, but do not give them separately. The output of spruce, including fir, south of Pennsylvania, in 1910 was 115,993 cords, equivalent to about eighty million feet, board measure. Most of it was red spruce, but some was fir, and in North Carolina probably twenty-five per cent was of that species. The total pulpwood cut in that state was 14,509 cords of the two woods combined, and probably 3,800 cords was Fraser fir.

The wood of Fraser fir is very light. An air dry sample from Roan Mountain, N. C., weighed 22.22 pounds per cubic foot. That is lighter than balsam fir, which is classed among the very light woods. It is stronger than balsam fir by twenty-five per cent. The wood is soft, compact and the bands of summerwood in the annual rings are rather broad and light colored and are not conspicuous. The medullary rays are thin but numerous. The color is light brown, the sapwood mostly white.

This wood is not of much commercial value except for pulp. It is not abundant, and it is not suited to many purposes. It is suitable for boxes, being light in weight and moderately strong; but other woods which grow in the same region are as good in all respects and are more abundant, and will be used in preference to fir for that purpose. The decrease in area on account of fires, and in quantity because of pulpwood operations, indicate that forest grown Fraser fir has seen its best days. On the other hand, the United States Forest Service has acquired tracts of land on the summits of the mountains where this species has its natural home, and the growth will be protected from fires and from destructive cutting, and there is no danger that the species will be exterminated.

It is an interesting tree. It contributes to the pleasure of tourists and campers among the southern mountains. The fragrance of its leaves and young branches add a zest to the summer camp. The traveler who is overtaken in the woods by the coming of night, prepares his bed of the boughs of this tree and of red spruce and sleeps soundly beneath an evergreen canopy. Pillows and cushions stuffed with fir needles carry memories of the mountains to distant cities.

In one respect this tree of the high mountains is like the untamed Indians who once roamed in that region: it refuses to be civilized. The tree has been planted in parks in this country and in Europe, but it does not prosper. Its form loses something of the grace and symmetry which it exhibits in its mountain home, and its life is short. Those who wish to see Fraser fir at its best must see it where nature planted it high on the southern mountains.

Some Problems in Wood Identification

There never was a time when there was greater need for experts in wood identification. With decrease in the available supply of the standard woods has come much closer utilization of all forest products and while this, on the whole, is highly to be desired, it not infrequently leads to all sorts of complications. The number of woods with which the trade is thoroughly familiar is very small compared with the number that grow and that are now finding their way to the market.

Building specifications are based upon results of very extensive tests of the standard woods and architect's plans have to take into consideration the safe working stresses of the materials to be used. If untried woods are substituted there is always the danger that they will not meet the requirements and that the resulting structure will prove unsafe.

A case in point recently came to the writer's attention. A contractor in Ontario, Canada, bought what he thought was long-leaf pine timber from a southern lumber company. The material was used in the construction of a large warehouse. Eighteen months after the building was completed it collapsed, resulting in a \$100,000 loss. Inasmuch as the plans had been prepared by competent architects and standard specifications for longleaf pine had been followed, suspicion was at once aroused as to the quality of material used. To determine this point samples of the wood were sent to the United States Forest Service and the xylologists of the department found them to be not longleaf pine at all but loblolly, a considerably weaker wood.

It is not at all improbable that the loblolly pine timber could have been made to serve the builder's purpose fully as well as longleaf

had the plans been designed for the weaker wood. Having specified longleaf, however, it was extremely important for the contractor to see that material true to name was supplied. The proper time for the wood expert was before, not after, the building collapsed.

Such failures have a farther reaching effect than the immediate loss sustained. It may result in such rigid specifications, so great a margin of safety, that excessive waste of good material is occasioned. Instead of making specifications for longleaf pine, for example, of sufficient latitude to allow the use of weaker wood like loblolly, thereby adding unduly to the cost of a structure and increasing the drain on our forest resources, greater care should be exercised that no material goes into a building that is not up to specifications. To determine such things accurately requires expert knowledge of wood.

Other examples could be cited. For instance the Baldwin Locomotive Works invited bids for 30,000 window sashes, specifying white pine. One planing mill concern in the Middle West submitted figures accompanied by specimens of wood which they represented to be the best grade of sugar pine. Now sugar pine belongs to the white pine group and for most purposes is almost if not entirely as satisfactory as eastern white pine. The company was rather suspicious of the samples and enlisted the services of an expert for identification. It was then discovered that of the three specimens of so-called sugar pine submitted one was western yellow pine and two were Engelmann spruce. Perhaps they would have served the purpose fully as well, for both are good woods, but they were not as specified and their use might have given the bidders an unfair advantage over others complying strictly with the company's demands.

New York City issued bids for white pine boards, and the material delivered was determined by the U. S. Forest Service to be an inferior grade of Douglas fir. There is no wood easier for the expert to recognize than Douglas fir, whether it be the largest beam or a tiny splinter, for the tracheids of the wood are marked with tell-tale spirals which need never be mistaken. It takes a compound microscope to see them, but they are always there and no other commercial wood (except yew, which is seldom on the market) has them.

A company bought a shipment of laths supposed to be white pine, and it was considered so important that the stock be true to name that an expert opinion was obtained. Of one hundred specimen laths examined seventy-eight were balsam fir and twenty-two red spruce. These woods look considerably alike to the average user, but the xylogist knows just where to look for the points of distinction. White pine has abundant resin ducts visible to the unaided eye—balsam has none at all, and spruce has comparatively few and small ones at that. Under the microscope there are more important differences which only the expert can appreciate. For instance, the rays of white pine and spruce have ray tracheids while balsam has none; the pits in the lateral walls of the ray parenchyma cells are few, simple and large, in spruce they are several, semi-bordered and numerous. These and other features fix the status of the specimen as a white pine, a spruce or a fir, though sometimes it is necessary to know what part of the country the material came from in order to get the exact species.

In a certain southern home is an expensive banister and no small item in the bill for its construction was for snake wood. In this case "snake wood" was another name for a curly specimen of our native yellow birch.

A certain large office in Chicago is finished with what the owners fully believe is expensive Circassian walnut. Somewhere in Arkansas some red gum stumps are still standing from which this native wood with a foreign look was cut. What's in a name? In this case a big fraud, for the owners paid well for something they never received. The substitution could readily have been detected, for red gum has entirely different structure from walnut of any kind; it is only in the coloring that there is a resemblance. Examine the end of a piece of red gum; a hand lens is required to make out the minute pores, scattered profusely throughout the growth ring. In Circassian walnut the pores are much fewer, large enough to be seen with the unaided eye, and collected in an irregular row at the inner edge of each ring. Mahogany may be distinguished from birch in exactly the same way, having comparatively few, large, scattered pores instead of a large number of very small ones diffused throughout the entire growth ring, as in birch.

About fifty different woods now masquerade in the market as mahogany. Not a few of them are beautiful and under their own names should be welcomed by the furniture trade, but it is not fair that a fictitious value be given them by appropriating the name mahogany. Crabwood (*Carapa*) from British Guiana is at the present time the principal substitute employed by furniture makers. A great many woods come from Africa to claim their share of the mahogany patronage.

There seems to be an impression in many places that things of foreign origin are better than domestic. The wood of a bigtree of California was sold recently to a New Jersey manufacturer as a South American cedar suitable for lead pencil stock. Telegraph insulator pins made from so-called Kalkeen wood, reported to have come from the South Sea Islands, proved to be our native rock elm. When it becomes generally known that such sharp practices can readily be detected the buyer will be in a position to protect himself, and the seller will need to be more cautious.

One enterprising firm attempted to dispose of a large quantity of ordinary red cedar shavings from local pencil factories. The material was given the name "Cedar of Lebanon" and placed on the market as a household remedy for moths and other troublesome insects. Evidently the promoters thought all cedar chips looked alike, and so they may to the casual observer, but not so to the critical scientists of the government who are on the alert for the

misbranding of drugs. An agent of the Bureau of Chemistry submitted samples of this "Cedar of Lebanon" to a xylogist and not long afterward the company in question changed the name of its insect panacea. Unfortunately the pure food and drugs act does not apply to all forest products.

Importers of dyewoods and extract woods are often the victims of substitutions and adulterations. When wood or bark is ground into fine particles it is by no means a simple task to determine the exact nature of the original material. Here again is work for the microscope and what it reveals depends upon the experience and ability of the man behind it. By carefully examining the individual cells, noting their size, the thickness and sculpturing of their walls, etc., it usually is possible to identify a material with a fair degree of certainty. If chips are large enough to show the characteristic arrangement of the elements, the task is comparatively easy. About the most unsatisfactory trick of all is to identify the material that has entered into the composition of chemical wood pulp. With incrustating substances dissolved out and the cells separated and torn, the job is often hopeless.

A very interesting problem was recently submitted to the Forest Service by one of the largest collar manufacturing concerns in the country. This company was constantly annoyed by the appearance on and in the laundered collars of small specks, little lumps, shiny patches and flecks for which its experts were unable to account. The manager appealed to the dendrologist for assistance, sending samples of the collars in various stages of manufacture, as well as over a thousand of the troublesome specks carefully removed and pasted on a sheet of paper. It may seem a far cry from the making of collars to the study of trees and woods but results proved that the manufacturer had gone to the right place.

Under the compound microscope the offending particles were revealed to the experts as bits of animal hair, wool, cotton, wood, outer covering of the flax and various other things. A few of the faults were in the flax fibre and in weaving the collar fabric, but most of the substances became attached to the fabric during the process of manufacture and laundering. The unfinished collar material failed to show as large a percentage of inside and outside faults as was found in the finished collars. This was due to the fact that the washing, drying and starching gave opportunities for other fault specks to be added. In some cases specks became visible only after the collars had been ironed, the color being brought out by the heat.

As a result of the dendrologist's report the manufacturer has instituted more critical inspection of the collar material not only in the different stages of manufacture but also in the various processes of washing, starching, ironing, and conveying from one place to another of these operations. It was found that prevention of contact with all sorts of fault materials is possible by providing absolutely clean conditions during cutting, carrying, sewing, and the other operations.

The introduction of outside faults was laid at the door of the laundries. An inspection revealed a certain amount of carelessness in washing, starching and ironing of collars, cuffs and shirt fronts which resulted in the accumulation of fault specks. Open-carrying vehicles, wood-lined washing machines, and open vibrators are the principal sources of trouble. Wood-lined machines are bound to impart bits of wood to articles cleansed in them, for the less dense fibres of the spring growth of wood are constantly being worn off. The use of metal lined washers would eliminate this trouble.

In order to re-establish a boundary line of some property in New Jersey it was desirable to locate a certain witness tree which the surveyor's notes called for. The tree was a birch. As a result of random lines a nob of a stump was found where the birch tree was supposed to have stood. The wood, however, was so old and blackened that its structure was not readily visible and besides, root wood has a somewhat different structure from that of the trunk. A small specimen no bigger than a pea was submitted to the writer for identification. The first step was to place it in water and boil it to remove impurities, soften the tissue and expel the air. A thin section was then cut with a microtome and placed under a micro-

scope. One glance was enough to tell that it was not birch, for here were rows of large thick-walled open pores which are never found in birch. The presence of a very broad ray proved it to be oak and the character of the pores and other features referred to unerringly to the black or red oak group, though the exact species could not be determined.

Sometimes holly is made into rulers and similar articles and sold as boxwood. Under the microscope, however, holly is more distinctive among hardwoods than Douglas fir among softwoods, for its wood fibers are marked with spirals. Yellow poplar and cucumber often look very much alike but are distinguished by the markings on their vessel walls—being ladder-like or scalariform in cucumber and ordinary bordered pits in the other. Basswood can be distinguished from the sapwood of yellow poplar by the presence in the former of tangential lines of wood parenchyma as well as by indistinct cross-markings on longitudinal surface due to the wood elements (except rays) being in storied arrangement. The tiniest shaving of birch can

be told from maple by the fact that under the microscope the vessel perforations of the former are seen to be crossed with bars (scalariform) while in the latter they are simple. Willow can be told from cottonwood by the fact that the marginal ray cells are irregular and different from the rest of the ray cells, while in cottonwood they are all alike and elongated in one direction. Hackberry can be separated from elm in exactly the same manner.

It should not be inferred from these examples that it is possible in all cases to identify a wood specifically. Often the best one can do at present is to name a group to which it belongs. This is largely true of the oaks, hard pines, cottonwoods, and willows. Even in the important case of the southern pines no one constant feature of distinction has been found, but one must rely instead upon a number of characteristics taken together, and all too often these are insufficient for absolute certainty. The art of wood identification is in its infancy, but with increased interest in the subject, a great many present uncertainties will be cleared up.

Balsa Wood of Commerce

Balsa, guano, corkwood, and down tree are different names applied to a soft-wooded tree botanically known as *Ochroma lagopus* of the steruliaceous family of plants. The tree often attains a height of from sixty to seventy feet, and sometimes a diameter of two feet. Balsa is the name of a raft or float in tropical America, which the natives construct out of this wood, and the tree, therefore, came to be called balsa. It is called guano or down tree because in Porto Rico it is one of the most important economic trees, for the cotton surrounding its seeds is the "guano" or "down" with which nearly all of the natives' pillows and cushions are stuffed. In the American markets corkwood is the name most generally applied to this wood, because it is as light as cork and often used for the same purposes.

Balsa is a very common tree, particularly along the sea shores in the West Indies and Central America. It is a commercial tree in Porto Rico, especially on the edge of mangrove swamps or in other inaccessible locations, often growing with its roots in contact with salt water. While it demands a damp soil, it frequently grows well in the poorer soils in the hills away from the sea shore. The tree has many of the characteristics of the ceiba or silk-cotton tree (*Eriodendron anfractuosum*) so common in the landscape of tropical America. The balsa is a much smaller tree, however, than the ceiba, and its distribution is restricted to tropical America. The ceiba tree is known within the tropics all around the world.

Balsa makes a very rapid growth and has striking foliage and magnolia-like flowers. The fruit consists of a five-celled capsule about six inches in length and about one inch in diameter. As soon as these pods are ripe, the cells split open longitudinally and the seeds with their silk cotton protrude and spread over the whole surface, giving the appearance of a hare's foot. This characteristic is alluded to in the specific name *lagopus*, which signifies hare's foot. The chestnut brown fiber which surrounds the seeds of this tree is gathered and packed into bales and sold at a few cents per pound. It is readily removed from the capsules, but it is almost impossible to free it entirely from the seeds. This silk cotton is said to be very valuable as a stuffing material. It keeps free from insects and does not wad to the same extent as pure cotton, and is used extensively for making pillows and mattresses, and to a smaller extent for making garments. The bark also yields a fiber which may become a staple product for rope-making. The bark is used locally for the tannin it contains, and both the bark and root are used medicinally.

The wood is nearly white or slightly tinted with red, showing practically no distinction between heart-wood and sap-wood. It has a silky texture, is rather coarse but straight-grained, and is the lightest of all woods—even lighter than true cork. A sample of balsa from Trinidad exhibited at Philadelphia in 1876 had a specific gravity of .120, or about seven and one-half pounds per cubic foot. Wiesner, a German authority, gives the specific gravity of this wood to be .250. Individual variability and the difficulties of determining

the specific gravity of so porous and absorbent a wood as this make it unwise to accept either one of these figures as invariable. Cork-oak bark (*Quercus suber*) has a specific weight of .240, but it appears that some samples of corkwood are considerably lighter than commercial cork, which is markedly lighter than any other wood, with the exception of the wood of a small and unimportant tree (*Herminiera elaphrocydon*) growing in Central and East Africa.

The reason for this extreme lightness of the corkwood is to be looked for in connection with its structure and the softness of its tissue, which is easily compressible under the thumb-nail. It is very fibrous and often exceedingly difficult to work because of the fibers that impede the action of the tools. Balsa is commonly employed as a substitute for cork, both for stopping bottles and for floats of fishing nets. In Trinidad and other places it forms an article of commerce with fishermen, who use it in place of true cork on their nets. It has served only to a very limited extent for stopping bottles, since the high elasticity, impermeability and resistance to decay, so characteristic of true cork, are not possessed by this wood.

The very buoyant rafts or balsas, the unsinkable properties of which caused such surprise among the discoverers of America, are likewise made of it. The Indians used it to make their canoes buoyant, and it was at one time considered very desirable for pontoons for dry docks. The wood has been experimented with and found suitable for making life preservers. For this purpose the wood must be heated with paraffin, which, together with other expenses in preparing it, renders the cost of the material equal to that of the regular cork. In an untreated state the wood is not very durable.

Balsa is imported into the United States from Cuba, Porto Rico and Trinidad. A good many logs go to England, chiefly from Trinidad. It is claimed by dealers that the bulk of balsa wood comes from Ecuador and Peru in the form of logs from sixteen to thirty inches in diameter and from ten to twenty feet in length. The wood is sold at prices ranging from forty to sixty cents per cubic foot. It is doubtful, however, whether the species from Ecuador and Peru is the same as that growing in the West Indies. Some writers claim that the wood from South America is *Ochroma piscatoria*, but this cannot now be definitely determined. An examination of the woods alone, however, indicates that they are from two distinct trees. The West Indian kind is lighter in weight and color and has less pronounced pith-rays.

The annual rings of growth, though nearly invisible to the naked eye, are evident on an examination of the wood under the hand lens, being partly caused by the occurrence of a broken line of slightly larger pores at the beginning of the year's growth. The pith-rays are quite conspicuous on a smooth transverse section; they are also plainly visible on the radial surface, and give figure to the wood, resembling the character of beech or sycamore, only in balsa they are more numerous.

Veneer Manufacturer as a Lumberman

One of the reasons why papers like *HARDWOOD RECORD* are popular in the veneer trade is because manufacturers of thin stock have realized that the division between their industry and the lumber business generally is more or less arbitrary and more or less shifting. They know that to be the best possible veneer manufacturers, they must know something about the lumber trade.

Not only does this appear in connection with the building up of material and the production of panels and other products of the glue-room, where it is almost essential that the manufacturer have an eye on the quotations on various classes of lumber suitable for core-stock, which in itself is a proposition not to be dismissed lightly, but the manufacture of veneers proper likewise involves, or should involve, rather accurate study of the lumber market.

An instance of the desirability of this kind of knowledge is occasionally found in a negative way; that is, veneer mills are found to be piling up on their yards material which is the by-product, or offal, or whatever you may care to term it, of the veneer saw and slicer, and which ought to be thoroughly good, salable lumber. But it isn't. The reason is found in the fact that lumber requirements are disregarded, and only the veneer situation is held in mind.

Suppose sawed quartered oak veneers are being cut. The tendency of the sawyer, unless otherwise instructed, is to take off as many veneers as he can get out of the particular flitch which he is sawing. The result of this practice is that the thickness of the back-board which is taken off the dogs when the capacity of the flitch is exhausted, as far as veneers are concerned, varies constantly. This one may be three-eighths of an inch thick, the next half an inch, while the next may, because of some defect that develops, retain a thickness five-eighths of an inch. The sawyer has done his duty, because he has produced as much sawed veneer as he could.

What happens then? Why, the veneer man looks around for a buyer for his back-boards. He finds some difficulty in selling them, as a rule, for though he may advise prospective customers that they are close to half an inch in thickness, as a rule, a purchaser who takes a carload of that material and then discovers that all sorts of dimensions are to be found in the lot usually decides not to take a chance on the material next time.

Assuming that the boards are sorted properly as to dimensions, the difficulty comes in accumulating a carload of each size. The necessity of carrying the lumber on the yard for the months required to get together 15,000 feet of one thickness means that much of the profit out of the sale that is finally made is lost before it is consummated.

As a matter of fact, few veneer men give much attention to their lumber accumulations anyway as far as selling is concerned. It piles up so slowly that its importance is seldom sufficiently realized. That is how it happens that yards are found to be filled with stacks of aged lumber which would have been moved long before, but consisting of such odds and ends of stock that there is little opportunity to dispose of it.

Practice, as well as study of the market requirements, shows that the manufacturer of thin stock is wisest who insists that every back-board taken off his saw and slicer shall be five eighths inch thick. There are several reasons for doing this. To make it three-quarters inch is not so good a plan, because another sheet of veneer could very readily be secured, in most cases, from the flitch. The point is to find the happy medium between making it too thin for use in the lumber market, and not so thick that much value, from a veneer standpoint, is allowed to remain.

Lumber that is five-eighths of an inch thick combines these qualities. Only one or two more veneers could be cut, at the most, and in many cases this is the right place to stop, looking at it purely as a veneer manufacturing operation. But when the utility of the board is considered as a lumber proposition the advantages of the plan are numerous. Not only is five-eighths lumber more readily salable, since most buyers want lumber that will dress to half an inch, but it is also worth more. Half-inch stock is not so easy to sell, and is worth

less; so even counting in the money the manufacturer got for the veneer which was cut off the flitch, the difference is in favor of the board that was permitted to remain five-eighths inch thick.

The point to bear in mind principally, though, is to have them all of the same thickness, and not to leave this matter, which is such a vital point in disposing of the back-boards, to chance. When a standard, easily sold thickness, like five-eighths inch, is produced right along, the veneer man gets the "salvage" out of his flitches quickly and with little effort, thus being enabled to put back as much of his capital as possible into additional material for veneers, instead of tying up a lot of money in lumber that nobody wants.

When random thicknesses are produced, the veneer man usually had to sell the material simply as back-boards, and at a lower figure than lumber would bring; while the veneer manufacturer who is careful enough to take advantage of the preponderance of the demand in favor of five-eighths inch can sell his stock for lumber and at regular quartered oak prices, without any apologies as to the origin of the material. It will stand on its own bottom and talk for itself.

Reference was made above to the need of studying the lumber market in order to be in a position to handle the core-stock problem to the best advantage. This has been a feature of special importance during the past year, on account of the numerous shifts in the lumber market. With prices going up and down and demand for various woods varying, the panel man who knew how to buy not only the lumber that was best suited for use in cores, but also that which could be had at the most favorable price, had an opportunity to make some money entirely apart from the usual manufacturing profit.

Simply buying the same material month after month and year after year, without considering differences in price or any other market features, is to overlook a bet of considerable importance, and while no panel man has the time to devote to the study of the lumber situation that one engaged in that business exclusively can give, he ought to take time enough to get in touch with essential features like that.

The manufacture of veneers and panels is a specialty, and is getting more so all the time; but, after all, it is only a department of the lumber business, and members of the trade ought to regard themselves as lumbermen to the extent of keeping advised of what is going on in that broad field, instead of shutting themselves up in the seclusion of their own corner of the trade. G. D. C., Jr.

Common Oak Cellar Frames

As an incident illustrating the growing use of hardwood in planing mill work, it was noticed recently that a planing mill man was making quite a lot of oak cellar frames. He had used two-inch stock, and in running it had put some fancy beading on the edge so that it looked like a special job.

Inquiry, however, established the fact that it was not special work, but that the millman had found that he could buy common oak cheaper than some of the high-grade poplar, pine and cypress he had been using. He immediately seized upon the idea of making these cellar frames of oak. The builders like them better, and as they are ultimately covered with paint, sound knots and similar defects do not amount to anything. Oak, of course, is a stronger wood and seems to make a more durable as well as a better frame.

Of course, the demand of one planing mill using oak for this purpose is not much of an item in the trade, but if oak manufacturers could prevail upon all the planing mill men within their territory to adopt this wood in making such frames, the aggregate increase in oak consumption would be considerable. This is but a little incident showing how hardwood is winning its way into new fields right along, but nevertheless an incident indicating that its progress would be much more rapid if it were persistently and consistently pushed. In this instance it was its own booster. How much more might be accomplished if the makers of oak lumber would do more boosting in the same line.

A REMARKABLE CARVING

Artistic Wood Carving

Mr. and Mrs. C. L. Willey of 4750 Grand boulevard, Chicago, who returned recently from a tour abroad, brought with them as artistic a piece of wood carving as can be found anywhere. It is cut in a block of pear wood, thirty inches long, eighteen inches wide, and four inches thick. It was purchased in Luzerne, Switzerland. The accompanying reproduction of the carving is as accurate as can be made on a flat surface. The picture brought out by the carver's skill tells its own story. There is room, however, for individual interpretation. It is evident to anyone that the dignified old gentleman has brought his bashful son to ask for the hand of one of the three charming young ladies, but which one? They understand the purpose of the visit, but is it clear to them which one is to be chosen? Does the expression on the face of any one of them tell the story? How far has the negotiation progressed at the moment caught by the artist for his picture? There is room for difference of opinion on several points, but none as to the excellence of the art displayed.

An artist will find all he wants to know in this picture itself, but the woodworker is interested in certain things which cannot be found out from an inspection of the carving alone. For instance, why was pearwood selected for the carving? There are a few other woods which may answer as well, as far as grain and texture are concerned. Ebony and boxwood might do it, but ebony is very black, and it is doubtful if it would have afforded means of bringing out the high lights and the shadows which add so much to this picture; and boxwood is light

in color, and the deep shadows might have been impossible if it had been used. Besides, it would be almost impossible, if the whole world were searched, to find a piece of perfect boxwood as large as that employed for this work by the Luzerne carver. The well-known Chinese blackwood is employed for some of the finest carved furniture in the Orient, but it is good for form, and not for feature, because it changes color too much with age. "Features" which the carver puts into figures might not remain after a complete change in color had taken place.

But pearwood remains as it is finished. It is rich in tone and fine in texture. The most minute details can be worked out, provided the carver possesses the skill to do it; and in the present instance there is no question as to his skill. It is, therefore, of interest to say a word regarding the man who did the work—E. Zeiner of Luzerne, Switzerland. He is ninety years old, and puts into his work a richness of experience possessed by few. This carving represents six months of labor. The old man makes two carvings a year—not duplicates, of course, but each original. Although he long ago passed the stipulated three score and ten allotted to the life of man, he has planned two more carvings, and is at work on them.

Mr. Willey is to be congratulated on his acquisition. He is a manufacturer of fancy woods and veneers and knows what fine pieces are worth. He and Mrs. Willey have decorated and furnished their beautiful home with works of art which they have col-

lected from various sources during their extensive travels in countries beyond the sea.

Reverting again to the carving, as shown in the accompanying

picture, it should be stated (because the picture does not bring out that point) that it all is in one solid piece, except a small peg which fastens the pole to the post in the top center of the carving.

About Concealed Cross-Banding

"Well, I wonder what they'll ask for next," rumbled the veteran panel man, as he gave a second look at the letter of inquiry that had just arrived in the afternoon mail. "It's beginning to look as if the consumer who hasn't got a special kink of his own he wants carried out in the manufacture of built-up stock is the exception, and that buying stuff made in the regulation way, the kind we have always used, has become tabooed."

"What's up?" inquired the observer who happened to be in the office at that moment.

"Why," returned the panel expert, tossing the letter with some feeling into the farthest corner of his battered old roll-top desk, "nothing's up except the price on the kind of goods that particular customer wants. Instead of taking the stock the way he's been getting it for years, he wants a new idea rung in. He doesn't stop to think that it may be much more expensive to do the thing he has in mind, but he takes it for granted that it can be done without difficulty and that it will not make any difference in the price. But he's certainly mistaken there. I'll put my little cost system to work, find out exactly what the additional labor will amount to, and then add it to the standard quotations on the material he wants. Maybe that will bring him around."

"Out with it," commented the other. "Don't talk in a circle, like the campaign orators, getting all red in the face without making a single fact clear. What's the row about? What does the consumer want that he shouldn't get?"

"Just this," said the manufacturer of built-up stock. "He wants the cross-banding of his veneered work concealed. He thinks that the consumer will have his feelings hurt if he should take a squint at the edge of his wooden bed—which, by the way, is getting back into action—and discover evidence of the veneering in the cross-banding. He has been having the corestock concealed by a band of wood similar to that of which the face is made, and he is carrying the idea one step further and trying to have the cross-banding eliminated, as far as visibility is concerned. He seems to think that it is a simple matter, too."

"Well, isn't it?" inquired the visitor. "It looks to me as if it would be a good idea to make built-up stock so good, and construct it so cleverly, that nobody could tell without very minute examination indeed that it was not made of solid material. It may seem like painting the lily or perfuming the rose to go to the trouble, but wouldn't it make the veneered proposition just that much stronger when it came into competition with the other kind?"

"That isn't the question, my boy," responded the panel man. "If we had to conceal the cross-banding in order to bring the veneered work up alongside of solid, of course we'd do it. But as a matter of fact it isn't necessary. After the finishing materials are applied, it is next to impossible to differentiate between the materials, and when you have the corestock taken care of there isn't much use fooling around trying to put the edge of the cross-banding one-sixteenth of an inch out of sight."

"It's a good idea to make the edge look like the face, and in the case of a bed, where the sides are placed so that the edges are exposed, it's particularly good. But the device of banding the core is sufficient to take care of the main difficulty, and it's going a good deal too far, in my opinion, to try to treat the cross-banding in the same way. Of course, if the consumer wants it handled that way, and is willing to pay the additional expense, all right; but here is a typical example of the way things run, for the buyer wants the work done the new way, but he wants to get the advantage of the old price."

Furniture men say that the concealed cross-banding stunt is one

of the best little tricks in their repertoire just now, as far as laying veneers is concerned. It is particularly popular with the wooden bed people, who are taking hold of the advancing popularity of their line with a vim, and are determined to make wooden beds so good as to design and construction that the brass bed will never have a place hereafter, except up in the attic or down in the basement. One of the things that they think is necessary in accomplishing this result is to complete the effort to conceal the inferior woods used in the building up of the panel by covering all of them with the band of material which now goes around the corestock only.

This is somewhat more difficult and naturally more expensive. The way the proposition is usually handled is to rim the core, which is, say, of basswood, with oak, in case an oak face is to be used, and then lay the cross-banding and the face veneers on top of that. The veneering is thus accomplished at one operation. In the plan which has been suggested it would be necessary to lay the cross-banding over the core proper; then, after permitting it to dry out thoroughly, to band the core, with its covering of cross veneers, with the solid rim of oak. After that, in order to be sure of having a smooth finish, it would have to be sanded carefully, the face veneers being laid and dried out before the stock is shipped.

This means that the gluing up is divided into two operations instead of one, with a consequent expense for labor, not to mention the additional time required for drying. It is a somewhat harder job, and certainly costs a good deal more. The question is, is the game worth the candle? Panel men who are asked to do the work without adding materially to the prices they charge insist that it isn't and point out that the presence of the edge of cross-banding is such a minor point that not one consumer in a thousand would object to it, or even notice it; while the bed manufacturer, on the other hand, makes the point that the bed which goes on the market as a mahogany or oak proposition ought to show nothing except one of those materials, and that it is an offense to the art of veneering to say that it is not worth while to do the thing in the best possible way.

There are certain kinds of veneered piano stock in which the edges are more or less exposed, but in most cases there has been no objection to the cross-banding being visible. The piano is considered a pretty high-grade proposition, and it looks, say those who object to the new wrinkle, as if the piano manufacturers would be the first to demand anything that was really necessary in this direction. The fact that they do not, it is suggested, is an argument in favor of letting well enough alone, and being content to treat the exposed edge question by the sufficiently satisfactory plan of banding the core, without worrying about the minute edge of the cross-banding veneer which happens to be exposed.

The question will probably be debated for some time longer, and if the consumers of glued-up stock come to the conclusion that they really need the material made in the new way, with the cross-banding concealed, it is probable that they will agree on a price for the work. Otherwise they may be content to take it as they have been getting it, and pay the prices which they have been quoted on this character of material by the panel factories.

Freight Car Statistics

The report on available supply of freight cars as compiled by the American Railroad Association, November 7, shows little change in the last two weeks. The total surplus has increased in this time by 2,608 cars and the aggregate shortage has increased by 3,886 cars. The total shortages reported November 7 came to 71,156 cars. Continued fair weather in the Northwest facilitating the movement of grain should do much to relieve the situation.

Primitive Lumbering Methods

The war in the Balkans is now attracting attention to that quarter of Europe. In the barren land of Herzegovina efforts for some years have been directed to reforestation, in order to save the country from becoming a desert. The Venetians and Romans once drew supplies of timber from that region, but now there is little left. In many places bare mountains of stone occupy regions of former forests; but the

admitted, as they do not reach the tops of the young trees, and finally the goat is admitted. The shrubbery is then high enough to care for itself.

Parallel plots of these reserves are laid out over the province, so that when one is entirely reserve, in the next there are sheep, while its neighbor still further on has sheep and cows, and in the fourth sheep, cows and goats graze together. Each year the peasants find that the previous reserve will be ready for sheep and the other areas each advance one stage, so that eventually the entire barren Herzegovina will be fertile and green.

They have very strict forestry laws in this region and violations are subject to imprisonment. Instead of jailing the men, however, they are set to gathering seeds, and later they are put to sowing them. Consequently, if but one wild seed in five hundred thrives the venture still pays. It costs the government nothing, and the produce of the work of that one seed will help spread the good work indefinitely.

In the north of the Herzegovina there is still some primeval forest remaining and it is now being made productive by cautious forestry. Interesting folk are the lumbermen there. Women work at these labors as well as men and wages are from twenty-eight to forty cents a day, but those of unusual ability may draw ninety cents. The lumbermen's homes are small cabins with peaked wood or thatch

roofs. Sawmills are as primitive as it is possible for them to be and are run by water power. Instead of hauling lumber on wagons, it is sent to market on the backs of horses, though the roads of the region are generally good.

F. J. K.

Building Wooden Cars

A news dispatch from Seattle, stating that within the past ten days 100,000,000 feet of lumber was purchased in Washington and Oregon by car companies, does not indicate that the steel car is driving wood out of car shops. The purchase of the above lumber was

A "TRAINLOAD" OF LUMBER GOING TO MARKET IN HERZEGOVINA

people are planting trees and trying to make them grow.

One of the commonest methods is to blast with dynamite holes for the trees, then carry soil to the pit and create a forest reserve. Frequently what appears from the road as a mere slope of rock is covered and edged with signs prohibiting pasturage in the area. On the sly, however, and quite frequently from mere laziness or spite, the peasant will drive his goats into this area and then, when he is fined heavily for the destruction, he becomes an opponent of the government.

If these plants thrive at the outset, it is judged that it will pay to plant further in the locality. Some places have become covered by green vegetation in two years and are held as reserves to the end of the third year, when they have become partly forested.

The goat is the predominating factor in the lives of these people. A goat ranges in value from \$4.80 to \$5.60, and a man's wealth is frequently expressed in terms of goats. The state, on the other hand, is trying to suppress the goats, as they destroy the vegetation, while the people who care nothing about reforesting the mountains for the benefit of future generations raise the cry that the goat is everything to the people of today. Their praises of the goat are well founded. What the reindeer is to the Eskimo so is the goat to the Herzegovinian. Hide and hair, meat, milk, horns—all are utilized. Then, too, the goat is hardy and hunts its own food, so the people ask what good the vegetation will do if no animal is permitted to eat it, and why prefer trees to goats, since the goat is able to skirmish for his own living. In deference to public sentiment the goat tax has been made very low and is regulated by the number of animals a man may possess, in direct proportion. A peasant who has but ten goats pays eight cents a head, while he whose herd is a hundred strong must pay more per capita.

No grazing is permitted at first on newly planted mountain slopes. Sheep are the first animals to be admitted to these new pastures, as they do not rise on their hind legs to devour the growing tops of plants. Then the year after opening to the sheep the cattle are

RESULT OF REFORESTATION AMONG THE FOOTHILLS OF THE BALKAN MOUNTAINS

A REPRESENTATIVE SAWMILL AMONG THE WESTERN BALKAN MOUNTAINS

reported to have been made by three companies, the Canadian Car and Foundry Company, the American Car and Foundry Company and the Pullman Company.

It is to be noted that this large purchase was made on the Pacific coast, and it consists wholly of soft woods, though the exact species are not reported.

The Wood of the Birches

There are twenty-eight or thirty species of birches now recognized in the world, thirteen of which are found in America. Ten of the latter are trees but only six of them are of commercial importance. The birch tree is widely distributed from the Arctic circle to Texas in the new world, and to southern Europe, the Himalayas, China and Japan in the old world, some species forming great forests at the north, or covering high mountain slopes. A very common shade tree in the eastern part of this country is the exotic species of white birch (*Betula alba*), and a varietal form with slender drooping branches and cut leaves. The six native species of chief importance are sweet, black or cherry birch, yellow birch, paper or canoe birch, gray or white birch, river or red birch, and western birch.

The following table will afford a fair idea of the sizes of the mature trees and the average weights and densities of their woods:

Common Name	Average diam., ft.	Maximum diam., ft.	Average height, ft.	Maximum height, ft.	Weight per cu. ft.	Specific gravity
Sweet	2	5	70	100	47	.76
Yellow	2	4	75	100	41	.66
Paper	2	3	60	85	37	.60
Gray	1	2	50	60	36	.58
River	2	5	70	90	36	.58
Western	3	6	85	120	38	.61

The wood of the birches has very numerous small pores scattered throughout the growth ring, though somewhat less abundant in the summerwood than in that formed earlier in the season; they are mostly indistinct without a lens. There are no conspicuously broad rays, such as found in sycamore and beech, but in sweet and yellow birch some of them are large enough to show quite plainly on quarter-sawed material. The wood, on the whole, is straight-grained, splits without difficulty and is easy to work. There is considerable variation in color between different species, sweet and yellow birch having rather dark heartwood; paper, gray and western very light colored or almost white; and the river birch somewhat intermediate. In the white birches it is very common to find abundant small brown patches (cross section) or stripes (longitudinal sections) known as pith flecks. These are the result of the tunneling of the larvæ of small moths and possibly of other insects.

The demand for birch wood has increased rapidly during the past ten years. According to the census returns the output in 1910 more than tripled that of 1899. The total quantity was nearly 421,000,000 feet, cut by 3,703 mills, located in thirty-two states, ranging as far south as Georgia and Texas and as far west as Washington. Wisconsin has led in the cut of birch lumber for several years and, with New Hampshire, reported an increased production in 1910. Wisconsin supplied in 1910 over forty-four per cent of the cut; the New England states contributed a little over twenty-five per cent. No distinction of species is made in these returns.

Birch has not been used to any considerable extent for tight cooperage though occasionally employed for half-barrels. The revision committee of the Chicago Board of Trade has issued a revised list of woods for the packing house trade and as birch is included it will probably become important in that class of tight cooperage. In the report of the woods used in tight cooperage in Canada birch is credited with 105,000 staves out of a total of 7,137,000. For slack cooperage in this country, birch ranked seventh in 1910, with a total of 61,438,000 staves and 3,131,000 sets of heading. In Canada the

number of staves was 2,705,000, heading 486,000 sets, hoops 986,000.

In the manufacture of veneer the amount of birch consumed was 27,633,000 feet, log scale, in 1910, a very considerable increase over preceding years. In 1908, for example, the total amount was some 10,000,000 feet less. Most of this may be classed as utility veneer, though considerable of it was for furniture, cabinet work and interior trim.

Birch is one of the three principal hardwoods used in destructive distillation. Charcoal, crude wood alcohol and gray acetate of lime are the leading products. The total amount of beech, birch and maple consumed for purposes of distillation in 1910 was over 1,250,000 cords, but no figures are available as to the proportion of birch. From the bark of the sweet birch an oil with wintergreen flavor is obtained, which is used for flavoring purposes.

The wood of none of the birches is durable in contact with the soil. The use of preservative treatment, however, is bringing the wood into common use for railway ties. It is strong enough to resist wear and its structure is suited to ready impregnation. The latter is of particular importance, as it lessens materially the expense of treatment.

Sweet, black or cherry birch (*Betula lenta*) is a common tree of the central hardwoods region, being widely distributed. It attains its greatest dimensions on the western slopes of the southern Appalachians. The wood is the hardest and heaviest of the birches, is very strong, takes a high polish, has a high satiny luster, stains well and is often called mahogany birch. The texture and grain are even and fine and the wood works with ease. Specimens with wavy and curly grain are not uncommon and have a high value for cabinet work. The wood is readily cleavable and is liable to split in nailing.

It is not always easy to distinguish this wood from that of the yellow birch. Upon comparison, however, it will be found that sweet birch has somewhat heavier, harder and stronger wood. The pores are larger and the rays are wider and more conspicuous. The color is brown tinged with red, often deep and handsome. It is unusual to find specimens marred with pith flecks. The bark is like that of cherry and when a bit of it is present on a waney board identification is made very easy.

Sweet birch is one of the most important furniture woods of the United States and when properly stained makes one of the best imitations of mahogany of any native wood. It has largely taken the place of cherry because it is cheaper. For example, the furniture factories of Maryland use annually upward of a million feet of sweet birch, worth \$26 per thousand at the mill, and only 6,500 feet of cherry, costing \$73 per thousand. It is extensively employed in all kinds of furniture and cabinet work, frequently in combination with mahogany. It also makes good flooring and interior finish as well as the numerous other uses to which the birches as a group are put.

Yellow or red birch (*Betula lutea*) derives its name from the color of its bark. It is one of the largest hardwood trees of north-eastern America, is very abundant and of its largest size in the eastern provinces of Canada and in northern New York and New England, being small and uncommon in southern New England and southward. It is a valuable tree of the Lake States.

The wood is structurally much like sweet birch, but is finer textured. The pores, which are moderately abundant, are smaller and

CROSS SECTION OF PORTIONS OF TREE GROWTH RINGS OF SWEET BIRCH. MAGNIFIED FIFTY TIMES

the rays are uniformly small and inconspicuous. The wood is somewhat less heavy, hard and strong than sweet birch, but unless one has specimens to compare, distinction is often difficult. The presence of a bit of the yellow, exfoliating bark in a waxy specimen is always a reliable index of the species. Pitch flecks are of rare occurrence. The uses of the wood are very similar to those of sweet birch, though the wood is not prized so highly for furniture. It makes excellent flooring.

Paper or canoe birch (*Betula papyrifera*) gets its common names from the papery nature of the bark and from the fact that the bark has been rather extensively used for canoes. Its economic distribution is along the northern border of the eastern half of the United States and north into Canada. The only extensive stands in the United States are in the Lake States and northeastern New England.

The wood is of medium weight, fairly hard, strong and tough, close grained and uniform textured. The green wood is sappy and rather heavy and difficult to handle. The wood holds its shape after seasoning, turns readily on the lathe and finishes smoothly. The sapwood is nearly white and makes up the entire stem of young trees. As the tree gets older heartwood, light brown tinged with red in color, begins to form and is considered a defect for most uses to which the wood is employed. By some this darker color is attributed to disease, but in reality it is the normal condition of heartwood. Pitch flecks are very common in this species. The rays are very fine and inconspicuous and the pores are very small. The wood cannot readily be distinguished from that of the gray birch and western birch. The appearance of the white, papery bark is an infallible guide to the identification of unpeeled logs or waxy pieces.

The principal use for paper birch is for spools, and some 40,000 cords, or more than half of the total cut, is consumed for this purpose. It is also employed in the manufacture of shoe pegs, shoe shanks, toothpicks, dowels, novelties, shoe lasts, clothespins, hairpin boxes, bobbins and shuttles. The wood is too hard and heavy for ordinary construction lumber, too soft for hardwood lumber, and not striking enough in appearance to be popular for furniture or interior finish. The presence of red heart unfits the timber for spools and its other important uses. The bark, which is tough, resinous, durable and impervious to water, is used by all the northern Indians in their canoes and for baskets, bags, drinking cups and other small articles, and often to cover their wigwams in winter. It is also employed somewhat in the manufacture of novelties and experiments are being tried to perfect some way of separating it into its natural layers for use in tipping cigarettes in place of cork.

Gray birch (*Betula populifolia*) is a short-lived tree of small size and little economic importance. It is most abundant in the coast region of New England and the middle states, springing up in great numbers on abandoned farm lands or on lands stripped by fire of their original forest cover, later giving place to other species. The wood is much like that of paper birch and is employed for the same purposes. Its principal use is for fuel. The bark is somewhat the color of paper birch, but is close and firm instead of exfoliating in paper scales.

Red or river birch (*Betula nigra*) occurs along streams throughout the eastern half of the United States. It is nowhere abundant and rarely attains large dimensions. While timbers are often of large diameter near the ground, they commonly divide into numerous branches at a height of from fifteen to twenty feet. The bark is of a reddish brown color, mostly rough and shaggy, giving the tree a ragged appearance. The wood is rather light and soft, moderately strong, rather tough. The pores are very numerous and are larger than in other species. The wood fibers have rather thin walls, in contrast to those of sweet and yellow birch. The rays are as large as in sweet birch, but less distinct because of the lack of contrast with the rest of the wood. The wood is not extensively used, but has a value for various purposes, such as hoops, baskets, corework and fuel.

Western birch (*Betula occidentalis*) is the largest of the American birches, frequently measuring over four feet in diameter and one hundred feet in height. It resembles the paper birch and is so similar to it that its true range has not been determined. It is known, however, to occur in northwest Washington and British Co-

lumbia, but its occurrence is so infrequent that its use commercially is very restricted. The wood is fairly hard, compact, fine and uniform textured. Its only known use is in the manufacture of interior finish and hardwood flooring. A total of 315,000 board feet, worth about \$46 per thousand, was reported used for this purpose in Washington in 1910. It is very probable that the wood is suited to furniture manufacture, although none has been reported as being so used.

The other species belonging to the birch family (*Betulacea*) are blue beech (*Carpinus*), hornbeam or ironwood (*Ostrya*), alder (*Alnus*) and hazel (*Corylus*). In structure, however, these woods are quite distinct from birch which most resembles maple. One of the principal distinctions between birch and maple lies in the size of the rays, part of those of maple, especially sugar maple, being much larger and more prominent than in birch. There are also differences in color, weight and texture. Under the compound microscope a decided difference is noted in the vessels of the two woods. In maple the vessels are spirally marked and the perforations between segments are rounded and simple, while in birch the vessels are without spirals and the perforations from one segment to another are scalariform—that is, crossed with little bars like the rounds of a ladder. These features are enough to enable an expert to separate with certainty the smallest shavings of the two woods.

Feeding Draft Horses

The Pennsylvania agricultural experiment station recently conducted a series of experiments for a period of eighty-four days to determine the effect of certain kinds of feed on draft horses. The conclusions reached should be of interest to those who use horses for heavy hauling. The purpose of the experiments was to obtain data in regard to the efficiency of three different rations for fattening purposes, corn, oats and hay. In one of the experiments cottonseed meal was used in place of oats to determine whether the less expensive ration of corn, cottonseed meal and hay is equally as efficient as one of corn, oats and hay. As corn silage furnishes digestible nutriment at a less cost than any other obtainable rough feed, a ration of corn, cottonseed meal, hay and silage was used in comparison with one of corn, cottonseed meal and hay to determine whether horses could be fed silage without detriment to health or reducing the efficiency of the ration.

The following conclusions were reached as a result of experiments on twenty-one horses during the period of eighty-four days:

Silage which is made from mature corn, is free from mould, has not been exposed to air too long before feeding and is properly supplemented with other feeds which will make up the deficiency in protein, can be fed to horses with safety when care is used to have them become gradually accustomed to it.

Horses fed silage as a portion of their ration consumed less grain, made their gains at lesser cost per pound, were sleeker and better finished than when fed on rations not containing silage.

Using cottonseed meal to replace oats resulted in a cheaper ration, a larger gain, smaller cost of gain and a higher finish in fattening horses.

The cost of gains varied from 13.4 cents to 17.7 cents per pound; the rate of gain, 1.59 pounds to 1.78 pounds per head daily, due to selections of rations for fattening purposes.

The rate of gain depends upon the ration used and the temperament, disposition, age, condition and type of individual.

The most profitable horse for feeding purposes is one that shows every evidence of draft blood, with clean, short legs, wide cannons, deep and wide both in chest and in middle, showing constitution and capacity throughout.

There is little change in depth of body or length of body from fattening, the greatest change being an increase in width and an apparent improvement in the spring of rib.

The greatest changes in form due to fattening are noted in those parts of the body where the natural covering of muscle is thickest.

The height at withers is greater in a thin horse than the height at croup. When finished, the height at croup is greater than that at withers.

Sawmill, Resaw and Power Problems

The growing use of the resaw in lumber manufacturing has given an opportunity for sawmill men to study the machine and the best way to utilize it. While not all lumber manufacturers believe that the resaw is adaptable to every purpose—and in view of the wide range of conditions under which sawmills are operated it would be asking too much to expect that it would fit the needs of everybody in the business—those who have used it under the right conditions are enthusiastic as to its possibilities in the direction of increasing production and lowering manufacturing costs.

The right conditions appear to be those under which there is an ample supply of timber, and where the profits are made through putting out the maximum quantity of lumber. In the case of the small mill, which must study each log carefully as it goes through, and must make out of each one the best possible lumber that can be produced, altering the thickness according to the requirements of this test, it must be admitted that the resaw cannot do the operator much good. Hence it is logical to expect to find, and actually to find, resaws used most successfully in the big operations where quantity, produced under uniform conditions, is desired, rather than a relatively small output varied as to thickness by the necessities of getting the best grade that the log will produce.

In this connection an interesting plan has been used by one of the big sawmill men of the southern hardwood country. Instead of using his resaw for the output of one band mill, as is usually the case, he has planted his resaw where it may receive the lumber cut by twin mills. Thus there is a regular tide of thick lumber descending on the resaw and going out thin, and while it sounds like asking a good deal of the crew of the resaw to handle twice as much lumber as the men who are handling the operation of the band mills, it is not such a hard proposition after all.

It must be remembered that since the resaw can be fed continuously, while the band mill necessarily loses time after each cut in getting back in position for another, the resaw ought to be able to cut twice as much lumber as the band mill, and then some. And by putting it up to the resaw to take the product of two band mills, the lumberman has a chance to get his quantity cut at a still lower figure than when the resaw is asked to cut thin lumber out of thick for the output of only one band mill.

In the instance noted the plan has worked beautifully, and the sawmill man is well-pleased with the success of the idea thus far, believing that it has made his resaw much more valuable than it would be if it were used in the regulation fashion. While resaw manufacturers do not stress this proposition, it is probable that they would find it worth investigating, even though it might be too extreme to justify recommendation as a general proposition.

A big sawmill man who has always believed in the use of the resaw has devised a plan of operating it which is somewhat out of the ordinary, but which he thinks will be economical. That is the installation of separate power equipment to take care of that particular machine. Everybody knows that a big resaw eats power pretty fast, and consequently a mill which is running a resaw must have pretty large power facilities. In this case the millman decided to put a resaw in his plant, which was comparatively new, and was confronted with the question of installing a new boiler and a larger engine. Instead of putting the new equipment in the present power plant, and operating it all as one battery, he decided on the other scheme, and the resaw will be run under its own power, that is, with energy developed in a plant reserved for that particular purpose.

The advantages of the plan are numerous. In the first place, since, as stated, the power production of the mill must equal the maximum requirements of all the machinery, and where a resaw is used must be able to take care of that load as well as others, the power capacity would be much larger than is necessary when the resaw is not in operation. And as there are occasions when conditions do not require the operation of the resaw, it would be a

big waste of power to be producing enough to run the additional equipment if the latter were not being operated.

The same argument which applies to the use of individual motors is applicable to the proposition of special power equipment for the resaw. You use power only when your machine is running. While the coupling up of individual power units is not advisable in a steam plant as a rule, and only when a large unit like a resaw, derrick or similar proposition is concerned, it certainly has advantages in a case of this kind.

Another benefit to be derived from the plan is that it will enable the cost of the operation of the resaw to be figured more exactly than under the other plan. Inasmuch as the sawmill man who has devised this scheme is using the resaw for the first time, although he has always been inclined to favor it, he wants to know just what it is costing him to run it, and whether he is making money on its operations. If it were being run with power from the main plant supplying the rest of the mill, it would be difficult to figure how much of the power produced was being consumed in the resaw. With its own power units operated to take care of its individual requirements, however, it is a simple matter to separate the consumption and charge to the resaw just the expense of the power that is consumed.

And the interest on the investment in the resaw itself plus its power equipment can likewise be calculated easily, thus making it an easy matter to get the "dope" on the machine from one end to the other. The sawmill operator believes that by the time he has had his resaw in use for six months he will have some interesting figures as to the cost of running it, and likewise as to the cost of producing lumber when it is in use. As he has been running his mill for several months without it, his comparison of figures ought to be a striking demonstration of whether or not the resaw is all that its advocates claim.

Speaking of the power question reminds one that the average sawmill burns up a lot of power that it doesn't use. Of course power is cheap when fuel is found in the waste of the plant, but at the same time, there is no need of wasting it, and frequently added boiler capacity with a rearrangement of the transmission system would enable the old plant to take care of all requirements. One of the easiest ways to lose power is through improper adjustment of shafting. If it is not lined up perfectly true, the transmission of power from the engine to the machine will be accompanied by losses which would amaze and impress the most careless millman. One of the disadvantages of ordinary sawmill construction is the use of timbers as supports for shafting. In many instances these gradually sag and get out of line, with the result that friction occurs and the belt tightens up and pulls hard on the pulleys. In most of the newer sawmills this feature has been taken care of by the use of concrete supports for the piers holding the shafting, so that there is less danger of it getting out of true.

The use of more transmission equipment than is really needed is one of the defects most frequently noted in sawmills. A graphic instance of this was given recently when a millman who had exhausted the timber on a tract which he had been working for several years moved his mill to a point further south. His operations previously had gradually developed, new equipment being put in, and additional countershafts provided, with a multiplication of gears and belts, so as to take care of all the various units requiring power. When prepared to put in the second mill, he asked his superintendent to figure out the best method of arrangement of the machinery so as to reduce the power requirements if possible.

"We are going to have to buy another boiler and increase the size of our engine," he said, "unless we can figure out a system of cutting down our power requirements, for the reason that we shall have some additional sawmilling machinery at the new plant. See what you can do."

The superintendent and the engineer got together and after

plugging away at the problem for a time emerged with a scheme which they submitted to the boss and got approval on. It provided for a more systematic and direct arrangement of the machinery, and eliminated most of the shafts and gearing. When they put the scheme into effect, they found that the old power plant, which had been groaning under the load imposed by the former conditions, was now able to carry the mill, even with its new equipment, along

so smoothly that there was no comparison. The mill had simply been using a lot of power it didn't need.

Poor transmission systems frequently use up over fifty per cent of the total power production, and including friction and other unavoidable losses, it often happens that the effective machinery in the plant receives about twenty five per cent of the power that is turned out of the engine.

Utilization of Hardwoods

ARTICLE SIXTY-THREE THE MANUFACTURE OF MOTOR TRUCKS

The rapidly increasing use of motor trucks of various sizes, from the light delivery wagon to the seven-ton Juggernaut which lords it over all the vehicles of heavy traffic, has created a new field for the employment of hardwoods which, in time, bids fair to be very close to the top of the list in importance, both in the quality of the wood demanded and the quantity consumed.

The bodies of these vehicles of the day demand materials in keeping with the costly and intricate mechanism of their motive power, and some of the models turned out for such uses as that of the better department stores, for instance, are not to be surpassed in appearance or fineness of finish by the most aristocratic of the pleasure cars.

It is a fact, too, that more care is being devoted to the manufacture of bodies than formerly. In the earlier days of the motor truck industry, which is not so very long ago, the manufacturer was content to turn out the chassis, upon which he mounted only a mere bottom, leaving to the devices of the purchaser the matter of fitting it with the particular style of body suited to his individual requirements. This is no longer the case. In fact, the usual procedure is precisely the opposite. Some of the leading manufacturers receive the motor and chassis from another factory and merely assemble it on their floor and devote their entire attention to the work of preparing the body of the truck for the exact needs of the customer's business.

Many manufacturers, with large factories and capacities, make no stock trucks whatever, confining themselves to turning out vehicles to the special order of their customers. For example, a truck of seven tons' capacity was recently constructed by a middle western concern on the detailed orders of one of the largest corporations in the country, one of the chief requirements being that it be just as large as the measurements of the house in which it was to be sheltered would permit!

The factory turned out a monster, measuring a few inches over seventeen feet in length and seven feet five inches wide, yet so designed as to be beautifully proportioned and almost incapable of being loaded beyond the limits of its power to pick up the load and walk off with it.

The material most in use in the manufacture of motor truck bodies is the best grade of white oak. The bottoms, sills and cross members are made of this wood, in various dimensions, depending in some degree upon the size and capacity of the truck. For instance, in the big machine just referred to, the bottom boards were one and one-quarter inches thick and seven inches wide; the sills were of two-inch material, the end cross-members measured two and one-half inches and the others two and one-quarter inches, dressed. These figures will illustrate graphically the quality of the material required, as well as the strength of the vehicle itself.

CONSTRUCTING TRUCK BODY, SHOWING WOOD USED

The length of the bodies and hence of the boards required for use in the bottoms, ranges from seven to thirteen feet, although sometimes an order is received which necessitates longer lengths, sometimes running as high as sixteen feet. Some makers use three and one-half inch widths, although the better practice seems to be to use wider boards. Narrow tongued-and-grooved bottom boards, of course, make a tighter bottom for the time being, but an absolutely tight bottom is not necessary, as a rule, in a truck of any sort, and the

greater number of edges exposed to the weather in the narrower widths give just so many more opportunities for the beginning of decay. There is a limit to the width, however, as excessive dimensions in this direction would split too readily under rough work. Ten inches is about as wide as boards can be used for motor truck bottoms, and they are usually narrower. Ordinarily the width is adjusted so that the boards will be of equal size and seven inches is about the best width.

Wheels usually come to the factory ready to go on the truck, although there are some concerns which manufacture everything that goes into the vehicle. Spokes and felloes are of second-growth hickory, as in the better sorts of wagons. Another place where hickory finds a use in the motor truck is on heavy machines which are built without solid sides, the supports being stakes and slats. Stakes used on such trucks are of hickory, the side slats being of ash.

Ash is also the material found best for the framework of the tops of light delivery trucks, whether the covering is of solid wood or of some woven fabric, such as canvas or other waterproof material.

The posts and ribs of the framework vary in size and the slats are usually five-sixteenths of an inch by one and one-half or two inches.

For the panels of the wood tops and bodies of these light machines poplar comes into play. As with all other materials used in such work only the best grades have any call, the usual material being good yellow poplar for this purpose. The panels are solid, as a rule, though veneered work is sometimes used. "Blue poplar" was at one time attempted, but it was found that it would not stand painting as well as the better grade, and this quality of taking paint well is a prerequisite for the side panels of delivery trucks, which must have a regular carriage finish. The side panels are protected from direct contact and pressure from within by an inner frame, usually of ash.

The machinery necessary in the manufacture of truck bodies is similar to that used in a wagon factory. Among them might be mentioned the mortising machine, tenoning machine, Universal wood-worker, variety saw, thirty-inch planer, boring machines of various sizes and cross-cut and rip saws.

The raw material usually comes to the factory in the shape of the rough lumber from the mill, which is stacked in the yards for seasoning. Some manufacturers, however, have something to learn about the care of high-grade lumber of the sort required in this industry. An instance is related of a prominent maker of bodies who stacked a large shipment of quarter-sawn white oak in his yard without proper protection and was compelled to charge the price of the greater part

of it to experience when he found that it was ruined by checking and splitting.

This sort of thing is not common, however, as most of the men who are branching out into the business of making trucks have had enough experience with lumber to know how it should be handled, especially when their judgment is whetted by the payment of the good round prices demanded for the sort of stuff that must be used.

As the advertisement of one of the largest makers of power trucks declared recently, there will be a hundred of these within a year or two where there are five now. If this is true—and the increasing use of such vehicles by progressive concerns in every business would seem to indicate that it is—the hardwood mills will be called upon to supply a vast quantity of the better grades of white oak, ash and poplar, and forests of second-growth hickory will be needed for the stout wheels on which the immense burdens of every branch of commerce will be carried.

Where now there are small shops, turning out a truck or two a month, as a sort of experimental side-line, there will be great factories, with an output running into scores and hundreds a day, and the mills must be prepared to meet increasing calls from such quarters in the very near future.

HARDWOOD RECORD is indebted to the Longest Brothers Company and the Kentucky Wagon Manufacturing Company for the information contained in this article.

Superiority of Wooden Filing Cabinets

Early in the morning of October 10 last, a disastrous fire occurred at the Hotel Utica, Utica, N. Y. In the automobile club-room connected with the hotel were several wooden filing cabinets and one or two of steel. As a result of the fire the steel cabinets were absolutely demolished and their contents totally destroyed. On the contrary, the wooden filing cabinets were burned only on the outside, the veneering peeled in places, but the cores were left intact. The contents of the wooden cabinets, which contained valuable letters and papers, were practically uninjured save being a trifle wet from the fierce onslaught of the fire hose.

Accompanying this article is a picture of a section of these wooden cabinets, from the frames of which quite a number of the drawers had been removed before the photograph was taken. It shows better than any text can tell the splendid way in which these wooden cabinets protected their contents in this fire.

The makers of this wooden equipment advise HARDWOOD RECORD that they are pleased with the way their mahogany units withstood the fire, that hardly a just comparison could be made between them and the steel cabinets, because the steel cases in the fire were of a thin sheet metal, and not of a very high-type. These went absolutely to pieces, including the contents, while in many cases the wooden cabinets charred almost through, preserved their contents perfectly.

WOODEN FILING CABINETS WHICH PRESERVED THEIR CONTENTS DURING DISASTROUS FIRE HOTEL UTICA, UTICA, N. Y.

In another letter from the same source, the writers allege that they have made exhaustive investigation into the relative merits of wood and steel filing cabinets, and are producers of both. They believe that "for certain purposes steel is a better equivalent than wood, although we do believe that people err greatly in assuming that steel in itself is fireproof. We have every expectation that the sensible and legitimate demand for steel furniture will increase, although we hope the public will come to realize that it is not ideal for all purposes."

This perhaps is a very fair statement of the situation from a manufacturer of steel furniture, and as a matter of fact is unusually fair. The public generally does not differentiate between fireproof, fire-resisting and non-combustible qualities. People should comprehend this most simple proposition: wood is not non-inflammable, it is a remarkably slow conductor of heat and

is fire-resisting. On the contrary, steel is non-inflammable, but by reason of its conductivity of heat will not of itself give fire protection to the contents of filing cabinets, desks and similar furniture unless it has hollow walls, like a fireproof safe, in which is packed fireproof material.

For a generality of purposes, for filing cabinets, desks, and kindred furniture, wooden furniture is infinitely superior to any steel equipment that has yet been devised, and the cost is very much less.

Traffic Matters Around Memphis

Indications are that rate problems will require considerable attention at the hands of the Lumbermen's Traffic Bureau, as well as at those of the lumbermen of Memphis, in the immediate future. J. H. Townsend, manager of the Lumbermen's Traffic Bureau, is just in receipt of official notice from the Interstate Commerce Commission that all the railroads operating between Memphis and New Orleans have filed notice with that body increasing rates on all hardwood lumber shipments from Memphis to New Orleans two cents per hundred pounds. The present rate is ten cents and the new rate will be twelve cents. The latter is to become effective Dec. 20. The notice was filed by M. P. Washburn, agent of the Southeastern Mississippi Valley Freight Association. Mr. Townsend has already asked the commission to suspend this advance until the lumbermen here have had an opportunity of presenting their side of the case, and he believes that this action will be taken in accordance with the usual custom of that body. The announcement of this advance brings to mind the fight which was waged several years ago by the lumbermen of Memphis in the case of the J. W. Thompson Lumber Company et al. vs. the Illinois Central and the Yazoo & Mississippi Valley railroad companies, in which the plaintiffs won a signal victory. The twelve-cent rate was ordered cancelled, the ten-cent rate was ordered restored and the plaintiffs were awarded reparation for the period during which the advance of two cents was paid. The commission, in giving its ruling at the time, pronounced this advance both unreasonable and unjustifiable.

The Illinois Central and the Yazoo & Mississippi Valley railroad companies have also filed notice with the commission of an advance of one cent per hundred pounds on cottonwood and gum shipments from all points on their lines in Mississippi to New Orleans, with the exception of several places where flat rates have been withdrawn and class rates have been substituted. The latter action principally affects points in the Leland, Helm and Vicksburg districts and amounts, in effect, to an advance of from five to six cents per hundred pounds. It does not, however, apply to any items except cottonwood and gum, but it affects a number of Memphis lumbermen and this proposed advance, which also becomes effective Dec. 20, will be opposed by the Lumbermen's Traffic Bureau. The first step will be, as in the other cases, a request for the suspension of the advance until the lumbermen can be heard.

Aside from the advances already referred to the next most interesting rate problem is that of securing through bills of lading on export shipments from points west of the Mississippi river. The Anderson-Tully Company has already filed a petition with the Interstate Commerce Commission against the western roads seeking through bills of lading on export shipments. Chairman Prouty of the commission will be in Memphis Dec. 16, at which time this subject will be heard. It is pointed out by lumber interests that a most serious hardship is worked upon them through the failure of the western roads to grant through bills. Since this petition was filed the Shreveport, Vicksburg & Pacific has announced that it will issue through bills of lading in all cases where arrangements have been made with the steamship companies for the prompt transportation of cargoes in question. It remains to be seen what effect the action of this road will have upon the others west of the Mississippi. So far it has had none. The Lumbermen's Traffic Bureau here has taken up this subject with the Interstate Commerce Commission and has suggested that it will be agreeable to the lumbermen if the western roads will issue through bills of lading on somewhat the same terms as the Illinois Central and other roads east of the Mississippi. These demand the engagement of steamship room at specified sailings so that the railroads may avoid the payment of demurrage at New Orleans, and also prevent a recurrence of the serious congestion which occurred in that port last winter and spring.

Lumbermen here are very much interested in the decision of the Rock Island System to place Memphis and Hopefield, Ark., frequently known as West Memphis, on the same basis on west bound shipments. Efforts have been under way for a number of years to get the Rock Island System to agree to this equalization. When the Rock Island purchased the Choctaw, Oklahoma & Gulf Railroad some years ago it was understood that the former was to take over all the contracts and agreements of the latter. The Rock Island, however, persistently refused to equalize rates as between Memphis and Hopefield until a few days ago, when it announced that it would do so. The Lumbermen's Club and the Memphis Freight Bureau were instrumental in bringing about this equalization, which means a considerable saving in freight rates to lumber shippers here.

The Bugbear of Innovations

"No," said the Colonel, "you needn't tell me that hardwood is in demand, is going higher every time you turn around, and that this would be a mighty good time to spread out with the idea of making more dimension stock in the woods to save some material that is going to waste, reduce the amount of railway tonnage so we can do more business with the same cars, and save a lot of freight charges. I know that already, and have been thinking about it a whole lot, and wondering why it is everybody has been so backward about this proposition that you all have urged so persistently in **HARDWOOD RECORD**. And I believe I've the answer—it is not so much a question of the ultimate success of the dimension stock idea as it is the bugbear of innovations. Millmen and other lumbermen get into a rut, and then instead of getting out when they see a way open before them, take refuge behind the theory that it takes time, work and lots of money to introduce a new idea to the trade.

"We have the same thing at times when introducing a new cabinet wood. It takes time and a little uphill tugging, and we shy at it and go along the same level way. By and by some enterprising and energetic fellows do take it up, though, and then they have great sport and do a big business all at the same time, and the other fellows come piking along in their wake afterward.

"Do you know what it all makes me think about? Well, I'll tell you. It takes me back in memory to a time when we boys who lived out in the woods where the timber grows trudged through red clay and dead leaves in the winter time to a little school house surrounded by hills and trees to get a little readin,' writin' and rudimentary reason. There was a moral lesson in rhyme in one of our readers that started off like this:

"'Twould be royal fun eried lazy Ned,
To coast upon my fine new sled,
And beat the other boys;
But then I can not bear to climb,
The tiresome hill, for every time
It more and more annoys."

"The moral was that the other fellows were having a ripping good time, with less to do it on than Ned, but they had the will, and didn't mind that little uphill trudge for the game. I can't recall all of this moral jingle, but it wound up with Ned grown into a man, and

"He drended still
That silly bugbear of uphill,
And died a dunce at last."

"That's the thing that stands in the way more than anything

else it's the silly bugbear of uphill, of the time and trouble it takes to introduce new ideas and methods. It is the only way one can find a logical explanation for lots of the backwardness about new ideas.

"Why, only the other day I was visiting at a plant that makes table slides. Here they were using log-run lumber, and cutting all of it up into small dimensions. I didn't measure the stock, but you can easily imagine the dimensions used for table slides. And that lumber had come in on a freight rate of twenty-one cents; which is not so bad as if it had been forty cents, but it was enough to make quite an item in the cost, when one considers that perhaps half the weight was cut out in reducing it to dimensions. Why might this not just as well have been done at the sawmill? It would have saved in the cost to the slide man, would have given the millman a chance to work in other material going to waste around the mill, and it would have required fewer cars for shipping so that it would have helped out at the car shortage end, too.

"Immediately afterward I was in a furniture factory where they were cutting gum lumber into dimensions. Some of it was thick stock in wide boards and was being cut into bedstead posts. There was an excuse for part of it, because it was being shaped on a band saw. But with a pattern of the bandsawed shape in the hands of the millman and a list of the other dimensions used regularly, quite a lot of this furniture stock could have been supplied in dimension form with the same elements of economy as attached to the table slide stock.

"I could go on for hours telling you of things of this kind, but what's the use? It's not here that you need the logic and arguing. What you need is to get rid of that silly bugbear of the 'uphill tug.' In the modern scheme of salesmanship things of this kind should be considered great sport, and they should be gone after with the same zest that the boys used in going up the hill to coast down—all but lazy Ned. Tell the folks that, and maybe they will see things in a new light—see how these innovations can help business instead of making it harder."

J. C. T.

Chicago Lumbermen's Meeting

The Lumbermen's Association of Chicago, which to outside appearances has been dormant during the summer and early fall months, sprang into renewed and increased activity on November 19, when it held its first monthly luncheon at the Hotel Sherman. About 200 members of the local trade, representing every branch of the lumber business, were present at the luncheon and the meeting which followed.

No comment is necessary on the character of the entertainment furnished by the entertainment committee. The excellent luncheon which it provided was followed immediately by an active business meeting, presided over by President F. L. Brown.

Mr. Brown opened the meeting by briefly outlining the growth of the association, telling of the expansion which had been made possible by the amalgamation of the various lumber interests in the city. He stated that the object of all association work should be along the lines of improvement and economies in the operation of the lumber business and in the extension of opportunities.

The first important question before the meeting was that of proposed increases in freight rates on hardwood from southern territory. All lines east and west of the river have already checked in advances to Ohio river crossings and western territory. The first petition of the roads will be to replace the special rate on box material of cottonwood and gum, as they claim that these woods should not enjoy a lower rate than the ordinary run of hardwoods. An advance placing them on a level with ordinary hardwood rates would mean an increase of two cents. It is further proposed to equalize the rates on hardwoods with the rates prevailing on pine from the southern territory. This would mean that the average advance on hardwood rates would be one cent; therefore this would necessarily be added to the other increase of two cents on box material, resulting in an increase of three cents on that grade of stuff. The railroads make their usual plea of insufficient funds and they have already definitely stated that they will check in these advances and let the Interstate Commerce Commission decide the question.

Elmer H. Adams of Chicago reviewed the broad question of freight rates on lumber which has been so directly before the lumber trade of late. He expressed as his opinion that the immediate object of the railroads is to bring hardwood rates on an equal basis with pine rates, but that this is but the first step toward a general advance on all lumber rates. He stated that he believed that after a reasonable period the old argument would be advanced by the railroads that pine necessarily should carry a greater rate than hardwood on account of its different character and that this increase would in the course of a short time be demanded and the whole movement would result in an increase on all lumber commodities in keeping with the proportions which are now maintained.

Mr. Adams referred specifically to the recent tap-line decisions of

the Interstate Commerce Commission. As he expressed it, the condition which brought this to a final decision was the practice of division of rates between the common carriers and the tap lines. Under this arrangement the owner of any kind of an apology for a railroad—which in some instances were positively not common carriers in any sense of the word—could secure what really amounted to a rebate on shipments from their points for through shipment. In other words, the tap-line owner secured from the railroads a certain division of the rate, differing under various conditions, merely because he happened to own a few lines of possibly rusty trackage. He would not even have to haul the material himself as the through line usually did the hauling for him. This practice has been stopped by decision of the Interstate Commerce Commission, although it is still under consideration by the commerce court. No decision has been handed down. The point Mr. Adams desired to bring out, however, was that with this practice stopped the railroads would secure the entire freightage and would not be compelled to make a division with the tap lines. It seemed obvious, according to the speaker, that if the roads have been operating successfully under this division arrangement, they could certainly continue to operate successfully without the division of revenues and were not necessarily in any need of freight advances. He expressed himself as of the opinion that unless emphatic protest is entered against the advances they will become effective at the time specified.

Mr. Adams also asserted that it was his opinion that all lumbermen owning freight bills which came under the old revision methods were entitled to reparation on such shipments during the last two years to the extent of the division to the tap line. He stated further that inasmuch as Chicago uses a great deal of low-grade lumber, the Chicago market should not be further handicapped by an increase in freight rates which would tend to place the actual cost of placing this low-grade material on the market so near to the level of value received that it would not be worth while to take it from the woods.

After considerable discussion, the matter of rate advances was referred to the board of directors, who will consider the advisability of protesting against their going into effect.

Harvey S. Hayden then spoke for E. A. Thornton regarding milling in transit privileges on shipments from the Northwest, particularly on shingles. The most pertinent condition pointed out by Mr. Hayden was that under the present ruling shipments must necessarily take two local rates rather than a through rate and that in order to secure a through rate it is necessary to designate final terminal point. The agitation for change in this milling in transit arrangement will apply only to shingles.

President Brown introduced J. S. Kemper, manager of the recently organized Lumbermen's Mutual Casualty Company. This company has been organized entirely by Chicago lumbermen and as a result of

the recent liability law adopted by the Illinois legislature. Mr. Kemper outlined the unsatisfactory conditions prevailing under the old methods of casualty insurance and showed the loose methods in vogue in computing the cost of insurance. He made a comparison of the methods employed by the two types of insurance companies.

The Lumbermen's Mutual company will provide means for covering every contingency likely to present itself to local lumbermen embracing its benefits. The local trade will also have the satisfaction of dealing entirely with a concern made up of men whom they know. A further feature is that the expense of placing insurance will be approximately twenty-five per cent instead of sixty per cent, as figured by the stock companies. In view of the fact that the company will specialize entirely in woodworking risks, it is reasonable

to suppose that its legal and medical service will be much better adapted to the risks than the stock companies taking general risks. For the same reason, the inspectors employed by the company will be more competent in the matter of effecting methods of accident prevention.

The company already in five weeks of work has half a million dollars more than the law requires of subscriptions. The lumber fire mutuals' net cash surplus and assets are in better proportion to insurance than any stock fire insurance company in the United States.

Mr. Kemper entered a strong and emphatic plea to the lumbermen for their co-operation in a proposition which cannot but result to their mutual advantage.

Following Mr. Kemper's talk the meeting adjourned.

The Perfect Sales Organization

"What is a perfect sales organization," asks one of the writer's friends, "one that could be applied to a large wholesaler or a very large manufacturer operating several mills?"

In answering the question, let it be understood that the sales office is at one point and that all stock is to be sold through that office. If conducted otherwise, there will be a number of cars sold twice. It does not look well to have to return orders; customers lose faith after one or two experiences of this kind. Explicit instructions should be on every letterhead to the effect that "all communications should be addressed to such-and-such an address." Then there can be no mistakes of the kind referred to.

The sales manager himself is the organization. He is the vital factor. It is "sales that move the wheels of business" and he is directly responsible. He is the brains; he imparts energy to the sales force and keeps stock moving and sales ever on the increase. He is alive to every change of condition and quick to take advantage of new ideas and new systems that will better his force. It is the man himself. As one authority puts it, "It is not the size of the concern a man works for, but the size of the man himself."

"A good soldier makes a good officer." In these days of efficiency and competition a sales manager must be a man who has been through every phase of the business from the logging end to the collections and credits, and must understand the uses and needs of every remanufacturer of lumber. Therefore he must have served his time in the mill and on the road. These are not the only qualifications, but they are the most essential. Knowledge is the foundation.

He must be a leader and a judge of men. If salesmen realize that he has been in their position at some time or other, he knows the hardships, he understands conditions, they'll know he is not unreasonable in his demands. When he writes a letter to any of the "boys" it is not a cold-blooded proposition—it is a letter from one part of the unit to another. Not long ago a salesman passed a letter to the writer to read. It was from his sales manager. "Dear Jim," it started off, "that surely was a clean-up you made in the state last week. The best batch of orders you've sent in in a long time. Business conditions were rather favorable, of course, and I know it can't be done every week. But try hard, anyway. If you can keep up the good work, it's going to make a little 'fatter' check each week. Here's luck." That's a letter of heartfelt interest and the kind of appeal that produces results. Ever get a letter like that? Few of us have.

He never sends out a salesman without complete information. It was all very well in days of the past to get up a list of stock and prices and turn out the men to sell it. But it won't do now. At least it will not get results. A salesman must have detailed information as to the widths and the average percentage of lengths, condition of stock for dryness, something about the texture and any other points that create interest. This information must be kept right up-to-date. It involves a lot of detail work, but it pays in increased sales. A salesman can then deal in facts—not general points. It makes a better impression on the customer, too, for he

knows that he is buying lumber of a definite value.

When a salesman knows that there is interest in him and his work it puts added interest in his own efforts. This added interest does much to create enthusiasm. Enthusiasm goes a long way in success.

Naturally the sales manager is in charge of all answers to inquiries. There are two ways to answer an inquiry. One is a business getter and the other isn't. That's the difference. When you write a man, talk to him. Do away with all stereotyped phrases, such as "We are in receipt of your favor of the 11th inst., and, etc." He knows you got the letter or else you would not be answering. Get down to business. Talk. Get personal. Use abbreviated words; it's proper and wins favor. Just imagine that John Miller of the Miller Furniture Company is sitting opposite you and that you are telling him about the car of lumber he has inquired for. Imagine, if you will, that your stenographer is Mr. Miller. Talk to him. Use his name throughout the letter. That's the kind of letters that pull results. The formal letter for sales work was doomed a year or so ago. But few have caught onto it, however.

Advertising is part of organization. Lumbermen are just realizing that advertising and salesmanship go hand in hand and that one reinforces the other. No, not the old standing-card style of—here, now follow closely—you have some oak to sell. Now just imagine all the prospective buyers of oak standing before you for you to address them. Take them collectively; imagine them all as one person. Now talk about your oak. Tell how dry it is, describe it, suggest uses, bring in all your selling points. Then ask who is interested. Tell them to write or wire you! That's the way to write advertisements that sell goods. Now if others can do it (and they are doing it right now), you can. Why, right now you are probably running a standing card in some paper. People see the same thing year after year and there is nothing to attract them or to induce them to investigate further. But suppose you change your copy every issue. Have a new story about your products. Why, the readers will begin to look for your ads every time the paper comes out. You hear lots of men say, "No, I never read the ads in the trade papers; there's nothing new in there." That is—because for a great many years the trade newspaper had no real advertising. And some of the aforementioned still think there is none in them to this day. You know yourself that when you read a popular magazine you spend most of the time looking over the advertisements to see what is new. Well, that is just what the buyers of lumber are doing and especially now, when stock is scarce.

But to get back on the original topic. Sales efficiency doesn't stop at mere sales. Service is a new and all-important item today. Not only service in shipping, but service as to information, questions and adjustments. When an inquiry is received it should be answered immediately. If it cannot be answered right away, then it is up to you to write the inquirer, explaining why and also when he can expect to receive it. Most sales offices quote a price and then stop right there. If the order comes in, all right. If it doesn't, well—they wonder why it hasn't. The writer has always followed the plan

else—it's the silly bugbear of uphill, of the time and trouble it takes to introduce new ideas and methods. It is the only way one can find a logical explanation for lots of the backwardness about new ideas.

"Why, only the other day I was visiting at a plant that makes table slides. Here they were using log-run lumber, and cutting all of it up into small dimensions. I didn't measure the stock, but you can easily imagine the dimensions used for table slides. And that lumber had come in on a freight rate of twenty-one cents; which is not so bad as if it had been forty cents, but it was enough to make quite an item in the cost, when one considers that perhaps half the weight was cut out in reducing it to dimensions. Why might this not just as well have been done at the sawmill? It would have saved in the cost to the slide man, would have given the millman a chance to work in other material going to waste around the mill, and it would have required fewer cars for shipping so that it would have helped out at the car shortage end, too.

"Immediately afterward I was in a furniture factory where they were cutting gum lumber into dimensions. Some of it was thick stock in wide boards and was being cut into bedstead posts. There was an excuse for part of it, because it was being shaped on a band saw. But with a pattern of the bandsawed shape in the hands of the millman and a list of the other dimensions used regularly, quite a lot of this furniture stock could have been supplied in dimension form with the same elements of economy as attached to the table slide stock.

"I could go on for hours telling you of things of this kind, but what's the use? It's not here that you need the logic and arguing. What you need is to get rid of that silly bugbear of the 'uphill tug.' In the modern scheme of salesmanship things of this kind should be considered great sport, and they should be gone after with the same zest that the boys used in going up the hill to coast down—all but lazy Ned. Tell the folks that, and maybe they will see things in a new light—see how these innovations can help business instead of making it harder."

J. C. T.

Chicago Lumbermen's Meeting

The Lumbermen's Association of Chicago, which to outside appearances has been dormant during the summer and early fall months, sprang into renewed and increased activity on November 19, when it held its first monthly luncheon at the Hotel Sherman. About 200 members of the local trade, representing every branch of the lumber business, were present at the luncheon and the meeting which followed.

No comment is necessary on the character of the entertainment furnished by the entertainment committee. The excellent luncheon which it provided was followed immediately by an active business meeting, presided over by President F. L. Brown.

Mr. Brown opened the meeting by briefly outlining the growth of the association, telling of the expansion which had been made possible by the amalgamation of the various lumber interests in the city. He stated that the object of all association work should be along the lines of improvement and economies in the operation of the lumber business and in the extension of opportunities.

The first important question before the meeting was that of proposed increases in freight rates on hardwood from southern territory. All lines east and west of the river have already checked in advances to Ohio river crossings and western territory. The first petition of the roads will be to replace the special rate on box material of cottonwood and gum, as they claim that these woods should not enjoy a lower rate than the ordinary run of hardwoods. An advance placing them on a level with ordinary hardwood rates would mean an increase of two cents. It is further proposed to equalize the rates on hardwoods with the rates prevailing on pine from the southern territory. This would mean that the average advance on hardwood rates would be one cent; therefore this would necessarily be added to the other increase of two cents on box material, resulting in an increase of three cents on that grade of stuff. The railroads make their usual plea of insufficient funds and they have already definitely stated that they will check in these advances and let the Interstate Commerce Commission decide the question.

Elmer H. Adams of Chicago reviewed the broad question of freight rates on lumber which has been so directly before the lumber trade of late. He expressed as his opinion that the immediate object of the railroads is to bring hardwood rates on an equal basis with pine rates, but that this is but the first step toward a general advance on all lumber rates. He stated that he believed that after a reasonable period the old argument would be advanced by the railroads that pine necessarily should carry a greater rate than hardwood on account of its different character and that this increase would in the course of a short time be demanded and the whole movement would result in an increase on all lumber commodities in keeping with the proportions which are now maintained.

Mr. Adams referred specifically to the recent tap-line decisions of

the Interstate Commerce Commission. As he expressed it, the condition which brought this to a final decision was the practice of division of rates between the common carriers and the tap lines. Under this arrangement the owner of any kind of an apology for a railroad—which in some instances were positively not common carriers in any sense of the word—could secure what really amounted to a rebate on shipments from their points for through shipment. In other words, the tap-line owner secured from the railroads a certain division of the rate, differing under various conditions, merely because he happened to own a few lines of possibly rusty trackage. He would not even have to haul the material himself as the through line usually did the hauling for him. This practice has been stopped by decision of the Interstate Commerce Commission, although it is still under consideration by the commerce court. No decision has been handed down. The point Mr. Adams desired to bring out, however, was that with this practice stopped the railroads would secure the entire freightage and would not be compelled to make a division with the tap lines. It seemed obvious, according to the speaker, that if the roads have been operating successfully under this division arrangement, they could certainly continue to operate successfully without the division of revenues and were not necessarily in any need of freight advances. He expressed himself as of the opinion that unless emphatic protest is entered against the advances they will become effective at the time specified.

Mr. Adams also asserted that it was his opinion that all lumbermen owning freight bills which came under the old revision methods were entitled to reparation on such shipments during the last two years to the extent of the division to the tap line. He stated further that inasmuch as Chicago uses a great deal of low-grade lumber, the Chicago market should not be further handicapped by an increase in freight rates which would tend to place the actual cost of placing this low-grade material on the market so near to the level of value received that it would not be worth while to take it from the woods.

After considerable discussion, the matter of rate advances was referred to the board of directors, who will consider the advisability of protesting against their going into effect.

Harvey S. Hayden then spoke for E. A. Thornton regarding milling in transit privileges on shipments from the Northwest, particularly on shingles. The most pertinent condition pointed out by Mr. Hayden was that under the present ruling shipments must necessarily take two local rates rather than a through rate and that in order to secure a through rate it is necessary to designate final terminal point. The agitation for change in this milling in transit arrangement will apply only to shingles.

President Brown introduced J. S. Kemper, manager of the recently organized Lumbermen's Mutual Casualty Company. This company has been organized entirely by Chicago lumbermen and as a result of

the recent liability law adopted by the Illinois legislature. Mr. Kemper outlined the unsatisfactory conditions prevailing under the old methods of casualty insurance and showed the loose methods in vogue in computing the cost of insurance. He made a comparison of the methods employed by the two types of insurance companies.

The Lumbermen's Mutual company will provide means for covering every contingency likely to present itself to local lumbermen embracing its benefits. The local trade will also have the satisfaction of dealing entirely with a concern made up of men whom they know. A further feature is that the expense of placing insurance will be approximately twenty-five per cent instead of sixty per cent, as figured by the stock companies. In view of the fact that the company will specialize entirely in woodworking risks, it is reasonable

to suppose that its legal and medical service will be much better adapted to the risks than the stock companies taking general risks. For the same reason, the inspectors employed by the company will be more competent in the matter of effecting methods of accident prevention.

The company already in five weeks of work has half a million dollars more than the law requires of subscriptions. The lumber fire mutuals' net cash surplus and assets are in better proportion to insurance than any stock fire insurance company in the United States.

Mr. Kemper entered a strong and emphatic plea to the lumbermen for their co-operation in a proposition which cannot but result to their mutual advantage.

Following Mr. Kemper's talk the meeting adjourned.

The Perfect Sales Organization

"What is a perfect sales organization," asks one of the writer's friends, "one that could be applied to a large wholesaler or a very large manufacturer operating several mills?"

In answering the question, let it be understood that the sales office is at one point and that all stock is to be sold through that office. If conducted otherwise, there will be a number of cars sold twice. It does not look well to have to return orders; customers lose faith after one or two experiences of this kind. Explicit instructions should be on every letterhead to the effect that "all communications should be addressed to such-and-such an address." Then there can be no mistakes of the kind referred to.

The sales manager himself is the organization. He is the vital factor. It is "sales that move the wheels of business" and he is directly responsible. He is the brains; he imparts energy to the sales force and keeps stock moving and sales ever on the increase. He is alive to every change of condition and quick to take advantage of new ideas and new systems that will better his force. It is the man himself. As one authority puts it, "It is not the size of the concern a man works for, but the size of the man himself."

"A good soldier makes a good officer." In these days of efficiency and competition a sales manager must be a man who has been through every phase of the business from the logging end to the collections and credits, and must understand the uses and needs of every remanufacturer of lumber. Therefore he must have served his time in the mill and on the road. These are not the only qualifications, but they are the most essential. Knowledge is the foundation.

He must be a leader and a judge of men. If salesmen realize that he has been in their position at some time or other, he knows the hardships, he understands conditions, they'll know he is not unreasonable in his demands. When he writes a letter to any of the "boys" it is not a cold-blooded proposition—it is a letter from one part of the unit to another. Not long ago a salesman passed a letter to the writer to read. It was from his sales manager. "Dear Jim," it started off, "that surely was a clean-up you made in the state last week. The best batch of orders you've sent in in a long time. Business conditions were rather favorable, of course, and I know it can't be done every week. But try hard, anyway. If you can keep up the good work, it's going to make a little 'fatter' check each week. Here's luck." That's a letter of heartfelt interest and the kind of appeal that produces results. Ever get a letter like that? Few of us have.

He never sends out a salesman without complete information. It was all very well in days of the past to get up a list of stock and prices and turn out the men to sell it. But it won't do now. At least it will not get results. A salesman must have detailed information as to the widths and the average percentage of lengths, condition of stock for dryness, something about the texture and any other points that create interest. This information must be kept right up-to-date. It involves a lot of detail work, but it pays in increased sales. A salesman can then deal in facts—not general points. It makes a better impression on the customer, too, for he

knows that he is buying lumber of a definite value.

When a salesman knows that there is interest in him and his work it puts added interest in his own efforts. This added interest does much to create enthusiasm. Enthusiasm goes a long way in success.

Naturally the sales manager is in charge of all answers to inquiries. There are two ways to answer an inquiry. One is a business getter and the other isn't. That's the difference. When you write a man, talk to him. Do away with all stereotyped phrases, such as "We are in receipt of your favor of the 11th. inst., and, etc." He knows you got the letter or else you would not be answering. Get down to business. Talk. Get personal. Use abbreviated words; it's proper and wins favor. Just imagine that John Miller of the Miller Furniture Company is sitting opposite you and that you are telling him about the car of lumber he has inquired for. Imagine, if you will, that your stenographer is Mr. Miller. Talk to him. Use his name throughout the letter. That's the kind of letters that pull results. The formal letter for sales work was doomed a year or so ago. But few have caught onto it, however.

Advertising is part of organization. Lumbermen are just realizing that advertising and salesmanship go hand in hand and that one reinforces the other. No, not the old standing-card style of—here, now follow closely—you have some oak to sell. Now just imagine all the prospective buyers of oak standing before you for you to address them. Take them collectively; imagine them all as one person. Now talk about your oak. Tell how dry it is, describe it, suggest uses, bring in all your selling points. Then ask who is interested. Tell them to write or wire you! That's the way to write advertisements that sell goods. Now if others can do it (and they are doing it right now), you can. Why, right now you are probably running a standing card in some paper. People see the same thing year after year and there is nothing to attract them or to induce them to investigate further. But suppose you change your copy every issue. Have a new story about your products. Why, the readers will begin to look for your ads every time the paper comes out. You hear lots of men say, "No, I never read the ads in the trade papers; there's nothing new in there." That is because for a great many years the trade newspaper had no real advertising. And some of the aforementioned still think there is none in them to this day. You know yourself that when you read a popular magazine you spend most of the time looking over the advertisements to see what is new. Well, that is just what the buyers of lumber are doing and especially now, when stock is scarce.

But to get back on the original topic. Sales efficiency doesn't stop at mere sales. Service is a new and all-important item today. Not only service in shipping, but service as to information, questions and adjustments. When an inquiry is received it should be answered immediately. If it cannot be answered right away, then it is up to you to write the inquirer, explaining why and also when he can expect to receive it. Most sales offices quote a price and then stop right there. If the order comes in, all right. If it doesn't, well—they wonder why it hasn't. The writer has always followed the plan

of holding back one or two selling points as "clinchers," then following up by telegraph, telephone and personal visit (provided the inquirer is within reasonable distance; that there is a chance for the order and the profits would warrant the expense). He finds the telephone the most valuable asset in getting business. Some sales offices; in answer to an inquiry, say that their representative will call shortly. That is very nice, but who is that representative and when does he expect to get there? Yet some wonder why the orders are placed before they can get to that town. Answer inquiries quick! Answer specifically. Send a copy of the original quotation to your salesman on that route.

Your salesmen should have copies of every letter, order, etc., that relates to customers in their respective territories, even to collection letters. A salesman cannot give you proper representation unless he is fully informed at all times. In the same way, the salesman should report to the office any points about his customers that will be of interest to the sales manager. Whether the customer is busy, whether he runs his plant on a scientific basis, his habits and other little points that will help toward judging a man's character and the extent of the line of credit to him.

The sales manager is the life blood of the business. Some men in that capacity have doubled the sales of their concern. Others, and there are a good many today, are putting their company in a bad way for future business. If your sales are falling off, ask yourself the following questions: Is it because of business conditions? Have we the stock to sell? If you can answer those with satisfaction, then ask: Have I the right sales manager? Is he an organizer? A business getter? Does he play teamwork with the entire organization? Does he inspire enthusiasm, optimism and aggressiveness? Is he alive to my interests, the customers' interests and the betterment of all? Does he understand every detail of the business and keep thoroughly posted? If these questions are not answered and in keeping with the man himself, you had better replace him.

Yet, do you know that some concerns take a clerk and put him in that position? What does he know of salesmanship, credit extension, trade conditions, uses of stock and business management. You might

CROSS SECTION OF A WOOD SHOWING PITH FLECKS, NATURAL SIZE

as well put a station agent in the cab of an express train. Both are out of place and create chaos.

It is not meant from the foregoing that the sales manager is to be set up as an ideal and to get all the individual credit. The only credit a man of this type should get is that he is an organizer. As such the whole concern is a unit for one purpose. And his supreme duty is to keep the concern as a unit.

In closing the writer would like to repeat a statement of Roy Johnson that appeared in Printer's Ink a short while ago. He says, "The most perfect organization is that in which the purposes of the individual are submerged for the time being, in the purposes of the whole. Kipling's story of the 'Ship That Found Herself' is the best illustration of it that I know about. When this ship started on her maiden voyage the plates and the rivets and the beams each took credit for keeping her from sinking. Then the steering gear, the

engines and the steam each demanded acknowledgment that but for them she wouldn't get anywhere. By-and-by, after a severe pounding and wrenching in the heavy cross seas, they came to the understanding that not one of them could accomplish a thing without the rest and a new personality came into beginning, 'We are the ship.'"

An Italian "Stone Oak"

The accompanying illustration of an Italian "Stone Oak" shows the peculiar form which is given the tree by pruning. It is made to grow in the shape of a millstone, hence the name. The crown of this particular specimen is about one hundred and twenty feet across, and it is nicely balanced on its comparatively slender trunk. The species is probably *Quercus robur*, the tree known in commerce as English oak. Though the spread of its branches is wide, it is greatly exceeded by some of the live oaks of the southern states, or the valley oak of California. It is claimed that the oak shown in the picture is a thousand years old, but this figure should be accepted with caution.

PICTURESQUE ITALIAN "STONE OAK"

Pith Flecks in Wood

The small brown spots one sees so commonly on the cross sections of certain woods like gray, red, and paper birch and soft maple are known as pith flecks. On the surface of a board these pith flecks appear as narrow brown bands running lengthwise. Sometimes on the smooth end of a log they may be counted by the hundred, though often they are very irregularly distributed.

While pith flecks are found in a great many woods, it is to be noted that such woods are diffuse-porous, and rather fine-textured. In addition to the birches and maples just mentioned they occur frequently in willow, service-berry or shad-bush, mountain ash, alder, hawthorne, and certain smaller forms of wild cherry and plum trees. They are rarely found in sugar maple or in black or cherry birch.

These pith flecks are not natural to any wood. They are caused by the larvæ or small grubs of certain moths. The moth deposits its eggs in the bark of a tree and as soon as the larva hatches out it gets into the soft cambium layer between the wood and bark and works its way up and down the stem. The flat tunnel it leaves is soon filled up by the growth of other cells into it. These filling cells are not fibrous like the rest of the wood, but are more like pith and the formation that results shows up prominently, due to the darker walls of the cells.

The Forests of Louisiana

The Forest Service has issued bulletin 114, dealing with the forest resources of Louisiana. The study on which the report is based was made by J. F. Foster, chief of state co-operation, who spent several months in different parts of the state, collecting data, observing conditions, and compiling statistics. His figures ought to come nearer giving correct information than any report in the past. Mr. Foster estimates that the total timber stand in the state is 119,800,000,000 feet, of which 52,500,000,000 feet is longleaf pine, 15,200,000,000 feet shortleaf and loblolly, 15,700,000,000 feet cypress and 36,400,000,000 feet hardwoods.

Various phases of the timber situation are considered. Forest fires do immense injury to young growth though not much harm to mature

trees, because the fires are slow and seldom burn through the bark of old trunks. When the longleaf pines are boxed for turpentine they become liable to great injury by fire. Much of the burning of wood lands is done intentionally to improve the range for pasture. The waste is great in hardwood lumbering operations where long hauls render it unprofitable to take out any but the best logs. In the manufacture of crossies and staves the West runs very high.

Cut of Northern Manufacturers

Reports based on statements of fifty-four members of the Northern Hemlock and Hardwood Manufacturers' Association show that there was a decrease in the total cut, October, 1912, as compared with October, 1911, of 21 per cent, with an increase in total shipments

during the same period of 23 per cent. The year showed a falling off in the hardwood cut of 7 per cent and an increase in hardwood shipments of 32 per cent. The cut of hemlock during the year decreased by 29 per cent and hemlock shipments increased 19 per cent.

Total cut of hemlock lumber during October, 1912, was 25,199,000 feet, as against 35,489,000 feet October, 1911. The cut of ash October, 1912, was 226,000 feet, and for October, 1911, was 427,000 feet. The basswood cut this year was 1,725,000, as against 1,766,000 last year. The birch cuts were, respectively, 2,983,000 feet and 3,698,000. The elm cuts were 962,000 feet October, 1912, and 553,000 feet October, last year. Maple showed a decided falling off during the year, the cut decreasing from 4,237,000 to 2,868,000. Thus the total cut of hardwoods in October, 1912, was 806,000, and in October, 1911, it was 10,144,000.

The Mail Bag

Any reader of HARDWOOD RECORD desiring to communicate with any of the inquirers listed in this section can have the addresses on written request to the Mail Bag Department, HARDWOOD RECORD, 537 South Dearborn Street, Chicago, and referring to the number at the head of each letter and enclosing a self-addressed stamped envelope.

B 346—Measurement of Hardwood Flooring and Parquetry Strips

Baltimore, Md., Nov. 6.—Editor HARDWOOD RECORD: There are several points in connection with the manufacture of hardwood flooring on which we find some diversity of opinion. If possible, would like to have you straighten this matter out by giving us expert opinion.

FIRST: Kindly advise if there are any books that treat on the subject of hardwood flooring.

SECOND: In the grading of flooring, in what is termed clear plain sawed, does this permit of any pin worm holes, or must it be absolutely clear?

THIRD: In measuring parquetry strips, is the measurement the actual face, or is allowance made for saw kerf and jointing?

COMPANY.

The writer has been advised that the only book that has been written treating exhaustively on oak flooring is the work entitled "Oak Flooring" written by H. H. Gibson, and published by HARDWOOD RECORD in 1910. He is advised that of all this edition, which involved ten thousand copies, very few are in the market, but possibly a copy can be obtained from the Oak Flooring Bureau, Hammond building, Detroit, Mich., which purchased a large portion of the edition.

Second: Clear plain sawed oak flooring does not permit of any pin worm holes, and should have an absolutely clear face, but one-fourth of an inch bright sap is permissible.

Third: All thin square edge parquetry strips are measured and sold on face or net surface measure, with nothing added for waste. This, it is believed, is the universal method of measuring among manufacturers of parquetry flooring. In tongued and grooved hardwood flooring the usual practice is to make an allowance of three-quarters of an inch for saw kerf, jointing, tongue and groove, but a few manufacturers still make a practice of selling this product on face measure basis, naming an additional price to cover the waste.—EDITOR.

B 347—Seeks Locust or Osage Orange

Wyoming, N. J., Nov. 7.—Editor HARDWOOD RECORD: I am anxious to find a locality where a monthly supply of 125 cords of either yellow or black locust or osage orange (Bois d'Arc) timber can be obtained for some years. Will you kindly advise me of a source of supply?

The writer has been advised of a probable source of supply for both black locust and osage orange.—EDITOR.

B 348—Seeks Oak for Bending Purposes

San Francisco, Cal., Nov. 4.—Editor HARDWOOD RECORD: Will you kindly give us a source of supply for white oak suitable for bending purposes, Indiana stock preferred?

To the writer of the above letter several suggestions have been made as to a source of supply for the type of oak that can be handled satisfactorily under steaming for bending purposes, and a specific list of manufacturers given, who should be able to deliver oak of the desired quality.—EDITOR.

B 349—Comparative Qualities of Red Spruce and White Ash

Chicago, Ill., Nov. 5.—Editor HARDWOOD RECORD: Will you kindly supply us with an analysis of the comparative strength and stiffness of spruce and ash?

AEROPLANE COMPANY.

The above correspondent has been supplied with the following information pertaining to the comparative strength and stiffness of the two woods named, as follows:

WOOD.	BREAKING STRENGTH.
Red Spruce.....	7,470 pounds per sq. inch
White Ash.....	8,610 pounds per sq. inch
	STIFFNESS.
Red Spruce.....	1,099,870 pounds per sq. inch
White Ash.....	1,916,680 pounds per sq. inch
Weight of Spruce per cubic foot, air dry—	28.57 pounds.
Weight of Ash per cubic foot, air dry—	40.78 pounds.
Strength of Spruce per pound weight of wood—	261.5.
Strength of Ash per pound weight of wood—	211.13.
Elasticity of Spruce per pound weight of wood—	38,500.
Elasticity of Ash per pound weight of wood—	24,920.

Pound per pound, spruce is twenty-four per cent stronger and fifty-four per cent stiffer than ash.

These calculations are based on Hough's factors. He does not state in what region his specimens grew.—EDITOR.

B 530—Specifications for Cedar Fence Posts

Toledo, O., Nov. 5.—Editor HARDWOOD RECORD: Are there any published rules covering specifications for cedar fence posts?

HARDWOOD RECORD knows of no set of association rules that covers specifications on cedar fence posts, but Cobbs & Mitchell, Inc., Cadillac, Mich., one of the most careful concerns in the United States on grading of both lumber and other forest products, sells its posts on specifications which from their fairness would likely be acceptable and satisfactory to the trade at large.—EDITOR.

These specifications follow:

All posts to be round and 8 feet long. Posts may be 2 inches scant in length if otherwise satisfactory. All posts cut from live timber and properly peeled.

Tops to run from 3½ to 7 inches in diameter after peeling with not to exceed 15 per cent under 4 inch.

Posts to be reasonably straight and to contain no short crooks nor reverse curves. Both ends to be square trimmed.

Pipe rot is admissible and rot or hollow heart in the butt may be allowed under the following restrictions:

Posts with 4 inch tops admit butt rot up to 1 inch diameter, 5 inch tops admit butt rot 1½ inch diameter, 6 and 7 inch tops admit butt rot 2 inch diameter. Posts having tops less than 4 inches in diameter must have sound butts. No ring rot shall be allowed.

B 354—Information on Precious Woods

San Francisco, Cal., Nov. 10.—Editor HARDWOOD RECORD: Can you tell me where I can secure data upon the following matters: Amounts of lignum-vitae, mahogany, black walnut, prima vera, genezero and rosewood used annually in the eastern markets; the average prices that wholesalers pay for them in the logs, and the names of the principal dealers and consumers; also the same information for Spanish cedar. Can you give me information as to the relative demand for these woods and whether there is a scarcity of supply or well supplied market? How is most of the timber shipped to the Chicago market?

LUMBER COMPANY.

This inquirer has been informed that the costly foreign woods brought into this country are seldom listed separately but are grouped as cabinet woods. For this reason it is next to impossible to secure figures for separate woods. The world's market for costly woods is London. Large dealers in this country go or send there to make their purchases. Much mahogany and Spanish cedar, however, is shipped directly to the United States without passing through London.

The use of lignum-vitae is limited and its total import is so comparatively small that it

does not constitute a matter of record. A fair estimate of the mahogany import into the United States places it at about 40,000,000 feet annually, while black walnut is still produced in the United States to the extent of about 30,000,000 feet annually, about one-half of which is exported, largely to Germany, and the remainder employed in this country. Prima vera has a limited demand but does not constitute an item of enough importance to be separately listed in imports. Rosewood importation is comparatively unimportant although in the aggregate considerable finds its way into high-grade work.

Genezero is another name for white mahogany. It is cut in South America and Central America and has about the same commercial value as mahogany. It has been imported through the ports of San Francisco, New Orleans and New York for about thirty years.—EDITOR.

B 351—Wants Dimension Stock

Evansville, Ind., Nov. 16.—Editor HARDWOOD RECORD: We are in the market at all times for kiln-dried plain oak, birch and maple dimension stock in 1-inch and 1¼-inch thickness, both solid and glued-up. We should like very much to have you advise us, if possible, the names of manufacturers of this kind of stock.

COMPANY.

The above concern has been referred to several sources of supply for the material sought.—EDITOR.

B 352—Wants Market for Apple Wood

Van's Harbor, Mich., Nov. 14.—Editor HARDWOOD RECORD: We have about twenty cords of 4-foot apple wood and would greatly appreciate any information you can give us which would indicate a market for this stock.

This company has been supplied with a list of possible users of this wood.—EDITOR.

B 353—Report of National Hardwood Lumber Association for October

HARDWOOD RECORD is in receipt of the following letter showing the record of inspection

by the inspection bureau of the National Hardwood Lumber Association for October, 1912:

Chicago, Nov. 14.—Editor HARDWOOD RECORD: We enclose statement of the inspection bureau for the month of October, 1912, showing 19,489,975 feet inspected under the bonded certificate during the month, which is an increase of 4,343,500 feet over October, 1911. During the months of August, September and October, 1912, the total amount inspected is 58,171,517 feet, a gain over the same period of 1911 of 18,619,027 feet, or an average monthly gain of over 6,000,000 feet. This volume of work for October was accomplished with earnings of about \$300 in excess of the actual expense.

Since our letter of Oct. 15, seven new applications for membership have been received, bringing the total number of new members admitted since the convention to fifty-one.

At a meeting of the executive committee, held at the association headquarters on Oct. 24, it was decided to call a meeting of the inspection rules committee, shortly after Jan. 1, 1913, in order that the final recommendations of the inspection rules committee be placed in the hands of all members as far in advance of the sixteenth annual convention as possible. While Section 2, Article IX, in the by-laws, provides only for notice to the membership of proposed changes of not less than thirty days, it is the intention of the executive board to give members as much additional time as possible.

You are invited to submit any suggestions you may have to offer for the improvement of the service, and we trust the figures presented in this letter, which indicate general satisfaction with the inspection department, will meet your approval. F. F. FISH, Sec'y-Treas.

B 355—London Importer Wants Oak

London, Eng., Nov. 12.—Editor HARDWOOD RECORD: We are anxious to get into touch with manufacturers of oak lumber in West Virginia, Virginia, Kentucky, etc. Can you assist us in our quest? We are able to use considerable quantities in various grades of the article in question, and will appreciate any assistance which you can give us.

This firm is one of the leading lumber importers of London and has been supplied with the above information.—EDITOR.

meeting a vote was taken on several proposed amendments to the by-laws of the club.

The following amendments were carried by the necessary two-thirds vote:

A new section to article II, of the constitution, to be known as "section 2," to read:

Section 2—All persons eligible to membership in the Lumbermen's Club, as provided in the foregoing section, living outside the city of St. Louis, shall be eligible to membership in this club, with all the rights and privileges of other members, except voting. The dues for such auxiliary members shall be \$1 per month.

Section 2 of article IV of the constitution shall be amended to read as follows:

Regular business meetings of the club shall take place on the second Tuesdays of January, March, May, September and November; but the executive board shall have the power to change such time of regular meeting, or call a special meeting at any time at their discretion.

A new section to article I of the by-laws, to be known as "section 3," to read:

Section 3—All resolutions or other matters that do not come under the head of any standing committee shall be submitted in writing and referred to a special committee for action, which committee shall be appointed by the chair.

The matter of the meeting of the National Federation of Retail Merchants, to be held here Nov. 19-22, was brought up by Julius Seidel. He suggested that the club entertain them and made a motion, which was carried, that a fund be subscribed.

President Rolfe stated that P. F. Cook had asked the well-known attorney, Judge O'Neil Ryan, to welcome the National Federation of Retail Merchants to the city, and Mr. Cook was given a vote of thanks.

Two nominating committees, one selected by the chair and the other from the floor, were named to select candidates to be voted on for the various offices of the club at the election in December. Stephen J. Gavin, George R. Hogg and Thomas J. Noser were named by the chair, and R. S. Price, W. W. Dings and Julius Seidel from the floor.

Meeting of New York Association

The New York Lumber Trade Association held its annual meeting and election at its headquarters, 18 Broadway, on Nov. 13, there being about one hundred members in attendance. The meeting was preceded by the usual luncheon.

The date of this meeting marks the completion of the association's twenty-sixth year. During the year just closed it has continued its good work. All of the officers of last year were re-elected, as follows: Russell J. Perrine, president; John S. Steeves, first vice-president; Charles F. Fischer, treasurer. Four new trustees were elected, namely: C. V. Bossert, J. F. Murphy, Charles Crabbe, G. M. Stephen, Jr.

President Perrine resumed the chair after the election and gave a short talk of appreciation of the new honor. He stated that one reason for association work is to preserve the value and integrity of the lumber business by eliminating from the inside dishonest methods and conditions and from the outside oppression. He stated that associations have proved their usefulness and established their permanency and they have fairly demonstrated their necessity to the lumber business in the same capacity that the clearing house acts for the banking business.

A special committee reported a resolution in memory of the late James H. Pittinger, who was for many years prominent in the affairs of the association and at one time its president.

Of special interest to the meeting was an address by A. B. Crniksbank, counsel for the Eastern States Retail Lumber Dealers' Association in the suit which the government has brought against that organization and its affiliated organizations. The speaker reviewed the case in detail from beginning to date, and his remarks were listened to with close attention.

It was voted to hold the regular annual banquet, the date to be decided upon by a special committee in due course.

The report of the trustees showed in detail the workings of the credit system which has done

With the Chicago Club

A success from its inception, the Lumbermen's Club of Chicago has on every hand justified the claims of its organizers since its organization last spring. It was rather expected, as is the usual thing in a new organization of this sort, that the membership would fall off when the second assessment of dues was levied the first of September, but the actual results were decidedly to the contrary, the membership now being greater than at the end of the first six months of the club's life. To its able president, E. A. Lang, assisted by the energetic and competent house committee, is due entire credit for the maintenance of the actively interested spirit of the members.

An extensive program of entertainment has been provided, which will run through the winter. One of the last and most successful of the entertainments was "Dutch Night," given two weeks ago. At that affair the feature was the German band gotten up by some of the leading entertainers in the club.

The next function will be a semi-glee club affair, given by a choir of twenty male voices, to be designated as the Dearborn Chorus, which will

be made up entirely of members of the club. This affair will take place Saturday night, Nov. 30, and will undoubtedly achieve the same success as have previous functions.

On Saturday, Dec. 7, "Swedish Night" will be celebrated, at which Swedish songs and stories will be rendered.

E. E. Skeele, formerly chairman of the house committee, recently resigned from this office, A. C. Quixley being chosen in his place. Mr. Quixley has reorganized that committee, apportioning to various members different departments of the supervision of the club.

Meeting of St. Louis Lumbermen's Club

The November meeting and dinner of the Lumbermen's Club was held at the Planters' hotel on Nov. 12, President Rolfe presiding. After a few preliminary remarks on the important matters which were to come up later in the evening, the speaker of the evening, Rev. Martin S. Brennan, was introduced and gave an address on the wonders and mysteries of The Starry Heavens. The address was listened to with much attention.

The business part of the evening followed. After the reading of the minutes of the October

so much for the members. The trustees also reviewed the government case, and their report shows that the officers of the association are confident as to the result of the suit. The trustees' report stated that the suit has been pending in the United States District Court for the southern district of New York since May, 1911, and reviewed the proceedings in the suit.

The substance of the petition upon which the suit is based is that the retailers' association is an organization in restraint of trade. The combination complained of is the agreement or understanding among the dealers to prevent wholesalers from selling to their customers. According to the petition, every effort of the retail lumbermen to prevent wholesalers selling to their customers in any manner is illegal and the object of the petition is to obtain an injunction forbidding such action. There is no question of prices in the case and it has nothing to do with local arrangements existing in some of the associations, but is confined entirely to the question above stated.

The defendant association contends that there has been no combination of any sort except to distribute the official lists, which is merely information to which the subscribers have a right, and that even if there were such a combination it would not be in restraint of trade, but, on the contrary, would be a regulation of business for the benefit of trade.

Researches by the defendant's counsel have revealed many cases in which similar questions have come up for decision, and in the majority of the arguments the defendants have been upheld. Thus it would seem that, while there are conflicting decisions upon the subject, the weight of the authorities is in favor of the defendant association.

New Pittsburgh House

C. E. Breitwieser & Co. is a new hardwood concern which has opened up for business on the eighth floor of the Bessemer building. "Charlie" Breitwieser, head of the concern, is one of the best and most favorably known lumbermen in Pittsburgh, having been for many years identified with the May Lumber Company on the north side. The active manager of the office business will be A. G. Breitwieser, formerly of the Breitwieser Lumber Company, who has twenty-five years of lumber experience in Pittsburgh behind him. The firm has secured some splendid agencies for hardwood and cypress and will make a specialty of the latter stuff.

Tariff League Proposes Uniform Classification

On Nov. 14 the National Industrial Tariff League met at the Hotel La Salle, Chicago. One of the most important questions of discussion was an act which has been passed by the United States Senate, and is now before the House, which if enacted would give the Interstate Commerce Commission control over classification matters, and would very likely result in the adoption of uniform classification.

The classification committee of the league reported very unfavorably on this measure, and suggested to the members of the league that in place of supervision by the Interstate Commerce Commission, a committee of from nine to fifteen members be inaugurated with the idea of equalizing as far as possible the various classifications which are now in effect in the three territories—Western, Official and Southern. It was not recommended, however, that complete uniform classification be effected. Such a committee, according to the report, should be continuous and should be composed of railroad experts.

A discussion of the report of the legislative committee brought out some sentiment in favor of uniform classification, but decidedly the majority of the members were strongly opposed to it. The committee's report was finally adopted.

On motion, the legislative committee was instructed to do everything possible to prevent the

passage by the House of Representatives of the proposed bill, which is known as Senate Bill No. 6099.

The Interstate Commerce Commission has had authority to suspend classification, and has already suspended western classification No. 51, but under present laws it has no authority to consider the question of uniform classification.

Discussion on freight storage, export demurrage, demurrage rules and storage charges were also inaugurated.

An Old Friend in a New Guise

The trade needs no introduction to J. H. P. Smith, lately of the Hardwood Lumber Company of Cincinnati, O., as a personality; but there may be a few who have not heard of his latest move in the lumber business, which connects him with the great Babcock Lumber Company interests of Pittsburgh. On Nov. 12 Mr. Smith opened an office at 1656 McCormick building, Chicago, to handle the entire business of that big firm in the Chicago territory. Mr. Smith will cover southern Wisconsin and Michigan, northern Illinois, Ohio and Indiana. He has evidently com-

J. H. P. SMITH, IN CHARGE NEW CHICAGO OFFICE BABCOCK LUMBER COMPANY, PITTSBURGH, PA.

pletely recuperated from his recent serious illness and, judging from the rush with which he has been going after and securing business, there is no doubt of his fitness.

The Babcock Lumber Company is planning extensive increases in its operations. Its already immense sawmill at Tellico Plains, Tenn., will be doubled within a year, while at the Sewell, W. Va., mill work has already been started, which will result in doubling the capacity of that plant.

The coupling of J. H. P. Smith's personality and ability with the Babcock interests should certainly result to the great mutual advantage of both parties.

With the Manufacturers' Association

Under the progressive administration of President DeLaney of the Hardwood Manufacturers' Association of the United States, another department called the development bureau has been added. This new work will be in charge of Edwin E. Myers, who took charge Nov. 18. Mr. Myers is a trained newspaper man, having been with the Cincinnati Enquirer as financial editor for a number of years. Plans have been formulated by which through this department the association expects a much enlarged membership. H. C. Hoover, assistant secretary, is to be in charge of general office affairs, and Secretary Doster will spend practically all of his time on the

road. Mr. Doster has been on a trip visiting association mills in the Mississippi valley, and has met President DeLaney, who has also been in southern territory during the past week on association business, at New Orleans, where they attended the meeting of the Southern Cypress Manufacturers' Association, held there Nov. 20.

The association has just issued a report on conditions as reported by members covering transactions for the month of October. It is to be considered a supplement to "Market Conditions" issued in October and covering September conditions. The new report condensed is a verification of the last issue, as very few changes are noted regarding either prices or demand, all mills reporting either fair or good demand. In many cases list prices are being obtained. Reports show that very few concessions were made on any item, and a number of items are reported as selling at better prices than the figures in last report. Reports also show that the demand has been even better during October than was reported during the month of September, which was considered one of the best months this year. All reports indicate a continuation of present good business, and members are planning accordingly.

To Begin Operations in New England

The New England Hardwood Company of Wilmington, Vt., is just now preparing to begin operations as successor to the Deerfield Lumber Company. The authorized capital stock of the new company is reported as \$300,000, of which \$100,000 is said to be paid in. It is reported that the company has acquired a large amount of timber rights and purchases; it has bought the standing timber on a large tract of land of the Deerfield Lumber Company with its twenty-five years' right to remove.

The New England Hardwood Company is fitting up its mill with new machinery and is preparing to do a large volume of business. Herbert S. Janes is president and Gardner I. Jones secretary of the company.

Baltimore Exchange to Meet

The annual meeting of the Baltimore Lumber Exchange will be held on the evening of Dec. 2 at the Merchants' Club. Yearly reports will be read by officers and the various committees, and statements of the activities of the Exchange in the matter of inspection and other details will be submitted. Officers will be elected for the ensuing twelve months, the following ticket having been put up by the nominating committee:

PRESIDENT—Theodore Mottu of Theodore Mottu & Co., renominated.

VICE-PRESIDENT—Ridgeway Merryman.

TREASURER—Luther H. Gwaltney of the American Lumber Company, renominated.

MANAGING COMMITTEE—William M. Burgan; Joseph D. Virdin, Canton Lumber Company; George B. Hunting, N. W. James Lumber Company; George E. Waters, George E. Waters & Co.; John H. Geis, John H. Geis & Co.; John L. Alcock, John L. Alcock & Co.; Henry C. Matthews, Thos. Matthews & Son; Rufus K. Goodenow, Canton Box Company; Edward P. Gill, William D. Gill & Son; Parker D. Dix, Surry Lumber Company, and Lewis Dill, Lewis Dill & Co.

The managing committee elects the secretary later. This office has been filled during the past year by Mr. Gwaltney, and there is no reason to expect a change. There is also every reason to assume that the ticket named will be successful. After the business session a fine dinner will be served. The monthly meeting of the managing committee will take place in the afternoon on the same day at the rooms of the exchange on East Fayette street, when the work preliminary to the annual meeting will be cleared away. The past twelve months have been very prosperous, and the reports are expected to reflect the feeling of satisfaction entertained by the membership.

Meeting Philadelphia Lumbermen's Exchange

The regular monthly meeting of the Lumbermen's Exchange of Philadelphia was held on Nov. 7, William T. Betts, president, in the chair. On motion of Ralph Souder, chairman of the legislative committee, a resolution was passed stating that the Lumbermen's Exchange of Philadelphia is in full sympathy with the resolution adopted by the Atlantic Deeper Waterways Association at New London, Conn., on Sept. 6.

An invitation from the National Rivers & Harbors Congress was received, requesting that delegates be sent to the next convention, to be held at the New Willard hotel, Washington, D. C., Dec. 4, 5 and 6. President Betts appointed the same committee to represent the exchange which attended the convention last year.

Memphis Lumbermen Discuss Excessive Insurance Rates

The lumbermen of Memphis will continue to fight the present alleged excessive rates on lumber insurance. This subject has been discussed at all the recent meetings of the Lumbermen's Club of Memphis and at the last one, held Nov. 8, the following resolutions were unanimously adopted:

WHEREAS, We are informed that several neighboring states, through the activities of the insurers, obtained state rating boards and enjoyed material reduction in almost every case where rates were excessive and out of proportion to other communities, and

WHEREAS, From the best information obtainable, we find that our insurance rates are excessively high, in proportion to the losses in this territory and further believing that the experience on the insurance carried on lumber should be published so that equitable rates on lumber of this class could be quoted in accordance with this experience; be it

RESOLVED, That the meeting appoint a legislative committee to investigate and confer with a delegation of the state legislature, preparatory to passing a law that will equalize insurance rates on lumber districts with those north of the Ohio river.

These resolutions were offered by James E. Stark, who said that he learned enough to lead him to the belief that rates were out of all proportion to the risk involved. He asserted further that he believed it possible to secure lower rates and expressed the belief that it was very poor business for the lumbermen to continue to pay present rates if it were possible to obtain lower ones. C. W. Holmes thought it was possible to secure lower rates also, especially if the proper efforts were put forth to that end. Some of the other lumbermen joined in the discussion, and it was declared that rates were so high that, if something were not done, it would be impossible for some of the yard men here to continue operations. After adopting the foregoing resolutions the club added J. E. Stark and J. M. Pritchard to the law and insurance committee, which has charge of this matter. This committee is composed of J. V. Rusli, chairman, F. E. Gary, W. E. Nickey, J. R. Bailey and Sam Burgess.

The club, at the request of the Lumbermen's Club of Nashville, instructed the secretary to write to the National Wholesale Lumber Dealers' Association, requesting that it hold its next annual meeting at Nashville. This action was taken.

There was also some discussion of the question of exchange on checks sent in payment for lumber. This matter will probably be further considered at a later meeting. Nothing definite was done.

Philadelphia Lumbermen in Golf Tournament

Through the courtesy of William T. Betts, Horace A. Reeves, Jr., and Eugene W. Fry, who are members of the Philadelphia Cricket and Golf clubs, the Philadelphia Lumbermen's Golf Club held its last tournament and meeting for the season at the famous Philadelphia Golf Club grounds with its eighteen-hole course, St. Martins, Pa., Nov. 12. The weather was ideal for golf and the day's sport was particularly animated.

The golfers were divided into three foursomes, one threesome and two twosomes for the conquest, which began for new honors at 12:30 p. m.

The first foursome, composed of Frank Buck, president of the club, with Eugene W. Fry, vice-president, as partner, and Horace A. Reeves, Jr., and Ralph Souder, four of the crack-a-jack welders of the driver and the putter, laughingly contested for first place, and throughout the game there was considerable good natured bantering and teasing back and forth, which only added new zest to the game. The play resulted slightly in favor of the last two named in the net score, but Buck and Fry won out in best ball. An amusing incident which will be appreciated by all amateur golfers occurred in the game played by the popular vice-president of the Lumbermen's Exchange, Benjamin Stoker. Although only his second game among older and experienced players, Mr. Stoker, nothing daunted, pluckily plunged ahead, but alas, he had not anticipated one of those swear provoking positions which are so familiar to the golfer, and when the like ill luck befell him, unaware of the rules of counting, he began vigorously to swipe at the ball, and not until the caddy, who mentally kept count, in a loud voice called out seventeen, did he realize his mistake. However, no one enjoyed the joke more than did Mr. Stoker, who spared not himself in the least. Another laughable affair was a strictly good natured jest which William Meyer played upon his friend, B. S. Gill. Mr. Meyer introduced Mr. Gill, a new member, to the club, and wishing him to stand well in the limelight (?) with the golfers, had only a twenty handicap placed to his name, taking at the same time twenty-five for himself. Gill having only played two games in his life, naturally is a novice, while Mr. Meyer has been playing for three years, hence the absurdity of the handicap appears. Meyer won second prize, but all honor to Gill, for in spite of the figures so kindly placed, he nearly beat Meyer out, which quite turned the tables on his jocose friend.

At 6:45 p. m. a dinner to tickle the palate of an epicure was served, after which the meeting was called to order by President Buck. As Secretary Ben C. Currie was absent, the minutes of previous meeting were omitted. H. G. Parker was elected a member of the club at this meeting, which makes the required membership of fifty complete. The remainder of the evening was devoted to various social amusements. The prize winners were: John E. Howes, first prize, a beautiful cut glass fern dish; William Meyer, second prize, a large hammered brass jardiniere; J. E. Troth and Frank E. Schofield each won a handsome electric desk lamp for best ball. Mr. Schofield had second lowest net score, but according to the rules of the club, could not receive two prizes. The organization of the Philadelphia Lumbermen's Golf Club has proved one of the most successful social ventures in which the lumber trade has ever embarked. The enthusiasm evinced by the members and which increases at each meeting and tournament augurs well for its progress and interest for 1913.

St. Louis Furniture Board of Trade Presented with a Token

At the October meeting of the St. Louis Furniture Board of Trade, its secretary, Henry M. Holtgrewe, president of the Missouri Furniture Company, presented to that association a handsome gavel. The gavel is a remarkable piece of workmanship in every particular. The woods employed in making it are both foreign and domestic. The body is of rosewood, each end having a star inlaid with hard white maple. The barrel is profusely engraved, the upper band showing a forest, the felling of trees, logs, sawmill, lumber yard, seasoning and curing of lumber, a furniture factory and a retail furniture store. The lower band is engraved with allegorical figures representing shields, with exquisite fancy scrollwork. The rest of the gavel is decorated in an equally tasteful way. The engraving was done by A.

Buehner of St. Louis, and occupied over one hundred hours of his time.

To Mr. Holtgrewe the club is indebted not only for the gavel but for the entire design, which he thought out carefully and planned in consultation with the engraver. The gift is highly appreciated by his fellow members of the board, who passed motion providing a box for the preservation of the gavel.

Second Growth Forest

Dr. C. A. Schenck of the Biltmore Forest School, who is well known to many lumbermen in all parts of the United States, has issued a third and much enlarged edition of his book, "Biltmore Lectures on Silviculture," which was first published in 1905. This book, which in its new form contains over two hundred pages, deals primarily with the growing of timber. He calls his book "The Art of the Second Growth." It contains much information concerning the kinds of trees suited to various situations; and owners of cut-over lands, as well as those who may wish to plant timber on worn-out farm lands, will find much valuable information in this book.

More of the International Lumber and Development Company

The International Lumber and Development Company, whose mendacious methods have been exposed in the columns of the HARDWOOD RECORD at various times, will be tried before a Federal jury on Dec. 10, on the charge of using the mails to defraud. Three additional bills of indictment were returned by the Federal grand jury on Nov. 13 against Charles McMahan, John R. Markley, Isaiah B. Miller, Henry A. Merrill, William H. Armstrong, Sr., William H. Armstrong, Jr., and Albert G. Stewart, officers of the company, all of whom were indicted in June. This company was formed seven years ago and capitalized at \$6,500,000 for the purpose of developing plantation and other timber tracts in Mexico. In the charges the government alleges that the company sold more than \$6,000,000 worth of stock, on which \$1,500,000 was paid in dividends. It is further alleged that these dividends were paid out of the money received for stock instead of the earnings of the company, and that very little had been done by the concern in the way of developing the property.

Action Against Railroads

The National Lumber Exporters' Association intends to ask for a rehearing in the case against the Kansas City and Southern Railroad and other lines running into New Orleans in connection with the variation in the rate from points in Louisiana to New Orleans on lumber and logs intended for the domestic trade as compared with the rate on lumber and logs for the export business. The difference in the rate is now two cents per 100 pounds, and the petition of the National Lumber Exporters' Association to have the rate equalized was rejected by the Interstate Commerce Commission at Washington. Just what reason will be urged for a rehearing has not yet been determined, but the commission in its action overlooked several points, any one of which may be taken up. It is suggested that the exporters have always been willing and now pay for any extra switching that may be done if a shipment is diverted from its original destination, but they maintain that they are not on equality with the domestic trade, which gets the benefit of delivery at any point designated free of charge, though, of course, a shifting to another point entails a special tax. The exporters contend that their requirement to have export lumber and logs delivered at the docks of steamers which are to take the shipments is in effect like the delivery at any point designated by the domestic trade, and that the rates should be the same in both instances because there is no difference in the character of the service.

The annual meeting of the National Lumber Exporters' Association will take place Jan. 23 and 24, 1913, at Chattanooga.

Wood Exports and Imports for September

The monthly summary of this country's exports and imports for September, 1912, issued by the Department of Commerce and Labor, makes the following showing for wood and manufactures of wood:

Exports of American woods, September, 1911, \$7,112,470; September, 1912, \$8,008,104; re-export of foreign woods, including reeds and rattans, September, 1911, \$58,268; September, 1912, \$108,833; shipments to Alaska, September, 1911, \$30,754; September, 1912, \$48,846; shipments to Hawaii, September, 1911, \$133,756; September, 1912, \$206,492; shipments to Porto Rico, September, 1911, \$124,559; September, 1912, \$143,664; shipments to the Philippines, September, 1911, \$1,638,024; September, 1912, \$2,006,963; shipments to Tutuila and Guam, September, 1911, \$4; September, 1912, \$470.

Death of John K. Sowers

During the past week a gloom was cast over lumber circles when John K. Sowers, president of the Sowers-Leach Lumber Company, of Columbus, Ohio, was found dead in bed at his home, 33 S. Ohio avenue, with a bullet wound in his head. It was first surmised that Mr. Sowers had committed suicide, but the conditions of his life both financially and domestically would not warrant the committing of such an act.

Mr. Sowers was in Columbus practically all of his life, having come here from Champaign county. He entered the employ of the Cross Lumber Company in the capacity as bookkeeper when quite a young man. He continued in this for a short time and then decided to branch out for himself. He became associated with W. Smith in the lumber business under the name of the Sowers-Smith Lumber Company. He later became a partner with B. F. Leach, who was his partner at his death. He was forty-one years of age, and was widely known and well thought of in lumber circles.

Mr. Sowers is survived by a wife and a son, Joseph, and two brothers, Daniel and Emory, of this city. The funeral was held from the residence Nov. 18, and burial was made at New Philadelphia, the former home of his wife.

Will Obtain Credit Information

The board of managers of the Bureau of Information of the National Wholesale Lumber Dealers' Association, with headquarters at 66 Broadway, New York City, has just sent out a circular letter to the membership of that association with the object of providing a means whereby all the members of the credit department may be immediately advised of any accounts in which the members of the association should know they are interested. With this end in view, the members are requested to file with the managers a confidential list of their customers. The managers pledge themselves that this list will be seen by no one but themselves. The letter states that each day a large amount of information of various degrees of importance comes to the bureau covering slowness in making settlement, complaints of various causes, notices of removals and similar information which may not be of so general a character as to warrant its being sent out in the weekly report sheet, but which might very properly be submitted specially to all those members whom the bureau is advised may be interested. An instance in which information of the kind solicited would be of use is seen in the event that a single complaint comes in from one member only, while other members selling might be interested to get in touch with the complaining member and thus cooperate and keep fully advised as to the conditions of each individual case.

Few American Pianos in England

In 1911 the United Kingdom imported 18,508 pianos, valued at \$2,733,712. The point of interest to Americans is that few of the pianos were made in this country. Germany supplied most of the instruments. The manufacturers in that

country seem to have a firm hold upon lovers of music in Great Britain. It might naturally be asked why England does not make its own pianos, since it is a highly developed manufacturing country. To make 18,508 pianos in England would require 3,000 workmen one year. Their wages at \$9.73 a week would amount to \$1,459,950, or more than half of the total value of the finished product, and to compete with Germany is impossible. It would be interesting to know what the labor bill would be if those instruments were made in the United States.

A Big New England Hardwood Operation

The Ray Lumber Company of Brownville Junction, Me., has been busy for the last five months constructing a modern hardwood plant at that place. It is expected that the company will be ready to operate by the first of January. The plant will be the largest hardwood mill in New England. The Ray Lumber Company owns in fee about 80,000 acres of timberlands in the state of Maine. The company will manufacture bobbins, spool wood and squares, and any other product of hardwood for which it can contract in large quantities.

McGARVEY CLINE, RETIRING DIRECTOR
FOREST PRODUCTS LABORATORY

A Loss to the Forest Service

The Forest Service will lose one of its most valuable and valued members on Dec. 1, at which time McGarvey Cline, director of the Forest Products Laboratory at Madison, Wis., will sever his connection with that institution to go into consulting work. Mr. Cline has been head of the laboratory since its construction about three years ago, and the success with which he has handled the affairs of that institution, working under the difficulties with which he has had to put up, has made his value to the lumber trade and to the Forest Service exceptional.

Under a recent change in the policy of the Service, the branch of products will be eliminated and the laboratory will be put under the branch of silviculture.

Mr. Cline will be succeeded by H. F. Weiss, who has been assistant director and who has had charge of the branch of timber preservation. In this line Mr. Weiss is probably without an equal in the country, having made this work an exclusive study. Mr. Weiss comes in well equipped to handle the affairs of the institution, and undoubtedly will continue its successful operation.

Biltmore Doings for October

The monthly bulletin showing the doings of the Biltmore Forest School, issued at present from Darmstadt, Germany, has arrived. The

school had a successful voyage, leaving Hoboken, N. J., on the Holland-American Line. The usual lectures were carried on during the voyage.

The school first went to the Odenwald, a hill country situated between Rhine, Main and Neckar. The students stayed at Dr. Schenck's old home at Lindenfels, where they became acquainted with the different types of forests there prevailing, known as the state forests, communal forests, and the private or family forests. The students enjoyed a surprise in the general adoption of American white pine for afforestation on lands where other native species would not grow. The wonder arose as to whether the time would ever come when America would have to go to Germany for American white pine.

In studying the interesting operations around Lindenfels, the school was surprised to note that destructive methods of lumbering were employed entirely. However, within a year or two after cutting the areas are entirely replanted. A clean cut in this territory yields about \$300 net per acre, while \$15 per acre will cover the expense of complete reforestation.

It is distinctive of German forestry that while there is plenty of timber, not more than a limited quantity is cut annually, consequently the market is never overstocked and the price of timber is maintained at a high level. Stumpage in the woods fetches about the same price in Germany that the manufactured lumber brings in America delivered to the consumer.

Contrary to the prevalent idea, there is no one type of forestry employed in German forests. Each forester, whether employed by state, family, or municipality, has to face conditions of his own and must solve the problem placed upon him.

Since Oct. 1 the students have been established at Darmstadt, which will be their address during the entire winter.

Tests of California Redwood

The Forest Service has issued circular 193, dealing with the mechanical properties of California redwood. The bulletin is the work of A. L. Heim, engineer in forest products, at the Madison, Wis., laboratory. A summary of strength tests shows that in bending and compression at right angles to the grain, redwood is about four-fifths as strong as Douglas fir or southern longleaf pine, while in shearing strength and compression parallel with the grain, for clear, small specimens Douglas fir and redwood are practically equal. In some instances redwood rated above Douglas fir on specimens four inches square and sixteen inches long.

Convict Help in the Woods

A new method of solving the labor question and at the same time clear off considerable valuable land which otherwise would remain as cut-over land was introduced by the state authorities in the Adirondacks recently. Eighteen thousand acres of land adjacent to the state prison at Clinton, N. Y., will be cleared by convict help. The work will be started immediately. It is planned to first cut 2,000,000 feet of timber burned over in 1908 and in addition, to market about 8,700 cords of poplar pulp-wood. There are on this tract some 12,470,000 feet of standing live timber, 7,030,000 feet of green hardwood and considerable pulp and fuel wood. The tract will be re-forested along the lines already started. There have been 180,000 trees of white and Scotch pine set out already.

Acquittal for Louisiana Disturbers

A. L. Emerson, president, and seven members of the Brotherhood of Timber Workers, who had been on trial at Lake Charles, La., on a charge of murder in connection with the riots at Grabow, have been acquitted. The jury took but an hour to arrive at a decision. Immediately after the acquittal, Emerson resumed his work for the strengthening of the whole of the union in that territory. He has announced that he

will hold frequent meetings in various parts of the state. The lumber manufacturers are well prepared to combat the spread of the anarchistic and socialistic ideas of the organization, and are also guarding their properties carefully to prevent any repetition of the disaster at Grabow.

Wood By-Products

Excelsior has largely taken the place of straw for packing purposes; wood flour, ground from spruce or pine sawdust, is one of the ingredients of linoleum and dynamite, and ropes made of wood fiber are coming into use in packing and shipping furniture and other commodities. However, ropemaking from bark is no new thing. Negroes in the South used basswood bark and hickory withes for mule harness long ago; and the Indians of the Far Northwest make all sorts of ropes, cords, baskets, wallets, and blankets of the bark of cedar, while teamsters on the mountain roads of California often use cedar and redwood bark as a covering to keep down the dust.

A New Idea in Stumping Lands

A concern in Spokane, Wash., the Economy Stump Burner Company, is responsible for a new and ingenious idea to facilitate the destruction of stumps on cutover lands. The company manufactures a machine which bores a hole through the center of the stump down and another slanted hole from the surface of the ground into the stump, meeting the vertical hole. The first hole is supposed to furnish a draft. In the slanting hole an oil burner is inserted which is equipped with a wick so that the burning can be regulated as desired. The burner is fed with oil from a cup on the outside of the stump, the flow of oil being carefully regulated so that it works down into the roots. After ignition is complete the burner is removed. It is necessary to prevent the top of the stump from being ignited as long as possible so as to concentrate the heat in the lower part.

It is estimated that each one of these burners will use from one to three cents worth of oil in destroying each stump.

Hints on Fire Risks

The usual line of good advice and pertinent suggestions regarding the proper maintenance of woodworking plants so as to insure as low a fire insurance rate as possible, is contained in bulletin No. 59, just issued by the Lumbermen's (Underwriting Alliance of Kansas City).

In the bulletin it is shown that while adjustments have not been completed, the October losses for the company will total about \$19,500, making the aggregate to date for the year a little more than \$100,000. The bulletin takes the opportunity of congratulating its subscribers on the small loss ratio for the first ten months of the current year, it equaling less than one-fifth of the annual premium deposits.

Subscribers are warned against too great a feeling of security on account of favorable weather conditions, which would lead them to a laxity in cleaning methods or failure to supplement the watch service in times of special hazard.

It is noted that most of the fires during the month occurred between Oct. 21 and 28, at which time a dry, warm and windy spell prevailed pretty generally. A gratifying testimonial to the efficiency of fire-fighting facilities of the subscribers is seen in the early control of the conflagrations after their incipency.

Subscribers are warned against laxity in the inspection of steam jets in kilns. It has been the experience of the Alliance that probably twenty-five per cent of the kiln and fuel house fires resulted from the impossibility of working steam jets when it was necessary. The automatic jet is strongly recommended.

A hazard in commissaries was noted in several instances. In one case a pile of hose in a warehouse was discovered ablaze, and upon investigation after the fire was extinguished it was found

that a rat had made its nest in the coil of hose and had there accumulated quite a store of matches, which, of course, resulted in a blaze. It is suggested that the current supply of matches, as well as the reserve stock, should be kept in tightly closed receptacles which can not burn or be gnawed.

The hazard of smoking on plant premises has received very general attention, and fewer cases of violation of rules are now reported by field men. Careless use of matches is a menace, however, which is not being generally well safeguarded. It seems to be a frequent practice of workmen to carry matches loosely about their clothing, and in many instances these are dropped onto the floor, where they might very readily start trouble.

An unique fire took place in an Indiana building recently, at which time a small blaze was discovered in the eaves. A bird had picked up a lighted cigarette butt in the street and had flown with it to its nest in the building, from which a half dozen other nests were ignited.

Defective flues are responsible for a large proportion of fires at commissaries, offices, hotels and dwellings, and it is urged that all flues be built of brick from the ground up. A brick flue built on a bracket is by no means safe as the inevitable settling of the building, even though slight, is very apt to crack the mortar and leave openings for sparks to escape between the roof and ceiling. Bracket flues, however, can be safeguarded by thorough cleaning and by closing with mortar any cracks or openings from which sparks might be diverted.

Wooden Pavement for Belgrade

A side light on the war in the Balkans gives the information that the streets of Belgrade, capital of Serbia, are to be paved with wood. The streets were torn up when war was declared, and the workmen dropped their tools and took up the implements of war, leaving the streets impassable. It is reported that the labor of laying the wooden pavement will be performed by women.

Miscellaneous Notes

The Herrick Casket Company of Lyons, Mich., is closing out its business at that place.

The Thomas Furniture Company is incorporated at Pontiac, Mich., with a capital of \$25,000.

The West Virginia School Furniture Company has moved from Logan, W. Va., to Huntington, W. Va.

The Carter Furniture Company has been incorporated at Sanford, N. C., with \$125,000 capital.

A. H. Marsh has recently begun business at Asheville, N. C., as a wholesale hardwood lumber dealer.

The Southern Hardwood Lumber Company has been incorporated at Barton, Ark., with a capital of \$25,000.

The Hardwood Finish & Supply Company has been incorporated at Los Angeles, Cal., with a capital of \$50,000.

The Jay Manufacturing Company of Jay, Me., has been incorporated at \$10,000 for the manufacture of novelties.

The mills of the Woodstock Lumber Company of Woodstock, N. Y., were burned recently with a loss of \$100,000.

The Pioneer Furniture Company of Eau Claire, Wis., has increased its capital from \$75,000 to \$150,000.

The Ozark Lumber & Construction Company has been incorporated at Harrison, Ark., with a capital of \$25,000.

The Evansville Desk Company, Evansville, Ind., is planning an extensive addition to its already large factory.

The Hardwood Mill and Lumber Company of Lena, Ark., is about to establish a new plant for the manufacture of pencils.

The Wisconsin Chair Company, Port Washington, Wis., announces an increase in its capital stock from \$500,000 to \$700,000.

The Varner Lumber and Lumber Company has removed from Altheimer, Ark., to Geridge, Ark. The postoffice address is Stuttgart.

It is announced that the Standard Veneer and Door Company, Beallville, Ind., has planned to erect a \$12,000 addition to its plant.

The Boyce Lumber & Realty Company has purchased a tract for \$5,000 near Alfalfa, La. The company has a mill at this place.

The Muskegon Veneer Furniture Company has been incorporated at Muskegon, Mich., with a capital stock of from \$50,000 to \$100,000.

The Hughes Manufacturing & Lumber Company of Los Angeles, Cal., has sold out to the Southern California Hardwood & Manufacturing Company.

George R. Fuller and G. T. Johnson of Oakland, Me., will shortly erect a new plant at that place for the manufacture of broom handles and chair stock.

E. Stringer Boggess, wholesale lumber dealer of Clarksburg, W. Va., has filed schedules in bankruptcy, showing his assets to be \$13,591.61 and his liabilities \$49,504.05.

Fire of unknown origin burned to the ground the \$10,000 heading plant of the Moscow Co-oprage and Lumber Company at Moscow, Tenn. The plant was insured for \$4,000.

The Crescent Furniture Company of Evansville, Ind., will shortly begin the erection of a four-story furniture factory at that place which will cost in the neighborhood of \$18,000.

A dry-kiln and 325,000 feet of lumber belonging to the John L. Roper Lumber Company at Oriental, N. C., were recently destroyed by fire, and the green lumber shed was partly destroyed.

The plant of the American Panel & Lumber Company of Newport, Ark., has been purchased by a syndicate of Kalamazoo, Mich., men who will remodel it for the manufacture of veneers.

Fire which started in the finishing room of the Clio Manufacturing Company, maker of kitchen cabinets and tables at Clio, Mich., destroyed the entire plant. Loss, \$12,000; insurance, \$4,500.

The Alta Vista Consolidated Furniture Works have been taken over by a syndicate of residents of Alta Vista, Va. The plant will be remodeled and upon completion will be opened to operate as the Evans Company.

The Butler & Langerin Company has started business at Lansing, Mich., with \$25,000 capital.

The Nelson-Jacks Lumber Company was recently incorporated at Shreveport, La., with a capital stock of \$25,000.

The new addition to the plant of the Breece Manufacturing Company, manufacturer of panels at Portsmouth, O., will shortly be completed. This addition embodies a building of brick construction 50x100 feet in dimension.

Spontaneous combustion was declared to have been the cause of the fire which recently destroyed the Anacoco Lumber Mills at Grabow, La. Until recently this plant was the property of the Galloway Lumber Company and was the scene of the labor riot in which four men lost their lives.

In future the office of the Norfolk Lumber Company will be located at 245-9 East One Hundred Thirty-seventh street, Borough of the Bronx, New York, where the company has opened a warehouse.

J. R. Shoupe & Co. of Longview, Tex., will soon open a lumber yard at that place, where they will handle both pine and hardwood as wholesalers and retailers. They will also continue their wholesale hardwood business as heretofore.

It is with deep regret that the death of Joseph Gardner, head of the firm of Joseph Gardner &

Sons of this city is announced. Mr. Gardner's firm has extensive hardwood connections in the United States and in addition has a sawmill at Memphis. He was everywhere known as a keen businessman, with large philanthropic connections, and will be greatly missed.

The citizens of Stoutsville, Mo., have donated the old pottery grounds and \$500 in cash as a bonus in order to bring the handle factory from Huntsville to Stoutsville, where it will be closer to very large tracts of timber desirable for its special purposes.

The St. Francis Box and Lumber Company has recently been incorporated at St. Francis, Ark., with a capital stock of \$20,000, by Thomas S. Marshall, president; Ella M. Marshall, vice-president; Wood Howe, secretary, and C. E. Horne, treasurer.

The Henderson Desk Company of Henderson, Ky., will shortly move its operations to Evansville, Ind., where it will occupy the old plant of the New York Dimension Company, Florida and Vaughan streets. This company manufactures all lines of office desks.

The Oak Lumber Company, Jane Lew, W. Va., has recently been incorporated at \$10,000 by I. J. Davis of Syles, W. Va.; W. A. Jackson, D.

L. Bryan and B. M. Davisson of Jane Lew, W. Va.; and S. G. Jackson of Clarksburg, W. Va.

T. J. Spraggins & Son, Fenwick, Miss., have just contracted with the Honochitto Lumber Company of Bude, Miss., for the sale of all the hardwood timber on their lands, which is estimated at about 100,000,000 feet. The Honochitto company will do its own logging in connection with its pine operations.

The sawmill of the Texas Lumber & Manufacturing Company at Honey Island, Tex., has again resumed operations after a two weeks' idleness during which dry-kiln repairs were effected. It is planned that the manufacture of hardwood will have a more important place in the company's business in the future than it has in the past.

At a meeting on Nov. 4 of the creditors of the Loyd G. Harris Manufacturing Company, St. Louis, in the office of Walter D. Coles, referee in bankruptcy, George McElair, secretary of the Lumbermen's Exchange of St. Louis, was elected trustee of the company. The schedule filed by the company showed assets of \$24,217.98 and liabilities of \$71,358.58, of which \$32,200 is represented by secured claims consisting in the main of notes held by the Third National Bank for money advanced.

years. Mr. Zodikow was president of the corporation.

The Mershon, Eddy, Parker Company, Saginaw, Mich., announces the appointment of D. J. Lagatree as manager of the local sales office at 1 Madison avenue, to succeed the late H. W. Alexander, who died Oct. 19. Mr. Lagatree has been with the Mershon, Eddy, Parker Company for nineteen years, during which time he has served them in all capacities. His appointment as manager of the local office assures to the local customers of the trade the continuation of the efficient services which the company has always aimed to render.

William A. Bennett of the well-known Cincinnati hardwood house, Bennett & Witte, was a visitor in the Metropolitan district last week.

F. E. Parker of the Mershon, Eddy, Parker Company, Saginaw, Mich., who has been at the local office of the company, returned home last week.

Charles Milne of Milne Brothers Company, 18 Broadway, is out of the city for a short stay.

The Hill & Neumann Company has been incorporated in Jersey City, N. J., and succeeds the firm of Hill & Neumann, formed a few months ago. V. J. Hill, A. Wm. Hesz and Anthony Neumann are the incorporators.

George H. Storm, head of George H. Storm & Co., local hardwood flooring specialists, returned from a short hunting trip in the Adirondacks.

The local trade was shocked at the news of the death of Thomas T. Reid, who was connected with the lumber business of the Metropolitan district for many years. Mr. Reid was president of the Dunbar Box & Lumber Company. Death occurred Nov. 17. He was fifty-eight years old.

On Nov. 10, Mr. Reid was injured in an automobile accident while driving a new car in his home town, Montclair, N. J. Mr. Reid was trying out the new machine, and while descending a hill the machine crashed into an electric light pole and he was thrown out. His brother, Hugh Reid, hurried to the scene and took Mr. Reid to a doctor's office, where his injuries were found to be serious, though hope for his recovery was manifest. It was reported last week that Mr. Reid's condition was improving but slowly, and his many friends in business and private life felt that he would recover. On Nov. 17, while the family were at dinner, Mr. Reid left his bed and went to an upper porch of the home, where he committed suicide by shooting. Death was instantaneous.

Mr. Reid was a member of many clubs and was an enthusiast of golf. He was a member and ex-trustee of the New York Lumber Trade Association.

Hardwood News Notes

CHICAGO

Houghton & Gillespie is the style of a new firm incorporated in Chicago to do a wholesale lumber and veneer business. The concern is located at 1146 West Lake street and is capitalized at \$5,000.

Thomas McFarland, well known in hardwood circles as a wholesale handler of hardwood lumber at Cairo, Ill., was one of the recent visitors to the local trade.

J. C. Turner of the J. C. Turner Lumber Company, New York City, who is prominently connected with the cypress business, stopped off in Chicago on Nov. 11 en route to his cypress mills in the South.

Nils Ducholm of the Scott & Howe Lumber Company, Ironwood, Mich., was in this city on Nov. 13.

J. M. Wells, sales manager for the Sherrill-King Mill & Lumber Company, Inc., Paducah, Ky., and former sales manager for the Lucas Land & Lumber Company of that place, spent several days of last week in this city on a selling trip.

F. F. Fee, president and manager of the Fee-Crayton Hardwood Lumber Company of Dermott, Ark., was in town on Nov. 14 and 15. Mr. Fee is optimistic about the future of the lumber business.

S. L. Eastman of the S. L. Eastman Flooring Company of Saginaw, Mich., was in Chicago one day last week.

W. H. Shippen, president of the Shippen Brothers Lumber Company of Ellijay, Ga., stopped off in town Tuesday of last week.

F. R. Gadd, vice-president of the Wisconsin Lumber Company, Chicago, has been at the southern mills of that concern for several weeks.

S. P. Coppock of the S. P. Coppock & Sons Lumber Company, Fort Wayne, Ind., made a short visit to the local trade during the week.

C. B. Allen, manager of the veneer department of the Anderson-Tully Company, has been in town for several days and has been a frequent visitor to the Lumbermen's Club.

A. J. Cross of the Monadnock block, Chicago, who succeeded his father, the late C. L. Cross, is enjoying a three weeks' visit to the cypress mills in the South.

George Strable, vice-president and general manager of the Strable Manufacturing Company, manufacturer of hardwood lumber and maple flooring, Saginaw, Mich., was in the city on Thursday, the 14th.

W. E. Trainer of the Trainer Brothers Lumber Company of Chicago has just returned from a week's visit to the hardwood mills in the Memphis territory, where he reported considerable difficulty in securing any adequate amount of stock.

C. H. Barnaby of Green Castle, Ind., was in Chicago last week in conference with Secretary-Treasurer F. F. Fish of the National Hardwood Lumber Association, of which Mr. Barnaby is president.

Ralph McCracken of the Kentucky Lumber Company, Cincinnati, O., was in the city several days of last week.

The General Wood Turning Company has been incorporated at Chicago with a capital stock of \$750,000. This company will manufacture pedestals.

E. L. French of the Hollister-French Lumber Company was in Chicago on November 12.

The year book for 1912 of the National Wholesale Lumber Dealers' Association, 66 Broadway, New York City, is just off the press. The little volume is an abstract of about all that is worth knowing about this most excellent lumber organization, including lists of officers and committees and a roster of membership.

John Shafer, brother and associate of Cyrus C. Shafer of South Bend, Ind., was in town Wednesday of last week.

NEW YORK

Maurice J. Breen has been appointed receiver for the Hoboken Planing Mills Company, plant at 507 Newark avenue, Hoboken, N. J. The company gives its assets at \$35,000, and it is stated that its liabilities may reach \$50,000.

L. Zodikow, Inc., manufacturer of parlor suite frames, at 334 Stanton street, New York City, was petitioned into bankruptcy on Nov. 11. The company was incorporated in January, 1912, with a capital stock of \$10,000, and succeeded Ludwig Zodikow, who had been in business for many

BUFFALO

A new hardwood firm has been organized in this city and incorporated for \$50,000. The name is Miller, Sturm & Miller, and the members are George B. and William P. Miller and Elmer J. Sturm, all of whom have been connected with the hardwood trade here for a dozen years or more. Mr. Sturm and W. P. Miller have been with the former Empire Lumber Company and then with the late F. W. Vetter, and G. B. Miller has been with the O. E. Yeager office. On Dec. 1 the Vetter yard will be taken over by these young men, who will add largely to the present stocks. They have a large acquaintance both with lumbermen and lumber buyers. Their friends in the trade and among consumers wish them much success.

The Wall brothers have formed a new company to take over their holdings of British Columbia timberlands, in which they have become interested to quite an extent, having recently made new purchases there. They have formed the Seneca Timber & Lumber Company, with an authorized capital of \$100,000. The directors are J. B., T. H. and W. M. Wall.

President W. L. Sykes of the Emporium Lum-

ber Company was one of the attendants and also a speaker at the Watertown, N. Y., meeting of the Empire State Forest Products Association.

T. H. Wall has been on a hunting trip with other Nimrods to the far north of Ontario, Canada, and reports that the game is ample enough to pay for a vacation tour to that part of the world.

B. E. Darling of Blakeslee, Perrin & Darling, has lately been making a visit to a number of southern mills, looking after shipments of lumber purchased there some weeks ago.

The yard of O. E. Yeager is getting in some good-sized stocks of oak and cypress. There is no indication of any fall in hardwood prices and trade is holding up well this month.

J. N. Scatterd is very busy getting ready for the further proceedings of the Terminal Commission, expecting that the decision on its constitutionality will be decided in its favor.

R. D. McLean has returned from a business trip to New York. The McLean yard has been adding plain and quartered oak and is now carrying a stock of good proportions for the winter.

F. M. Sullivan has been spending some spare time hunting this month and has found some good territory in western New York. He is receiving some one- and two-inch oak among other hardwoods.

A. J. Elias is one of the five delegates from the Chamber of Commerce to attend the Rivers & Harbor Congress to be held in Washington from Dec. 4 to 6 to discuss general waterways improvement.

Anthony Miller has been receiving supplies of oak and other hardwoods lately, and states that the hardwood trade, while not very strong, is still quite satisfactory this month.

The yard of H. H. Salmon & Co. is taking in a large amount of Michigan hardwoods by lake and will receive a barge from Lake Superior next week with 1,500,000 feet more.

PHILADELPHIA

The Baldwin Locomotive Works is being rushed to the limit. An order was recently received from the Chicago, St. Paul, Minneapolis & Omaha Railroad for twenty-nine switching locomotives, and scattering orders for four large locomotives. An order was also booked for fifty consolidated locomotives for the Boston & Maine Railroad, delivery to be made in the early spring of 1913. The British steamship Shimosa, for Japan, will include in its cargo eighteen locomotives for the Imperial Railway of Japan, built by the Baldwin works. This concern is building a new locomotive for timber hauling, the details of which will undoubtedly be of interest to the lumber manufacturers and will be given out in the near future.

Arthur W. Kent, secretary and treasurer of the J. S. Kent Company, recently returned from a trip through the southern lumber camps, where he succeeded in making some desirable deals. He reports increased trading and looks for a good winter business. Thomas B. Hoffman of the hardwood department is scouring the South for stock.

Howard B. France, secretary and treasurer of the Monarch Lumber Company and of the Had-dock-France Lumber Company, visited the mill at Sterling, N. C., and reports the plant rushed to the extreme. If the winter keeps open continued good trading is predicted.

Daniel B. Curll is on a trip to North Carolina and Tennessee, closing some desirable deals. He has just made a contract for 6,000,000 feet hemlock, 500,000 feet oak, 500,000 feet chestnut and considerable poplar.

F. X. Diebold, president of the Forest Lumber Company, reports undiminished activity. Orders are accumulating, and the mill at Konnarock, Va., is worked to the limit getting out stuff. The company recently engaged R. W. Watts, formerly with Beecher & Barr, as salesman to cover the Cumberland valley district.

The J. A. Finley Lumber Company, wholesaler, 342 Land Title building, was chartered under Delaware laws Nov. 12. Its capital is \$50,000. J. A. Finley, who was formerly of the Harding-Finley Lumber Company, and prior to that with Owen M. Bruner Company, and one of the best-known young lumbermen in the East, is president; W. L. Eliason, a builder of this city, secretary, and L. L. Maloney, a Wilmington, Del., banker, treasurer. They will do a wholesale business handling long and shortleaf Southern pine and maple flooring.

J. Randall Williams, Jr., of J. Randall Williams & Co., says they are getting excellent business. The uncontrollable car shortage is the only trouble they have to contend with.

W. H. Wyatt of the Jackson-Wyatt Lumber Company says he has no complaint to make in the way of business. The interrupted shipping is the only difficulty. W. A. Jackson is in the South looking after some delayed orders and hunting a new supply of stock.

The Maryland Land and Timber Company, Wilmington, Del., was chartered under Delaware laws, Nov. 12; capital is \$100,000.

PITTSBURGH

The Pittsburgh Retail Lumber Dealers' Association banqueted the Pittsburgh Wholesale Lumber Dealers' Association at a quarterly joint meeting at the Hotel Henry, Nov. 12. President E. M. Diebold of the retailers was toastmaster. Addresses were made by L. L. Barth of the Edward Hines Lumber Company of Chicago and Walter Faulkner of Pittsburgh.

Louis Germain, Jr., president of the Germain Company, has taken on a new partner in the person of Dorothy Dill of Neville street, Pittsburgh. The wedding occurred in St. Paul's Cathedral Nov. 14, and the couple will reside, after a tour of the eastern cities, in the Albine apartments in Ellsworth avenue.

The American Lumber & Manufacturing Company has decided that trade is about as good in hardwoods as it ever is in this district. Manager Brown of the hardwood department returned a few days ago from a long trip through the Kentucky and West Virginia mill districts and found stocks very small and prices very firm.

Joseph J. Linehan believes that purchasing agents of industrial corporations and especially of hardwood manufacturing concerns, will, as a rule, buy much more lumber for 1913 than they did for 1912. They are already putting in bigger requisitions, and, furthermore, do not seem to hesitate about the slight advance in prices, he says.

J. N. Woollett, president of the Aberdeen Lumber Company, is unloading a big barge of gum and cottonwood at Joppa, Ill., for distribution throughout the middle states. He will shortly load another barge on the lower Mississippi. He reports that there is some dropping off in the trade with wagon makers, but that the box trade is unusually good.

F. R. Babcock of the Babcock Lumber Company has no fear of any break in business as the result of the election. He believes that the Democrats will move slowly and that business will go on very much as if no election had been held.

The Thomas E. Coale Lumber Company was very busy last week and finds trade in general fair to good, with collections better. The Pittsburgh local market is not contributing its share of the business, however.

The Mutual Lumber Company announces that business is good and the great trouble is to get lumber moved after it has been bought and sold. Railroads are buying very largely the past month.

The Kendall Lumber Company is very busy at all its mills. There is no lack of enthusiasm among its sales or office force, for they feel con-

fidant that present business conditions will continue for a long time.

Pittsburgh building fell off considerably in October, compared with October, 1911. There is quite a little house building in the outlying districts, but the city itself is doing very little building. Retailers report that the falling off in the home building has been definitely responsible for the apathy in their trade the past year.

The Balsey & McCracken Company is getting things nicely organized at its office in the new First National Bank building, and I. F. Balsey is feeling exceptionally happy over the big order for chestnut which came his way recently. The concern has some fine hardwood connections that will help it out considerably in the Pittsburgh market.

BOSTON

The Pope Lumber Company, Beverly, Mass., has been making extensive improvements to its wharf property in that city. When these improvements are completed the company will be better able to handle its arrivals of lumber.

Robinson Bramley, a woodworker of Lawrence, Mass., has filed a voluntary petition in bankruptcy. The assets and liabilities are small.

The Schmick Handle & Lumber Company has been organized at Waterville, Me., with a capital stock of \$100,000. The president is Wilson E. Schmick of Hamburg, Pa., and the treasurer is Charles J. Tobias of the same place.

The Wilson Lumber Company, Portland, Me., has recently finished unloading a cargo of cypress amounting to over 600,000 feet. This is one of the largest cargoes of cypress ever received at Portland.

William G. Barker and Dean C. French of Boston are among the directors named in the list of officers of the recently organized Bingham Lumber Company of Bingham, Me.

The Interstate Commerce Commission will hold a hearing in Boston Nov. 25 on the subject of weighing freight. This subject was the chief topic of discussion at the last meeting of the Massachusetts Wholesale Lumber Dealers' Association. At this meeting a committee was appointed consisting of Frank W. Lawrence, Charles S. Wentworth and Wendell M. Weston. This committee will present the claims of the lumber trade to the Interstate Commerce Commissioner. Several lumber dealers in Boston have important facts to put before the commission on this subject.

BALTIMORE

The R. K. Hartwell Company, with offices in the Keyser Building, Calvert and German streets, went into the hands of a receiver on Nov. 14. Richard K. Hartwell, the president, being appointed by the court to act in this capacity. Mr. Hartwell bonded in the sum of \$5,000. He was appointed on his own application, in which he contended that while the books of the company showed assets of about \$46,000 and liabilities of approximately \$38,000, the company was insolvent and the appointment of a receiver necessary for the protection of creditors. The company in its answer admitted the truth of the allegations, and the appointment of Mr. Hartwell followed. The corporation was formed more than a year ago to succeed R. K. Hartwell & Co. as a firm. It expanded, establishing a hardwood department.

Another concern in trouble is the Mount Winans Mill and Lumber Company, which conducted a yard at Mount Winans, just outside of the southwestern city limits. Application for the appointment of a receiver was made in the circuit court here on Nov. 15 by Thomas A. Charshee & Bro. The complainants declare they are creditors to the extent of \$169,04, and they allege further that the defendants owe other

debts and are insolvent. The Mount Winans company is said to be owned by Mr. Hartwell.

Articles of incorporation were filed at Dover, Del., on Nov. 12, for the Maryland Timber Company, which purposes to acquire timberlands and to develop coal deposits and other minerals. The capital stock is fixed at \$100,000, and the incorporators are H. Ralph Ewart, Clarence J. Jacobs and Harry W. Davis, all of Wilmington, Del.

Another new corporation is that of The H. B. Herring Company, which has just taken place, with H. B. Herring as president, and a capital stock of \$5,000. The new corporation has an office at 603 Phoenix building, German street, near Charles. Mr. Herring was for a time connected with the R. K. Hartwell Company. His company will handle hardwoods, as well as yellow pine and cypress.

George W. Eisenhauer of the Eisenhauer-Mac-Lea Company, who was brought home from Colorado quite ill, has improved considerably, and it is thought that he will be able to get out in a short time.

One of the visiting lumbermen here last week was John H. Burrell of John H. Burrell & Co., Liverpool, England. He was on his way down South from Canada, having landed at Montreal.

Another caller was C. F. Treadway of Sanford & Treadway, New Haven, Conn., who stopped in Baltimore on his way back from the South. Mr. Treadway stated that he had found mills everywhere short of stocks and oversold on practically all items in hardwoods, with the range of prices tending upward.

COLUMBUS

Innis Creighton, general sales manager for the W. M. Ritter Lumber Company (limited) of London, left for Liverpool, England, Nov. 16 after a visit to the Columbus office. He reports conditions in that country good in every respect.

L. B. Schneider, sales manager of John R. Gobey & Co., reports a good trade in all varieties of hardwoods. He says prices are ruling firm and the car shortage is slightly improved, and that it is about all that can be expected at this time of the year.

F. B. Pryor of the W. M. Ritter Lumber Company says that the volume of trade is fair in all grades of hardwoods. He says the stocks are broken but prices are holding up well. The trade between the factories and the yards are about on an equal. He says he looks for a continuation of the good business.

M. A. Hayward reports an active demand for all grades of hardwoods with prices ruling firm. He says the oak trade especially is progressive.

W. L. Whitacre of the Whitacre Lumber Company says that trade in hardwoods is not inclined to advance, owing to the cold weather setting in. Dealers are a little optimistic about stocking up during the winter and since the high prices are being well maintained.

R. W. Horton of the W. M. Ritter Lumber Company is in the East on a business trip.

A. C. Davis of the A. C. Davis Company says trade is good in all grades of hardwoods and that prices are holding up unusually well for the time of the year. He says the car shortage is not being felt so much.

CINCINNATI

U. A. Carrier, dealing mostly in cypress and yellow pine, says that he has been doing a splendid business, finding more difficulty in getting prompt shipments than selling stock. During the last couple of weeks shipments have been coming in faster and better service from the mills from now on is looked for.

Duhlmeier Brothers are doing a big business and are handling more red and sap gum this year than ever before. Will Duhlmeier is a firm believer in the future of red gum for interior finish and is pushing the wood hard for that purpose.

He claims that a number of architects whom he has requested to try out the wood have done so with more than satisfactory results in every case.

Ed Bradley of the E. C. Bradley Lumber Company states that his firm is doing a bigger volume of business than ever before. After going over his territory and finding business booming in all branches of the industry, he does not hesitate to say that while this has been a big year for the lumber business, the coming season will far outreach it. All factories that he came in contact with are booked ahead well into next season.

Weaver Haas of the W. E. Hessler Lumber Company has just returned from a trip to New Orleans, where he closed a contract for the output of a big band mill in that vicinity for the next six months.

Charles McCall, manager of the Wm. H. Perry Lumber Company, states that his company is getting its share of the excellent business that is to be had by any one in a position to furnish quick shipments. The company has had excellent shipping facilities all season. It is doing a big business in red gum.

Harry R. Browne, often referred to as the yellow pine man of the hardwood club, says that it has been several years since business has been on such a firm footing as at the present time. While stocks have been hard to get all summer, he has been able to supply the trade in most cases, and while he has had to let a great deal of business pass by on account of the scarcity of yellow pine, he looks for a very healthy season to follow the present one.

TOLEDO

The Booth Column Company has never been as busy as right now. Although working to its capacity, the concern is now three months behind in its orders and new ones flooding the office with each mail. This concern was fortunate in having purchased and had delivered at its plant early in the spring a heavy stock of lumber. It has been using up this stock and still has a large amount on hand, thus saving the firm all difficulties over the car shortage situation. Orders have been especially heavy from the East and South, and the tendency is toward larger columns for exterior use. The Booth company has now on hand an extensive order for twenty-four-inch columns. Prices are a little stronger, the local company securing a fifteen per cent advance on special work. The company has recently been shipping quite a lot of its product to Cuba.

A meeting will be held in Toledo Nov. 20, which will be attended by representatives of the lumber and building interests of the state, at which time a complete draft of a mechanics' lien law, designed to be satisfactory to all interests, will be prepared. Building association representatives will be invited to attend the meeting. Heretofore the building associations have manifested an unfriendly attitude towards a mechanics' lien law.

The Dayton Lumber and Manufacturing Company recently purchased a new lumber yard located at May and Clinton streets, Dayton, O. This is one of three yards which the lumber company has leased for ten years and it was decided to purchase.

INDIANAPOLIS

The Charles H. Campbell Furniture Company of Shelbyville has been taken over by E. M. Porter of that city and L. J. and Robert Hackney of Cincinnati.

The Hoosier Veneer Company and the Wabash Veneer Company, both located at Massachusetts avenue and Adams street, are completing extensive improvements to their plants.

With an authorized capitalization of \$10,000, the American Pipe Organ Company has been organized and incorporated at Anderson to manu-

facture pipe organs. Horace W. Sumner, Frank East, Frank Reynolds, Philip B. O'Neil, Michael W. Staub and Edward A. Wellens are interested in the company.

The property of Ford & Johnson, furniture manufacturers, with a plant at the state prison, Michigan City, has been ordered sold by the Federal Court on December 16. The sale will also include the company's real and other property in Chicago.

A. A. Barnes, president of the Udell Works, and other local business men have organized the Union Land and Timber Company, which will deal in timberlands. The company has been incorporated with an authorized capitalization of \$100,000.

James W. Clark, trustee for the Foster Lumber Company, has brought suit against the former directors of the company, asking judgment in the sum of \$50,000. It is alleged the directors used funds of the company for private use.

A meeting was held here Nov. 12 to discuss organizing a national association of kitchen cabinet manufacturers. Another meeting will be held here soon to perfect the organization. The meeting was called by L. D. Waters of the Hastings Cabinet Company, Hastings, Mich. A number of Indiana and Michigan manufacturers were present.

MEMPHIS

R. J. Darnell, R. J. Wiggs, Elliott Lang, R. H. Darnell and H. H. Darnell are the incorporators of the Batesville Gravel & Material Company, which is domiciled at Batesville, Miss. The capital stock is \$5,000. R. J. Darnell, Inc., is building a railroad running out from the main line of the Illinois Central from Batesville for the purpose of developing its timberland holdings in that section. The road is known as the Batesville Southwestern, and the new company has been formed in connection with the construction of this line.

An unusual development in the Memphis lumber market has been the receipt of a consignment of African mahogany logs by the Memphis Veneer & Lumber Company. There are about 100,000 feet of timber in the consignment, and this will be cut into lumber and veneers. James E. Stark, who is one of the officials of the Memphis Veneer & Lumber Company, says that this is the beginning of the manufacture of African mahogany in Memphis, and that other shipments will follow in rapid succession.

James E. Stark & Co. have recently bought considerable quantities of timber in Mississippi, which is being brought to Memphis, where it is being cut into lumber at several of the customs mills. Among the firms which are doing the sawing are McCollum Brothers, Moffat, Bowman & Rush, and Gibson & Whitaker. Mr. Stark has recently materially increased his yarding facilities in North Memphis, and as fast as the logs are converted into lumber in South Memphis the latter is being sent over the belt line to the yards of the firm in North Memphis. Mr. Stark believes that there will be a large business this winter, and he is making his plans accordingly.

The Missouri & North Arkansas will begin work shortly on the new shops which will be built at Harrison, Ark., at a cost of \$125,000. It is proposed to have these in operation by May or June of next year.

NASHVILLE

The Bonner Furniture Company is putting its new factory, at Charlotte avenue and Tennessee Central Railroad, into operation. The company has been delayed in starting operation on account of machinery shipments being slow arriving. The company operates by electrical power, having separate motors for each machine. A

substantial line of household furniture will be turned out.

Mr. Bigsby of the Bigsby Manufacturing Company, Decatur, Ala., one of the large manufacturers of hardwoods of north Alabama, was in Nashville recently. Mr. Bigsby is very optimistic in regard to the future of hardwoods, and said that high values were being realized by the Decatur trade.

The North Fork Lumber and Timber Company is the name of a new firm that has been organized at Jackson, Ky., composed of S. J. Young and W. L. Eversole. The company will operate mills at Yerkes, Ky. S. J. Young will be active manager.

The Louisville & Nashville Railroad is taking steps to build a branch from Iron City, Lawrence county, to Martin's Mills, Wayne county, a distance of about thirty miles. The branch is being built to reach valuable timberlands. Wayne county has some of the finest undeveloped hardwood forests in Tennessee.

The record of the building inspector of Nashville shows permits for improvements in the city for the first ten months of 1912 amounting to \$1,005,466, against \$1,113,754 for the corresponding period of 1911.

The Dickson Planing Mill Company, a well equipped company at Dickson, Tenn., has recently awarded a contract for remodeling two of its 30-foot kilns to Fitch H. Kelly, manager of the Memphis branch of the Grand Rapids Veneer Works.

W. V. Davidson, president of the Davidson, Hicks & Greene Company, left this week for Cocoa, Fla., to look over his property there. Mr. Davidson has a winter home in Florida, and will go there with his family later in the winter. His company is one of the largest hardwood operators in middle Tennessee.

The Interstate Commerce Commission will take up the hearing of the case involving over-weights on car shipments of lumber at Memphis, Dec. 18. The Nashville Lumbermen's Club will send its traffic committee, composed of A. B. Ransom, chairman, G. A. Washington and Charles M. Morford, to Memphis to represent the club. Other local lumbermen will attend. The case is one of great interest to the lumbermen of this section.

The car situation continues to hamper the lumber business in this section. Lumber manufacturers and shippers are unable to get large supplies of logs that have accumulated along the lines of the different railroads to market, which interferes greatly with their ability to fill orders. Cars to move shipments out of Nashville can be secured in fairly satisfactory manner, but the manufacturers are now more anxious to get the raw material. Railroad officials of this section have again issued appeals to shippers urging them to cooperate with the railroads by prompt loading and unloading of cars, and not to order more cars than they can load promptly. They claim that all shippers have not been cooperating as they should in this matter.

LOUISVILLE

The annual meeting of the Louisville Hardwood Club was marked by the election of Edw. L. Davis to the presidency, succeeding T. M. Brown of the W. P. Brown & Sons Lumber Company, and the re-election of Vice-President D. E. Kline and Treasurer C. M. Sears. Mr. Sears is starting on his fifth consecutive year as treasurer of the club.

Mr. Davis has named his committees as follows:

FINANCE—T. M. Brown, W. P. Brown & Sons Lumber Company, chairman; D. E. Kline, Louisville Veneer Mills, and C. M. Sears, Edw. L. Davis Lumber Company.

ADVERTISING—D. E. Kline, chairman; G. D. Crain, Jr., and T. M. Brown.

MEMBERSHIP—P. G. Booker, Booker-Cecil Company, chairman; R. F. Smith, Ohio River Saw Mill Company.

ENTERTAINMENT—Stuart R. Cecil, Booker-Cecil Company, chairman; G. D. Crain, Jr., and C. M. Sears.

CONSTITUTION AND BY-LAWS—D. E. Kline, chairman; P. G. Booker and Smith Milton, Louisville Point Lumber Company.

TRANSPORTATION—A. E. Norman, Norman Lumber Company, chairman, and E. B. Norman, Norman Lumber Company.

LOGS—H. E. Kline, Louisville Veneer Mills, chairman, and Edward S. Shippen, Louisville Point Lumber Company.

After a two-day shutdown, due to the necessity of making some machinery repairs, the sawmill of the C. C. Mengel & Bro. Company has been put in operation again full time, this meaning day and night. The demand for mahogany lumber continues unabated, while the call for veneers also is picking up. The veneer mill, however, is running at a normal rate and putting in little overtime.

The New Albany Veneering Company is securing additional floor space by the erection of a large balcony in its gluing department, which will be devoted to handling Circassian walnut veneering. Business with the company has been so good as to justify enlargements in the plant.

The Robe Lake Lumber Company is now headed by W. P. Brown, Mr. Brown succeeding M. A. St. John as president. The other officers are: J. G. Brown, vice-president; T. M. Brown, treasurer, and Leroy Alcott, secretary. Headquarters of the company, which owns 12,300 acres of timberland in Arkansas, will be retained at Memphis.

Owing to the fine, dry weather which has marked this fall, mills in this territory are operating full time. Men and teams have been available during the past month in greater number, with the harvesting of the crops completed, and logs have been coming out in greater quantity than for several years.

The Jefferson Woodworking Company of Louisville has decided to go into the veneering business, and will make veneered table tops as soon as an addition now in course of construction is completed. The new department will start about Jan. 1. Table slides have been about the only product of the concern heretofore.

ST. LOUIS

The board of directors of the Lumbermen's Exchange held a special meeting on Nov. 12 to discuss what action, if any, it should take in regard to the general advance in hardwood rates to nineteen cents, from the greater part of Arkansas and Louisiana to St. Louis. The advance will amount to from two to three cents. It was decided that Thomas E. Powe and George McBlair, president and secretary respectively of the exchange, should attend a meeting called for the next afternoon at the traffic department of the Business Men's League. At this meeting it was decided to refer the matter to their respective organizations.

Another meeting was held on Nov. 18, at which the traffic officers of the St. Louis and southwestern lines and the hardwood representatives attended to confer further. The lumber representatives outlined that if the railroads were going to advance the rates generally, the railroads should now re-establish the old rate basis, which existed prior to January, 1911, between Cairo, Thebes and St. Louis; that the reason of the advance having been made at that time, so it was claimed by the railroads, was on account of the low rates on lumber, rendered that service unprofitable; that since the railroads were to get higher rates, they should be willing to give St. Louis its just dues. The railroad officials took the matter under advisement.

The C. F. Luehrmann Hardwood Lumber Company reports a good healthy demand for nearly every item on the hardwood list. This is especially true of red gum and ash. Other hardwoods, of which it has a good assortment on hand, are also being freely called for.

E. W. Blumer, sales manager of the Lothman Cypress Company, has recently returned from

a selling trip. As is usually the case, he brought a nice bunch of orders. He says the conditions in the East are most encouraging for future business and he believes the present good demand for cypress will continue for some time to come, provided the weather continues favorable for building.

The Linderman Machine Company of Muskegon, Mich., has opened an office at 1808 Lumbermen's building, St. Louis, Mo., with D. H. MacLean in charge.

NEW ORLEANS

Thirty thousand acres of cutover land in La Salle and Catahoula parishes are to be converted into a forest reserve for reforestation, under the direction of the Conservation Commission, thus inaugurating the first effort toward scientific forest cultivation attempted in Louisiana. Wardens are to be placed in charge of the land to watch the growth of the trees and to protect them against forest fires and against the ravages of stock. The area is in the center of a splendid hardwood and yellow pine belt. All available timber has already been cut from the land and new trees are to be grown and cared for.

The outcome of the experiment will be watched with much interest by lumbermen of the state, and from present indications the project is sure to lead to similar ones.

The regular monthly meeting and dinner of the Lumberman's Association of New Orleans was held Nov. 12. After the usual bountiful dinner, the meeting was called to order and business matters were taken up. Transportation questions were particularly discussed and it was decided that the transportation committee would take up the matter with several of the railroads.

As a result of the law passed by the recent state legislature taxing timber at its worth when cut from the soil, a suit has been filed by prominent lumbermen of the state as to the constitutionality of this act. The Conservation Commission is doing its best to enforce the law, while the big companies are trying to have the value per acre of the standing timber taxed. The matter is still pending, and from present indications the fight will be a long and hard one.

MILWAUKEE

The free employment offices in Milwaukee and other large cities of the state have found that the present demand for laborers, especially the common laborer, is far beyond the supply. During October more than 2,900 men and 670 women were referred to employers, of which 1,538 men and 331 women accepted the positions. Many offers were received from construction companies and the building trades who wish to fulfill as much work as possible before the frost. The woodworking and furniture plants were among the lead of those who demanded laborers.

George P. Noble, wholesale lumberman of this city, has filed a voluntary petition of bankruptcy before Referee Nye, giving his assets as \$46,919.57 and liabilities as \$40,315.36. Of his claims, \$25,113.05 are unsecured and \$14,436.46 are secured.

H. R. Stolle of Tripoli, a prominent lumberman of this state, has purchased a large part of the stock of the Badger Basket and Veneer Company of Burlington.

The White Star Lumber Company has become possessor of the sawmill formerly owned and operated by the Antigo Manufacturing Company of Antigo. The plant, which has been idle for the past two and one-half years, will require alterations and improvements.

The Mason-Donaldson Lumber Company of Rhineland, recently disposed to Montgomery Ward & Co. of Chicago over ten thousand acres of heavily timbered land just north of the state line.

The J. S. Sterns Lumber Company of Odanah, which has been operating in the Bad river reservation, has purchased two tracts of timber on Lake Superior, one at the northern end of Bayfield county and another in the northwestern corner of the upper peninsula of Michigan. The timber is being cut and towed to the mill at Washburn to be sawed.

The Oelhafen interests of Tomahawk were successful bidders at the sale of state timber, having secured a tract lying north of Tomahawk on the Tomahawk river. Three camps will be started on the tract, the estimates calling for over a million feet of timber.

Official announcement by William Templeton of Chicago, president of the Peshtigo Lumber Company, whose sawmill was recently destroyed by fire, confirms rumors that the plant will be

rebuilt as soon as possible. It will cost \$150,000.

The Smith Manufacturing Company of La Crosse, manufacturer of wagons and agricultural implements, has found it necessary to erect an additional building to its plant.

Isaac H. Crawford, for thirty-two years chief engineer at the Paine Lumber Company at Oshkosh, died at his home at 364 New York avenue recently, as the result of an internal cancer. Mr. Crawford was a native of Canada, having been born in 1847. He lived at Oshkosh for about forty years. A wife and three children survive him.

The sawmill of the Fred Schubring Lumber Company of Wausau has been started for its winter run, during which time the cut will exceed twelve million feet of hardwood and hemlock.

by the number of purchases of hardwood timber that are being made and the number of new operations being started. Yard trade in hardwoods is very fair, but it is not quite so heavy in comparison as the selling of hemlock and pine lumber.

BUFFALO

The hardwood trade is on a good scale of activity and the prospects are good. The local yards are carrying well-assorted stocks, some of them having supplies in excess of those of last year. The car shortage has not been very serious in this section, and there is no great complaint over the delays to shipments from the South. In the general list of hardwoods prices are holding very firm.

Good and common oak is short and bringing a very strong price. Quartered oak is in a little better demand than recently; the furniture factories employing it to a larger extent again. Poplar is inclined to be slow. Cherry has taken a little start, but has not become active. Chestnut and ash are in steady inquiry, while birch and maple are good sellers.

BOSTON

The market for hardwood lumber has been moderately active during the past two weeks, and prices are well held. Some dealers in this market state that quotations on some classes of hardwood lumber received by them within a few days are firmer and higher than any price previously received and they do not consider that top prices have yet been seen. Others believe that it will be very difficult to get further advances unless there is a decided improvement in the demand. Offerings of dry lumber are smaller than they have been for several months at least, and it really looks as if the manufacturer who has stock in good shipping condition can get practically his own price.

Shippers are still forced to contend with the car shortage, for which condition no immediate relief is expected. Those dealers who brought in lumber ahead of orders are having no real difficulty in making sales, as the average buyer has not greatly anticipated his wants.

Quartered and plain oak is very firm, an advance in price of two dollars being reported in some instances. Black walnut is in small offering with a fair demand reported. Maple flooring is fairly active. Prices are well held. White-wood is in fair call and prices are very well held.

BALTIMORE

Perhaps the only change in the hardwood situation to be reported during the last two weeks is a further advance of \$2 to \$3 in the price of oak, which, however, does not seem at all to have checked the movement. The demand keeps up undiminished, and there is every prospect at this time that the year will end with the requirements of the trade up to exceptional proportions. Mills report that they can get offers for all the lumber which they are able to turn out. Not even the merest tyro in the matter of selling can fail to dispose of stocks if he has them to deliver. This state of affairs extends to practically every division of the trade, with the sole exception of extra wide poplar, which fails to find favor among buyers at such prices as would be commensurate with the scarcity of the wood. The absence of a spirited or even moderately active demand for extra wide poplar is noted abroad as well as in the domestic trade, and has come to be accepted as a fact which cannot be altered. The ordinary widths are active enough, inquiries being numerous and the buyers showing a disposition to meet the prices asked by the producers.

The Hardwood Market

CHICAGO

Local wholesalers, as for some time in the past, are concentrating their main energies on the buying end of the business, as it seems to be possible for almost anybody to effect sales at reasonably strong prices. The most efficient of the local trade are showing their ability in taking up stocks at figures which will net them good profit and in disposing of their lumber at a little higher basis than the majority of the trade.

It cannot be said that any items in the local hardwood business are weak, although red gum and wide poplar, as at other centers, are the slowest movers. Ash, basswood, oak, birch, maple and chestnut are the leaders in the local market, and there is very little difficulty encountered in marketing stock of good quality of these woods.

Owing to the difficulty in securing lumber from the usual sources of supply, there has been quite a little trading of late between the wholesalers themselves, and the good effects of association and club work are shown in the fact that the members of the local trade are willing to sell their fellow members at a price which will net both of them some profit rather than to do everything possible to freeze out each other, as was the custom under the old method of conducting the lumber business.

The local trade is considerably excited over the proposed increases in freight rates from the South to Ohio river crossings and western territory. The fear is expressed in some quarters that if these increased rates go into effect it will seriously endanger the local market for low-grade material, which holds an important place in Chicago lumber consumption. It is feared that an increase in rates such as is proposed would make the ultimate selling price of low-grade stock so nearly on a parallel with the cost of getting it into the local market that there would not be enough margin in the transactions to make them worth while.

NEW YORK

The hardwood market shows a continuance of the strength that has been noted for the past several months. Inquiries are brisk and prices remain firm with some advances noted. Local yards are by no means carrying a normal supply of material and new stocks are drawn from almost as fast as received. This, with the difficulties experienced by shippers getting cars and forwarding stock, practically assures a strong market for the entire winter season.

Oak, chestnut, birch and maple show advances

in the list, some items bringing two dollars more than a month ago. Cherry continues firm. The rest of this list shows no change in price. Hardwood flooring is in good demand and an advance in oak flooring is noted.

PHILADELPHIA

In spite of the more or less unavoidable concern in the November election, there has been no diminution of activity in the hardwood lumber business during the last fortnight. All standard grades, especially of dry lumber with a reasonable guarantee of delivery, find a ready market, and prices are well sustained. Although the fall rush in furniture buying is practically over, the factories have all they can do to catch up with orders. The other wholesale consuming industries continue active, in many instances being obliged to work overtime several nights in the week. This is a good word for the prosperity preachment which has begun. There is a little relief in the car shortage handicap in some of the lumber distributing fields, and a fair volume of stuff is being shipped, but orders are still delayed at many points. An encouraging sign of the times is the stout optimistic feeling which prevails everywhere as to outlook.

Oak, both red and white, still heads the list; stocks are scarce and prices are stiff. Quarter sawed oak is strengthening right along, and prices are moving up. Chestnut, plain and sound wormy, holds a good position, ash has many friends, poplar remains steady, the mahogany and veneer market continues active; birch and beech are selling freely and cypress is improving.

PITTSBURGH

No bad after-election effects are visible in the hardwood market here. The volume of inquiries keeps up surprisingly well, considering the fact that the inventory season is close at hand and that the usual first of the year statements will have to be made shortly. Purchasing agents as a rule are making ready to buy more lumber for 1913 than they did this year. Evidently they are determined not to be caught again with a shortage, and they also foresee that their respective plants are going to be crowded with orders if present business conditions continue. All kinds of fine hardwood for use in implement, furniture and automobile factories is in excellent demand. Prices are firm with small increases noted every few weeks. Stocks at the mills are very low, although all mills are working nearly or quite to capacity. The splendid undertone in the hardwood market is evidenced very plainly

The car shortage continues to interfere with a free movement of stocks, but less trouble is experienced on this account along the northern railroads than down South. As a rule, it is possible to meet at least the more urgent wants, and there is no such embargo upon the freight movement as would cause serious embarrassment. Of course, the possibility that a shipment may fail to reach its destination in a reasonable time stimulates the interest in supplies, and the yards as well as other buyers are placing orders with sufficient freedom to allow for delays. The quotations on oak are probably as high as they have been at any previous time, and the demands upon the mills are such as to keep all the plants busy. So brisk is the movement as to affect every kind of lumber in general use.

The interest on the other side of the Atlantic is attested by the arrival of a number of representatives of foreign firms in search of supplies. The ocean freight situation is becoming better. In addition to the Atlantic Transport Line most of the others have now announced their rates, but these mark such an advance over the current figures that exporters hesitate about binding themselves for the whole of 1913. Some of them prefer to take chances, making such shipments at the prevailing rates as they must and hoping that the companies will find it impossible to maintain the range put out. With the exception of the high ocean freight rates and the car shortage, the hardwood trade has nothing to complain of, being active in all of its branches and presenting a most favorable prospect.

COLUMBUS

Dealers throughout central Ohio report a good demand in all varieties of hardwoods and a continuation of the firmness in prices. Building operations continue active. Oak is especially strong and is advancing steadily. The demand seems to center principally in the quartered. Dry stocks are scarce, and hence all hardwoods are moving better. The car shortage still continues, but has improved somewhat over the past week. Buyers do not seem satisfied to buy in large quantities until the shortage is better. Red oak and plain oak are in good demand and prices are going up. Ash is advancing and is particularly strong, as is also basswood and chestnut.

CINCINNATI

There is a steady demand for all items on the hardwood list with plain oak a leader. Quartered oak is gradually getting into its former position, and dealers in this wood are much encouraged. Ash is very scarce and in big demand. All low grades are called for daily, and dealers are having trouble in finding sufficient quantities to supply the trade. Chestnut is doing very well, both upper and lower grades being called for and bringing top prices.

There is a strong tone to the poplar market again. Low grades are in strong demand at top prices and the good grades are picking up. Wide stock also has been doing much better.

All grades of cypress are going well; planing mills are using No. 1 shop and better in large quantities and the box factories are taking all the low-grade stock they can get hold of and paying good prices for it. Receipts are much better than for some time and prices are holding firm.

Hardwood flooring is moving fast at good prices.

All wood consuming factories in this section are very busy, especially the furniture trade. Box factories are having considerable trouble in procuring enough stock to keep them busy. The implement business is in good shape, and carriage woodwork plants are doing a capacity business. The automobile industry has been

exceptionally good all season, and there is every indication of a brisk winter in this line.

The late building season has kept the planing mills busier than ever before. Favorable weather conditions are responsible for continued activity among the building contractors. Many buildings are now under construction that were not expected to be started until next season, thus assuring more work for millwork men and interior finish people.

TOLEDO

Hardwoods continue in good demand with prices stiff and supplies short. The car shortage is seriously affecting deliveries from the South, in some instances mills being compelled to wait as long as thirty days for a car. The demand for lumber has kept up remarkably well, and it is generally noted here that there has never been a presidential election year when business has been affected so little by the political situation. It seems to be the general opinion among lumber dealers that there will not be much tariff tinkering, and moreover the tariff changes likely to be made will have the tendency to put more money in the pockets of lumber dealers, which no sane American business man is likely to meet with objections.

Red gum is in specially heavy demand, but is hard to get. First and seconds plain oak is scarce, and quartered oak is quoted at an increasing figure. Mahogany is strong in demand and high in price. Ash is in good demand. The local yards are running pretty low on stocks and there is bound to be heavy buying around the first of the year. The enormous demand which has been made for hardwoods of all kinds from the building trades is falling off a little, but the factory demand is strong.

INDIANAPOLIS

Although business is by no means rushing, the hardwood trade is fairly active. There has been no decreased activity in the last fortnight, however. Many retail dealers are making inquiries as to prices and prospects of delivery, and some few orders are coming in. Hardwood prices are steady.

Local hardwood wholesalers and manufacturers appear to be getting sufficient stock to meet their needs, but some trouble is experienced in getting it shipped out again. The coal fields are making considerable demand for cars at this time, and the Indiana corn crop will soon begin to move. The car shortage situation appears to be improving slightly, however, and it is thought that this condition will be cleared up within the next few weeks.

MEMPHIS

The car situation is considered much better in this territory than it was a short time ago, and lumber is being moved with rather greater dispatch. At some interior points there is still a scarcity of cars, and shipment of both lumber and logs is delayed on this account. However, it is conceded by practically all interests in the trade that the railroads are giving a more satisfactory service and that lumber is moving with greater regularity than a short time ago. Owing to the fact that the height of the cotton movement has already passed, it is anticipated that there will be further improvement in the movement of traffic in the near future.

Weather conditions throughout this section recently have been very favorable for work in the woods, and this has made excellent progress. The amount of timber being brought out is quite large and the outlook is for an adequate supply of logs for the winter. Some of the firms in this territory have quit logging operations and will do nothing else in that line this season. There are others, however, and the latter are in

the majority, who are still getting out timber and who will continue this work as long as it is possible to make satisfactory progress therewith.

Practically every hardwood mill in the Memphis territory is running on full time, and yet there is no particular accumulation of lumber, particularly in shipping dry stock. The volume of business during the past few months has been quite satisfactory, and while production has materially increased, there has been likewise a substantial gain in shipments. There is no accumulation of lumber in any direction, and, on the other hand, there are some items which are particularly scarce.

One of the features of the box situation here is the fact that there is a decided increase in the amount of gum lumber being used in the manufacture of standard packages. A prominent manufacturer here said recently that he was using about sixty per cent gum, as against forty per cent cottonwood. A year or two ago the figures were easily reversed. There is no doubt that the scarcity of cottonwood and the high prices therefor have had some influence toward increasing the use of gum. The growing popularity of this wood, however, has been an important factor in this substitution. It is noteworthy, however, that there is little or no gum being used in the manufacture of cases used for the storage of eggs.

LOUISVILLE

The demand for hardwoods continues brisk and satisfactory, both as to extent and prices offered. Quotations are strengthening in practically every line, and the man with a wide range of stocks is hard put to it to tell which items should be included among his "six best sellers." The prospect of tariff revision is apparently not affecting the optimistic feeling existing among consumers of hardwoods, and the election of Mr. Wilson has not been regarded as anything to worry about. Manufacturing interests in all directions are continuing to expand, instead of drawing in, and even the peeved individuals who canceled orders "because of the election" were so few in number, as a matter of fact, as to be possessed of a splendid isolation. Nobody with any business sense is insisting on cutting down the volume of his business just because the man he didn't vote for got elected. As long as the present sound foundation for bigger trade exists, there is no reason to fear any retarding of the process of developing trade to a normal state as to quantity and profits. Oak continues to lead in sales in this market, plain oak being sold as fast as offered, and quartered oak being in good demand. Quartered red is going up, buyers realizing that the difference between the price of that commodity and quartered white is greater than is justified by a comparison of the intrinsic values of the woods. Good poplar, which has been rather slow, is improving materially, the lower grades continuing to sell in large quantity. Ash is a good mover, as are gum and cottonwood.

ST. LOUIS

A reasonable volume of business is reported by the various local hardwood dealers generally. Were it not for the fact that their stocks have been depleted by the mills that have been made on them during the past few weeks, the hardwood dealers could do considerably more business. The demand has been most unqually divided. The larger yards have had an excellent trade and are well pleased with what they have done, but the smaller yards are not as satisfied with their business. Prices generally are held firm, but many items, such as plain oak and ash, command a better price when they can be obtained.

The weather has been most favorable for get-

ting out timber, and that has been taken advantage of by many of the mills. A good business has been done by the cypress people, especially in mixed car lots, and from indications there will be a good trade for several weeks to come, unless the weather should suddenly turn very cold. The factory demand is fair and the call from the yards is satisfactory. Requests from the northern territory are coming in nicely. Cypress receipts are somewhat better than they were and more cypress is coming into the local market than at any time during the car shortage. Sash and door people are well satisfied with the business they are doing. The call from the country yards has been better recently and special work keeps up well.

NEW ORLEANS

Although trade is not what can be called brisk, the local hardwood market is holding its own. Nearly every variety of oak is in strong demand, with prices very firm. The lower grades of gum are scarce and command high prices. Buying is firm and the tendency to fill orders as they are booked holds sway. This keeps the mill stock light.

Notwithstanding the many obstacles in the transportation of the export trade, a fairly heavy

business is being done, the limitation being practically fixed by the possibilities of getting goods forward. While buying is limited and many purchasers abroad are still holding off as much as possible, there is a volume of comparatively small orders which in the aggregate keep up the total to about normal conditions.

The restrictions placed by the railroads on the movement of forest products are beginning to show their effect in the decreased movement to the port, and to some extent make the lack of ocean tonnage less noticeable. The situation thus, slimmers down to the freight conditions, and the hardwood exports are governed to a marked degree by the freight question. Oak seems to be in good demand for export, and in some cases fancy prices are offered.

From all sections, however, come dissatisfied reports relative to the ocean freight rates and the reluctance of the railroads to bring into New Orleans more lumber than can be handled by the steamship lines. The outlook for better rate conditions is by no means encouraging, and what change is noticed is almost uniformly in the way of further increases.

NASHVILLE

The tone of the Nashville hardwood market continues strong, with active demand and considerable inroads being made into dry stocks by the drain that has been steady for several months. Plain and quartered oak continues to be in the greatest demand. There is a satisfactory demand for chestnut and poplar. Ash and hickory are good sellers, with very light supplies available. One local plant turned down an order for 500,000 feet of plain oak and other smaller orders because of inability to fill the orders.

MILWAUKEE

While there is a slight falling off in demand from the building trade, owing to the lateness of the season, orders from various sources for hardwood are coming in faster than they can be filled. Local wholesalers report the receipt of an unusually large number of inquiries and orders for this season of the year, but they say they are handicapped in the delivery of stocks. There seems to be a general shortage here and at the mills about the state. Demand from the sash and door plants, the furniture factories and the farm implement concerns is decidedly better than at this time a year ago.

Reports from the northern lumber country indicate that prices at the mills are strong and give promise of further advance as the shortage of lumber becomes more serious. First and second birch is selling well, interior finish and sash and door concerns buying considerably in this line. There is a brisk movement in hard maple and wholesalers say that there is a shortage in Michigan stocks. Many dealers are looking to Wisconsin mills for their supplies this season. Basswood stocks at the mills seem to be well cleared up, stocks of No. 1 and No. 2 common being especially light. Both red and white plain oak is firm, while quartered white oak is stronger than it has been recently.

LIVERPOOL

The market position here is the most extraordinary that has ever been known, even by the oldest men in the trade. Prices have gone up to an incredible extent. This does not mean that returns are higher to the shipper, but sea freights have gone up to such an extent that prices have been compelled to go up to correspond. The general opinion here is that present values of freight will last until March, when a very large number of ships, now in the hands of the shipbuilders, will be launched ready for sea.

Hickory logs have actually been sold at first hand at 2s 9d per cubic foot Liverpool string measure for future arrivals. It is, however, quite impossible to buy any further stocks on the same basis. Shippers are asking 3s, but no sales on this basis have been reported.

Round ash is equally firm, and 2s 4d has been mentioned as the value of first growth ash to arrive. The mahogany position is exactly in the same position, and judging from recent sales this market must continue very firm. Here again the freight rates are the main cause of high prices and March may see a change, though there is a very keen demand for hickory at present. Canary whitewood is selling very well and good prices have been realized for stocks on hand. The wider stocks especially are firm, though the very high prices make the wood prohibitive for many users. Black walnut is practically non-existent and prices keep very firm. Cheaper stocks are coming into favor. Tupelo in 5x8 inch and 10x14 inch is in favor. Birch is moving quietly and firmly, while all the oak is sold at good prices as it arrives. Oak dimension orders are moving quietly and prices are keeping very firm for future deliveries. Gum stocks of all kinds have been selling quite well, as these are being used extensively as a substitute for poplar.

GLASGOW

The tone of the timber trade in this section is steady, with a continued movement into consumption both from the quay and from the various storage yards. Brokers are holding goods firmly on the quay and if buyers cannot be found at their prices the goods are promptly stored, brokers knowing well that advanced prices can be obtained simply by holding for a short time. The high f. o. b. prices of lumber, coupled with the abnormal rates of freight, makes the consumption somewhat crippled. As numerous freight contracts expire at the end of the year, the f. o. b. costs are bound to increase still further.

Imports meantime being unusually light cause inroads to be made upon stocks in first hands. Oak planks and boards and the various furniture woods which arrived by the last two Baltimore and Newport News steamers were well cleared direct from the quay, as was also the poplar. The prices were well up to the standard, although some of the gradings were not what should have been. Sap gum (hazel pine) and black walnut are in moderate request, but in some instances the prices do not justify consignment. Spruce in first hands is well nigh depleted and fresh imports are very improbable at present rates of freight. Canadian pine deals have arrived moderately within the last week or two and keen competition is taking place for the various widths. Baltic spruce has fallen off slightly, the freight rate no doubt accounting for this, but the small lots imported have been cleared on arrival. The demand for shipbuilding requirements continues unabated, and several new contracts have been placed during the past week.

Freights all over have now reached high level; in fact well nigh prohibitive for most parties, unless much higher prices can be established. The annual freight contracts being made at present are abnormally high. The uncertainty of the steamship lines taking lumber when they can get cotton is increased by the shortage of cars for the inland movement on the other side, and by restrictions on through bills of lading as well as consignments by rail for certain lines of steamers.

With prices advancing, buyers are showing a tendency to increase their holdings, a course which will prove advantageous to themselves.

The various markets in the west of Scotland are in a healthy condition, and a good winter trade is sure to be experienced.

WHY DO more than 320 of the most prominent and successful lumber manufacturers exchange nearly \$26,000,000 of indemnity against fire loss at

Manufacturing Lumbermen's Underwriters

B E C A U S E !

BECAUSE it is the oldest and strongest inter-insurance association among lumbermen, being now in its fourteenth year.

BECAUSE \$728,910.41 cash savings have been returned to members.

BECAUSE \$756,787.21 cash surplus, owned entirely by the members, has been accumulated.

BECAUSE \$2,012,427.96 has been paid in losses under prompt and equitable adjustments without resort to quibbling or technical controversy.

BECAUSE it was the first to settle lumber losses on a market value basis.

BECAUSE the regular, frequent and thorough inspections given the plants of all members help them to prevent fires, thus materially reducing both the fire waste and the cost of indemnity.

One Coe 76"x52" Veneer Lathe.
One Coe 76" Veneer Clipper.
One 76" S. C. Rogers Buffalo Knife Grinder.
All machinery guaranteed to do first-class work, and good reasons for wanting to sell. Address "BOX 116," care HARDWOOD RECORD.

MISCELLANEOUS

WANTED—HARDWOOD LUMBERMEN—

to try the Gibson Tally Book. The three-throw aluminum tally ticket cover accommodates any form of ticket desired. The use of the special triplicate tally ticket supplied, printed on water-proof paper with carbon backs makes tallies unalterable. For durability, convenience, accuracy and for systematizing the inspection of lumber the Gibson tally method can't be beat.

Special forms of tally tickets mailed on application. Covers sold on approval to responsible concerns.

ESTABLISHED 1882

WE CAN
DOUBLE
THE CAPACITY OF YOUR
DRY KILN
BY THE GRAND RAPIDS VENEER WORKS PROCESS

If you attempt to dry two-inch oak in your kiln in fourteen days the result will probably resemble the above illustration.

The lower picture is from a photograph of two-inch oak dried by the Grand Rapids Veneer Works Process in fourteen days, and every plank as sound as the sample.

The absence of checks is not the only saving due to this process. The lumber is straight, soft and free from sap or acids.

For a small sum of money your old kilns can be converted to G. R. V. W. Process Kilns, with a guarantee to give the results above described.

VENEERS AND PANELS

Ahnapee Veneer & Seating Co.

HOME OFFICE, FACTORY AND VENEER MILL, ALGOMA, WIS.
VENEER AND SAWMILL, BIRCHWOOD, WIS.

We manufacture at our Birchwood plant single ply veneers of all native northern woods and deliver stock that is in shape to glue.

From our Algoma factory, where we have specialized for twenty years, we produce panels of all sizes, flat or bent to shape, in all woods, notably in Mahogany and Quarter-Sawed Oak.

We make no two-ply stock, and do not employ sliced cut quartered oak. Our quartered oak panels are all from sawed veneer.

Every pound of glue we use is guaranteed hide stock. We do not use retainers. Our gluing forms are put under powerful screws and left until the glue has thoroughly set.

If you seek a guaranteed product that is the best, based on results accomplished by most painstaking attention and study of every detail, combined with the use of the best stock and an up-to-date equipment, our product will appeal to you.

If you are a "price buyer" we probably cannot interest you.

Don't Delay Placing Your Lumber Orders

There's always danger of disappointment when you let the order go until just a few days before you require the lumber; transportation is not always reliable and no matter how prompt the shipment, you run a risk.

However, it is one of the strong points of the McILVAIN Service to make prompt shipments, and RUSH orders are always given the attention they demand.

So let us talk Lumber with you, and bid on your specifications.

J. GIBSON McILVAIN & Co.
1420 Chestnut Street **PHILADELPHIA**

Timber Talks

1880 (stumpage worth \$1 to \$2)—Capital: "I have been offered a large tract of white pine timber at a low price. I think I'll buy."

Timid Friend: "Don't. There never will be a market for all that timber."

1890 (Southern pine stumpage worth 50 cents to \$1)—Capital: "I have an option on a fine body of yellow pine timber down South. Guess I shall take it up."

Timid Friend: "Don't. That timber is not worth it, and may not be in our day. Now, if you could buy timber at that price up North, I would advise you to do it."

1912 (Western stumpage worth \$1 to \$2)—Capital: "I am offered a fine tract of Western timber; the trees are big and stand thick. I am considering the advisability of making an investment."

Timid Friend: "Don't. There is too much timber out there and it is too far away. Now, if you could buy at that price down South, I should say, 'Go to it.'"

And it may have been the same timid friend that gave all this

ABSURD ADVICE

It was not more absurd in 1880 or 1890 than it is today, but seems so in view of the great advances in timber values North and South.

Today Northern pine is worth \$8 to \$14 a thousand feet, and an estimate will show twice as much timber as it would have shown in 1880. More of the timber is valuable. Yellow pine is worth \$3 to \$6 a thousand feet, with a like increase in the quantity that can be marketed at a profit.

Western timber has passed the day of acre valuation and now is offered at low prices by estimated thousands of feet. The price of Western timber will follow in the footsteps of that of the North and the South.

"It is not what lumber costs you, so much as what you can get out of it, that decides its value for your work."

OUR OWN MANUFACTURE

**Something New
For Your Factory Floors**

Utility Joined With Economy

We are now manufacturing what we call a No. 2 Factory grade of Hardwood Flooring which can be used successfully in factory buildings where good wearing qualities rather than appearance are required. This Flooring is made from the hardest portion of the log, and while the Flooring shows the heart defect to a considerable extent, nevertheless it will wear with wonderful durability. It is "Rockhard" flooring at a rock bottom price.

It is 13/16 x 2 1/4" face, and the Flooring is kiln dried, hollow backed, bored, end matched, steel scraped and bundled.

Write us about it. This is a grade of Hardwood Flooring you should know about. Address MITCHELL BROTHERS COMPANY, Sales Department, CADILLAC, MICHIGAN.

A floor to adore

For thirty-three years Wilce's Hardwood Flooring has been among the foremost on the market and because it stands today "unequaled" is the best evidence that its manufacturer has kept abreast of modern methods and the advanced demands of the trade. To convince yourself of the above statements, try our polished surface flooring, tongued and grooved, hollow backed, with matched ends and holes for blind nailing—you'll find it reduces the expense of laying and polishing.

Our Booklet tells all about Hardwood Flooring and how to care for it—also prices—and is free.

SAVE YOUR MONEY BY USING THE

RED BOOK

Published Semi-annually
in February and August

It contains a carefully prepared list of the buyers of lumber in car lots, both among the dealers and manufacturers.

The book indicates their financial standing and manner of meeting obligations. Covers the United States, Alberta, Manitoba and Saskatchewan. The trade recognizes this book as the authority on the lines it covers.

A well organized Collection Department is also operated and the same is open to you. Write for terms.

How's This for a 1913 Platform?

"Resolved, That I will give to the purchase of my lumber the same discriminating care that I devote to manufacturing it into the finished product and distributing it to the trade in which I am interested.

"Resolved, That in ordering hardwood and veneer stocks I will remember the truthful saying that a man gets just about what he pays for, and that cheap lumber is usually cheap lumber.

"Resolved, That I will deal with concerns which have shown themselves to be square and honest in their dealings with me; with which I have no friction as to measurement or grade; which have the facilities for taking care of my orders, and which can fill orders promptly with material sufficiently aged to insure satisfactory use in my factory.

"Resolved, That I keep tab exactly on the results experienced in working lumber purchased from different concerns, to as great a degree as practicable, with the end of determining which of them have justly earned my permanent business."

We recommend the adoption of these resolutions for 1913 by every hardwood lumber buyer in the country. Our reason, to be perfectly frank, is this: It would mean a lot of new business for

Hardwood Record announces the issue on January 1, 1913, of an Authoritative Commercial and Scientific Book

American Forest Trees

By Henry H. Gibson, Editor Hardwood Record
Edited by Hu Maxwell, Wood Utilization Expert

The Work Involves :

First: A botanical description of the more than 300 species of American forest tree growth.

Second: A physical description of the wood of these species.

Third: A recital of the chief uses of all important American woods, together with suggestions of advantageously broadening their uses.

Fourth: Complete information concerning the range of growth of all varieties.

Fifth: Related trees are logically grouped according to families and spe-

cies; important species covered in substantial detail, and brief mention of the woods of minor importance.

Sixth: Scientific name of each tree is recited, as well as the various common names by which it is recognized in different parts of its range of growth.

Seventh: The properties of the various woods are carefully analyzed, particularly weight, hardness, stiffness, strength, elasticity, toughness, color, figure, and seasoning and lasting properties.

☐ The book will contain between 650 and 750 pages, will be printed on the best quality of enameled paper, and handsomely bound in half leather, dark green roan back and corners, with basket cloth sides, silk head-bands, gold stamping on the back, and gilt top.

☐ The work will be illustrated with more than 100 full-page pictures on plate paper in sepia, outlined in orange, from photographs, covering all the chief commercial varieties of virgin forest timber growing in the United States; and also with numerous engravings, from drawings and photographs, showing leaf and flower forms, etc.

☐ The price of the work is \$6.00, delivered by express or mail, and is sold only on subscription.

☐ An order blank, and a prospectus, showing the character of the paper, size of page and style of printing will be forwarded on application.

Review and Outlook

General Market Conditions

The usual holiday slacking in business is but slightly perceptible in the various hardwood centers throughout the country although in a few instances reports come in that this condition is showing itself. Outside of this feature, however, there is practically no alteration in the hardwood situation during the last two weeks. Reports state that there is some little easing up in the ear situation except at such southern points as are materially affected by cotton movements. It is expected that the crest of the demand for ears by planters will have been passed by the first of the year, after which time lumbermen will have less difficulty in obtaining rolling stock. Throughout the rest of the hardwood territory of the United States, while ears are difficult to get, there is but little actual hardship experienced except perhaps in some sections in Michigan where the sugar beet industry has grown to such enormous proportions that the movement of the crop at this time seriously strains the facilities of roads in that section. It is estimated that the sugar beet industry in Saginaw valley exceeds by far the proportions of the old white pine business in that territory when it was at its greatest.

Unusually fair weather has distinctly favored the lumber industry, particularly the sawmill end. Report, however, comes from the Mississippi Delta country of extremely heavy rains which have prevailed there for several days. Continuance of this condition will undoubtedly seriously affect the operations of the mills in the delta territory. Such condition is to be regretted as the hardwood mills of the country now have all they can do to fill in the present scarcity of hardwood stock.

A month ago some members of the trade were predicting that before the first of the year there would be considerable accumulation in some sections, of dry hardwood, but there seems to be absolutely no tendency up to date to check the movement which in some instances has compelled the shipment of stock green from the saw. In fact, this is not at all an uncommon occurrence at present.

Export conditions at New Orleans are not entirely satisfactory, the month of November showing a decrease over October. Shipments during November, however, are greater than during November, 1911. It is anticipated that the movement to foreign ports will be light during the remainder of the year owing to the ocean freight rate

situation. The report from Baltimore, however, is more favorable. Export conditions have been excellent, shipping conditions being considerably improved. Cargoes of excessive proportions have been sent from Baltimore but an unusually strong market on the other side has taken all that has been offered without any trace of breaking or surplus. Buyers in fact are actually meeting the exporters' prices which have gone up owing to increased rates on ocean tonnage.

The usual relative position is being maintained in the various woods, with a continued strengthening on quartered oak. The mahogany situation continues to be strong with high prices and scarcity of stock. Wide poplar, while still not strong, is being taken up in a little better shape than formerly. The automobile people seem to be getting back into the poplar market satisfactorily.

Undoubtedly the modern style of office building construction calling for polished marble corridors in place of wood trim has had some little effect on the hardwood demand. However, this has been offset by increased popularity of hardwood interior work in dwellings. A seasonable condition of trade maintains in the various consuming lines. In the East active competition has been a serious factor in determining sales methods on various lines of wood manufactures. As a result price competition has made itself felt, which in turn has created more or less of an indisposition on the part of buyers to tie up any great sums in hardwood stock. This, however, is not a serious condition but purely local and one which undoubtedly will not prevail for any length of time.

Reports emanating from different hardwood sources show a decidedly optimistic feeling regarding winter and coming spring business. There should be no break in the situation for a good many months to come.

A Regrettable Occurrence

It cannot be denied that the Forest Service has vast possibilities, and that it has actually accomplished a world of good both to the country at large and to the lumber trade. Occasionally, however, its methods are open to criticism. One of the latest publications emanating from the Forest Service at Washington is particularly to be regretted by the lumber trade. For two years the Service has been working on the compilation of a bulletin reviewing the last thirty

SUBSCRIPTION TERMS: In the United States and its possessions, and Canada, \$2.00 the year; in foreign countries, \$1.00 extra postage.

Both display and classified advertising rates furnished upon application.

Advertising copy must be received five days in advance of publication dates.

Telephones: Harrison 8086-8087-8088.

Henry H. Gibson, Editor; Hu Maxwell and Edwin W. Meeker, Associate Editors.

Entered as second-class matter May 26, 1902, at the postoffice at Chicago, Ill., under act of March 3, 1879.

years' developments in the lumber trade, giving market conditions prevailing at different periods. The bulletin itself undoubtedly will be of interest and value in a comparative way, and if the Service had not decided to make an announcement of the pending publication of this bulletin, things would have been all right. But coming from that source, under date of November 25, is a detailed notice containing excerpts from the bulletin but printing them in such a way that the public is given to believe the conditions as quoted apply to present markets. There is absolutely nothing to correct or to prevent such a false impression. The notice has been sent out to the Associated Press and has already been printed pretty widely.

The bulletin says that production has outrun consumption until a condition of over-supply has been reached which has prevailed for four years. It further says that there exists an excess capacity of production amounting in some of the timber states to one hundred per cent; and further goes on to tell of the increase of substitutes for wood, stating that they have brought the demand for lumber almost to a standstill and promise to still further decrease demand in the future. The writer of this particular passage says that prices for middle and low-grade lumber have been practically at a standstill since 1907 and cannot advance to any extent without opening the door still wider to substitutes. It is certainly to be regretted that this sentence alone was published, covering conditions of several years ago.

It is to be hoped that the bulletin itself from which can be gleaned information which will correct false impression created by the announcement, will be given as wide publicity as the announcement and that the service will do its part toward correcting the evil that may have resulted.

Taft Pleads for Export Trade

President Taft in a notable message to Congress on December 3 clearly established his position regarding the development of this country in its industrial relations with foreign nations. Some of Mr. Taft's most marked achievements have been along the lines of establishing relations with foreign countries, which will result in an unchecked growth of this nation's export business. The successful culmination of his efforts in this line will undoubtedly be more fully appreciated in after years and will certainly stand out as one of the most notable achievements of any of the presidents. The President's message in discussing many questions lays particular stress upon the wisdom of the policy which has gained the title of "dollar diplomacy." Our distinguished President has advocated the possibility of consummating amicable relations between civilized nations by means of establishing firm commercial relations rather than through the medium of bullets.

Under the present administration marked steps in advance have been taken in view of establishing more firmly American footing in foreign commerce, but the message urges the necessity of presenting a solid front in all questions involving the expansion of business, contending that otherwise many markets will be usurped by foreign commercial interests which naturally belong to the American trade.

One of the features of the administration tending to place our foreign commerce on a higher standard has been the raising of the standard of the foreign corps. By putting this branch of the government entirely under the merit system the highest character of efficiency and development in foreign commerce has been effected.

The plea contained in the message, which undoubtedly will meet with the unbiased approval of every true citizen, is the appeal to Congress to raise the great foreign policy above the mere question of partisanship. This is involved in his plea to stand firmly together in all commercial relations with foreign powers. If this ideal condition can be accomplished, and if the government and commercial business interests through the medium of the newly-organized Chamber of Commerce of the United States can work together, the possibility of future development in our now already important foreign relations is unlimited.

It is sincerely to be hoped that this policy will receive due consideration from the coming administration, and that the principles involved will be carried out to the interest of the country at large.

Excessive Prices and Poor Business

Lumbermen's attention has been called continually to the folly of attempting to maintain an excessively high level of prices on hardwoods. Experience has always proven that when such stock attains value very materially greater than the market has been used to paying for it without such rise being so gradual as to be scarcely perceptible, a reaction will result. This is due to the fact that buyers are either unwilling to buy any lumber on this basis and content themselves with playing a waiting game and not making any purchases, or else they seek out some substitute. It is a matter of history that the dull condition in the poplar market which prevailed for some little time recently was directly due to high prices on high-grade material. It is a further matter of common knowledge that the unusual prices which quartered oak was bringing three or four years ago resulted in buyers giving up the purchase of this material for the time being. In fact, the difference between the cost of quartered oak and mahogany at the time of greatest value for the former wood was so small as to turn the buyer's attention to mahogany. Mahogany on the other hand now seems to be following the same course as quartered oak. It is scarce and high, and with a knowledge of this fact comes the generally increased firmness in the quartered oak market.

The latest example, however, of the buyer's willingness to substitute when prices are in his judgment excessive is seen in a report of the German market emanating from a Hamburg firm of repute. This company makes the statement that cottonwood has reached such a high level of price that its use is actually prevented to a large extent. It further asserts that the local and cheap African woods can be purchased to much better advantage to the buyer. This condition, of course, is due in a large measure to the excessive rates on ocean freightage, but another contributing factor undoubtedly is the high prices asked by exporters and shippers generally for this stock. The loss of a foreign market for any particular item of lumber is more serious than is a shipping market in this country. This is naturally so because of the fact that the buyer and seller are more intimately acquainted here than are the exporter and foreign importer. The source of supply and the market being in much closer proximity, of course, than in foreign trade makes the matter of adjustment of various shifting conditions much more propitious in this country than in the export trade. It is to be hoped that this condition as suggested by the German market for cottonwood will not make itself manifest in the sales of other woods.

Reimbursed for Damages from Car Shortage

As reported by a correspondent the coal industry has achieved a notable victory in a suit instituted in Kentucky by a local coal mine against the Illinois Central Railroad for damages on account of the failure of this road to supply sufficient cars to take care of the company's shipments. The reasonableness of damage claims on this account has been advocated by shippers for some time, but in few instances has the possibility of winning a decision seemed evident. As a result shippers have been pretty generally discouraged from making any attempt to recover damages.

The point on which the case was contended was that while the road had adequate facilities to move coal shipments during normal periods, excessive shipments in the late fall and winter were entirely too great for the rolling stock. Attorneys for the defendant maintain that the question should be considered on the basis of the normal demand for cars, but the court ruled that inasmuch as the great demand for cars during the fall and winter period is regular and is to be expected every year by the roads, they must necessarily govern their supply of rolling stock according to the demand at that time.

The question came down to one of public interest, namely, that while the roads can carry on business and show a profit without carrying coal, it is absolutely impossible for the coal companies to continue in existence, and it further would work a decided hardship on consumers both industrial and private if the coal mines did not have suitable transportation facilities.

While the situation in the lumber business is not exactly analogous, the lumber trade would undoubtedly have a case if it protested against

the ignoring of its interests by the railroads as under present conditions. The lumber trade could very justly base its plea upon the question of public interest as instanced by the suit just going into effect in which a Memphis concern is seeking to prevent excessive rates from the Memphis territory. The point in this case is that such excessive rates prohibit the movement of lumber, which would be used for building purposes, and further absolutely prevent the opening up of these territories for agricultural purposes, inasmuch as they prevent a clearing of the land of standing timber. Concentrated interest is all that is necessary to carry conviction based on just claims. This sentiment of unity is constantly making itself more strongly manifest in connection with the lumber business, and it is to be hoped that it will not be long before the entire lumber trade can put up a solid front on any question having any direct bearing on the interest of that business.

Why Is a Trade Paper?

It is always gratifying to have sufficient confidence in one's own good work and in one's relations toward mankind to be able to sit quietly and undisturbedly by while the next door neighbors on either side are throwing verbal mud across the back fences. A situation of this kind cannot fail to give one a warm glow of satisfaction in the belief that his efforts at least are appreciated to the extent that he is not considered a fit subject for vituperation and sarcastic comment of various types. Instance, —an undignified and purposeless wrangle which is being carried on by certain of our esteemed contemporaries. The disputes in question carrying no direct reference to any question which should have any bearing upon the good or ill of the lumber trade, naturally cause wonder at the evident conception in the minds of these contemporaries of the duty of the trade journal to the trade it represents. It has always seemed that the reason for the existence of a trade paper is that through it the trade is furnished with an efficient and accurate spokesman, an organ which will act as a sort of mirror for the ideas and opinions of the trade and will put its best efforts into an exposition of such things as would react to the benefit of the trade it represents. Seemingly, however, this idea is rather old-fashioned. There is an evident opinion among certain prominent journalists connected with lumber journalism that the field of usefulness of a trade paper, while incidentally in the interests of the trade it is sponsor for, is more directly to afford a means by which personal quarrels and petty jealousies can be exploited for the benefit of no one but the writers concerned. What possible benefit to the lumber trade can come from criticism, either straightforward or sarcastic, of the methods of a competitor? It has always been our belief that a trade paper edited and published in such a manner that it would stand absolutely on its own merits, winning subscribers, readers and business because of the fact that its attractiveness and usefulness made it indispensable, would need to pay no attention to vituperant outpourings of any other medium of a similar nature. Every red-blooded man likes a good scrap, but nobody who has attained his majority has any particular fondness for tongue-lashing and hairpulling tactics when employed by grown men. If the lumber trade feels that the discussions referred to have any particular bearing on the lumber business, there is nothing further to say, but it does not seem that it will view it in that light.

Broader Than Dollars and Cents

The public at large is apt to take a rather narrow view of the broad question confronting the railways involving on one hand advances in freight rates and on the other hand advance in the cost of maintenance and operation. Notwithstanding extremely favorable reports on gross and net earnings coming from the roads since trade situation has been manifestly improving, the common carriers must necessarily look at the question not entirely with a view of meeting immediate necessity, but rather considering the situation as it will have a direct bearing in the future.

The absolute power enjoyed by the unions of railway employes is undoubtedly not a matter of public knowledge, at least the average citizen has probably not taken the time to reason the thing out to an ultimate conclusion. Does he realize that the entire industrial and business structure of the country and also the social structure embodying the sustenance of the family, its physical comfort as affected by coal supply, is absolutely controlled by conditions existing with our means of transportation,—namely, the railroads? Does he realize further that the organizations of railway employes are the most powerful and efficient of any labor organization in the world and that in the event of discontinuance of employment by reason of strike or other cause on the part of the organization, it would be next to impossible to fill their places with any degree whatever of satisfaction? Any general strike on the part of railway employes means absolute discontinuance of business and industrial effort. The tremendous power of the railroad employes' unions therefore can be readily seen. What they will do with this power depends entirely upon the personnel of those organizations. They have, if they wish, power to demand such increases in wages as will ultimately narrow the margin of profit to the railways to the vanishing point. It is not reasonable to suppose they would employ these narrow-minded methods, but nevertheless the menace is constantly before the officials of the big systems of the country.

It is possible that this feeling, which in some quarters very likely is one of unconscious apprehension, in a degree retards investment in railway property,

which in turn results in insufficient investment to effect improvements and expansion and in the same line ultimately retards development of the country.

An article in this issue of HARDWOOD RECORD suggests the possible means for governing advances in freight rates on an amicable and equitable basis. Would it not be a feasible proposition to employ the same kind of a scheme to adjust the relations between railway employers and employes? The personnel of the unions is undoubtedly of high character. The men are all citizens of good standing. If the baleful influence of certain organizations ostensibly in the interests of the labor unions but really of socialistic and anarchistic nature can be eliminated, it is reasonable to suppose that the time will come when all questions involving wages of railway employes will be settled not by strike or argument, but through some unbiased meeting which will absolutely guarantee equitable adjustment.

It is inconceivable that any body of intelligent men such as is found in the railroads' employ would willingly take an arbitrary stand if they could be brought to a constant realization of the grave possibility of such action checking the advancement of the country.

UNSOLICITED TESTIMONIAL

C. S. Brown

Boat and Dock Timbers, Hardwood and
Yellow Pine Lumber,
Timbers, Ties and Piling

Huntington, W. Va., Nov. 27, 1912.

Hardwood Record,
Chicago, Ill.

Dear Sirs:—

I have received such satisfactory results from your bulletin service that I wish to express to you my sincere thanks for bringing the proposition to my notice.

From the firms I selected from your list, I received very courteous replies to at least seventy-five per cent of my requests for an opportunity to quote them and added out of this list several new customers.

On the whole I think of no service that is more effective to obtain the desired result than this.

Yours very truly,

C. S. BROWN.

Poor Matching versus Profits

An article appearing in this cover treats somewhat at length of the folly as shown in some manufacturing plants of giving too little attention to the question of matching lumber so as to turn out an article which embodies the maximum of beauty contained in the wood going into its manufacture. The question is not in any way an esthetic one, but merely involves a question of dollars and cents. It surely has a bearing on the ultimate profit balance of any manufacturing concern turning out wood goods. It is not reasonable to suppose that a dealer in furniture or the ultimate consumer buying in single pieces will consider an article showing poor matching where strikingly different color and grain are shown in direct contact in different pieces of wood in the same article as of equal value to an article which distinctly shows great care in matching. It is hard to conceive of any real reason for not giving close attention to this feature of manufacture. It may be argued that the additional cost of selecting stock is prohibited. The human element undoubtedly also comes in strongly. It is of course difficult to train a mere tradesman to the finer points of proper utilization, but nevertheless efforts along these lines will react to considerable advantage. There has been some little complaint among the woodworking factory trade that keen competition has inaugurated a condition of competition on price. It would seem that the concern paying particular attention to the question of satisfying as far as possible the esthetic taste of the purchaser of his goods is going to have a big bulge on the man who simply grinds out work, taking the lumber as it comes from the kiln. At least the question is one which might well be considered seriously.

Imports and Exports for October

A summary of commerce and finance showing the imports and exports for October, 1912, compiled by the Department of Commerce and Labor, shows a healthy increase in the total export of woods and the manufactures of woods over October, 1911. The total for October of this year was \$8,463,490 and for October a year ago \$7,823,634. The total export value of logs and other round timber decreased during this period from \$216,590 to \$154,296. This can undoubtedly be attributed to a great degree to the serious condition of the export ocean freight situation.

The total value of hewn and sawed timber fell from \$757,338 to \$616,076. On the other hand the total export of lumber in boards, planks, deals, joists, etc., increased from \$4,342,104 to \$4,398,964. Of the remaining export of manufactured wood goods decided increases were shown in shingles, shooks, staves, headings, sash, doors and blinds, furniture, hogsheads and barrels, interior trim and other house furnishings, woodenware, wood pulp and several other lines of smaller manufacture. The increase in total export was noted mainly in these items.

The import value of wood goods manufactured and unmanufactured increased from \$5,682,800 in October of 1911 to \$6,208,570 in October, 1912. There was an increase in the import value of all unmanufactured round timber, mahogany of course being the most important of the lumber items. The value of mahogany brought into this country in October, 1912, was \$550,248. The value of pulp woods imported increased from \$524,091 to \$565,661. Manufactured lumber of various kinds to the value of \$2,141,401 was imported in October, 1912, as against a total import value of \$1,790,663 for October, 1911.

The import value of lath increased materially, while the import value of shingles fell off considerably. The import of foreign furniture remained practically the same. The total value of wood pulp imported increased from \$1,306,139 to \$1,502,190.

Sugaring the Grade

An enterprising advertiser in *HARDWOOD RECORD* uses this sentence among others in his advertising: "When you specify a certain grade of lumber, you get just that grade." It is a safe guess that most people interpret this to mean that there is no stuffing or salting of the grade with a percentage of something lower, in the hope that it will get by, and with the feeling that if it does not, the shipper

will at least get its grade value. Sticking to a grade, however, means more than that. It means, or should mean, including neither that which is better nor that which is worse. It means freedom from the reverse of salting grades (sugaring the grade). It is not generally considered objectionable for the millman to ship stock that is above grade if he wants to and is willing to stand for it, but there are objections, and trade troubles which result from this practice as well as from salting, though perhaps they are not so frequent nor so acute as the former case.

A country customer of a lumberman recently called him over long distance and registered a kick on a carload of lumber. The customer admitted that the lumber would pass inspection and make the grade the order called for, but said it was so much below the grade he had been in the habit of getting that he wanted the lumberman to make a reduction of \$2.00 a thousand on it. This led to a lot of correspondence between the lumberman and the mill shipping the lumber. The mill had built up a reputation for shipping out stock above grade, and for this reason was often able to get preference on orders at equal prices with other mills. When this claim of the customer reached the main office in another city, the owners objected, and said that if the mill had been shipping stock that was above grade it was without their knowledge and that it would have to stop. The upshot of it all was that the lumberman had a dissatisfied customer, and the inspection department at the mill got a jacking up, and the mill manager probably felt that his prestige on orders was gone.

From a monetary standpoint that millman would have been as well justified in cutting his regular price as in shipping lumber that was above grade, but he perhaps persuaded himself that it looked better morally to sugar his stock, and that technically he was maintaining prices. In reality he was not, and the morals of the thing are subject to fully as severe criticism as cutting prices. Then, entirely aside from the question of right and wrong to other members of the trade, he was spoiling his customers, detracting from the value and usefulness of specific grades, and letting down the bars to wrangles about quality which would be without any reliable guide for adjustment.

Sugaring a grade may not be as gross a fault as salting it, but neither is right, and what is not right is wrong. If you are selling by grades, stick to them; you needn't strip everything down to line boards that will just barely make the grade; neither should you make the grade markedly better than the specifications call for. It is the specific grades that are the more satisfactory in the long run, and it is sticking to the grades faithfully that helps make them worth more in your business as well as to the trade in general.

Dimension Stock in Handle Making

Some broom handle manufacturers are under the impression that they can make handles only from logs or lumber, but in the case of the handle man who does not saw his own timber but buys it cut into lumber, it is very convenient to buy it in boards cut two inches longer than the finished handles, or in blanks ripped to size. The trouble always has been that the lumberman furnishing this stock will not cut it out as it should be done. A broom handle square must be large enough to allow for plenty of stock for turning, and many millmen, if ordered to rip stock one-and-one-eighth inches square, will try to skimp that measure a sixteenth of an inch or so. This practice will practically spoil the squares for the purpose that the handle man desires to use them.

It is the practice of some mills to rip out large piles of blanks in warm weather from green stock, and let them lay in bulk so long that rot sets in. Consequently, when the handle man puts them on a lathe he finds that a lot of them are worthless to him.

It would seem that it would work to the advantage of the lumber manufacturer to look to this phase of lumber consumption with more care, because good blanks and short boards for broom handles can be made from the edgings and butts, and also from the short lengths which would not saw into a good grade of lumber. It would be well for the sawmill man to look this matter up as there are hundreds of handle factories which are willing to buy this class of stock.

Pert, Pertinent and Impertinent

The Forest Fires

Is this the Forest Primeval?—that redolent, hallowed cathedral
Lifted by Nature to God, the solace and joy of His creatures.
Health-giving, tranquil and strong, the source of beneficent waters,
Wooing the quickening rains, guarding the bountiful wheat-lands?
This was the Forest Primeval;—this roaring, devouring furnace
Billowed and sheeted with flame, a pitiless, raging inferno.
See! how the sentinel pines go down, while the red-hearted cyclone
Greedy sweeps on the settlements, whirling in panic before it

Caribou, timber-wolves, deer, snorting and plunging and bounding
Mingled with cattle and men, poured through the streets, where the houses
Melt in the fury!—And now, nothing remains but the timbers
Desolate, blackened and charred, heaped over smoldering bodies.
There let the fire-weed grow, dropping memorial blossoms.

Only a camp-fire brand,—only a spark from an engine,
One of the myriads blown daily and nightly at random—
Such was the procreant seed. Come, let us thresh out the harvest.

—Arthur Guiterman.

In the Carpenter Shop

"Life's a hard grind," said the emery wheel.
"It's a perfect bore," returned the auger.
"It means nothing but hard knocks for me," sighed the nail.
"You haven't as much to go through as I have," put in the saw.
"I can barely scrape along," complained the plane.
"And I am constantly being set upon," added the bench.
"Let's strike," said the hammer.
"Cut it out," cried the chisel, "here comes the boss."
And all was silence.

—Scissors Beaudin.

But a practical joke isn't funny when the reaction sets in.

DID IT EVER OCCUR TO YOU?

From the testimony brought out at the recent weight hearings in Boston, it would seem that this is not an uncommon method of "official" weighing.

Generosity

A large, husky negro and a small Frenchman were sawing a large piece of timber for the Boston subway with a heavy crosscut saw, each in turn pulling it back and forth. A pugilistic Irishman stopped to watch the operation. After a few moments he strolled up to the negro and dealt him a blow, saying:

"Give the saw to the little fellow if he wants it."—Harper's.

Art Is Short

Artist—"Only \$1.50! Why, the frame cost three times that!"

The Broker—"Vell, dot is all right, my frendt. Ve only loans on der vrame."—Puck.

Absent-Minded

Waiter—"Do you mind if I put your bag out of the way, sir? The people coming in are falling over it."

Diner—"You leave it where it is. If nobody falls over it I shall forget it's there."—Fliegende Blatter.

The Reason

Benevolent Individual—"Yes, sir: when a man makes a little extra money his first duty is to give his wife a present of a handsome suit."

Ordinary Individual—"You are a philosopher, I presume?"

"No; I am a ladies' tailor."

Premeditated Bliss

"If by any chance I have to stay late at the office, I'll send you a note, dearie," he thoughtfully said as he left in the morning.

"Don't worry, dear," she replied; "I've already found it in your coat pocket!"—Exchange.

Military

"Yat makes der corn stalk so?"

"Dot is because its family is all composed of kernels."

Heine—"Und how dit you say you becamed such a wonderfud orator?"

Louey—"Mein poy, I began by addressing envelopes."

American Forest Trees

ONE HUNDRED-FIRST PAPER

WESTERN WHITE PINE

(*Pinus Monticola*—Dougl.)

The silvery luster of the needles of this tree gives it the name silver pine, by which many people know it. It appears in literature as mountain Weymouth pine, the reference being to the eastern white pine (*Pinus strobus*), which is sometimes called Weymouth pine. Finger-cone pine is a California name; so is mountain pine, and soft pine. In the same state it is called little sugar pine, to distinguish it from sugar pine (*Pinus lambertiana*), which it resembles in some particulars but not in all. It is thus seen that California is generous in bestowing names on this tree, notwithstanding it is not abundant in any part of that state and is unknown in most parts.

The botanical name means "mountain pine," and that describes the species. It does best among the mountains, and it ranges from an altitude of from 4,000 feet to 10,000 on the Sierra Nevada mountains. Sometimes trees of very large size are found near the upper limits of its range, but the best stands are in valleys and on slopes at lower altitudes. Its range lies in British Columbia, Montana, Idaho, Washington, Oregon, and California. In the latter state it follows the Sierra Nevada mountains southward to the San Joaquin river.

This species has been compared with the white pine of the East oftener than with any other species. The weights of the two woods are nearly the same, and both are light. Their fuel values are about the same. The strength of the eastern tree is a little higher, but the western species is stiffer. The woods of both are light in color, but that of the eastern tree is whiter; both are soft, but again the advantage is with the eastern tree. The western pine generally grows rapidly and the annual rings are wide; but, like most other species, it varies in its rate of growth, and trunks are found with narrow rings. The summerwood is thin, not conspicuous, and slightly resinous. The small resin passages are numerous. The heartwood is fairly durable in contact with the soil.

The western white pine has entered many markets in recent years, but it is difficult to determine what the annual cut is. Statistics often include this species and the western yellow pine under one name, or at least confuse one with the other, and there is no way to determine exactly how much of the sawmill output belongs to each. The bulk of merchantable western white pine lumber is cut in Idaho and Montana. The stands are seldom pure, but this species frequently predominates over its associates. When pure forests are found, the yield is sometimes very high, as much as 130,000 feet of logs growing on a single acre. That quantity is not often equalled by any other forest tree,

though redwood and Douglas fir sometimes go considerably above it.

The western white pine's needles grow in clusters of five and are from one and a half to four inches long. The cones are from ten to eighteen inches long. The seeds ripen the second year. Reproduction is vigorous and the forest stands are holding their own. Trees about one hundred and seventy-five feet high and eight feet in diameter are met with, but the average size is one hundred feet high and two to three feet in diameter, or about the size of eastern white pine.

The wood is useful and has been giving service since the settlement of the country began, fifty or more years ago. Choice trunks were split for shakes or shingles, but the wood is inferior in splitting qualities to either eastern white pine or California sugar pine, because of more knots. The western white pine does not prune itself early or well. Dead limbs adhere to the trunk long after the sugar pine would shed them. In split products, the western white pine's principal rival has been the western red cedar. The pine has been much employed as mine timbers in the region where it is abundant. Miners generally take the most convenient wood for props, stulls, and lagging. A little higher use for pine is found among the mines, where it is made into tanks, flumes, sluice boxes, water pipes, riffle blocks, rockers, and guides for stamp mills. However, the total quantity used by miners is comparatively small. Much more goes to ranches for fences and buildings. It is serviceable, and is shipped outside the immediate region of production and is marketed in the plains states east of the Rocky mountains, where it is excellent fence material.

A larger market is found in manufacturing centers farther east. Western white pine is shipped to Chicago where it is manufactured into doors, sash, and interior finish, in competition with all the woods in that market. It is said to be of frequent occurrence that the very pine which is shipped in its rough form out of the Rocky mountain region goes back finished as doors and sash. When the mountain regions

shall have better manufacturing facilities, this will not occur. In the manufacture of window and hothouse sash, glass is more important than wood, although each is useless without the other. The principal glass factories are in the East, and it is sometimes desirable to ship the wood to the glass factory, have the sash made there, and the glazing done; and the finished sash, ready for use, may go back to the source of the timber.

The same operation is sometimes repeated for doors; but in recent years the mountain region where this pine grows has been supplied

FOREST GROWTH WESTERN WHITE PINE, MONTANA

with factories and there is now less shipping of raw material out and finished products back than formerly. The development of the fruit industry in the elevated valleys of Idaho, Montana, Washington, and Oregon has called for shipping boxes in large numbers, and western white pine has been found an ideal wood for that use. It is light in weight and in color, strong enough to satisfy all ordinary requirements, and cheap enough to bring it within reach of orchardists. It meets with lively competition from a number of other woods which

grow abundantly in the region, but it holds its ground and takes its share of the business.

Estimates of the total stand of western white pine among its native mountains have not been published, but the quantity is known to be large. It is a difficult species to estimate because it is scattered widely, large, pure stands being scarce. Some large mills make a specialty of sawing this species; and the annual output is believed to reach 150,000,000 feet, most of which is in Idaho and Montana.

Disproving a Log Buyer's Idea

Bigness is the attribute that must be possessed in order to command attention these days. The heavyweight prize-fighter is proclaimed a white hope and given a chance even if he is a plain boob from the wilds of Oklahoma. The bigness of nickels, taken in the aggregate, is demonstrated by the size of the tallest skyscraper in the country. The sales manager loves to have as his road men fellows who are at least six feet tall and wear seventeen-inch collars without having too much room for their Adam's apples, and Big Business and the Big Stick are current idioms which express the admiration of the populace for prize productions in every line.

The log buyer who is charged with getting the material for a mill is not only attracted by a big bunch of logs, but by the lot which contains the biggest specimens. The sight of a big, round, fat log stirs the ambition of the buyer to surprise and amaze the mill superintendent and to show the boss that his territory is still capable of producing monarchs of the forest. Every other buyer feels the same way about it, and the consequence is that a lot of logs containing a few exceptionally big specimens invariably brings a great deal more money than if the sizes were average and if there were no remarkably large logs in the lot.

In the case of veneer mills, of course, log buyers are rather justified in going after the select logs, figuring according to size. But even here the advantages are not altogether in favor of the extremely large log, and in the straight sawmill business an exceptionally big timber is really a handicap. In the opinion of a lot of expert manufacturers of lumber, as much money is lost as is made out of handling unusually large timber of that kind.

"It looks mighty good to bring in a log thirty-six inches in diameter or over," said a hardwood man whose Kentucky mill is conceded to turn out quality stock, especially in oak, "but when you get to handling a log of that size you can be prepared for unfortunate happenings. In the first place, an oak log over three feet in diameter is going down hill. That is, the tree of which it was a part had passed its prime when it was cut. Under scientific methods of forestry, such a tree would not have been allowed to develop that size, for it is likely to have developed heart cracks, worms and other defects that come with old age. Hence getting hold of an exceptionally big log is inviting trouble in this direction.

"Then the equipment around the mill, it must be remembered, is built to take care of average-size logs. Your derrick, carriage and saws are tuned up with reference to logs smaller than the kind that bring the premium prices, and when you require them to handle a bigger load it causes delays. You never see a tremendously big log go through a mill as slick as one of the average size, for the reason that it takes longer to handle it and accidents are more frequent. You may have good luck as to the grade of lumber you get out of it, but even then, by the time you have figured the higher price you have paid and the additional labor required to manufacture it, it is doubtful if you have made anything on the transaction, or, at any rate, any more than you would have made on the same amount invested in smaller logs."

A great many hardwood manufacturers who specialize in quartered oak take the ground that even though wide quartered oak is desirable, it is not nearly so desirable as good lumber, and that consequently the small log, averaging around twenty-two inches, makes the best material from which to manufacture their specialty. Eight-inch lum-

ber in this commodity is a good width, and ten-inch is wide stock; so that a log of the size indicated makes a good average run of lumber as to width, and is much more likely to grade up nicely than if a thirty-six-inch log were cut. In a good many cases, where the larger logs are quartered and defects found, it is necessary to use the edger and trimmer anyhow to get as good a grade as possible, and the result is that the manufacturer has little advantage as to specially wide stock to offer because of his big logs.

From twenty-two to twenty-eight or thirty inches seems to be the range within which successful manufacturers like to buy their logs, and for plain oak a twenty-four-inch log can hardly be beat, it is contended. It is most likely to be sound all the way through, it is easy to handle, it does not usually cost more than the average, and it cuts up into good wide stock. What more can the lumberman desire?

The big log craze is not confined to handlers of domestic woods. Some of the mahogany producers report that their logging crews spend more time and waste more effort in getting out the real giants of the tropical forests than are justified by the results, for, as indicated in the case of trees grown in this country, it invariably requires greatly increased expense to move such a log.

In the tropics, of course, it is necessary to construct a road from the trees to the nearest stream, and the size of this road, as well as the number of oxen or men necessary to drag the big log from its native place to the stream which is to float it to the coast, or to the logging railroad which takes it to the shipping point, is much larger than under ordinary conditions. It is the same story again of handling for shipment; and, while the big derricks which are provided for handling mahogany logs are necessarily of greater load capacity than are used in other lines, there is a good deal of trouble experienced in the mill proper in handling a log of that size.

The figure in a mahogany board counts for more than the size, and, as wide stock is a feature of this class of lumber, an exceptionally wide board is not worthy of much comment; while the fact that a superb figure may be found in a small log and not in a big one indicates that in a good many cases unusual expense and trouble have been resorted to without a corresponding profit.

A veneer manufacturer who naturally likes to get hold of big logs was relating his experiences recently in this connection. A timberman who had always "toted fair" with this concern wrote in offering a bunch of logs which appealed to the manufacturer on account of their exceptional size. The price was pretty high, but the veneer man decided to invest. The logs were taken up by his inspector and looked all right, and trouble wasn't run into until they were cut into flitches and put on the veneer saw and slicer. Then came the deluge. The saws struck metal which turned out to be old horse-shoes, spikes and other foreign matter, and a few experiments showed that most of the logs had evidently been bought from farmers who had used the trees as hitching posts in years gone by. The result was that it was next to impossible to handle the logs to advantage, and by the time broken saws were repaired and delays figured, it was found that the veneers produced from them were pretty expensive—to the mill.

It is just as well to look on the large log without much enthusiasm, anyhow; for they are getting few and far between in most sections of the country. There are still a lot of the smaller sizes to be found, and as they are the best for practical purposes the passing of the giants among hardwood trees will not be greatly deplored.

Wooden Bed Logically Superior

In the issue of *HARDWOOD RECORD* dated March 10, 1912, under a general article covering the various phases of the question of substitutes for woods, a paragraph touching on the supposed claims of metal bed advocates was inserted. In that paragraph, the fallacy of the claims of the metal bed manufacturers as to the overwhelming popularity of their production was established. It was shown that there has been a considerable falling off in the sales of metal beds and while no attempt was made to go into the question in detail, the trend of the argument was that the wooden bed is increasing rather than decreasing in popularity.

This is unquestionably a fact. Granting it as such, it is interesting to review possible reasons for this condition in the face of the extravagant claims of the brass bed people.

The question must necessarily, to arrive at any satisfactory and sane conclusion, be considered on a broad basis,—that is, wooden beds and brass beds as general classes of products must be taken into account rather than any one type of either. The high grade, consequently high-priced lines in both makes certainly enjoy advantages which might reasonably be advanced to prove the supremacy of either line; but taken as a class, there are certain features which, considering the modern type of construction, are about on a parity.

Without considering the varying quality of articles manufactured from either kind of raw material by individual firms, it is undoubtedly a fact that the modern bed is a pretty sanitary article. Furthermore, by eliminating useless parts, its weight has been so reduced and distributed that as an article of furniture it does not offer the disagreeable features of the old style cumbersome wood or metal bed. Another quality which is analogous in both types of manufacture is the fact that both the wooden and the brass or iron bedstead have been reduced in actual size so that they now appear as but an article of furniture rather than, as formerly, occupying practically the entire bed chamber.

Thus eliminating these claims of superiority which have been advanced by the advocates of both types of beds, in order to establish the superiority of either class, it is necessary to look for further features. It is claimed by the manufacturers of the brass bedstead that there is not a sufficient quantity of high-grade cabinet woods left to enable the wooden bed manufacturer to turn out a product sufficiently inexpensive to be within the means of the average purchaser. That this is unquestionably not true can easily be proven by investigation of prevailing market prices of wooden beds as compared to brass beds of an equally high character, or if one is familiar with market conditions in hardwood lumber going into bed manufacture it can be seen that the cost of the raw material going into the manufacture of the bed will amount to very little as compared with the labor cost and other factors which go in to make up the final cost to the consumer.

But by far the greatest advantage which the wooden bed has over any other type of manufacture is its beauty. It must be admitted by the most partisan that the old style wooden bed was so entirely ugly, unwieldy and unsanitary in every way that no just claims could be made as to the sanity of using it, let alone any advantage it might have over a metal article. But this condition has been entirely eliminated. The objection to the old type of bedstead probably was directly responsible for the introduction of the modern metal bed. The old fashioned wooden article was so unsanitary and cumbersome that a change was absolutely necessary. With the successful introduction of the metal substitute, the growth in its popularity, probably as much because of the fact that it was a new thought as because of anything else, was remarkable. But the metal bed manufacturers have been their own worst enemies. They had absolutely no room for originality and beauty of design and seemingly exercised their entire scope of operation in this line by introducing the most grotesque twists and turns in the piping of the bed, thus not only creating ridiculous designs but eliminating from the advantages of the metal frame the claim of increased hygiene. This condition has gradually been improved, but in the meantime other causes have grown up which would tend to make the metal bed anything but a successful substitute for the modern wooden one. In fact, this very condition

limiting the possible designs and improvements in the brass bed created the condition which has meant a great deal for the wooden bed manufacturers. It seems that it is absolutely impossible for a concern turning out a high-grade article to sell to any advantage inasmuch as necessary simplicity of design made it possible for every buyer to ascertain definitely exactly what was in the bed and to make comparison of size of tubing, etc. Thus the different manufacturers were put on an absolute price competition and the process of handling their business ever since has been based on this condition. They have seemingly endeavored only to reduce their goods to the cheapest possible character and to sell on as narrow a margin of profit as possible. In fact, very few metal bed manufacturers turn out beds of quality and the few who have have in most cases been compelled to meet the fierce price competition or go out of business. In other words, because they did not have quality, they have not been able to advertise this feature of their production or at least if they have advertised it they have been unable to maintain it.

Public taste for house furnishings has been so wonderfully expanded in every line that the buyer nowadays demands first, style and at least seeming quality and then price in keeping with his pocket. Thus it is absolutely necessary for a concern to successfully operate a manufacturing business turning out any article of household furniture to offer something extremely attractive which he can put out at a reasonable figure. Experience has shown and it is being constantly now demonstrated that a medium priced brass bed cannot possibly meet these requirements. The decreased sales have demonstrated this condition. On the other hand, manufacturers of wooden beds have the broadest fields for variety in design, materials and finish. New ideas in keeping with different periods of furniture design are constantly being offered to the discriminating buyer. He is not compelled to merely select a bed of a certain size and either of a dull or shiny finish; but he has a myriad of designs, colors and styles in any kind of wood or combination of woods which he requires. A dignity in design involving graceful curves and massiveness, together with lightness and simplicity, can be acquired in wooden bed manufacture which is absolutely unthought of in the manufacture of any substitute article, and the beauty of it all is that that process of construction has been so reduced to a scientific basis that the labor cost is at a minimum. As to the claim that cabinet woods are too high priced to be within the popular reach, there are various kinds of wood coming in constantly which have beauty of figure and color and that offer to the buyer of a medium grade of furniture beauty and elegance. While these facts are but opinions, although based on actual conditions, one needs only to investigate conditions in the plants of the wooden bed manufacturers, or, if he does not care to take their word for the growth of their business, he needs only to visit some large furniture sales room in which are grouped all kinds and types of furniture. The astonishing variety and beauty of the modern wooden beds which have developed as the fallacy of substituting metal in this line of construction made itself evident, will certainly convince him that the wooden bed has come back to stay.

Wood Used for Polishing Watches

An interesting use of rotten wood is in the polishing of the fine parts of the highest grade Swiss and French watches. Formerly this material was more extensively employed than at present, being largely supplanted by machinery and benzine. The escape parts and small screws are still in large part polished by hand and rotten wood. The value of the rotten wood used annually in Switzerland for this purpose is about four thousand dollars, the best quality bringing a price of one dollar per pound. What is wanted is a yellowish-white silky material, soft and spongy, brittle and very light, and in which the growth rings are still visible. Such is produced by certain fungi growing in the stumps and roots of beech, maple, ash, aspen and willow. It is not easily found, being mostly confined to southern exposures in dry, shallow, stony soils in the mountain regions.

Logging Costs—A Sane Method

Perhaps the most perplexing problem before the lumbermen and foresters today is that of logging costs. Every estimate of stumpage value demands an estimate of probable logging cost. Every projected operation calls for a choice of the cheapest method and equipment, by comparison of estimated cost under different methods and with different equipment. Usually the only solution of these important problems has been the estimate of practical loggers based upon their judgment and experience. But as stumpage values rise the importance of close estimates of logging costs becomes greater, as does also that of choosing the most efficient and cheapest method and equipment under the given conditions.

A great many lumbermen keep costs in some detail, but I believe myself safe in saying that the majority keep only such accounts as, used in conjunction with an inventory, will give them a total cost per M. This when compared with the average return per M shows their net profit. Often this total cost is itemized to show the expense per M of different parts of the operation, such as felling, skidding, loading, railroad haulage, etc. Mostly these costs are kept with the old bookkeeping point of view, viz.: debit outgo, credit income, and the balance shows profit.

Accounting, as a method of measuring efficiency of work by a careful analysis of the operation, and detailed costkeeping, is not often used.

There are numerous reasons for this state of affairs. In the first place careful cost accounting is very difficult under the continually varying conditions of a logging job. In the sawmills, where conditions are much more stable, and work can go on in a routine way, detailed cost accounting is much easier and in a great many cases is applied. Another reason is, that large timber holdings have been bought in former years at a very low stumpage valuation. Such timber can be logged and manufactured at a good profit today, whereas if the present stumpage value had to be paid, the profit would be small, and often loss would result. In other words the profit comes largely from the increased price of standing timber and consequent rise in the price of lumber, rather than as a profit on its manufacture. The average lumber manufacturer sees to it that the mill work is as efficient as possible and settles the troublesome profit of efficient logging either by letting it out under contract, or putting it in charge of some practical woodsman, to do the best he can.

In the present days of high stumpage prices, however, the efficiency of the logging end of the business has a large influence on its profits. The only sure way of determining efficiency is by careful cost accounting, and the reason why most logging costs obtainable today are of little use in this connection, is because they have seldom or never been tied in with conditions under which the work has been done.

It remains then to develop a "science" of logging, to determine the most efficient method of operation under given conditions. This is not to be easily or quickly accomplished, but I believe it can be done—never, to be sure, in any extreme detail, because of the difficulty of closely measuring the varying factors which govern logging efficiency, but yet close enough to give a fairly firm basis for the choice of logging method, and for an estimate of its probable cost.

The important factors which affect the cost of logging and which may be measured and expressed intelligibly are:

1. Stand of timber per acre.
2. Size of timber (average number logs per M).
3. Average slope.
4. "Bottom" (condition of ground, swampy, rocky, etc.).
5. Average length of haul.

Another very important factor, which is both hard to measure and to foresee in estimating cost of logging, is the character and efficiency of the available labor supply.

If now, we measure the average daily or monthly capacity of, say, a skidding crew (or any other crew performing a definite part of the operation) and state the method of work, the character of the labor, the equipments (tools, stock, machinery, etc.), and the five factors

mentioned above, we have a fair basis for comparing the efficiency of a given method of work, with another method which has been studied in the same way. In every case, however, it is necessary to analyze the operation into its distinct parts, so that if a skidding crew is also doing some other part of the work, say road building, as it goes along, we may by a ranger time study determine what proportion of the expense belongs to road making and what part to the skidding.

It will be necessary in this connection to work out average costs of operation (aside from labor costs), maintenance, and repairs of logging tools, stock, and machinery used by the crews whose capacities are studied.

When this has been done on a large number of operations and under a large number of different conditions, it will be possible to state, for any set of conditions, what is the ideal method of work, and what is the ideal equipment. It is, of course, true that the lumberman must use what he has on the spot; very often he cannot use the ideal method, even though he knows surely what it is. But such information as is described above should aid greatly in choosing the method of operation, and in buying the logging machinery and other equipment for estimating a given tract of timber.

Besides these general problems of determining the efficiency of different logging methods, every company will have its own purely local problems to solve, more detailed comparisons of cost of different ways of doing things, under the conditions peculiar to the individual operation. This can be carried by means of detail bookkeeping to any point desired. But it should always be kept in mind that comparative costs are of very little practical value unless the factors which influence them are also known. In picking the cheaper method it is necessary to know that the work was done under similar or nearly similar conditions.

Hardwood Market of Hamburg

German lumber merchants have usually confined themselves to the publication of market reports in their own language. These reports sent to American journals and to the American lumber trade have not been of particular importance because of this fact. J. F. Müller & Sons of Hamburg have issued a report dated November 11, which is printed in English and contains an interesting and instructive summary of market conditions in that center for November. According to the report, black walnut was in good demand, especially the better grades, which were not in all cases obtainable at the prices buyers had formerly been paying. Offerings of firsts and seconds were, according to report, scarce and it was the opinion of this firm that shipments of these grades would be welcome. Sales of the common grades obtained somewhat slower owing to the large quantities consigned to the Hamburg market, which created a condition of stock in excess of the actual demand. Cull walnut lumber should be sent only on firm orders as there is but a limited output for this stock.

There was a brisk demand for white oak, but the resulting business was not excessively large owing to the steadily increasing price that shippers have been asking for their lumber on account of the extraordinary rise in ocean freight rates. The bulletin calls attention to the fact that exporters should bear in mind the German preference for white oak and the difficulty of disposing of red oak stock in that market. Plain oak is equally favorably received, while quartered is of slow movement.

The better grades of chestnut occasionally find a market in Germany, although the business transacted is of small proportions. Lower grades, such as sound wormy, are not saleable. Cottonwood has reached a level of price which prevents its use to a great extent, as local and African woods can be purchased to better advantage. There is an equally limited demand for yellow poplar and very few contracts have been closed. But few entries have been obtained for red gum, while sap gum and tpele lumber is imported on a large scale and enjoys an active inquiry. There seems to be but little demand for basswood in Germany.

The Tropical Hardwoods of Florida

For a long time there has been a halo of mystery surrounding the timber resources of Florida, particularly the tropical hardwoods that are generally known to occur in the southern part of the peninsula. The greater portion of the forests of Florida is taken up with the longleaf pine, the southern limit of which is reached in the south central part of the state; then there are a great number of northern hardwoods which find their southern limit here, such as the white, post, cow, Spanish, red and black oaks, white elm, persimmon, magnolia, yellow poplar, red and black gum and several of the ashes and hickories. Toward the southern end of the state the longleaf pine gradually gives way to the Cuban pine, a very close relative to the longleaf. The Cuban pine, however, grows only on the higher and dryer parts of the land. Interspersed among this Cuban pine and covering the tidal shores, swamps and areas bordering the streams and lakes are the tropical hardwoods. Several reports have been spread about that a timber wealth of enormous extent and in a great, undeveloped state is still lying untouched in the southern part of Florida. There is no state department in Florida charged with the survey of its forest resources and up to a recent date no examination of the forest conditions of the state had been made.

A careful survey of the forest conditions in the southern part of the peninsula shows that there is a great variety and extent of tropical hardwoods covering the entire southern end of the peninsula. This tropical growth extends farther north on the eastern coast than on the Gulf coast. This is undoubtedly due to the warming influence of the gulf stream. Although there is no hard and fast line which marks the northern limit of this tropical region, yet a line drawn from Mosquito Inlet in Volusia county on the east coast in a southwesterly direction to the lower part of Tampa Bay on the west coast will give an approximate idea of the extent of this region. A great number of the important and valuable hardwoods found in Cuba, Central America and the West Indies find their northern limit here. It is estimated that the tropical hardwoods cover in round figures about 4,000,000 acres. This represents about thirteen per cent of the total area of the state.

In the past a good portion of the more accessible tropical forests has been exploited and much valuable material has been sent to the northern markets. Although the tropical hardwoods found here do not reach the size and development that they do in the West Indies and Central America because of their location in the extreme northern part of their range, yet there is no doubt but that they will constitute an important source of supply of some of our more valuable cabinet and furniture woods, especially those manufactured locally and sent to all parts of the country.

The general popular conception of southern Florida is that it is wholly covered with swamps of which the Everglades are typical. The Everglades themselves occupy about 3,400,000 acres around Lake Okalochee and are practically treeless. Here and there a few islands dot the otherwise monotonous landscape of marsh and sawgrass. On these, Cuban pine and a few tropical shrubs and trees are scattered about, but the total amount of timber on the area included within the Everglades is negligible. Throughout the remainder of the southern end of the peninsula the tropical hardwoods occur in two general types.

The first is locally known as the mangrove swamps, which occur along the tidal shores and in the swamps bordering the streams for many miles back from the sea shores. The principal trees in this type are the red, white and black mangroves, the buttonwood and the seagrape. The mangroves often attain a size of twenty-four inches in diameter and from fifty to seventy feet in height, but the average size is considerably below these figures. They grow very close together and form a dense, almost impenetrable forest. The wood of these mangroves is hard, heavy, highly colored and durable. The trees have been cut considerably in the past both for the high market value of the woods and for their bark, which contains a high percentage of tannic acid. Much of this mangrove lumber has gone into flooring of the highest grades as well as in ship construction and piling. It has been estimated that the red mangrove has built up thousands of

acres of swamps and marshes along the sea shores by its remarkable ability to reach out into the salt water with its complex aerial root system and form new soil by holding together the sands, debris, etc., which wash in along the shores.

The second type of forest which includes some of the more important tropical hardwoods is the so-called hardwood "hammock." This type does not grow in the swampy regions, but consists of isolated areas of dense tropical hardwood trees, vines and low plants scattered about on the dryer portions throughout the southern part of the peninsula and on the long, narrow islands known as "keys" just off the coast. It is principally found on the higher land above the mangrove shore type. These "hammocks" vary from a few to several thousand acres in extent. This type is representative of what the whole forest of the southern part of Florida would be like if forest fires were excluded. The growth of trees on this type is exceedingly dense and thrifty. Young trees are continually coming up to supplant those that die out or are removed after lumbering. The growth of the individual trees is exceedingly rapid. The principal trees of this type are the Jamaica dogwood, a dark, heavy cabinet wood of very handsome grain and color; the

mastic, which grows to a good size and is highly prized for its bright colored wood, and the mahogany, the greater part of which has been cut out in this region and is only found now as individual trees scattered along the keys of the coast. It grows rapidly, however, and with proper protection should be of considerable importance in the future. Other common trees are the ironwood or lignum-vitae, of which our billiard balls, head blocks and piling weights are usually made; the satinwood paradise tree, torch wood and two trees locally known as the gumbo limbo, or West Indian birch and manchineel. Besides these principal trees there is a great variety of tropical woods and shrubs, many of which are yet to be classified by our botanists and of which very little is known at present. Most of them, either on account of their scarcity or insufficient size, are not and will not become of great commercial importance. All of the above woods are exceedingly valuable for furniture and cabinet woods as well as for interior finish, high-grade flooring, ship construction, etc., on account of their high color, weight, close grain of great beauty, ability to take a high polish, durability, and workability.

Most of these trees reach a height of from forty to sixty feet and from fifteen to thirty inches in diameter. Many of the better speci-

THE MASTIC TREE—TYPICAL OF THE "HAMMOCK" TYPE OF THE TROPICAL HARDWOODS IN SOUTHERN FLORIDA

mens in the more accessible regions have been cut out, leaving the more crooked and inferior trees standing in the forest. It is seldom, however, that the trees clear themselves of their limbs and form straight, tall cylindrical boles, such as we find in our better class of hardwood stands of Kentucky or the southern Appalachians. It seems to be more natural for most of these trees to grow crooked and knarly rather than to grow straight and it is very seldom that more than twenty feet of straight clear timber can be cut in one log. More often the logs have to be cut in lengths of from six to twelve feet. Owing to the fact that comparatively little general exploitation has taken place in these tropical forests in the past, the chief market for them at present consists of local industries engaged in manufacturing high-grade cabinet work and furniture from the more desirable and accessible varieties.

If it were not for the common prevalence of forest fires, the extent of the tropical forests in southern Florida would be considerably greater. The mangrove swamp forests have not been molested by forest fires on account of their naturally moist location, but the "hammock" type where our most valuable tropical hardwoods occur

has been repeatedly damaged and a great deal of it destroyed by the annual recurrence of ground fires which sweep over this region. But with forest fires eliminated these hardwood forests should be of great value to the timber interests in the future on account of their exceedingly rapid growth and high demand on the markets.

The following is a list of the most important tropical hardwoods known to southern Florida:

COMMON NAMES.	SCIENTIFIC NAMES.
Mahogany	<i>Swietenia mahagoni</i> —Jacq.
Lignum-vitæ or ironwood	<i>Guaiacum sanctum</i> —Linn.
Red mangrove	<i>Rhizophora mangle</i> —Linn.
Buttonwood	<i>Canocarpus erecta</i> —Linn.
White mangrove	<i>Lequincularia racemosa</i> —Linn.
Black mangrove	<i>Arcicemia nitida</i> —Jacq.
Seagrape	<i>Coccolobis wifera</i> —Jacq.
Jamaica dogwood	<i>Ichthyomethia Piscipula</i> —Linn.
Mastic	<i>Sidcroylum mastichodendron</i> —Jacq.
Satinwood	<i>Xanthorylum fagara</i> —Linn.
Gumbo limbo	<i>Bursera simaruba</i> —Sarg.
Manchineel	<i>Hippomane mancinella</i> —Linn.

N. C. L.

Poorly Matched Woodwork

Joseph's coat of many colors may have been artistic as a woven fabric; and the patchwork of crazy quilts was fashionable some years ago; but furniture makers are not, as a general thing, catering to good taste when they imitate those examples. The finest furniture, that which is really high grade, is made of parts which harmonize in color, grain, and figure. Numerous pieces of wood may be joined together to form a table top, bureau front, panels of sideboards, dressers or bedsteads; but there must be harmony, or the work as a whole will be more or less a failure.

Good taste is often offended by incongruous combinations of woods that do not match. A stand top is formed by joining two, three, or four pieces which are out of harmony. Colors may differ, figures may not match, grains are at variance. The sharp lines separating the component parts stand out as the most prominent feature in the whole make up. The man who puts such combinations together is evidently thinking of something besides how his work is going to look when it goes to market to be sold. A walk through many a furniture factory or store will reveal such offenses against taste; but they are more apparent in some places than in others, because some makers and dealers are more careful than others to keep such misfits in the background.

Poor combinations of woods occur in various ways. Sometimes in cheap furniture no effort is made to produce harmony. Everything or anything goes, and colors, grains, figures, different kinds of woods, and all are thrown together. That, however, is not the class of furniture now under consideration, but a better grade where appearance is supposed to count for something. Some of the mistakes and errors in combinations and matching may be pointed out without going too much into particulars.

A factory may be making red gum furniture. A workman might suppose that as long as he uses red gum he is fulfilling all necessary conditions; but every man who is familiar with that wood knows that there is sap gum and heart gum, and both may come from the same tree. The sap is whiter than the heart. Each in its place is unobjectionable, and one is as good as the other; but a strip of white sap beside a strip of darker heart in a table top is not an artistic combination, unless some kind of doctoring is done to conceal the true color of both woods. Gum is taken as an example, but carelessness or poor judgment may produce similar results with many woods which differ in color, depending on whether heart or sap is used.

Bad combinations may result in other ways than in color. Take sycamore as an example. Quarter-sawed sycamore and plain sycamore are so different in appearance that the eye distinguishes them at a glance. Yet the maker who is producing sycamore furniture

sometimes perpetrates combinations which resemble the old-fashioned "strip-about" meat counters in butcher shops. The mere fact that a certain species of wood is being faithfully adhered to is no palliation of the offense committed against good taste by joining pieces of wood together which should not be used in the same article, in a way to contrast one with the other.

Many a sin is committed against oak in the same way. Oak is a pretty broad term, and it includes colors, grains and figures almost without limit. Many a broad table top is made of pieces so tastefully combined that colors and patterns blend in a perfect whole, and it is a perpetual delight to the eye; but often the reverse is the case. Every piece stands out to itself. The lines of separation are so plain that the eye cannot possibly pass over them without stopping to note the esthetic hiatus. Beauty is spoiled; good taste is offended; and yet the workman who contrived the combination may have supposed that he was fulfilling every requirement. For, did he not make genuine oak furniture?

It was genuine oak, without any imitation or counterfeit, but something more than that is required of oak furniture, or furniture of any other wood. The combinations must be harmonious. Quarter-sawed and plain wood should not touch edge to edge; and chestnut oak should not join with white oak, much less white oak with red oak. If that mistake is made, the contrast will be mildly or severely offensive, depending upon its degree of violence.

Bad contrasts are not infrequently produced by the process of "filling" the wood. Ash and chestnut may serve as examples. What figure these woods have is due chiefly to the rings of yearly growth. These rings are very porous, and they stand out prominently in dressed lumber, but not with equal prominence in all dressed lumber. Much depends on the way the sawing is done. If the rings are cut in a certain manner their edges are exposed to view much more than if the cutting is done in another way. The run of lumber contains pieces with the porous rings exposed in various angles. The application of fillers to such woods plugs the pores and changes the color of that part of the ring.

The result is that pieces of wood combined in broad panels, table tops, or in similar places, may match very well while the woods remain in their natural colors, but when fillers are applied, the different pieces take on different tones, due to their porosity and the varying quantities of coloring matter they absorb during the application of the filler. Inharmonious combinations in the finished article may be the consequence. The remedy in such cases consists of prevention. The porosity of the woods ought to be considered before they are placed side by side. A piece sawed radially should not be combined with one sawed tangentially. Many undesirable

contrasts seen in furniture and finish will be found, upon examination, to be due to mistakes of that kind.

Many high-grade veneers owe their chief value to the practicability of matching one piece with another. Veneers are thin, and several sheets with practically the same grain or figure are cut from a log. The same burl, crotch, or wave shows in all. The similar sheets are kept together and sold together. The manufacturer can produce perfect matches, and his panels or tops are artistic and harmonious. Sometimes a single log of specially fine-figured mahogany or Circassian walnut may produce enough panels to finish a Pullman car,

a room, or even a house, and all the panels may be worked out with a harmonious arrangement of figure.

Unfortunately, all manufacturers are not so careful with their combinations. They miss opportunities to produce good effects. Bad matching is sometimes done without excuse. White wood is combined with dark wood, when there is no need for it; coarse grain with fine grain; wide rings with narrow rings; edge grain with quarter-sawed; anything of the proper size and shape may go in. These are lost opportunities, and the man who loses opportunities needlessly will soon begin to lose trade.

"Sample Car" Shipments

Where is the lumberman who will not extend himself to the limit when he gets an inquiry terminating with a paragraph like this:

"We expect to be in the market for several hundred thousand feet of this material; and if you can give us what we want as to price and grade in the first car, we shall be ready to close with you for the remainder."

That kind of statement is as much of an attraction to the average hardwood man as the storied Lorelei was to the fishermen of the Rhine. And he makes just as strong efforts to land the order for the big block of stock as the fishermen did to reach the side of the beautiful maiden. The results in both instances are not what would ordinarily be called successful.

When an inquiry suggesting that the buyer is prepared to purchase heavily in the immediate future comes in, the experienced dealer usually takes the information with a couple of bags of salt. He has probably had experience in this direction before, and knows that he seldom lands the huge contract to which veiled reference is made by the buyer. But he is a *rara avis* if he can restrain his desire to make a play for the business, and to fix up a car that is calculated to bring home the bacon, if there is really any business to be secured.

A quotation is usually made on the "sample car" which is lower than would be offered if merely that single shipment were under consideration; and the lumberman frequently goes out of his way to see that widths, lengths and grade are all a little better than necessary. In fact, the car is "salted," using the term in its better sense, and the consumer who receives it is sure to be pleased with its contents.

But does this presentation of lumber par excellence produce a wire to the effect that eight or ten more cars of the same kind may be sent forward? Hardly; for the purchaser who is wise enough to use the suggestion for the effect it has on the quality of the lumber is likewise shrewd enough to realize that, having sent one car of that kind, the lumberman will expect to get his regular profit out of the others. Hence the buyer turns to someone else and asks that a sample of his lumber be sent, and that if it is found desirable as to grade and dimensions, a big order covering the season's requirements of the factory will be placed.

Everybody realizes that a fairly large number of clever consumers are thus showing themselves to be shrewder bargainers than the lumbermen, and yet a lot of hardwood men continue to be taken in. They chase after the pot of gold at the end of the rainbow, and when they get there they find just what might have been predicted—nothing. It must be admitted, too, that the purchaser of lumber who is shrewd enough to get better lumber than the money he pays justifies is entitled to all that he receives, for, in the language of the baseball players, he "outguessed the batter." When a lumberman ships a "sample car" which is "salted" with better lumber than would go into an average car of this kind, he is frankly holding it out as a bait; and if the buyer were really to place the order for the additional lumber, it is a moral certainty that the additional shipments would not and could not be up to the standard set by the first car.

They would be up to grade and correct in measurement, of course; but not necessarily with the "trimmings" in the way of extra lengths and widths added to create the impression that the car contained particularly desirable stock. Hence, while the purchaser would

get his money's worth, he would not get more than his money's worth, as in the case of the first car. The argument of the lumberman, of course, is that the initial car is a kind of advertisement, and that he is spending a little money on his ad in order to secure a favorable impression that will result in more orders.

The same kind of proposition is frequently met with in the panel business, when consumers attempt to get quotations on small lots of built-up stock at the same rate as though a heavy order were to be placed, pleading that if the first shipment is satisfactory, the order for the additional material will be given. And cases are reported of panel men being so anxious to get the prospective big business that they accept little or no profit on the first job that goes through the factory. They ought not be disappointed if the consumer fails to produce the big lot, for in a good many cases he doesn't need more than was indicated by his "sample" order, and merely used the promise of the big trade, to be forthcoming a little later, to get a better price and possibly better panels than he could have secured otherwise.

The fallacy of the whole proposition lies in the effort of the lumberman or the panel manufacturer to do more for the new customer than he would do for the old. He is willing to ship out a better car of lumber to the man who he thinks may buy a big lot of lumber from him if that car is good, than to merit continued patronage from those to whom he has shipped heretofore by giving occasionally better stock than is absolutely necessary. Instead of "skinning" a car down to the lowest possible level as to grade and sizes, why not spend a little of the money that goes to the peripatetic buyer of "sample cars" in creating good-will on the part of those who are known to be regular and constant buyers?

Attention has been called before to the lack of the permanence of lumber business, and to the fact that too few lumbermen have customers who can be counted on to buy their supplies from them, month in and month out. If this is the case, as the experience of most members of the trade suggests, there must be a reason, and possibly it is found in the fact that the lumberman seldom makes himself worthy of the constant and uninterrupted patronage which he would like to have. If he studies the needs of his customer; tells him frankly when he ships lumber that isn't as dry as it might have been; never rushes a car of stock out a couple of weeks ahead of the date specified, and in other ways seeks to give his customer an even break all along the line, and occasionally the better part of the bargain, there will be less necessity for trying to dig up new connections which present themselves with suggestions as to the possibility of buying a sample car.

There is hardly a line of business in which regular connections are as little developed as in the lumber trade. Occasionally one finds a consumer buying on contract; but the bulk of the business is handled in single car orders picked up by canvassing the field and going after everything that offers. Possibly on account of the narrow margin of profit involved and the fact that prices are not standard, and a matter of official market quotations, few buyers would be willing to do business with one house exclusively; but it is certain that an effort in the direction of developing permanent patronage by getting in a position to deserve it is sure to have some results. G. D. C., JR.

White Oaks and Red Oaks

Editor's Note

In *HARDWOOD RECORD* of June 25, 1912, appeared an article in which was submitted a discussion of the identification of red and white oak based on wood characteristics and written from the practical woodsman's viewpoint. The following article treats of the same question in the same manner, but is based on botanical characteristics.

It is customary for lumbermen to separate oaks in two classes, white oak and red oak, and they do not usually carry the subdivision farther. Occasionally, however, other names are used, such as post oak, chestnut oak, yellow oak, bur oak, and others. The two general classes usually suffice, and few dealers attempt to make any finer distinctions. Nevertheless, it is pretty generally understood that there are several kinds of white oaks and fully as many kinds of red oaks. Millmen are sometimes in doubt as to where a certain oak should go, whether it belongs with the white oaks or with the red oaks.

If the exact species is known, it is not very difficult to determine, from the botanist's standpoint, whether it is a red oak or a white oak. The two groups are well defined; if a certain oak does not belong in one group it must of necessity belong in the other.

The oaks of the United States have certain habits in regard to their acorns. Some of them bear bloom and mature their acorns the same year, while others blossom one year and mature the acorns the following year. That is, one group of oaks produces one-year fruit, the other produces two-year fruit. If that habit is taken as a basis for separation into groups, the matter is not difficult, provided it can be ascertained in each case whether the tree produces its acorns in one year or two. That is not always easy to determine from individual observation, for a man cannot watch a particular tree a year or two in order to find out how it manages its acorn crop. Besides, some individual oaks do not bear acorns every year, and some seldom or never do. Neither is it always easy to see the two-year acorns the first year. It often takes close observation to make them out. Even after the leaf falls, the acorns may escape casual examination, because they may be very small and may sit close to the twig. Even after they are found they may be disappointing, because in some instances the acorn at that stage is only a small, flat cup, and does not seem to have any acorn in it. However, if there are any, practice will usually enable one to see acorns on the bare limbs.

If they are found, the tree may be set down as a red oak, for the red oaks have two-year fruit, and the white oaks one year. It is better to speak of trees with the two-season acorns as black oaks. Botanists prefer to call them so, because of the general blackness of their bark. Besides, there is a particular tree whose proper name is "red oak," and it belongs to the black oak group, being simply one of several belonging to that group.

Speaking generally, but not absolutely in every instance, the trees which produce acorns in one year are good for white oak lumber at the sawmill; while those which ripen their acorns the second season make red oak lumber. This is true only if it is admitted that all oak lumber is either white oak or red oak. Most millmen so separate it. It might be chestnut oak, or post oak, or live oak, or pin oak in the woods, but when cut into lumber and sent to market, it would be either red oak or white oak.

Sawmill men and woodworkers usually determine from the color of the wood to which group it belongs. Several of the red oaks have heartwood of decidedly reddish tinge, and several white oaks have whitish wood. It often happens, however, that lumbermen judge white oaks by their bark rather than their wood. Some oaks might fall in the doubtful class, whether judged by the wood or bark. Is a live oak a white oak or a red oak, and where do chestnut oak and blue oak belong? The color of the wood alone, or the color of the bark alone, might leave doubt in the millman's mind, whether he should stack the lumber on the white oak or the red oak side of the mill yard. In doubtful cases like that—and there are several doubtful cases—it is well to let the acorns decide. If the tree ripens its crop the first year, put the lumber with the white oaks, if not, it should go with the red oaks.

There are from fifty to sixty species of oaks in the United States. Botanists do not agree among themselves on the exact number. What

one authority may call a species, another may regard only a form or variety. Nevertheless, there is agreement concerning fifty or more, and they are the most important. Some are very scarce and of little importance to lumbermen. In the lists which follow, some of the principal oaks are separated and are placed in respective groups, either white oaks or black oaks. For convenience, the botanical names are first given, followed by one or more of the common names by which the trees are known, and these are followed by information concerning the range of the tree, where it is most abundant. The white oak group is properly headed by the common white oak, and the black oaks by the common red oak.

THE WHITE OAKS

Quercus alba—White oak; range in eastern half of the United States.
Quercus minor—Post oak, iron oak, box oak, brush oak; range from Massachusetts to Texas, scarce in the upper Mississippi valley.

Quercus macrocarpa—Burr oak, mossycup oak, overcup white oak; in most parts of the country east of the Rocky mountains.

Quercus lyrata—Overcup oak, swamp post oak, water white oak, swamp white oak; south of Potomac river, and generally south of Ohio river to Florida and Texas.

Quercus lobata—California white oak, valley oak, weeping oak; range in California.

Quercus garryana—Pacific post oak, Oregon white oak, western white oak; range Pacific coast.

Quercus platanooides—Swamp white oak, swamp oak; range from Maine to Missouri and Arkansas; not in extreme South, or in northern Lake states.

Quercus michauxii—Cow oak, basket oak, swamp chestnut oak; range from Delaware to Florida and west through Gulf states to Texas, and north to Missouri and southern Indiana.

Quercus prinus—Chestnut oak, rock oak, tanbark oak, mountain oak; range from Maine to Maryland and along the mountains of Georgia, west to Ohio, Kentucky, and Tennessee.

Quercus acuminata—Chinquapin oak, chestnut oak, pin oak, rock oak; range from New York to Nebraska, south to Texas.

Quercus virginiana—Live oak; range from Virginia to Florida and in the Gulf states west to Texas.

THE RED OAKS (OR BLACK OAKS)

Quercus rubra—Red oak, black oak; range from New England to the Lake states, south to middle Tennessee, and along the mountains to Georgia.

Quercus texana—Texas oak, Texas red oak, southern red oak, spotted oak; range from the Ohio valley to Texas.

Quercus palustris—Pin oak, swamp Spanish oak, water oak, swamp oak; range from Massachusetts to Missouri, south to Virginia and Arkansas.

Quercus velutina—Yellow oak, black oak, quercitron oak, yellow bark oak, spotted oak; range from New England to Florida, west to Minnesota and Texas.

Quercus coccinea—Scarlet oak, red oak, black oak, Spanish oak; range from New England to Nebraska, south to North Carolina and Tennessee.

Quercus californica—California black oak, mountain black oak, Kellogg's oak; range, Oregon and California.

Quercus digitata—Spanish oak, red oak, Spanish water oak; range from New Jersey to Florida, west to Missouri and Texas.

Quercus marilandica—Black jack, jack oak, iron oak, black oak, scrub oak; range from New York to Nebraska, south to Florida and Texas.

Quercus nigra—Water oak, duck oak, possum oak, punk oak; range from Delaware to Florida, west through Gulf states to Texas and Arkansas.

Quercus phellos—Willow oak, peach oak, water oak, swamp willow oak; range from New Jersey to Florida, west to Texas and Arkansas, north to Kentucky.

Quercus imbricaria—Shingle oak, laurel oak, jack oak, water oak; range from Pennsylvania to Wisconsin, south to Georgia, west to Arkansas.

Quercus chrysolepis—Canyon live oak, Maul oak, iron oak, black live oak, golden cup oak; range from Oregon, through California and Arizona to New Mexico.

Quercus densiflora—Tanbark oak, California chestnut oak, peach oak, live oak; range, Oregon and California.

The foregoing lists include eleven white oaks and thirteen red or black oaks. They constitute less than half of the whole number, but those omitted are not generally important. Some are scarce, others

are small. Nearly all of those omitted are, however, of some importance in restricted regions. Among such are the following white oaks: Rocky Mountain blue oak, gambel oak, California blue oak, Arizona white oak, and netleaf oak. Among minor red or black oaks are turkey oak, laurel oak, highland oak, and California live oak, the last one being regarded by some as a white oak.

In the statistics of sawmill cut collected yearly by the United States census, the oak lumber is not even divided into white oak and red oak classes, but all goes in simply as oak. Manufacturers who use oak are nearly always desirous of separating white oak lumber from red oak, and some go further and keep species separate where they can. In a report on wood using industries in Michigan, recently issued, the manufacturers listed five white oaks and three red oaks. A similar report for Illinois listed four white and five red oaks; while a like report from Texas carried the subdivision still further, and listed ten white oaks and eleven red oaks.

Log cutters in the woods can separate the different oaks much easier than the lumber can be separated after the sawing is done.

Most timbermen know the principal oaks by sight, but it takes an expert yardman to pick out the various kinds of oak lumber from a common heap. If it is the purpose to separate the oaks, it is better to do it in the woods, and mark the logs. That will help the yardman to keep the lumber apart. Railroads are pretty careful to keep white oak and red oak ties separate. It is more important with ties than with lumber kept dry, for red oaks are generally more susceptible to decay than white oaks. Manufacturers of tight cooerage are another class who are strict in keeping white oaks and red oaks apart because the red oaks are too porous for some of the highest grade barrels. Furniture makers and manufacturers of interior finish use both white oak and red oak, but they usually want either one or the other, and it is to the lumberman's advantage to be able to ship white oak to the man who orders it, and red oak when ordered, and not in mixed lots. In order to do this, identification and separation ought to begin in the woods, and it can then be carried through the mill, into the yards, and finally on board the cars, and each customer will receive the kind of oak he asks for.

Specializing Proves Its Worth

One of the most important consumers of hardwoods in the Ohio valley was never a prospect for lumbermen of that territory, save to a small extent, for a very interesting and convincing reason: it made its own lumber. It regarded its sawmill as one of the departments of the factory proper, and, while it never undertook the job of manufacturing its own paints or tanning the leather which it used in some of its goods, it did not see why the production of lumber should not be regarded as a factory proposition, just as cutting it into sizes was a recognized part of factory routine.

Consequently it maintained a regular department for the purchase of logs; had buyers out in the hardwood country within a radius of several hundred miles, and got its consignments of logs just as regularly as the sawmill men in the same town with it. The head of the lumber department was an experienced man, and there was no fault to be found with the lumber which his mill turned out. The system used by the company apparently was a successful one, and to all appearances refuted the frequently heard assertion that this is the day of the specialist, and that the company which succeeds confines itself as closely as possible to its own particular business.

Recently the announcement went out that the sawmill was to be closed down and operations discontinued. The reason given at the time was that the building where this work had been done was needed for the uses of another department, which had been added a few months before by the manufacturer. Later on the head of the lumber department, who had undergone a metamorphosis by which he was changed from a manufacturer of lumber to a buyer, said that the reason for the change was that the timber country in which the concern had been buying was pretty well cut out, and that it was being forced to go further away from the factory than it liked to get its logs. The long haul involved too much expense, and the economy of the proposition had been reduced to such a point that it was no longer worth while to maintain the department.

In spite of this assertion, however, the mills which have been running for years in that locality are continuing to operate, and seem to be getting enough logs for their requirements; so that, while the growing scarcity of timber undoubtedly affected the convenience of operation, this could not have been the only reason for the change.

The company, as indicated, has just taken on a new line of work, and is manufacturing an article somewhat different from the line to which its attention has been devoted. It needs additional capital for this work, of course, and in order to get the best results from its business it is finding it advantageous, without doubt, to concentrate all of its resources on its manufacturing lines proper. In other words, instead of spending money to buy logs, cut the timber into lumber, sort it and leave it on sticks for a year—the time usually given by this concern in drying its lumber—it is taking the same

money and using it for the manufacture of the product which it sells to the trade, and out of which it can get a return almost immediately.

The fact that the lumberman is now going to make an incidental profit on the material consumed in the factory, which heretofore has gone to the consumer himself, by virtue of his operation of a sawmill, does not alter the fundamental fact that more money can be made by using the capital and other resources of the concern to turn out goods rapidly than by attempting to squeeze a profit out of the manufacture of materials which it uses.

Another interesting fact in this connection is that the manufacturer, in operating his sawmill, cut all of his lumber to the dimensions required for the goods turned out of the factory. It was dried in this way and went to the factory proper ready for dressing and actual use. The advantage of doing this work at the sawmill impressed the company to such an extent that now that it is to buy all of its lumber, instead of only a part of it, it will purchase dimension stock, and not random lengths and widths. So that, while the company will be in the open market for lumber hereafter, it will still not be a prospect for those who are not prepared to sell lumber cut to size.

The whole question of specialization is thus given a double significance: first, the consuming manufacturer decides to make his special product and quit manufacturing lumber; and second, he is going to buy from concerns which are themselves specializing in the lumber field and are furnishing consumers with stock cut to the size required and not just as it came from the log.

The experience of this concern is suggestive, for the reason that actual demonstrations of this kind are sometimes needed to convince one that it is not only more convenient, but actually more profitable to concentrate instead of spreading out capital and energy over the large space made necessary through the operation of a great number of departments. Even the largest consumers of lumber, with but one or two exceptions, buy their lumber; and if their knowledge of the situation has demonstrated the futility of attempting to increase net earnings by getting a manufacturer's profit out of the materials used in the business, it is pretty clear that the average consumer is making no mistake by doing likewise.

Instead of users of lumber wanting to go into the lumber business, the tendency is just the other way, as was suggested by the fact that the company which has been making its own lumber is now to be a user of dimension stock made somewhere else. In just the same way furniture manufacturers and others are buying all of their glued-up stock from manufacturers who specialize in this material; and in that business the usual plan is for the panel man to buy his veneers instead of making them himself. Thus the apparent wastefulness of the plan which requires the services of a great number of specialists,

each of whom necessarily gets a profit out of his contribution to the finished article, is shown to be, in the last analysis, the only economical method of production.

The secret, of course, is in doing business with as small a capital investment as possible; or, to turn the situation around, to get as large a turnover as possible out of the capital available. If the manufacturer has exhausted his selling field and has reached a point where it is impossible to sell more goods, then, conceivably, it would pay him to turn around and seek for methods of increasing his profits by going into the manufacture of the goods which he himself consumes. But a situation such as this is hardly likely to develop in America for many years to come, for in every line the proclamation is heard that the field is just being properly developed, and that consumption is expanding in every direction. Hence the greatest profits are still to be had by confining attention to insuring a big production of the article which is being made, and earning the profits from its sale rather than in the manufacture of the goods of which it is made.

There are of course other advantages in that better work can be done by specialists. The glue-room problems which are simple to the panel manufacturer, who handles them every day, are sometimes hard puzzles in the consuming factory which lays its own veneers; and it is hardly likely that if a furniture man decided to make his own hardware and mirrors he could do the work as well or as cheaply as those who have made a life job of finding out how to produce those goods best and most economically. It is usually cheaper, more con-

venient and better from the standpoint of results to let the other man do it if possible, and to reduce overhead expense, capital investment and a lot of other important charges to the minimum in the factory.

A striking evidence of the extent to which specialization is carried is furnished in the textile trade, one of the oldest and best developed of all. Take a cotton shirt, for example, and imagine the number of hands through which it passed. First the cotton was grown; then the ginner cleaned and baled it; then the spinner purchased the cotton and sold the yarn to the weaver, who made up the fabric. Then the convertor or dyer colored it, the sales agent passed it on to the shirt manufacturer, who probably sold it to the retailer by way of the jobber before it finally reached the hands of the ultimate consumer.

This seems like a roundabout way to produce a shirt; and yet it is unquestionably the best that could be devised. When it is remembered, too, that specialization is carried on to the extent that a spinning mill produces but one kind and grade of yarns, as a rule, and that the weavers content themselves with specializing in one class of goods, beyond which they do not attempt to go, it will be realized that the business is made up of specialists and specialists only.

Consumers of lumber as a rule are willing to buy lumber without worrying too much about the profits made in its manufacture; and now they are going a little further and expressing their willingness to pay out more money for having the stock cut to the sizes required by their individual businesses.

G. D. C., Jr.

Traffic Matters Around Memphis

The Lumbermen's Traffic Bureau of Memphis, acting for shippers of hardwood lumber from this city and from points in the Memphis territory have filed a formal petition with the Interstate Commerce Commission at Washington, not only protesting against the proposed advances in almost every direction but also asking for reductions in existing rates. The petition was prepared through J. H. Towse and presented to the commission by John R. Walker, a prominent rate expert at Washington, and is styled James E. Stark & Co. et al vs. the Illinois Central Railroad Company et al. This is the first step in what promises to be one of the most important contests on record involving rates on hardwood lumber shipments from the southern territory, and the Memphis lumbermen enter it with an unbroken record of victories in all similar fights before the commission.

In the claim set out by the lumbermen it is said that the agricultural resources of parts of the country around Memphis are not being developed because railroads have advanced freight rates on certain lumber which is practically prohibiting the shipments of the commodity of lands virtually cleared for farm use.

It is also claimed that railroads have made advancements in such freight rates until hardships are worked on consumers, thereby preventing building advancement as is always necessary in a country filling up with homeseekers.

No claim is made to seek reparation on shipments which have been made in the past, but reasonable rates for the future are asked that the increasing difficulties of their business may be successfully coped with; that the price of lumber to the consumer may not be inordinately increased and that the development of the section in which their operations are located may not be retarded.

The petition asks the commission to prohibit any further increase on hardwood lumber freight rates governing shipments of hardwood lumber, but to reduce them two cents per hundred pounds less than quoted in the new tariffs submitted to the commission by railroads.

In the petition claim is made that the Illinois Central and Yazoo & Mississippi Valley railroads are common carriers and that a major portion of lumber shipments made from this section is delivered to the so-called Western Trunk Line territory and Illinois-Wisconsin territory and to the Buffalo and Pittsburgh zones. It is

shown that the railroad's way of fixing through lumber rates from Memphis is by adding the proportional rates beyond the Ohio and Mississippi river crossings.

It is shown that several railroads mentioned in the petition reach the heart of the lumber sections around Memphis and in Memphis, and that their own lines extend beyond prohibitive rate-fixing territories, some even reaching from Memphis into the territory described in circulars issued by various freight associations and complied with by defendants mentioned in the complaint.

The lumbermen believe if these roads maintain their usual way of basing through rates from Memphis, that there should be a lower rate granted from this territory to points in which the through lines reach and where no exchange of business is necessary. Claim is also made that the present through rates are unjust and unreasonable and in violation of the act to regulate commerce.

The complainants deny any decrease in the movement of hardwood lumber as stated by the defendants. It is shown that there is a big increase instead of a decrease and that the railroad's reports are not correct because the growing scarcity of stumpage and its remoteness from points of manufacturers, creates a hardship on mills to furnish same, and that this fact alone is worthy of consideration in asking for a reduction in such rates.

Other rate matters occupy the attention of the manager and members of the advisory board of the Lumbermen's Traffic Bureau and will do so for an indefinite period. At a recent meeting of the bureau three new members were added to the advisory board, as follows, bringing the entire number to thirteen: Frank Fee of the Fee-Crayton Lumber Company, John Dwyer of the Lamb-Fish Lumber Company, and John W. McClure of the Bellgrade Lumber Company. At this meeting the fight against the proposed advance on hardwood lumber shipments from points in the southern territory to Canadian destinations was discussed and it was decided that a committee go from the Lumbermen's Traffic Bureau to St. Louis December 16, when the hearing of that case before the Interstate Commerce Commission will come up. Efforts were made to secure the meeting for Memphis, but these have failed. The bureau is still working upon the proposition of securing the issuance of through bills of lading on hardwood lumber shipments over lines west of the

Mississippi river. The railroads have, since about the middle of October, refused to issue through bills on export shipments of hardwood lumber on the plea that they were charged with demurrage by the steamship companies and on the additional plea that this was the only way of avoiding congestion in New Orleans. This matter is being handled through the petition filed with the Interstate Commerce Commission in the name of the Anderson-Tully Company of this city.

There will be a hearing in Memphis December 13-14, in connection with estimated weights on hardwood lumber shipments and the Lumbermen's Traffic Bureau, as well as members of the lumber fraternity here, are very busy preparing the necessary data. It is charged by the lumber companies that the railroads are somewhat arbitrary in fixing estimated weights on hardwood lumber shipments and that shippers have had to suffer considerable financial loss as a result of the weights in vogue.

Announcement has been received from the Interstate Commerce Commission at Washington that the proposed advances from Memphis and the Memphis territory to New Orleans and the other ports, as well as to practically all destinations in this country, have been suspended, pending a hearing of the arguments of the lumbermen. It is not known just what length of time will be allowed, but the action of the Interstate Commerce Commission insures that these advances will not be allowed to become effective, if at all, before the

lumbermen have had an opportunity of presenting their side of the controversy. The Lumbermen's Traffic Bureau is rapidly completing the necessary data to be used in filing these hearings before the Interstate Commerce Commission and it is anticipated that victory will result for the shippers. Some of the advances have been attempted by the railroads in this territory before, but have been overruled by the Interstate Commerce Commission on the ground that they were both unreasonable and unjustifiable. An effort will also be made to show that discrimination is being practiced against lumber shippers operating in the Memphis territory in the respect that the new rates will put Memphis out of line with other cities, with which it has to compete.

The car situation has shown some further improvement in the Memphis territory recently and the outlook is considered reasonably good. There is still a shortage of cars at some points in Arkansas and Mississippi and the movement of both timber and lumber is restricted on this account. As a general rule, however, it may be said that conditions are getting better and after the first of the year it ought to be possible to secure a larger share of full requirements. This statement is based on the fact that the cotton movement will have passed its climax by that time and that a great deal of the equipment of the southern roads which went to the North and West to aid in the movement of the grain crops is returning to the lines which own them.

Commercial Foreign Woods

THE TULIP WOODS

The Indian or seaside tulip wood (*Thespesia populnea*-Lam.) is a common tree along the shores of nearly all tropical countries. While it grows abundantly in Cuba and Jamaica, it is still more plentiful in West Africa, where the tree attains a height of forty or fifty feet. It is also found in commercial quantities in India and in the islands of the Pacific ocean. The wood is considered almost indestructible under water and is therefore used for boat building. Its hardness, toughness and durability render it valuable for cabinet making, spokes, carriage building, carving, and building purposes. In Ceylon it is employed for gun stocks. The use of this wood is limited, however, from the difficulty of getting it of large size. In India the young trees are cut for use as rafters for houses, and generally command a good price when sold for this purpose. The wood is dark red, resembling some grades of mahogany, but it is very variable in this respect.

In the West Indies this tree grows very rapidly and produces a splendid shade. It is variously known as santa maria, palo de jaqueca, and majuquilla. Its inner bark yields a valuable, tough fiber, which is used for making rope. This fiber is used in Demarara, British Guiana, for making coffee bags, and the finer pieces of it for cigar envelopes.

Brazilian tulip wood (*Physocalymma scaberrimum* Pohl.) is a South American tree that is used for inlaying, brush backs, tool handles, and small turned articles, but is now becoming very scarce. The logs are sold chiefly in the English markets and are cut and trimmed in about the same way purple heart (*Copaifera pubiflora*-Benth.) of British Guiana is prepared. The wood is very wasteful and splintery. It is rose-colored and beautifully figured, with darker colored lines. While this wood is very handsome, it is said to fade on long exposure to the air and light.

French tulip wood, which has not been determined botanically, remotely resembles a variegated cedar wood (*Juniperus*). It has a much straighter and closer grain and is softer than the Brazilian tulip wood. The longitudinal orange-red streaks are well defined and render the wood very beautiful. It is said to be an excellent furniture and turnery wood.

Australian tulip wood (*Harpullia pendula*-Planch.) is a lofty tree with a stem of from eighteen to twenty-four inches in diameter. It is the best Australian wood for lithographer's scrapers and engraving.

The beautiful dark and yellow colored lines render this wood very costly and suitable for ornamental work. In this respect it resembles the Brazilian tulip wood.

Another tulip wood from northeastern Australia is the *Stenocarpa sinuatus*-Endl., which supplies beautifully marked, close-grained, hard, and very durable wood susceptible to good polish. It is used largely for staves and veneers.

A less important tulip wood from Australia is the *Lagunaria patersoni*-Don. This tree yields a very close-grained wood used principally for building purposes.

In the Philippine islands is a tulip wood known to botanists as *Aphananthe philippinensis*-Planch. This tree produces a light-colored wood, resembling our white elm and has nearly similar uses.

Owenia venosa-F. Muell. from Australia is also sometimes called tulip wood, but it is a mahogany-like wood and is used chiefly for making furniture.

LIGNUM-VITAE

Lignum-vitae (*Guayacan officinale*) is a tree which usually attains a height of from fifteen to twenty-five feet and a diameter of about eighteen inches four feet from the ground. It is found in Mexico, Central America, Colombia, Venezuela, Guianas, and on all the islands of the West Indies. In Mexico and Central America this tree attains its best development and often grows to the height of from forty to sixty feet and nearly two feet in diameter. The wood is exceedingly close and cross-grained, hard (about seventy-six pounds per cubic foot), of a rich greenish brown color, and often prettily marked, looking very well when polished. It is often used for making furniture, ship-blocks, pestles, mortars, rulers, heads of croquet mallets, and string-boxes and machine-bearings. It is preferable to metal for the latter uses. The wood is very durable and this quality coupled with its extreme strength and hardness renders it one of the most valuable woods of tropical America. Enormous quantities of this wood are now being used annually for bearings, etc., and the supply is becoming limited and the price consequently very high.

Guayacan officinale does not grow in the United States, but *Guayacan sanctum*, a closely allied tree, is found on the keys of southern Florida and in Texas, where it occurs too sparingly to be commercially important. It sometimes grows to be thirty feet in

height and over twelve inches in diameter. This species was formerly very abundant on the coast hills of Porto Rico, but now the merchantable trees are nearly exterminated. The wood is considered as valuable as that of *Guayacan officinale*.

Maracaiba lignum-vitae (*Guayacan arboreum*) of Brazil, also called palo santo, is a tree that grows from sixty to seventy feet in height and upwards to two feet in diameter. The wood is dark brown, excessively hard, fine and close-grained, and has structural and other qualities similar to those of true lignum-vitae.

West Indian or Martinique ironwood (*Ixora ferrea*), called lignum-vitae in British Guiana, is a dark brown and exceedingly hard wood, valuable for cogs, shafts and furniture, and is often used as a substitute for the true lignum-vitae.

One of the best substitutes that is available for use in place of the vanishing supply of lignum-vitae is the mancono (*Xanthostemon verdugonianus*) of the Philippine Islands. The genuine kind has a resinous odor, which the mancono does not possess, and while it is different also in other respects, it has good enough qualities to indicate that it might be utilized as a successful substitute. It is closely related botanically to *Guayacan officinale*.

The African lignum-vitae (*Combretum truncatum*) is a large tree, which is abundant in lower Guinea and the Mosambique districts.

The wood is very hard, heavy, close-grained, with a deep reddish-brown heartwood and light-colored sapwood.

Other woods used for engraving, turning, tool-handles, and walking sticks, and suitable for all the purposes for which true lignum-vitae is now employed are produced by the following Australian trees commonly known as Australian lignum-vitae, and are botanically called *Acacia falcata*, *Myrtus semenoides*, *Eucalyptus polyanthema*, *Phyllanthus ferdinandi*, and *Vitex lignum-vitae*.

India supplies a very important wood known as lignum-vitae of Pegu (*Melanorrhaca usitalissima*). The Burmese call it thitsi and the English-speaking people of India have named it the varnish tree, because it exudes a black resin which repels ants. It grows plentifully in different parts of India and Burma, and forms extensive forests, where the trees attain often enormous sizes. Some of the trees have a clear length of forty-five feet to the first branches, with a diameter of about four feet near the ground. The wood is exceedingly hard, heavy, very fine and close-grained and is of a reddish brown color. Its extreme closeness of grain and density of structure suggests a relationship with the true lignum-vitae. The specific gravity of this wood is so great that it often serves in place of iron as anchors for the native boats; a cubic foot weighs about fifty-four pounds. It answers very well for the purposes for which the West Indian kinds are now used so extensively.

Equitable Rate Adjustment

The discussion of the various phases of rate charges is so constant and has led to such an aggravation of the contenders that the wonder arises that some amicable method of settling the question for all time has not long ago been advanced. In treating of the question, a writer in a recent issue of Trade and Transportation says that late press reports credit the western railroads with planning another move for a general freight rate advance. This may or may not be intended by the carriers, but there is sufficient color to these rumors to suggest a discussion of the subject—a discussion not in the spirit of adverse criticism because an advance may be contemplated, but rather with the thought of arriving at a more comprehensive, and a less objectionable procedure than was followed on the occasion of the attempted general rate advance of June, 1910, and as employed in other instances since that time.

The purpose of the article may be assumed to be that the carriers have in preparation for presentation before the Interstate Commerce Commission a showing of a need for greater revenue for up-keep, reasonable return on investment, to maintain a satisfactory standard of credit and for extensions and improvements, and which they believe may be secured only by charging higher freight rates. With this condition then we are brought face to face with the question of the method, or the best method, to be followed in undertaking to make the advances—a method calculated to secure the desired result and to entail the least hardship upon producers, middlemen, consumers and the carriers themselves, and that would encounter the least opposition at the hands of the freight paying public in general.

Perhaps a more unsatisfactory plan than that adopted by the carriers in the general rate advance instance could not be hit upon. To emphasize this statement it is only necessary to recall how, without conferring with shippers, and in close secrecy, amendments were printed to the principal mid-western tariffs; and how these amendments were kept out of the hands of shippers until within a few days, ten days or two weeks, of date effective. By reason of this method of procedure, and in the belief that the changes had been hastily considered and contained many advances which were unreasonable and injurious, vigorous protest was made, finally resulting in prolonged and expensive hearings, and in the end meeting with disapproval of the commission.

This experience was probably typical of others and is mentioned to bring under review the effect on shippers. Promptly on receipt of these amendments, the changes were canvassed with the result that

trips were taken and calls made on executive traffic officials of the railroads serving St. Joseph, Mo., upon whom it was urged that conference be granted to shippers with a view to arriving at more equitable adjustments. To these officials it was pointed out how such a conference would disclose to them the fact that while some of the advances could be accepted without hardship, others ought not to stand, while in still other instances no advances were announced where the same could be made; that on the whole there was every prospect that in conference the way would be clear to secure the same measure of increase, and at the same time allay objection. The carriers were not asked to hold their tariffs in abeyance (legally they could not) but merely for assurances that at an early day they would meet their patrons in conference to go over the schedules with a view of readjustment. This request was denied. With a situation of this kind before them there was nothing left to the shippers but to tamely submit—or fight it out. Surely a better plan may be found should the time come when the carriers again feel warranted in moving for higher rates!

The writer further says:

“I believe it fair to say that in a majority of instances petitions for rate reductions in the Middle West have origin in a desire to overcome inequalities or for the removal of discrimination between either localities, commodities or individuals; or that were there greater equality in these respects complaints, compared to the present, would be few and far between. This being true, then some feasible plan for solution of these questions is desirable. The wise builder looks to the soundness of the foundation before erecting the superstructure. Seemingly too many rate structures have arisen without the due regard to the foundation, and because of this there is almost continuous rate contention and litigation, and from which cause the carriers encounter their most serious rate difficulties. That there is solution of these difficulties along the way of conference I firmly believe.

“By conference, in this instance, is meant something entirely different from that in vogue in recent years. It means the coming together of carriers and shippers imbued with a spirit of give and take; with a determination to arrive at adjustments as nearly equitable as it may be possible to reach. When the foundation of equality is laid, then, and then only, should be considered the matter of advances to a general higher level; and advances from this point ought to be horizontally made, or almost wholly so. If advances be brought forward in this manner, and if sufficient reason be shown for

having higher rates, it is a good guess that no serious objection would be encountered.

"I realize that a conference of this kind would be no affair of a day, nor the business of a boy, but rather one of weeks and demanding the attention and best thought of those well equipped by experience and responsibility. And, too, it should have the advice and council of one or more members of the commission, sitting informally. A conference of such scope could scarcely fail of results of vast consequence to all concerned."

As an instance of rate inequality which might be considered in conference, take the range of rates between the Mississippi and the Missouri rivers, where the spread is from sixty cents on first class down to six cents on commodity. Without alleging that either of these be too high or unduly low it is unquestionably a fact that along the way are numberless cases where greater equality would be had through realignment.

To turn to a closer view of detail, let it be assumed that a conference of this character be decided upon; then arises the question of how to proceed with it. In fitting detail to any plan there are generally a variety of ways in which to proceed, hence the first coming to mind may not prove the best one, so in this instance the suggestion to follow is tentative; merely an outline to point a possible way:

Assuming there be a docket containing a compilation of rate changes proposed, together with a call for a conference with shippers for a discussion of the same in an endeavor to reach an agreement, with the assembling of the carriers and shippers it is easy to predict that the gathering would readily decide upon a method of procedure and quickly resolve itself into an efficient working organization. But to enter somewhat further into detail:

In the absence of a better suggestion, one plan to follow would be that of making up a presiding committee of, say, five, two of them to be selected by the carriers, two by the shippers and these to agree upon the fifth. The body so constituted to hear testimony and evidence from both sides, examine and cross-examine witnesses and by other proper means endeavor to arrive at a fair and equitable conclusion on the questions at issue.

Though any conclusion reached by a committee so constituted and under such circumstances would carry no legal authority, the moral influence should be material. A report from a committee of this kind should, at least, carry conviction to the conferring principals, and at the same time convey to the minds of the Interstate Commerce Commission an unmistakable expression of opinion. An opinion so expressed ought to command, and doubtless would receive, the serious consideration of that body.

Only by giving this or some similar plan a trial could it be determined to what extent the various communities concerned might be interested, but the simple fact that those participating would have voice in the selection of the presiding committee encourages the belief that the representation would be complete. Further than this, I much mistake the prevailing sentiment if in a conference of the kind the shipping interests would not be found ready to co-operate, and to "give and take" to all reasonable extent.

In giving expression to these thoughts the writer does not assume that the last word has been uttered for solving the problem under consideration, but does submit that until there is made a real effort for solution of the freight rate question (by co-operation) it cannot be claimed fairly that the carriers and the shippers have discharged their obligations in this respect.

Cottonwood for Windbreaks

Cottonwood is the tree best suited for windbreaks in the Middle West if planted on good, moist situations, on river bottoms, or, in the extreme eastern part of the region, on rolling uplands. Best results are secured by planting the trees in belts from one hundred and twenty-five to one hundred and fifty feet wide, running east and west. The tree is not long-lived, but grows more rapidly than any other native tree within its range, so that at the end of a few years it yields a good rental in fuel. If the trees are not cut until about forty-five years old they will be approximately ninety feet high.

The wood of cottonwood is light, soft and spongy and in a natural state is not durable in contact with the soil. The lumber has value, however, for a great many purposes, particularly in localities where other timber is scarce. In the prairie states cottonwood is worth about ten dollars per thousand board feet on the stump, and two dollars per cord for fuel. The larger trees contain a very large proportion of merchantable lumber, and eighty per cent of the total volume. It is suitable for rough construction, bridge planking, box boards, backing in veneers, the sides and bottoms of drawers, wood pulp and matches. If properly treated with creosote the smaller sizes are well adapted for posts for which there is an increasing demand.

In addition to its value for windbreaks cottonwood also pays

FINE GROVE OF TEN-YEAR OLD COTTONWOODS ON LOW GROUND. ELMORE, FARIBAULT COUNTY, MINNESOTA. BOLES UNUSUALLY STRAIGHT AND CLEAR. PLANTED 5x6; THINNED TO 6x10

direct returns from plantations. If the trees are planted along the stream banks in belts from two hundred to three hundred feet wide, they will prevent the erosion of fertile bottomlands, which was so destructive in many western river bottoms during the floods of last spring. Such a belt of trees will afford all the advantage of a levee without exposing the protected land to the danger of a break. The trees will break up the current of any overflow that occurs and will help to keep the main current confined to the channel of the stream. Cottonwood should not be planted where the moisture supply of the soil is limited; but if its roots can reach water it will endure prolonged drought without injury.

Cottonwood can be grown from seed very readily. Seedlings are so abundantly produced naturally on the sandbars of rivers that nurserymen have no trouble supplying the demands of the market from this source. For this reason it is seldom necessary to sow the seed. The wild stock is just as serviceable as nursery-grown seedlings and is much cheaper. Cuttings may also be employed and in the case of the Carolina and Norway poplars, it is necessary to use cuttings exclusively since these trees bear no fruit. This is often a decided advantage as the annoyance occasioned by the cotton-covered seeds blowing about is avoided.

Northwestern Lumbermen Meet

The Northwestern Hardwood Lumbermen's Association met for its twenty-fourth annual convention at the Commercial Club rooms in Minneapolis on December 3. Social features were provided to follow the business session.

President W. H. Sill called the meeting to order at 4 P. M. Following the address of Secretary J. F. Hayden, the president presented his annual talk. He expressed himself as particularly grateful for the fact that the membership roll was complete for its second successive year. This was considered rather remarkable in that there has been a larger than normal percentage of failures in the commercial world the past year. The president reviewed the comments on the situation at last year's meeting, at which time it was reported that plain birch was slow, red birch moving very poorly and no sale for curly birch. Basswood was also slow, ash and soft maple far below normal, rock elm dead, and the grades of number two and three common in all woods extremely slow. However, during the past few weeks particularly a decided change for the better has been noted. Plain birch is now moving with more ease than ever before, with red in better demand. Common basswood now drags considerably, but low grades of both birch and basswood have advanced materially, while ash and soft elm have made corresponding gains. Even rock elm is showing some life, due to non-production. The advanced price of southern oak and the very low price to which the elm had sunk show that it only takes time to level prices and that one wood cannot long maintain a very great lead over another of a like nature.

The president accounted for the present situation by the fact that last year's output of logs in the North was about twenty-five per cent less than the previous year's supply, and that excessive rains and water in the South curtailed the output there to a large extent, and further that rather active borrowing on the part of the consuming trade led to the investment of considerable money in the expansion of business.

In speaking of the national political situation, President Sill stated that the national administration has had its effect on business. He stated that we cannot avert and must not discount political influence on business, but that the manufacturer, dealer and consumer can do a great deal to so regulate the supply and demand that the fat and lean periods will give way to a more even and regular trade, eliminating excessive fluctuation such as we have experienced in the last few years, which has been mostly to the detriment of all concerned. He expressed himself as hopeful that the manufacturer of lumber will be wise enough to produce only in moderation and on the basis of the normal demand, and that the consumer in turn will manufacture only for ready sale.

Increased ease of adjusting differences with outside concerns has been noted from year to year, owing to the marvelous growth of association work.

Letters were read from Frank F. Fish, secretary of the National Hardwood Lumber Association, and from C. H. Barnaby of Indianapolis, president of that body; also from O. O. Agler of Chicago, former president of the National Association.

Secretary Hayden said in his report that the record of the last year does not show so much the things that have been accomplished, but that this did not indicate any stagnation in the association's work. Four meetings were held during the year and at each meeting the market conditions were discussed. The secretary stated that at one time a government official had endeavored to pump him for information as to the character of subjects talked over at the meetings.

Secretary Hayden said that at last year's meeting he volunteered to get the credit standing of all prospective customers and that he would investigate at anyone's request the practice of such customers in dealing with the rest. He said, however, that judging from the inquiries he had received, members of the association had had very little difficulty with customers.

Treasurer C. F. Osborne reported a balance a year ago of \$30.54, receipts during the year of \$104.50, disbursements of \$99.40—leaving a balance on hand of \$39.64.

The board of arbitration then reported through its chairman, P. R. Hamilton, who stated that that board had received but one complaint—namely, that of a buyer of hardwood lumber in Minneapolis who desired national inspection on some lumber which he had purchased from a concern not a member of the Northwestern association. The request was referred to the secretary of the National Hardwood Lumber Association.

The addition of five new members was reported by Chairman A. H. Barnard of the membership committee. D. F. Clark, reporting for the forestry committee, told of progress which has been made toward creating a new state forestry organization for Minnesota.

The report of A. S. Bliss, chairman of the railroad committee, showed no business during the year. Mr. Bliss suggested that the association notify the Civic and Commercial Association of Minneapolis that the railway committee stood ready to co-operate with it at any time.

Upon motion of P. R. Hamilton, it was decided to send a letter to the National Hardwood Lumber Association declaring that the present rules of that organization are satisfactory. The motion, however, it was understood, is not to oppose changes which might be effected by the rules committee.

A. H. Barnard, E. H. Broughton and F. H. Lewis were appointed as nominating committee and recommended the following officers: President, F. A. Nolan, St. Paul; vice-president, A. S. Bliss, Minneapolis; secretary, J. F. Hayden, Minneapolis; treasurer, O. F. Osborne, Minneapolis; board of arbitration, P. R. Hamilton, E. H. Broughton, N. C. Bennett, P. M. Parker and D. R. Stanton. Following an informal talk by A. S. Bliss in the absence

of the new president, the meeting adjourned to the banquet hall, where dinner was served, preceding a theatre party.

W. H. SILL, MINNEAPOLIS, MINN., RETIRING PRESIDENT NORTHWESTERN HARDWOOD LUMBERMEN'S ASSOCIATION

Poplar in France

Cottonwood for a long time was considered almost worthless, but the demand for box material brought it into extensive use. In fact, it is no longer an inexpensive wood, and the trade is looking for cheaper substitutes. Owing to the large dimensions it attains, the clearness and uniformity of the wood, combined with lightness and toughness, it is peculiarly fitted for many important purposes. Cottonwood is one of the most rapid growers of our forests and reaches merchantable proportion in twenty-five years, or even less. In France, poplar which corresponds to our cottonwood, ranks second only to oak in importance of native timbers. The annual wood product of poplar is valued at six million dollars. Paris alone consumes about seven million cubic feet. It is there, as here, one of the few trees which he who plants it can harvest, and its extended propagation is being strongly recommended. Plantations are best started from one-year-old seedlings. A height growth of five feet the first year after transplanting is very common.

The Problem of Forest Utilization

Editor's Note

The following article was read by Nelson C. Brown, of the New York State College of Forestry, before a recent convention in that state. It is not valuable so much for any specific recommendations for forest utilization that it might contain as it is for a summary of the possibilities of utilization in this country in the future.

It has been estimated that in this country only about forty per cent of all the wood that is produced is actually consumed in a legitimate way. Contrasted to this it has been estimated that ninety-six per cent of all the wood that is produced in some countries of Europe as in Germany and France is utilized. In Europe, even the twigs and leaves are used for kindling and all the branches and waste material are utilized in some profitable way. It will be some time before we can practice such intensive utilization in this country, yet with the rapid depletion of our forest resources, the rise in stumpage and wood values will eventually make possible the close utilization that is practiced in Europe. The fact that only forty per cent of all the wood that is produced in this country is used may be attributed to two broad reasons, first of which is the common prevalence of forest fires which are so well known that they hardly need further discussion here. Suffice it to say that forest fires destroy as much timber, valued in dollars and cents, as is ultimately used on the markets. Fire protection is not directly associated with wood utilization but efficient fire protection means closer utilization and therefore better conservation and profits to the timber owners. The second reason for the wide discrepancy between what is grown and actually utilized is the tremendous waste both in the woods and in the mill.

The practice of forestry in this country will be devoted as much toward securing a closer and more complete utilization of our timber resources as in growing new timber. The subject of forestry may be broadly divided into two branches:—those of production and consumption. Under production we have the planting and growing of new timber; under consumption the utilization of what is already grown. In this country we originally had greater forest resources than in any other country in the world, both in variety and size of timber. One of the greatest problems in forestry therefore will be to utilize these virgin stands in the most complete and profitable manner until it becomes necessary to raise timber on a broad scale. With the rise in stumpage values as a result of the rapid depletion of our forest resources the question of utilization has been brought keenly to the front, in fact, many of the profits of our mills are being made from the utilization of the bi-products as well as from the main product. An analogous case is found in the meat packing industry in which it is said that the principle profits are derived from the bi-products of the packing industry rather than from the meat that is dressed and shipped to all parts of the world. Along with the closer utilization that has been forced upon us we have come to see species that were formerly considered of little or no value. Today we are using hemlock, red gum, tupelo and a great variety of other species which were considered hardly of any value except for the rougher classes of timber twenty years ago. In the pulp industry our spruce supplies are becoming so short that we are compelled to use other species. Experiments are now being carried on by the Forest Service which will probably make available for the paper industry nearly every one of our common species, at least, for the rougher forms of paper.

Opponents of the conservation policy have insisted that substitutes are coming in so rapidly for our wood supplies that in a short time we will need but very little timber. The best argument against this is that in spite of the increased use of iron, steel, concrete, brick, etc., the annual consumption per capita of wood is increasing in rapid strides from year to year. We are today using practically twice as much timber per capita as we did fifty years ago. We are using over five times as much timber per capita as is used in Germany. Even in Germany with its continued practice of forestry for over three hundred years, they still have to rely upon outside sources for a portion of their wood supplies, and they are planting up land formerly used for agriculture to supply the great

and increasing demand for timber in the years to come.

The problem of forest utilization, therefore, is and will be the most important one in forest conservation until the present standing timber is all cut. Up to that time our stumpage values and lumber prices on the market will gradually increase. The question naturally arises how utilization may be increased. In the woods, utilization may be increased by the cutting of low stumps and by the use of small logs from the tops as well as by taking everything that is merchantable out of the woods. On the national forests in the West they commonly make a practice of taking everything down to twenty-five per cent of merchantability. That is, a log that contains seventy-five per cent of defective or worthless material is hauled to the mill and utilized.

Waste is also occasioned by leaving good logs scattered here and there in the woods or covered up by brush and carelessly neglected. Other careful methods may be adopted in the woods such as the use of inferior or knotty logs for skids, corduroys, bridges, camps, etc., instead of the better class of material. In the mill, however, is where intensive utilization may be practiced even more than in the woods. It has been estimated that only forty per cent of the wood that is cut in the woods actually finds its way into the hands of the ultimate consumer. We now use the thin band saws instead of the circular saws. The waste in sawdust alone is from two per cent to ten per cent of the total amount of wood in the log depending upon the method of sawing and the kind of saw used. Besides the ordinary productions of the sawmill such as lumber, shingles, and lath, special lines of utilization of bi-products are being developed such as the use of slabs and defective logs for box lumber, crating material, etc. The use of sawdust and other waste for wood-pulp and the use of sawdust and shavings especially that from kiln-dried lumber, for special packing material as well as for use in ice houses, etc., is rapidly being adopted. Wood distillation plants are also being maintained in connection with sawmills. We are now getting products from wood material through processes of distillation that were not heard of thirty years ago. One sawmill in the South is producing sufficient wood gas from the distillation of wood to run its entire lighting system. Some of these problems are mere suggestions for the future yet they are strong possibilities and may be developed for the further utilization of timber products with the resultant conservation of timber supplies.

The first work that has been attempted in New York state to take stock of our timber resources and to find out how we stand in the matter of wood utilization has been undertaken by the New York State College of Forestry at Syracuse University in co-operation with the United States Forest Service during the current fall and past summer. There have been from three to five men continually in the field making a close investigation of the amount of wood being consumed in the minor wood using industries of the state. This does not include the amount of lumber produced by the sawmills of the state nor the amount of pulp-wood being consumed by our paper mills, as well as the statistics of wood distillation, veneers, cooperage, etc., which are covered by the government census bureau. However, the report is intended to be an exhaustive study of the amount of wood being consumed in every wood using industry besides the above mentioned ones. It includes such industries as the box board, carriage, furniture, implement industries and every other woodworking establishment that uses wood, in any form or manner. The report will show the average price per thousand board feet for each species that is being paid in each line of utilization, and it will show how much of each species has been produced in New York or in other parts of the country. The main value of the report is in the fact that owners of timberland may determine just what they may expect from their timber hold-

ings as it gives the price being paid for the different species of wood in each industry as well as a directory of the names of all wood-using industries in the state. It is expected that some very interesting information will be given in this report; it will certainly show that millions of dollars are being invested in the state for products produced in other states of the country or Canada; it

will also show that we may substitute our own home grown material for goods shipped in from other parts of the country. Southern yellow pine and even western fir and southern hardwoods are successfully competing with timber grown in the state whereas over 12,000,000 acres of potential forest land should be producing the entire demand for timber supplies in the state.

The Mail Bag

Any reader of **HARDWOOD RECORD** desiring to communicate with any of the inquirers listed in this section can have the addresses on written request to the Mail Bag Department, **HARDWOOD RECORD**, 537 South Dearborn Street, Chicago, and referring to the number at the head of each letter and enclosing a self-addressed stamped envelope.

B 356—Wants Rim Strips and Sleigh Runner Billets

WOODSTOCK, ONT., CAN., Nov. 29.—Editor **HARDWOOD RECORD**: Will you kindly give us the names and addresses of any parties who furnish white oak rim strips and sleigh runner billets?

The above inquirer has been furnished with a partial list of manufacturers of the stock sought.—EDITOR.

B 357—Wants Saw for Cutting Plugs

BERWICK, LA., Nov. 25.—Editor **HARDWOOD RECORD**: We would like to get a tool for cutting plugs from one inch cypress boards. These plugs are straight, have no taper like those of a bung. Would be pleased if you would give us some information with reference to this.

COMPANY.

The above concern has been put in touch with a few manufacturers making a saw for cutting out straight plugs, which are very much in the nature of a stave saw.—EDITOR.

B 358—Wants Dimension Stock

LOUISVILLE, KY., Nov. 25.—Editor **HARDWOOD RECORD**: A friend of mine is planning to start a large wood-consuming plant, and is desirous of securing a list of manufacturers of kiln-dried dimension stock, as at the start he intends to buy all of his lumber cut to size. The kinds of woods to be bought include oak, plain and quartered; poplar, beech, chestnut and gum.

If you can send me a list of the principal producers of these woods in sizes, I shall be greatly indebted.

The above party has been supplied with the names of a few manufacturers of dimension stock of the woods mentioned.—EDITOR.

B 359—Wants Tool for Removing Knots

ATLANTA, GA., Nov. 30.—Editor **HARDWOOD RECORD**: We remember some months ago reading that a tool or machine had been perfected and was being used on the Pacific coast, where knots were objectionable in boxes, which cut out the knot and also cut a round plug of clear wood which would perfectly fill the hole.

If you can help us out with any information we would be glad to hear from you.

This concern has been supplied with the names and addresses of a few saw manufacturers who make stave saws, and would undoubtedly be in a position to furnish the tool required.—EDITOR.

B 360—Wants Red Gum Veneers and Poplar Casings

CINCINNATI, O., Dec. 4.—Editor **HARDWOOD RECORD**: We should like to hear from any firms

in a position to supply poplar electric casings, and also from any firms in a position to supply red gum veneers. If you have a list of such firms, we shall be glad to have you send it to us.

The above inquirer has been supplied with the names of several manufacturers of red gum veneers and poplar lumber.—EDITOR.

B 361—Seeks Market for Basswood Mouldings

NEW LONDON, WIS., Nov. 25.—Editor **HARDWOOD RECORD**: Can you give us the addresses of two or three wholesalers or buyers of basswood mouldings? The market for basswood mouldings seems to have been discontinued in a great many parts of the country, and if you have a line on anyone using it, we will appreciate the information, as we have considerable of this stock for sale.

COMPANY.

The above manufacturer has been supplied with the names and addresses of a few possible buyers of the material referred to.—EDITOR.

B 362—Seeks Mill Connections

BOSTON, MASS., Nov. 26.—Editor **HARDWOOD RECORD**: We are very anxious indeed to make connection with some first-class concern cutting principally oak, ash and chestnut, and write to ask if you know of any good concern with whom you think it might be possible for us to make a similar arrangement to what we had with an eastern concern, which is now practically cut out, for the sale of its stock in the territory which we cover. We want nothing but fine stock, something that will stand right up to grade and well-manufactured, and we would not care to tie up with anyone except a first-class concern in every way.

If you have any such concern in mind with whom you think it would be possible for us to do anything, we wish you would advise, and the writer would be very glad, indeed, to go and see them. We could probably handle five or six million feet or more of this class of stock annually, and could, we think, furnish them with some very desirable business.

The above inquirer is a well-known wholesaler and any millmen contemplating making a connection for the sale of his product, would do well to communicate with this concern.—EDITOR.

B 362—Regarding Arkansas Timber

FRONT ROYAL, VA., Nov. 23.—Editor **HARDWOOD RECORD**: Will you be kind enough to inform us as to the hardwood timber situation in Arkansas, particularly in the section of Hope, Ark.? We are interested in hickory principally for axe, pick, sledge, etc., handles. Is there a good supply to be had within a reasonable shipping distance of Hope, Ark., say within radius of 150 miles? What grade is timber in that section; is it likely to be sound or defective; is it virgin growth, that is, trees of good size, or has it been cut over? What is hickory stumpage worth per thousand or per cord? We shall appreciate your advice on this subject very much.

The above inquirer has been advised that we are not able to quote prices on hickory stumpage in Arkansas, as prices depend largely upon the quality of the timber and location. However, Arkansas has only a small amount of second-growth timber of any kind, the timber there being practically all virgin stand. He has been further informed that the United States Forest Service issued a report this year on the forests of Arkansas, which he can procure by writing the Forest Service, Washington, D. C., and asking for Bulletin 106. Also, that he might ask the Service for two bulletins on hickory, one written by Boisen and the other by Hatcher, which contain pretty full information regarding supplies, prices, etc.—EDITOR.

B 364—Fuel Value of Woods

BOSTON, MASS., Nov. 26.—Editor **HARDWOOD RECORD**: I should like to know why old railroad ties are not used for fuel, and I should like a complete tabulation of the fuel value of every kind of wood, if such a thing exists. I am getting material together for a handbook of the trees of Boston and vicinity, and in this I want something that will appeal to the man who uses open fires.

The writer of the above letter has been advised that we do not believe he would care to have a list of the fuel values of different kinds of wood figured on a scientific basis, as the method of figuring these values is very complicated and is figured, we believe, on the basis of British thermal units. Fuel value of woods on a practical basis is purely comparative and is based on the weight. For instance, one wood weighing forty pounds would have four-fifths of the fuel value of a wood weighing fifty pounds. There is no government bulletin covering this information, but Dr. Sargent, in the ninth volume of the tenth census of forest trees of North America, gives comparative fuel values of this character. Further, if he desires to go into the scientific calculation, we can probably inform him as to the method of figuring.

The question of using old railroad ties for fuel has been brought up by conservationists a great many times, and, in fact, ardent but impractical men who have been more enthusiastic than in touch with the practical side of the question have protested vigorously against so-called waste of old railroad ties. However, this waste is based upon business calculation by the railroad. It is certainly not logical to suppose that if they could see any return from converting this material into firewood they would overlook the opportunity. They have demonstrated, however, to their own satisfaction that they would actually lose money by splitting and sawing this wood into fuel lengths and hauling it to the market. They find it cheaper to burn it along their rights of way.—EDITOR.

News Miscellany

Annual Meeting of Baltimore Exchange

The annual meeting of the Baltimore Lumber Exchange, which was held at Merchants' Club Dec. 2, was more largely attended than any similar event in years, and the proceedings were of a character to promote good feeling and stimulate the interest felt in the work of the exchange. The meeting followed the monthly session of the managing committee in the afternoon, when the preliminaries were disposed of, and it opened with the reading of the yearly reports by President Theodore Mottu. Treasurer Luther H. Gwaltney, Chief Inspector J. G. Creamer and others. The statement of President Mottu was in the nature of a general review of lumber trade conditions, and he also made some valuable suggestions. He outlined the trade conditions at the beginning of the year and referred to the troubles with which the mills had to contend at the beginning in the early months, the result of these conditions being to greatly retard production. These impediments, he stated, still continued, the car shortage being attributed in large part to the bountiful cotton and other crops, which interfered with the movement of lumber. Continuing, he said:

"The export trade of our city has also been in a very unsettled state. In the early part of the year there was a good demand for lumber and logs in all markets of the United Kingdom and the Continent, which made a considerable amount of business on a profitable basis. Owing to the strike of the stevedores in the early spring the export trade received a severe setback, and shippers accumulated lumber and logs. The steamship companies being unable to manage the situation, much of our exports were diverted to Philadelphia and New York, but this caused an increased cost by the advance in the inland as well as ocean rate of freight, and the loss had to be borne by the shippers. Since the lull in August and September there has been an increased demand, and owing to the difficulties in getting shipments forwarded, prices have advanced, and in all foreign markets there is now a strong demand for all classes of lumber and logs. A good trade is anticipated for the next year, but there are considerable troubles to be overcome, as the steamship companies have recently advanced their ocean rates ranging from twenty-five to eighty per cent, and this serious advance in the cost of export lumber has now to be considered in making sales. The foreign buyer is not quick to pay the advanced price to cover this extra cost, as he believes there will be a great amount of lumber that will find its way into the foreign markets, but it is the hope of the exporters that the domestic trade will continue to increase, and thereby provide for a large consumption of the lumber manufactured."

Mr. Mottu complimented the work of the inspection bureau and commended it to the membership. He also discussed the method of counting in vogue here, which had given rise to some criticism, being different than that used elsewhere. On this subject he said:

"We are trading today on an actual contents count in practically everything that we use with the exception of lumber on the wharf. Our own wholesale members are shipping to Baltimore by car the same sizes that are received on the wharf and making their invoices entirely different. I feel, therefore, that we should not continue in this way because it is easy and has been in existence for so many years, but make the change now and let our exchange be in line with other cities in progressive, up to date methods."

Secretary L. H. Gwaltney stated in his re-

port that the finances of the exchange were in excellent condition and that the past year had been very satisfactory in so far as the work of his office showed it.

Chief Inspector Creamer, in his report, placed the total quantity of lumber inspected at 79,218,981 feet, a quantity slightly smaller than last year, the difference being on account of several firms which had substituted their own inspection for that of the exchange. The volume of business done here was in excess of 1911. The report, of course, did not take account of the vast volume of business done by Baltimore firms and corporations which does not go through the local inspection bureau. Accurate statistics about this trade are lacking, and their compilation has been so difficult and attended with so many obstacles that even President Mottu abandoned the task. The hardwoods inspected were divided as follows: Gum, 3,747,256 feet; poplar, 2,163,515 feet; oak, 1,678,454; chestnut, 454,717; ash, 351,931; maple, 364,390; beech, 147,558; birch, 144,568; juniper, 71,477; bass, 109,006; hickory, 33,106; mahogany, 26,311, and walnut, 7,555.

The adoption of a change in the constitution making out-of-town firms and corporations eligible to membership was almost the only other business transacted, with the exception of the election of officers, which resulted in the secretary being instructed to cast the vote for the ticket named by the nominating committee, as follows:

PRESIDENT—Theodore Mottu.

VICE-PRESIDENT—Ridgeway Merryman.

TREASURER—Luther H. Gwaltney.

MANAGING COMMITTEE—William M. Burgan, Lewis Dill, Parker D. Dix, Edward P. Gill, Rufus K. Goodenow, Henry C. Matthews, John L. Alcock, John H. Geis, George E. Waters, Joseph D. Virdin, Ridgeway Merryman and George B. Hunting.

On adjournment of the business session the members proceeded to the hall on the first floor, where caviar and liquid refreshments had been provided, and where an opportunity was afforded of taking an appetizer and getting acquainted, in which respects the gathering was highly successful.

Nearly one hundred were present, practically all of the membership in the exchange being represented, and the occasion was voted one of the most successful ever held. The arrangements were made by the house committee, which consists of George E. Waters, chairman; Joseph D. Virdin and Henry C. Matthews.

Meeting of Cincinnati Lumbermen's Club

The regular monthly meeting of the Lumbermen's Club was held at the Business Men's Club on Dec. 2. The usual toothsome banquet was provided by the entertainment committee. Following the dinner the meeting was called to order by President Chas. F. Shiels. After the reading of the minutes, followed a discussion of a rate question that had been put up to the club for consideration, originating at St. Louis among some ex-railway men who are now making a study of rates in several sections. Printed copies of the brief had been previously furnished the members of the club and therefore they were well acquainted with the alleged discriminations and comparisons shown. The discussion was very thorough and was participated in by most of the members present, bringing out the consensus of opinion that there was nothing to be gained by a motion to take the matter up with the railroads interested as most of the statements made as to discrimination against Cincinnati were based upon a mileage basis and a comparison of Cincinnati rates with those at

Cairo. The communication was ordered filed.

The question of reconignment in transit was the matter next discussed. This subject was brought up by Dwight Hinckley, who contended that some of the roads entering Cincinnati were permitting the protection of through rates when cars are reconsigned while others were not doing so, and urged that concerted effort be made by the club to gain this favor from all of the roads. The chair appointed a committee, consisting of Dwight Hinckley, Harry Fagin, C. H. Clark and H. J. Pfeister, to take up the matter and report at the next meeting of the club.

A communication which had been prepared by Ben Dulweber of the John Dulweber Company was then read, stating that he is informed of a contemplated advance by the Illinois Central and the Southern Railway in freight rates from Mississippi points to Ohio river crossings and all points north of the river. While the tariffs increasing these rates have not as yet been filed, it is the intention to cancel present rates on cottonwood and gum, placing these woods on the same basis with other hardwoods, which would increase those rates three and four cents on gum and cottonwood and one cent also on other lumber, being a general advance on all stock. After a general discussion that brought out the fact that the Memphis Lumbermen's Club was about to take some action to prevent this increase of rates, a committee consisting of George Hand, chairman, Ben Dulweber and E. J. Thoman was appointed to investigate the matter thoroughly and to co-operate with the Memphis Lumbermen's Club or with the traffic department of the Cincinnati Chamber of Commerce and to draw on the club treasury for any necessary expenses. After the traffic manager of the Chamber of Commerce, Guy M. Freer, had been heard on the question of rates, the meeting adjourned.

Indiana Hardwood Association Meeting

At a meeting of the board of managers of the Indiana Hardwood Lumber Association on Nov. 27, the date of the next annual meeting of that organization was set for Jan. 16, 1913. The meeting will take place at the Hotel Claypool in Indianapolis. It is planned to make the gathering a sort of homecoming for all Indiana lumbermen and a gratifying attendance is expected.

Coming Meeting of the Hardwood Exporters

The coming meeting of the National Lumber Exporters' Association is scheduled for Jan. 23 and 24 at Chattanooga, Tenn. It is expected that fifty prominent exporters will be in attendance, coming from all parts of the country. Inasmuch as this organization controls seventy-five per cent of the total export business of the country, the importance of these meetings is well-known. The Chattanooga lumber trade is extremely well pleased with the decision of the association to hold its meeting in that city, and Fred Arn of the J. M. Card Lumber Company, who is chairman of the local committee on arrangements, is already getting busy making preparations for the event.

Evansville Lumbermen's Club to Meet

President D. B. McLaren of the Evansville Lumbermen's Club of Evansville, Ind., announces that the next monthly meeting of that body will take place at the New Vendome Hotel on Dec. 10. The most important question up for discussion will be that of the new log rate proposed by the Louisville and Nashville Road. The newly elected officers will not start their terms until the January meeting.

Board Meeting National Wholesalers

The board of trustees of the National Wholesale Lumber Dealers' Association will get together at the association headquarters, 66 Broadway, New York, on Dec. 19, in response to a call of F. E. Parker of Saginaw, Mich.

The executive committee will meet the preced-

ing day and in view of the important questions coming up for discussion, it is anticipated that there will be a full attendance. It is further anticipated that the trustees will name the date and place of the next annual meeting. The work of the past year will be reviewed, and questions to come up at the next meeting will also receive consideration.

Hardwood Manufacturers' Annual

There has been a change in the office force of the Hardwood Manufacturers' Association of the United States. H. G. Hoover, who during this year left the Griffen H. Deeves Lumber Company of Chicago, Ill., to become assistant secretary, has resigned. Mr. Hoover is now associated with the new lumber firm, The Stratemeyer Lumber Company, and will devote his time to the office and selling end of the business.

The association will again hold its annual convention at Cincinnati at Hotel Sinton. This will be the eleventh annual convention and the fourth consecutive year that it has been held at Cincinnati. W. E. DeLaney, president of the association, is determined to make this the biggest gathering of lumber manufacturers ever held, and no pains or expense are to be spared to achieve that end. It is expected that the registration will be close to one thousand and a good program will be arranged for the entertainment of the delegates. The convention will last only two days—Feb. 4 and 5—but the day previous to the convention will be a busy one, as all of the prominent members will be on hand a day ahead and will be busy in committee meetings so that no time will be lost when the meeting convenes.

"Doings" at Chicago Club

On Saturday, Nov. 30, the Lumbermen's Club of Chicago pulled off one of its surpassing entertainments, the feature of which was the Dearborn Chorus. This chorus is famous in semi-professional musical circles and is composed of twenty well-trained male voices, who have established an enviable reputation for their ability to produce harmony of the most harmonious kind. These entertainments are becoming decided features in the Chicago club, and are calling forth a fair response from the members. It is to be hoped, however, that the members will more strikingly show their appreciation at future entertainments.

The entertainment committee is now working on a glee club entertainment which will be given strictly by club talent. The committee in charge, composed of W. A. Eager, Robert Sullivan and F. B. McMullen is holding regular rehearsals, which take place every Friday in the club rooms at 8:30 p. m. They are anxious to secure as many voices as possible from among the members.

Statement of Manufacturing Lumbermen's Underwriters

The last annual statement of the Manufacturing Lumbermen's Underwriters, Harry Rankin & Co., attorney, Kansas City, Mo., shows that organization to be in a decidedly healthy and growing condition. The company was organized with eleven members Nov. 1, 1898. The membership shown in the last statement was 318 and the present membership is 359. The insurance in force Nov. 1, 1911, was \$25,265,525, and on Nov. 1, 1912, it was \$27,535,778. The aggregate of the number of small losses reported after the issuance of the last statement amounted to \$249,178.39. Losses in process of adjustment at time of statement were \$35,559.75. Total losses paid since the organization of the company aggregate \$2,242,505.44.

Lamb-Fish Representative at Rochester

The Lamb-Fish Lumber Company of Charleston, Miss., announces that its representative, Clyde E. Jones, is now located at Rochester, N. Y., where he will maintain his headquarters for

three or four months. Mr. Jones will work the eastern territory with the express purpose of pushing red gum lumber. The Lamb-Fish company expresses itself as quite confident that there is a good field in the East for placing a considerable quantity of this stuff.

New Memphis Concern

W. L. Crenshaw, for a number of years a member of the firm of Crenshaw & Cathey, and later president of the Bellgrade Lumber Company, has, with F. E. Gary, general manager of the Baker Lumber Company, purchased the sawmill, timberland holdings and lumber stock of the Norton Hardwood Lumber Company, at Ritchie, Miss. The consideration is understood to have been \$75,000 and the new owners have formed the Crenshaw-Gary Lumber Company, Inc., which is capitalized at \$50,000. The new company has already assumed control of the properties and is operating the mill at Ritchie. It is in charge of E. M. Schulte, who is experienced in that line, having been formerly connected with the J. W. Thompson Lumber Company and later with the Penrod-Abbott interests.

W. L. CRENSHAW, CRENSHAW-GARY LUMBER COMPANY, RITCHIE, MISS.

Seven thousand acres of timberlands were included in the transfer. Mr. Crenshaw has had no active connection with the lumber business for the past few months, aside from his service as president of the Memphis Hardwood Flooring Company. Mr. Gary will continue as manager of the Baker Lumber Company and his relations with the new firm will not affect in any way those with the company of which he has been general manager for a number of years.

New Arkansas Veneer Company

The American Veneer and Specialty Company is the style of a new concern which has recently started business at Newport, Ark. This concern is well equipped as to plant and capital and it expects to manufacture an extensive line of gum, cottonwood and tupelo veneers. A portion of this stock will be made into specialties such as basket stock, box shooks, excelsior, etc.

Forrest City Company Loses Case

In the latter part of 1910 G. M. Sims of Memphis, Tenn., and Proctor, Ark., contracted with the Forrest City Box Company of Forrest City, Ark., for 5,000,000 feet of log run gum, 24 inches and up wide and guaranteed thirty-five per cent red. The price was \$13 f. o. b. Proctor. The Forrest City company accepted 1,500,000 feet of the order but in May, 1911, refused to accept the remainder. After attempting ad-

justment of the difficulty, Mr. Sims took the case to court. On Nov. 22 a decision was handed down at Little Rock, the unique point in which was that settlement must be made for damages to the extent of the difference between the cost of raw material (logs) plus the cost of production, and the contract price on material not accepted and paid for.

The complainant proved that the value of the stumpage to him was \$3.50 per M and the cost of logging and milling was \$7.50. Thus the total cost was \$11.00. The decision awarded Mr. Sims \$2 per thousand on the remainder of the contract. This with a judgment on stock accepted made the total award \$8,300.

Incorporation of Clark L. Poole & Co.

Clark L. Poole & Co., Chicago, announce that the former co-partnership composed of Clark L. Poole and Edward C. Cronwall has been incorporated under the same style as the partnership carried. The object of the incorporation is to perpetuate the business in the interest of the company's clients and to strengthen the organization by the admission of several men to the firm as officers and directors. New members of the company will be A. M. Coit, Kenneth D. Steere, Frank R. Barnes, H. C. Barroll, Horace C. Poole, Harold O. Cronwall. All of these gentlemen have either been with the company for several years or closely connected through other companies. D. H. Bitner, H. J. Elliott and R. H. Coit have also been admitted as stockholders.

The management of the incorporation will be under the control of Clark L. Poole and Edward C. Cronwall, whose financial interest in the business is not affected by this change in the form of business organization. The officers now are: Clark L. Poole, president; Edward C. Cronwall, vice-president; R. S. Poole, secretary, and Harry O. Cronwall, treasurer. The other vice-presidents are: H. C. Barroll, A. M. Coit, Kenneth D. Steere, and Frank R. Barnes.

Clark L. Poole & Co. have purchased and sold to their clients about \$60,000,000 of timberlands bonds during the last nine years. During this period they have had no principal or interest defaulted and no loss has ever been sustained in connection with any of the bond issues.

Buys Jackson Plant

It is announced from Jackson, Tenn., that the Tennessee Hardwood Lumber Company of Nashville, Tenn., has purchased the sawmill plant and timber interests of John Rose of Knoxville, Tenn. The consideration involved is \$35,000. The new plant will be operated in connection with the Nashville offices of the Tennessee Hardwood Lumber Company.

Mr. Rose owned several hundred acres of timberland in Crockett county and had just completed a large sawmill near the Birmingham & Western Railroad depot, which road runs through the land in Crockett county. Mr. Rose completed the sale the latter part of November.

National Wholesale Lumber Dealers' Association Represented at Boston Weight Hearing

At a hearing of the Interstate Commerce Commission in connection with its investigation of the alleged irregularities and discrepancies in the weighing of freight, held at Boston, Nov. 25, before Special Examiner Prouty, the National Wholesale Lumber Dealers' Association was represented by its traffic manager, W. S. Phippen, who presented evidence covering some fifty shipments on which incorrect weights had been assessed. The evidence showed that in assessing the weights of these shipments, errors in calculation had been made, weighing figures had been transposed, and the wrong tare weights had been inserted. Several instances were cited where investigation failed to develop that the cars had been actually weighed, notwithstanding the gross, tare and net weight figures had been

inserted on the billing, and other cases showed that the assessed weights were exorbitant when compared with recognized estimates. This evidence tends to show that as a general rule it is as easy for a weigher to make a mistake in inserting the gross weight on a weight certificate, which it is impossible to detect except by means of an estimate, as it is for a weigher to insert the wrong tare or make an error in calculation which can be detected.

Mr. Phippen also gave evidence covering fifty shipments which were loaded on flat and gondola cars equipped with car stakes, and on which no car stake allowance had been made at the time of scaling; this being the allowance obtained as a result of the famous car stake case brought before the Interstate Commerce Commission in 1905 by the National Wholesale Lumber Dealers' Association. A strong argument was made for the uniform allowance of five hundred pounds for car stakes on all flat and gondola cars which are equipped with car stakes, regardless of whether such shipments consist of lumber, timber, logs or any other forest product, said allowance to be made at the time shipment is weighed, and the scale weights, including the allowance, to be shown on freight bills.

Mr. Phippen submitted resolutions as adopted by the joint committees of the National Lumber Manufacturers' Association and the National Wholesale Lumber Dealers' Association in Chicago last March and also at the annual meeting of the latter body in Louisville, Mar. 7, 1912. The resolutions were to the effect that carriers be required to show on the bills of lading the gross, tare and net weights, less allowance for stakes, dunnage, etc., if any, on each car, or furnish a weight certificate—and that in the absence of scale facilities at point of origin, the carriers be required to weigh each car at the nearest scales and forthwith furnish the shipper a certificate showing the gross, tare and net weight of the shipment, less allowance for car stakes, dunnage, etc., if any. Should the consignor or consignee request another scaling, same shall be made at the next weighing point ahead of the car, and if a difference of over one thousand pounds be shown between the first weight and the certificate of said reweight furnished the consignor or consignee, then the weights authorized by the various lumber associations shall be recognized by the carriers in settlement of claims between the shipper and the carrier.

It was further resolved that a joint committee consisting of railroad officials and lumber shippers shall within a reasonable time agree on a schedule of weights to be used between the parties at interest, and that the present weights authorized by the various lumber associations shall govern in the interim.

Belting Company Doubles Capacity

The New York Leather Belting Company has been so successful in marketing its production that it has found it necessary to greatly increase its power plant and other parts of the factory. Power plant has been more than doubled, the heating system enlarged to heat increased space, and many other changes all through the large Brooklyn factory have been made and are now under construction. When finally completed, this will place the company in better position to protect its friends in the way of delivery, especially in very wide belts, which are now being made, contrary to the usual theory that such belts are being replaced by the use of directly connected installations. It was but a short time ago when the lace leather tannery in Brooklyn was compelled to put on material additions to its facilities.

Foreign Market for Wooden Handles

Consular reports on the wooden handle market in Argentina show that there are various kinds of woods imported into that country. Most of the broom handles come from Brazil because they are cheaper than the American handles and

better adapted to the style of broom made there. The end of the stick is square, the balance of the handle being round. Broom handles manufactured in Argentina are three to four feet long and sell for 2.12 to 2.97 cents gold.

In Cienfuegos there are two broom factories, one of which imports 50,000 and the other 20,000 handles annually from New York. No chair-ropes are imported at this place, turned wood products of any importance being handles for mops, hoes, axes, picks, hammers, files, sledges and chisels. All of these articles are imported from the United States.

Austria does not offer a very inviting field for handle makers, as most of the tools used in that country are fitted with roughly finished handles driven into an eye in the upper part of the tool. This is true of hoes, rakes, shovels and forks. Handles there are made of beech and oak.

To the Malaga district of Spain, foreign made handles are not imported. The working classes in that section cut the lengths to suit and turn them exactly to the thickness desired by the individual. The exceedingly small cost compared to that of the imported handle makes the sale of foreign handles in that country practically impossible. In fact, seventy-five per cent of the common tools are shipped without handles.

Building Operations for November

Official building reports from some fifty building centers throughout the country, as compiled by The American Contractor, Chicago, show an aggregate gain of 8 1/4 per cent for November as compared with November, 1911; and the past eleven months show a gain of 5 1/2 per cent as compared with the same months of the past year. The building industries enjoyed prosperity last year, and it is gratifying to know that this year promises to be still better. Over one hundred per cent increase for November was scored in the following cities: Atlanta, 199 per cent; Duluth, 251; Indianapolis, 183; Kansas City, 153; Nashville, 309; St. Joseph, 105; Worcester, 194.

Particulars will be found in the following table:

	November, 1912, Cost.	November, 1911, Cost.	Percent Gain/Loss.
Akron	397,980	209,655	89
Atlanta	1,238,181	416,508	199
Baltimore	668,871	654,383	2

Total	\$51,557,032	\$47,594,485	8 1/4

The Forest Fire Menace

The Forest Service has issued two important publications dealing with the problem of forest fires. They do not cover the same ground, but take up different phases of the question. Bulletin 113, by Daniel W. Adams, forest examiner, bears the title, "Methods and Apparatus for the Prevention and Control of Forest Fires, as Exemplified in the Arkansas National Forest," and bulletin 117, by Fred G. Plummer, geographer of the Forest Service, is entitled, "Forest Fires, Their Causes, Extent and Effects, With a Summary of Recorded Destruction and Loss."

The latter bulletin is historical, and contains much valuable and interesting information of a scientific nature. It is a companion publication to Mr. Plummer's recent bulletin concerning the agency of lightning in starting fires. It is asserted that forest fires have occurred ever since there were forests on the earth, and that geological records of charcoal, far antedating any human history, is not wanting. Evidence of fires many hundreds of years ago in both the East and the West are found in many places. There is said to be geological evidence that all parts of the United States, except the loftiest mountain summits, were once forested; and it is believed that much of the open plain and prairie in the Mississippi valley was bared by fires, probably set by Indians to improve the food supply of birds and beasts, thereby making hunting more profitable.

The total remaining stand of timber of all kinds in the United States is estimated at 2,800 billion board feet; the annual cut for all purposes 100 billion feet; the annual area burned over, 10 million acres. No estimate is given of the total financial loss due to fires, for the reason that records are so incomplete that definite figures for the whole country are not possible. The evident purpose of the bulletin is to deal with facts, and to present to the timber owners of the country all available information which may help them to attack the forest fire problem in an intelligent way.

The other bulletin referred to, that by Mr. Adams, has a much narrower scope, but the work is no less important. The author is not concerned with the history of fires, nor with natural phenomena over wide areas; but he has worked out a plan whereby he believes fires may be controlled more effectively than in the past. The bulletin describes the fire-fighting appliances and the way to use them. He tried them out in the national forests of Arkansas, and success there has led to the belief that similar success will result elsewhere, both on public and private lands.

To begin with, there is a system of watch towers located on mountain peaks, and connected by telephones. During dangerous fire periods, a watchman occupies each tower. Three or four towers will keep watch over many hundreds of square miles of forest and the first smoke by day or the first glare by night is instantly detected. The towers are each equipped with compass and graduated scales of degrees, and with certain other appliances which enable the observers to determine instantly the direction of the fire from two or more towers. Telephone communication enables them to plot the lines on charts already prepared, and the meeting of the lines of direction locates the fire as to range, township, and section. That information is telephoned to headquarters, and in a few minutes the fire fighters are called out and are on their way to the fire, knowing exactly where it is, though it may be many miles distant.

Under the old system one of the principal difficulties has often been to locate a fire. In the clear atmosphere of the western country, a smoke or glare may be seen fifty miles, but it may not look to be ten miles; or it may appear only ten, and be fifty. It has often happened that fire fighters lose a whole day in locating a fire, and when they reach it, it has gained such headway that it cannot be controlled. That

can not happen when the tower system is employed. Fighters within reach of the fire will be sent against it, to keep it in check until those farther away can come up.

Watch towers, with quick triangulation apparatus, are only part of the tools invented by Mr. Adams for controlling fire and tested by him in Arkansas. It would not avail much to reach a fire quickly if no arrangement had been made for extinguishing it. Chemical tanks, mounted on horses, or on men's backs, are carried along, with hose, nozzle, and fire shields; and if the fire has not gained too much headway it can be extinguished by that means, supplemented by the usual methods of beating out the blaze with wet sacks or green boughs. The "fire department," thus mounted on horses, can get over the ground very rapidly, and it can, of course, be used independently of any system of watch towers.

The bulletin discusses fully the ways and means of getting the best service out of the apparatus, and also the matter of training the fire fighters, and organizing auxiliaries to be called out in cases of emergency.

Purchase of Poles for 1911

Preliminary report for 1911 issued by the census bureau shows that the number of poles purchased by telegraph and telephone companies, steam and electric railways and electric light and power companies in the United States was less than for 1910 and 1909 by 452,674 and 320,720 respectively but exceeded the total for 1908 and 1907 by 168,866 and 134,752 respectively. The total reported purchase in 1911 aggregated 3,418,020, of which 70.3 per cent were made by telephone and telegraph companies, 23 per cent by electric railroad, light and power companies, and 6.7 per cent by the steam railroads.

The decrease in the 1911 totals as compared with that for the preceding year was confined entirely to a falling off in purchase by the telephone and telegraph companies and steam railroads. On the other hand, a substantial increase was shown in purchases by electric railroads and electric light and power companies. The decrease in 1911 in purchases as reported by the telegraph and telephone companies was not general, being confined in the main to states in which there was no more than usual activity in the construction of telephone lines during 1910.

During the period of five years covered by the report, the total pole purchase was 17,559,576, of which white cedar contributed 64.2 per cent; chestnut, 17.8 per cent; oak, 5.3 per cent; pine, 4.5 per cent; cypress, 2.4 per cent. These five woods furnished 94.3 per cent of the total, but the tendency has continued to substitute less expensive woods for these five. Other woods used are redwood, osage orange, and locust.

Successful Management of Wood Lots

The New York State College of Forestry at Syracuse University has placed under supervision the first commercial forest devoted entirely to the production of trees as a forest crop. The tract in question is but small, comprising only one hundred fifty acres, but offers exceptional opportunities for investigation. The forestry students made detailed surveys and maps of the tract and have laid it out in separate plots which vary in size from one-eighth of an acre to a full acre. Each sample area is managed according to different methods of forest improvements, some being given frequent thinnings of old and matured trees, others lighter thinnings and more attention to natural growth, while on still others thinning, seeding and replanting will be carried.

The work can have no practical value as far as the supply of sawlogs in the country is concerned for a long time to come at least, but it should serve to establish valuable figures which can be used by farmers possessing wood lots of

small area who desire to manage them for the greatest remuneration possible.

Miscellaneous Notes

The Globe Box Factory, New Orleans, La., was damaged by fire to the extent of \$69,000.

The Kennedy Corporation has been organized at Killingly, Conn., with a capitalization of \$12,000.

The McNatt Coffin Casket Company was incorporated at Vidalia, Ga., with a capital stock of \$25,000.

The Texarkana Casket Company was recently incorporated at Texarkana, Ark., with a capital stock of \$80,000.

The F. Leslie Clark Piano Company has been incorporated at Milwaukee, Wis., with a capital stock of \$20,000.

The Diamond Furniture Company, with a capitalization of \$100,000, has started operations at Statesville, N. C.

It is reported that the Gayoso Lumber Company of Memphis, Tenn., has discontinued its yard at Cairo, Ill.

The American Veneer & Specialty Company has begun operations at Newport, Ark., with a capital stock of \$50,000.

Consolidated Piano Company has been incorporated at Bridgeport, Conn. The company will operate with \$25,000 capital.

The American Veneered Column Company is the name of a concern recently started in Brooklyn, N. Y., with \$19,000 capital.

The Fisher Vehicle, Woodstock and Lumber Company has recently been incorporated at New Madrid, Mo., with a capital of \$5,000.

The Klerner Furniture Company is the style of a new corporation at New Albany, Ind. This company has \$30,000 subscribed capital.

The Avon Furniture Manufacturing Company, Easton, Md., was recently organized with a capital stock of \$50,000 to manufacture tables.

The Riegelsville Manufacturing Company, Riegelsville, Pa., manufacturer of caskets, will rebuild its plant which was destroyed by fire.

The Farmers Handy Wagon Company of Saginaw, Mich., builder of silos, will erect a plant for making silos at Houston, Tex., in the near future.

The Clio Manufacturing Company of Clio, Mich., manufacturer of woodworking novelties, baskets, etc., suffered a \$10,000 loss by fire. The plant will be rebuilt.

The Royan, Dawson & Ryan Manufacturing Company, Dresden, O., was recently incorporated to manufacture baskets, boxes, veneers, etc. The company is capitalized at \$10,000.

The W. H. White Company of Boyne City, Mich., have assumed control of the mill of F. W. Gilchrist at Alpeua, Mich., and will operate

as soon as its railroad to Gaylord is completed.

A stock company was formed recently in Indianapolis, Ind., to manufacture an undertaker's camp chair recently invented by George Palmer, a former chair manufacturer. The company includes in its stockholders Rodney H. Brandon, Kenneth McMahon, Archer Jackley and George Palmer.

The Edisto River Lumber company is a recent corporation, with head offices at Manistee, Mich. The capital stock is \$50,000, of which \$30,000 is subscribed in cash and \$20,000 in timber land at Edisto, S. C. The principal stockholders are Howard Cole of St. Louis, Mo., and Andrew Dovel and J. O. Nessen of Manistee.

The Knabe Brothers Company, piano manufacturer of Norwood, O., has recently begun operation in its new factory which succeeds the one destroyed by fire. The new plant is thoroughly modern in every respect, one of the chief features being the veneering department, which is equipped with the latest and most efficient machinery for the veneering of piano cases.

The American Veneer Company, Newport, Ark., has purchased the plant of the American Panel & Lumber Company and will improve and operate it, manufacturing elm, walnut and gum veneers, and baskets from sycamore. The officers of the company are: Oscar W. Jacobs, president-treasurer, Kalamazoo, Mich.; Wm. C. Grace, vice-president, and Geo. P. Benton, secretary.

The Slinger-Roettger Lumber and Manufacturing Company has recently started business at Huntington, W. Va., to manufacture, buy and sell lumber, and deal in timber and timberlands. The authorized capital of the new company is \$25,000, and the incorporators are: Walter Slinger, Fred J. Roettger, T. W. Slinger, C. A. Slinger and Everett Roettger, all of Huntington.

The B. A. Stevens Company of Toledo, Ohio, has reduced its capital stock from \$250,000 to \$50,000, in order to eliminate the expense of surplus capital which was not used. The company was organized in 1875 by B. A. Stevens, who died eight years ago. The concern suffered a great loss last July when the factory was almost destroyed by fire. One factory building and the office building was saved and the company has since occupied only these buildings.

It will no doubt be of interest to the lumber trade in general in Ohio, Indiana and Michigan to take notice that H. J. Reinhard has resigned from his position as sales manager of the Midland Lumber Company, Cincinnati, O., and will represent some larger mills in the South on a sales agency basis. Mr. Reinhard's many friends no doubt will be pleased to note this change, inasmuch as he will now be in better position to take care of the volume of business which has always been given to him.

Hardwood News Notes

CHICAGO

H. F. Below of the Vollmar & Below Company, Marshfield, Wis., spent a few days of last week in Chicago.

H. H. Heineman, secretary and treasurer of the Heineman Lumber Company, Heineman, Wis., paid HARDWOOD RECORD an appreciated call on Dec. 3.

M. M. Wall of the Buffalo Hardwood Lumber Company, Buffalo, N. Y., stopped at HARDWOOD RECORD offices on the third of the month.

R. S. Kellogg, secretary of the Northern Hemlock & Hardwood Manufacturers' Association, Wausau, Wis., was in town a few days the past week, and dropped in at HARDWOOD RECORD offices.

James D. Lacey of James D. Lacey & Co., Chicago, recently spent a few days at the New Orleans office, from which place he went to his home on the Hudson river. Mr. Lacey will spend the latter part of the winter in New Orleans.

J. H. Faust of J. H. Faust & Co., Paducah, Ky., was in the city on business several days last week.

F. A. Kirby and Martin Rees of the Cherry River Boom & Lumber Company, Scranton, Pa., spent a couple of days in Chicago the early part of last week.

A beautiful catalogue styled "Clyde's Self-Propelling Logging Machinery" has just been received from the offices of the Clyde Iron Works, Duluth, Minn. The book shows extremely good taste from cover to cover. It is descriptive of that concern's extensive line of logging machinery, and is generously and effectively illustrated.

J. R. McGiffert, secretary and treasurer, and C. A. Luster, president of the Clyde Iron Works, Duluth, Minn., stopped at the HARDWOOD RECORD offices on Dec. 3, during a short visit to the city.

J. W. Thompson of the J. W. Thompson Hardwood Lumber Company, Memphis, Tenn., spent a few days last week in Chicago on a selling trip.

C. P. Crosby of Rhinelander, Wis., was one of the prominent visitors to the local trade recently.

W. E. Cox of the Nichols & Cox Lumber Company, Grand Rapids, Mich., made a short stop at this city the latter part of last week.

R. G. Page of the Licking River Lumber Company, South Bend, Ind., was a recent visitor to this town.

W. D. Reeves of the W. D. Reeves Lumber Company, Helena, Ark., spent most of last week soliciting business in the local market.

W. W. Dings of the Garetson-Greason Lumber Company, St. Louis, Mo., made a trip of several days' duration to the local market last week.

J. W. Dickson of the J. W. Dickson Lumber Company, Memphis, Tenn., recently put in a few days with the local trade.

Lewis Doster, secretary of the Hardwood Manufacturers' Association of the United States, Cincinnati, O., spent three days of last week in this city, during which visit he took time to call at HARDWOOD RECORD offices. Mr. Doster is on an extended trip in the interest of his association, and upon leaving Chicago went to Memphis, from which point he will journey to New Orleans and other southern points.

C. M. Clark of the Swann-Day Lumber Company, well-known hardwood manufacturer of Cincinnati, dropped in at this office on Saturday of last week while waiting for a train to take him back to Cincinnati.

C. L. Faust of the Faust Brothers Lumber Company, Paducah, Ky., spent Wednesday, Thursday and Friday of last week consulting with his Chicago manager, J. F. Mingea.

W. E. Barnes of St. Louis, the well-known lumber journalist, was in the city a few days the early part of last week.

The National Piano Bench Company of Chicago has recently increased its capital stock to \$10,000.

NEW YORK

Edward J. Glenn, Brooklyn hardwood dealer, has moved from 583 Kent avenue to 1205 Myrtle avenue, in the Bushwick section, where he has improved and enlarged yard space. Mr. Glenn has been engaged in the hardwood trade in Brooklyn for several years.

Friends of E. L. Sinsabaugh, hardwood and mahogany lumber and veneer manufacturer and wholesaler of Long Island City, are united in expressions of sympathy in the loss of his wife, which occurred last week. Mrs. Sinsabaugh was active in charity work, and was a member of the board of managers of the Congregational Home for the Aged.

Ben C. Currie of Currie & Campbell, Philadelphia hardwood wholesaler, was among recent visitors to the Metropolitan district. He reports satisfactory business in point of inquiry and orders, but finds some difficulty in getting forward shipments, a condition experienced at this time by most lumber shippers. He considers that the future for the lumber trade is bright.

Sam E. Barr, hardwood wholesaler, reports business good and is well pleased with conditions generally. He is getting forward a very good percentage of his lumber, which is rather unusual at this time.

Hugh McLean of the Hugh McLean Lumber Company, Buffalo, was a recent visitor in New York.

A. Allan Dill of the Baltimore lumber firm of Lewis Dill & Co., was in New York recently in the interest of business.

J. M. Hastings of the Davison Lumber Company, Ltd., local office 1 Madison avenue, returned recently from a trip to the company's large operations at Bridgewater, N. S.

BUFFALO

The Standard Hardwood Lumber Company has a large assortment of oak and chestnut at its new Baitz avenue yard. Business is reported fair, but cars are not at all plentiful.

B. E. Darling of Blakeslee, Perrin & Darling, who lately returned from a business trip to the South, found mill stocks much broken in all hardwoods. The yard recently added to its stocks in various woods.

Hugh McLean spent Thanksgiving day in New York City, taking dinner with his son and daughter, who are attending college in neighboring cities. He states that the lumber trade is very fair.

J. H. Wall left early this month for an inspection trip of a number of mills of the Buffalo Hardwood Lumber Company in the South, expecting to be gone several weeks.

Anthony Miller has been receiving a number of hardwood stocks, including birch, cherry, maple and ash. He states that there is a steady, though not unusually brisk, demand for hardwoods.

Miller, Sturm & Miller started in at the former Vetter yard early in December and have lately been taking inventory. They expect to add quite a little to present stocks.

O. E. Yeager was lately in Pittsburgh, where he attended the annual banquet of the Pittsburgh Chamber of Commerce. He reports a fair amount of trade in hardwoods, with the outlook promising.

H. A. Stewart is back from a business trip to Charleston, W. Va., where he found the mills pretty busy and most of them complaining strongly over the present shortage of cars.

F. M. Sullivan has returned from an eastern business trip and reports a pretty good demand for hardwoods. Orders are largely made up of oak, elm and ash at present.

As chairman of the sub-committee of the terminal commission, J. N. Scatcherd is active in promoting the interest of that body. It was hoped that the court decision would be favorable, but matters are still in an unsettled condition.

What is said to have been the largest hardwood cargo ever brought to this port reached here on Dec. 2, consigned to the yard of Hamilton H. Salmon & Co., on South street, of which Frank T. Sullivan is manager. The cargo contained 1,677,000 feet of maple. The lumber came from Pequaming, Mich.

The Automobile Club of Buffalo, which is the largest organization of its kind in the world, will hold its annual meeting and election on Dec. 16 and in the evening a smoker will be held at the Broadway Auditorium. Maurice M. Wall has been nominated for president of the club and A. W. Kreinheder for treasurer.

PHILADELPHIA

J. W. Floyd of the Floyd-Olmstead Company continues unperturbed as to trade conditions. Business is good and prices satisfactory. The company has a fair quantity of lumber on hand, but is not forcing it on the market. It recently removed with Charles Atherton & Co., who occupied the same office, from No. 307 Bulletin building to 709 and 11, where it has more commodious quarters.

William P. Shearer of Samuel H. Shearer & Son says there is nothing the matter with business. Prices are all right, only a little inconvenienced by the somewhat low stocks. He is spending considerable time in North and South Carolina looking after desirable contracts.

Norman A. Perry of Robert C. Lippincott re-

ports expanded trading. He says it is easier getting orders than shipping the stock, especially when lumber at mills is sold way ahead.

The machinery of the Penn-Sumter Lumber Company, Sumter, S. C., recently organized by Wistar, Underhill & Nixon, has begun to hum. Its mill has commenced to make lumber, and from present indications a big pile may soon be expected.

Horace A. Reeves, Jr., says things are moving without serious disturbance. Stocks are a little hard to get, but nothing more alarming is apprehended to interfere with smooth business unless prices keep soaring.

J. W. Turnbull Lumber Company, which has outgrown present quarters, is preparing to take offices in the new Stock Exchange building, in the near future. G. C. Burkholder of this house reports excellent trading, and the Bristol Door and Lumber Company, Bristol, Tenn., which it represents, rushed with orders.

William H. Fritz of W. H. Fritz & Co. says orders are multiplying and prices are stiff. As they are handling mainly northern woods they have fortunately had very little trouble with the car shortage.

Howes & Russell state that the Birch River Lumber Company, Birch River, W. Va., which they own, and which is now making lumber, is turning out some excellent stock. The operation is under the able management of Joseph P. Dunwoody.

The planing mill of John Griffie & Co., adjoining the J. B. Van Sciver's extensive furniture factory, Camden, N. J., was destroyed by fire, Nov. 27, causing a loss estimated at \$10,000. The firemen were fortunate in preventing the spread of the flames to the Van Sciver plant.

Moulton H. Davis, lumber dealer, West Chester, Pa., at one time president of the Structural Iron Workers' Union of Philadelphia and who was indicted in connection with the dynamite cases being tried in Indianapolis, has been released, as it was shown that Davis had resigned from the union in 1906.

Frank Crane, one of the best-known men in the New Jersey lumber trade, and senior member of the firm of Crane Bros., Clayton, N. J., died of acute indigestion Nov. 26. He was sixty-two years old.

The Lumbermen's Exchange held its regular monthly meeting preceded by a luncheon on Dec. 5. President William T. Betts presided. Only routine business was transacted. The board of directors has decided to change the next monthly meeting from Jan. 2 to January 9, as the exchange will hold its usual annual social entertainment on Dec. 31.

The Philadelphia Wholesale Lumber Dealers' Association has decided to postpone its regular December monthly meeting until Jan. 9, 1913, when it will hold its annual meeting and banquet.

PITTSBURGH

Isaac Seman of Uniontown, Pa., and others have bought 5,000 acres of timberland in Jefferson township and expect to put in a mill and cut it off shortly. The timber is largely hardwood and will be shipped out over the Baltimore & Ohio.

Fred R. Babcock, of the Babcock Lumber Company was last week elected president of the board of trustees of Grove City College, Grove City, Pa.

The American Lumber & Manufacturing Company has secured Frank B. Clayton as an addition to its sales force. He has been for three years manager of the D. M. Nesbit Box Company at East Lewisburg, Pa.

The Jamestown Panel Company, capital \$75,000, has been incorporated by Frank Morrison, B. E. Strong, Frank Erl, R. Z. Morrison and others of Warren, Pa., to take over the business of the Jamestown Veneer & Panel Company at Jamestown, Pa. The plant will be improved at once.

The DeVoss & Adelman Lumber Company is now represented in Columbus, O., by O. H. Taylor of that city, who will work the Ohio trade. D. H. Younger, Jr., is working the Pittsburgh trade for the company at present. Mr. A. Adelman of this company recently made a very successful buying trip among the southern mills.

The Acorn Lumber Company, one of the most thrifty hardwood concerns in the city, says that politics is having no effect at all on business. President H. F. Dombhoff recently said they were quoting high and everybody is buying heavy.

The C. P. Caughey Lumber Company has bought a very nice tract of Washington county white oak and will put in a mill at once to cut off the lumber. It will be shipped over the Pennsylvania railroad and the Baltimore & Ohio.

The Kendall Lumber Company shipped an average of twenty-nine cars of lumber a day in November. It has more orders on its books now than at any time for five years and its mills are rushed.

BOSTON

The Boughton Door Company, Boston, has been incorporated with a capital stock of \$50,000. The incorporators are Fred W. Boughton, Forrest E. Howes and E. Florence Guild.

The J. H. Lockey Piano Case Company, Leominster, Mass., J. M. Lockey, treasurer, has filed its annual statement, showing total assets as \$128,904, and liabilities \$128,904.

The Hartford Lumber Company, Hartford, Conn., has been incorporated with a capital stock of \$10,000. Leon O. Irish is president and Edgar C. Irish, treasurer, both of Hartford.

Arthur H. Whitcomb, for many years in the lumber business in Vermont, but of late years in business in Boston, died recently at his home in this city.

H. D. Moulton, a lumber dealer, Monson, Mass., dropped dead recently while riding through Webster, Mass., in an electric car. The cause of his death was heart failure.

The E. C. Wright Block Company, Brockton, Mass., manufacturer of wood and metal last blocks, has been incorporated with a capital stock of \$25,000. The incorporators are Ellery C. Wright, C. A. Batchelder and F. R. Wright.

The Hills Chair-Couch Manufacturing Company, Boston, has leased a factory in Gardner, Mass., and will occupy the same. The company has taken the factory in that city formerly occupied by the Collier-Keyworth Company.

The Mansfield Lumber Company, Mansfield, Mass., have built a three-story addition to its building.

The Taunton Lumber Company is planning to build additions to its storehouse and office at its branch in Brockton, Mass.

The Lansing Lumber Company, Providence, R. I., is about to erect a two-story building of mill construction on its property in that city. The new building will be 145x150.

BALTIMORE

All of the steamship lines have now sent out contracts for the exporters to sign covering shipments to be made during 1913. All of the contracts call for materially higher rates, and there is more or less holding back on this account, the shippers taking the view that they may be able to do better by contracting as they go along. On oak planks of two inches and over, for instance, the advance from Norfolk to Liverpool has been four cents, to London three and one-half cents. On planks under two inches the raise is five cents to London and seven and one-half cents to Liverpool. The increase on poplar lumber has been about eight and one-half cents to London and Liverpool, with the rates to Hamburg eleven cents up and those to Cardiff increased to twenty-eight cents. The rates for the current year on poplar logs are twenty-three

cents from Norfolk to Liverpool and twenty-one cents to London. The new rates will be thirty-five cents. Of course, this difference does not represent the advance between the general rates for 1912 and those for 1913, several advances having been made in the course of the year, but it does constitute the rise on contract shipments for 1912 as against 1913, and will make such a difference in the cost of putting down stocks on the other side that there can be no talk of the exporters absorbing the increase.

One of the visiting lumbermen here in the last week was Mr. Howie, of Wright & Graham, Glasgow and London, who came here from New York on the way to South and Southwest to visit mills and exporters, and get a close view of trade conditions in the United States.

A. Temple Dobell, who was in Baltimore about a month or six weeks ago in company with Robert Lyle Dobell, both representing the firm of Alfred Dobell & Co., Liverpool, stopped in Baltimore on the return trip to New York, after visiting the South, to take the steamer Maurentania for home. Robert Dobell remained in Mobile, where he will give special attention to the pitch pine business.

Still another visitor here in the last two weeks was John Bain of Munro, Bryce & Co., London. Like other callers from the United Kingdom, Mr. Bain stopped here in the course of an extended trip to the hardwood producing sections.

CINCINNATI

O. P. Stratemeyer and H. G. Hoover have recently organized the Stratemeyer Lumber Company in this city. Mr. Stratemeyer was formerly vice-president of the Thompson Hardwood Lumber Company, while Mr. Hoover was assistant secretary of the Hardwood Manufacturer's Association of the United States. Previous to this connection Mr. Hoover was with the Griffen H. Deeves Lumber Company of Chicago. Both young lumbermen are hustlers and should make a success of their new venture.

The band mills of Mowbray & Robinson, which are located at Quicksand and Irvine, Ky., are running overtime, much of the cut being special. Fred Mowbray, who recently has spent considerable time at the mill, states that business never was better with them.

One of the busiest yards in town is that of the John Dulweber Company. Ben Dulweber, the active head of the business, is a real hustler and has built up the present big business of the concern in a comparatively short time. Mr. Dulweber is of the opinion that business is normal and will continue without any interruption.

W. J. Eckham of the M. B. Farrin Lumber Company is of the opinion that present trade conditions reflect the good business conditions that prevail all over the country. This company does a very large business and ships to most all of the consuming centers. Its hardwood flooring department is a big feature of its business and the brand of "Century Oak Flooring" is widely known.

Chas. F. Shiels & Co. are doing a fine yard trade. Chas. F. Shiels recently returned from a trip through the producing sections and says that while all hardwoods are scarce, he succeeded in getting out quite a lot of stock that they had bought, and arranged for a good portion of requirements for the next couple of months.

J. C. Rash of the Shawnee Lumber Company, whose mills are located at Shawnee, states that the white pine business is very good and all hardwoods are moving fast at satisfactory prices.

INDIANAPOLIS

Henry R. Bliss, for twenty-five years secretary-treasurer of the Sinker-Davis Company, manufacturer of sawmill machinery, boilers and

engines, died at his home here recently. He was fifty-three years old and was born in Weedsport, N. Y. A widow and one son survive him.

The Tadge Mahogany Company has received from the coast of West Africa a consignment of 1887 mahogany logs, valued at \$50,000. This is the largest single shipment of its kind that ever passed through the local custom house in the thirty-one years of its existence.

To Dec. 1 the aggregate of building permits issued by the city was \$8,623,302, as compared with \$7,590,059 for the corresponding period of last year. The total amount of permits issued last year was \$8,349,477.

The board of managers of the Indiana Hardwood Lumbermen's Association met here a few days ago to make final plans for the annual meeting of the organization to be held here Dec. 16. Committees on program and entertainment were appointed. The meeting is to be a special home coming for all hardwood lumbermen formerly in business in Indiana.

William White Knight of Indianapolis and Miss Mary Ethlyn Prentice were married at the home of the bride in Leroy, N. Y., on Dec. 2 in the presence of a distinguished gathering of friends and relatives. Immediately after the ceremony they left for Panama. After a visit of several weeks, they will return to Indianapolis for residence and will have apartments in the Buckingham. Mr. Knight is president and treasurer of the Long-Knight Lumber Company. He is prominent in hardwood circles of the Middle West.

MEMPHIS

C. K. Sharp and G. K. Caldwell, Jackson, Tenn., have recently acquired the properties of the Star Lumber & Transportation Company at West Point, Ark. Included in the transfer are a sawmill, a dimension mill and a planer. The new owners have already assumed charge and are now operating these plants. They have likewise acquired control of several hundred acres of hardwood timberland in the adjacent territory, from which they will secure their timber requirements.

Lumbermen here are watching with considerable interest the outcome of the recent importation of about 100,000 feet of African mahogany by a prominent manufacturing firm here. If the first importation turns out well it is certain that the firm in question will bring numerous other imports and it is also intimated that other firms may engage in the same departure. In fact the lumbermen have taken up with J. H. Townsend, manager of the Lumbermen's Traffic Bureau, the question of securing reduced rates on shipments of African mahogany from Mobile to Memphis. It is believed that the railroads may be induced to offer lower rates in order to build up an entirely new industry. The present shipment of mahogany logs is being cut into lumber and veneers.

One of the most prominent producers of hardwood lumber in east Arkansas, who has recently become identified with the Arkansas Lumbermen's Club of Little Rock, is authority for the statement that one of the first steps to be taken by the members of that organization is that of securing lower rates on the lower grades of hardwood lumber. He says that under present rates it is well nigh impossible to ship the lower grades of lumber more than one hundred miles and that, owing to the excessive freight rates, manufacturers of lower grades are meeting with increasing difficulty in disposing of their output and that much accumulation of this class of lumber is the result.

A number of business men from this city and section left Memphis Dec. 2 for Washington, where they have gone to present to the proper committees of the House and Senate the resolutions which were adopted by the Interstate Levee Association last September, asking for an

appropriation of \$35,000,000 for improvement work on the Mississippi levee. Prominent among the Memphis delegation was W. H. Russe of Russe & Burgess, Inc.

The Arkansas Timber & Land Company, which recently acquired a large mill site at Malvern, Ark., is preparing to erect an up-to-date plant at that point. The company is also planning to build a line of railway about seventy-five miles in length to facilitate the movement of its timber from its extensive holdings in Garland and Montgomery counties to Camden. This road is to be standard gauge and will necessitate the construction of a bridge across the Ouachita.

F. B. Robertson, president of the Lumbermen's Club of Memphis, has appointed the following gentlemen to nominate candidates for the presidency and other officers in the gift of that organization: No. 1, C. C. Lattauer, S. M. Nickey and F. W. Dugan; No. 2, D. F. Heuer, W. H. Greble and A. G. Fritchie. These gentlemen will make their reports at the next meeting of the club, and the election will be held two weeks from that date. Nothing will be known as to the identity of the candidates until these committees have made their reports.

H. F. Auten and associates at Helena, Ark., have sold to the Chicago Mill & Lumber Company 7,000 acres of timberland in Phillips county. The tract lies between White and Mississippi rivers and it is estimated that there are fully 60,000,000 feet of oak, gum, ash and hickory on the property. It is understood that the Chicago Mill and Lumber Company, which maintains offices in Memphis, will install a plant in the early future for the development of the timber on this tract. The average price per acre is understood to have been about \$20.00. This is the last large tract of timberland in that part of Arkansas which has not already passed into the hands of some of the big lumber companies.

NASHVILLE

A \$20,000 company is being formed for the purpose of establishing a strawberry crate factory at Dayton, Tenn. Some difficulty has been experienced of late in securing a sufficient number of crates to handle the strawberry trade of this section, hence the plan to establish the proposed factory.

Notwithstanding the recent action taken by some furniture manufacturers looking to a ten per cent advance in the prices of their products to the retail trade, the furniture makers of this city will make no advance just now, at any rate. Prices of material and the cost of production have increased, it is true, and if advances continue along this line an increase to the retail trade may be necessary later.

The sawmill of James Smith near Sango was destroyed by fire recently, the blaze supposedly starting by a spark from the engine room. A temporary shut down for repairs was necessary.

Fire which is supposed to have been started by sparks in some straw accumulated in an upper window casing at the residence of S. Lieberman by birds, caused \$200 damage the other day. Mr. Lieberman is a leading member of the local lumber fraternity.

A good attendance of prominent men from all sections of the country is expected at the coming meeting in Chattanooga, Jan. 23 and 24, of the National Lumber Exporters' Association. J. M. Card of the lumber company bearing his name, has charge of the local arrangements.

The members of the lumber club at Memphis are heartily co-operating with the members of the club here in efforts to secure for this city the next regular session of the National Wholesale Lumber Dealers' Association.

A hearing will be held in St. Louis Dec. 16 by the Interstate Commerce Commission of the application of local lumbermen for a suspension of the proposed advanced freight rates by carriers for the transportation of lumber in carload lots from Nashville north of the Ohio river and to

Canada. T. M. Henderson of the local traffic bureau will represent the Nashville interests at this hearing.

BRISTOL

R. W. Cox of Gate City, Va., who has a mill and yards at Poplar, N. C., lost over 1,000,000 feet of hardwood lumber by fire last week. He carried only \$4,000 insurance on the stock.

Shipments from the Bristol district have been heavy of late, despite the scarcity of stocks and car shortage, according to the managers of the local offices of large eastern and western concerns. Indications are that the scarcity of stocks will continue, as a result of many of the mills having oversold.

The T. W. Thayer Lumber Company is building a large new plant at Damascus, Va. The company lost its plant by fire about a year ago.

A large amount of lumber is being hauled to Bristol from the country mills, as the roads are still in fair condition. The small mills have had a busy year and especially during the fall. A large amount of lumber has been received here in this manner, while many logs are being hauled in to local band mills.

Among the visitors on the Bristol lumber market recently were: J. J. Rumbarger and George M. Speigle of Philadelphia; L. H. Snodgrass, Johnson City, Tenn.; J. H. Barrell, London; P. W. Bevins, Hiltons, Va., and J. Walter Wright, Mountain City, Tenn. They report business brisk and splendid prospects for trade during the remainder of the winter and next spring.

The D. T. McKeithan Lumber Company of Lumber, S. C., is preparing to let the contract for cutting about 20,000 acres of timber in that section. J. Mortimer, Jr., former general superintendent of the W. M. Ritter Lumber Company, is at the head of the company.

Trustee Irving Whaley of the J. A. Wilkinson Lumber Company, Inc., will soon sell at public auction the large planing mill owned by the company. It cost \$70,000.

Price and Pierce, Ltd., London, England, are buying very heavily in this section, through J. A. Wilkinson.

ST. LOUIS

Building operations continue to be fairly good, owing to the very pleasant weather which has prevailed up to the present time, and which makes work possible.

Last month 567 permits for buildings and alterations were issued by the building commissioner, aggregating \$1,079,432. During the corresponding month last year there were only 507 permits issued, but the aggregate cost was \$1,611,662. This shows a falling off of about half a million dollars during the past month.

Receipts of lumber during November were 13,981 cars and 34,000 feet by river. Receipts for November last year were 12,560 cars and 13,000 feet by river. Shipments by rail last month were 9,203 cars and 37,000 feet by river. Shipments during November last year were 9,443 cars and none by river.

The Lumbermen's Exchange intends to co-operate with Memphis and Nashville lumbermen in a fight before the Interstate Commerce Commission against the recent advance in hardwood lumber rates by the railroads from the Ohio river gateways to Canadian points. The lumbermen from the two former cities will be in St. Louis Dec. 16, and will testify before Examiner Prouty at the Jefferson Hotel, Dec. 16 and 17.

The Lumbermen's Exchange will hold its annual meeting and banquet at the Missouri Athletic Club on Dec. 17. The visiting Memphis and Nashville lumbermen witnesses have been invited to attend the banquet. Nominations of officers for the ensuing year will be made. The election will be held early in January.

The two nominating committees of the Lum-

bermen's Club, which were named at the November meeting have selected the names of Thos. C. Whitmarsh for president, R. B. McConnell, first vice president, and C. H. A. Beckers for second vice president. The committee named from the floor has handed in the names of Thos. C. Whitmarsh for president, T. J. Noser for first vice-president and S. J. Gavin for second vice-president. Both committees named E. C. Robinson for treasurer and John B. Kessler for secretary. The friendly fight therefore will be on the offices of first and second vice-president. Mr. Whitmarsh is held in high esteem by the members of the club and there was no opposing candidate considered by the members of the two committees. The same applies to E. C. Robinson and J. B. Kessler. Mr. Whitmarsh is the general manager of the W. T. Ferguson Lumber Company. The election will take place on the evening of Dec. 10 at the Mercantile Club.

MILWAUKEE

A plan has been thought out by State Forester E. M. Griffith by which the state forest reserve will be used for the employment and treatment of convalescent consumptives and "run down city folks." His plan has been indorsed by the Wisconsin Anti-Tuberculosis Association. The manual work in cultivating the forests is out of doors and there are about 1,200 lakes in the forestry area, both of which are very beneficial to the health. Mr. Griffith proposes to have the next legislature pass on this bill.

The death of Emil F. Wollaeger, general manager of the Wollaeger Manufacturing Company of Milwaukee, office furniture, etc., occurred at his home on Nov. 26. Mr. Wollaeger was forty-two years of age. He had charge of the Pittsburgh, Pa., branch of the Wollaeger company for several years, and returned to Milwaukee two years ago, where he has since held the position of manager of the local plant. He is survived by his widow, one brother and two sisters.

The John S. Owen Lumber Company of Eau Claire has started running both day and night shifts with a supply to run through the winter.

A voluntary petition of bankruptcy has been filed by the Plymouth Parlor Frame Company of Plymouth. The liabilities are \$33,576.78, and the assets are \$25,999.19.

The Hardwood Products Company, one of the new industries of Neenah, is having a large warehouse erected to facilitate the manufacture and shipment of its hardwood products.

The Keith & Hiles Lumber Company of Cranston, has started its sawmill after having been closed down while new boilers were being installed.

An employees' benefit disability fund has been planned by the Roddis Lumber & Veneer Company of Marshfield. Each employe will pay \$1 per month to the fund.

The Peshtigo Lumber Company, which sustained a loss of several thousand dollars when its sawmill was destroyed in October, has started operations on the planing mill, which was not damaged to any great extent. Work of clearing the sawmill site has been started and the contract for rebuilding the same will be let in a short time.

Andrew Kaul, Jr., & Co., is installing a new 150 H. P. boiler in connection with its new dry-kiln at its hub plant in Merrill. A dry room for drying veneers is being fitted up on the second floor of the plant.

The big sawmill of the J. S. Stearns Lumber Company at Washburn has been closed following the finishing of its season's cut. The company has several logging camps in operation throughout the northern sections of Wisconsin and Michigan.

The E. J. Pfiffner Company of Stevens Point, has leased the sawmill at Sell's Landing, north of Glidden, which will be supplied from a recently acquired tract of timber together with custom sawlog.

The Lee Handle and Dowell Company, which has succeeded the Hankwitz Handle Company at Merrill, will begin operations in a short time. A new wood conveyor is being installed and a machine to make toy broom handles will arrive shortly. Mr. Essler will be retained as superintendent of the plant by the new owner.

The regents of the state university at Madison have decided to open a forestry training school at the university in response to numerous requests from lumbermen. The new department will be opened in January under F. B. Moody of the state board of forestry, and will give instructions and training in range, nursery and timber work. The building for the new department is now partially completed.

Fire caused nearly \$15,000 damage at Oakwood when the yards of Otto Davis burned and spread to the lumber yards of the Tibbitts-Cameron Lumber Company, causing \$10,000 damage to the latter concern. The village has no fire protection and a bucket brigade of 200 citizens did all in their power to check the flames.

Mrs. W. H. Upham, wife of former Gov. W. H. Upham of the Upham Mfg. Company of Marshfield, died at her home on Nov. 29. She is survived by her husband and two daughters.

DETROIT

The Detroit Lumber Company has increased its capital stock from \$150,000 to \$300,000 and the Plymouth Lumber & Coal Company from \$10,000 to \$20,000.

The Thomas Forman Company, the Brownlee-Kelly Company and the Lowrie & Robinson Lumber Company have received the last of their lake shipments of lumber. All have received large cargoes of hardwood lumber, especially maple, within the past fortnight.

Escanaba is to have a new \$75,000 veneer manufacturing plant. J. C. Kirkpatrick, head of the National Pole Company, is the leading spirit in the new enterprise.

Secretary John Lodge of the Dwight Lumber Company reports that the hardwood flooring trade is in an excellent condition. The Dwight company's flooring mill is running overtime trying to keep up with orders. Mr. Lodge says that his company has not been as badly affected by the freight car shortage as some of the other Detroit lumber dealers and ascribes this to the fact that all cars received at his plant are promptly unloaded and are not held overnight. Mr. Lodge reports that this is the best season the Dwight company has had since its organization over thirty years ago.

Samuel Ellsworth has petitioned the Pontiac circuit court for permission to reopen the Michigan Oak Flooring & Interior Finish Company. He claims to own 900 shares of common stock and is the largest individual stockholder. Chauncey A. Harris, the receiver, is in charge and is engaged in winding up the affairs of the plant. Mr. Ellsworth believes that the plant will bring a better figure at a sale as a going concern.

Detroit lumbermen are interested in the report that the Dayton Last Block Works has rented the S. S. Humphrey sawmill at Gaylord and will manufacture hardwood ties during the coming winter. There is still considerable timber of this sort in the section of the country surrounding Gaylord.

"Building conditions have never been better in the history of the city," said Charles A. Bowen, secretary of the Builders & Traders' Exchange. "For example the value of the building permits from the first of the year to the end of November exceeded by over four million dollars those of the year previous for the same time."

Frank A. Black of Detroit is at the head of a new company organized to manufacture plumber's woodwork and sectional bookcases. A plant will be established at Milford.

Thomas J. Anketell of the Anketell Lumber Company will leave about the first of the year

for a southern trip. He expects to be gone until way along into the summer.

Frederick J. Robinson of the Lowrie & Robinson Lumber Company says that trade in hardwood flooring and finishing during the past month has been exceedingly good. Plain red oak, he says, is in great demand.

Oak and cypress have been the leaders with E. W. Leech during the past month. Manager Smith of the company complained of the shortage of freight cars which has resulted in holding up shipments and he says he does not look for much relief in this direction before the first of the year.

J. P. Scranton, the veteran dealer in hardwoods, says that he has orders which cannot be filled for some time on account of the scarcity of men and delayed shipments of stocks. Mr. Scranton says that it is hard to get men because the automobile companies win them away with offers of more pay. He says that there is a good, healthy demand for hardwoods of all kinds.

George I. McClure declares that 1912 will go down in history as the biggest and best year Detroit hardwood men have ever had. He also says that the prospects for the coming year are just as bright. "Many big orders for hardwoods will be placed this month," said Mr. McClure, "and I expect to get my share of them. I have been handicapped by not having a sufficient number of warehouses, but by next spring I will have one big one which will be second to none in this section. I have two cargoes of approximately 700,000 feet coming in this week and with what I have on hand this will tide me over

nice until next spring. The demand for hardwood flooring is as brisk now as it has been at any time during the summer. Wide poplar is being used by the automobile body companies more extensively than at any time during the past two years."

The Brownlee-Kelly Company reports a very good trade with satisfactory prices prevailing. "With the arrival of the last shipments by water we have proceeded to take an inventory of stock on hand," said Mr. Brownlee. "At the present time we have a fairly good supply on hand, but not what we should have. We have handled over 300,000,000 feet of hardwood lumber this year and are very much pleased with the prices we have received. No. 3 common, which is used mostly for crating, and thick maple, 1½ inches or thicker, is scarce and the prices on these materials are high. One Wisconsin firm has withdrawn its stock from the market and does not intend to sell until the February market opens, which shows that the prices are bound to go higher."

J. M. Clifford, large dealer in hardwoods, reports business very brisk. He says that prices on hardwoods are advancing rapidly and that stocks are scarce. He says that red oak is especially hard to get.

F. W. Mowbray of Mowbray & Robinson, Cincinnati, O., was a Detroit visitor recently.

Detroit box manufacturers report excellent business at the present time. All the box men complain that prices of lumber stocks have materially increased. A lively demand for packing cases in which No. 3 common is used is also reported.

The Hardwood Market

CHICAGO

Continued activity is noted with the local trade. The slackening of business on account of the holiday season seems to have been slight with Chicago hardwood handlers. In fact the only change in the situation during the last two weeks is the generally healthy improvement in the whole tone of the market. This is in keeping with the improved conditions which have been noted for several months past. Continued difficulty in getting any satisfactory amount of dry stock is felt. There does not seem to be much improvement in the situation either at northern or southern mills supplying the local trade. Practically all items are moving briskly although, as noted two weeks ago, red gum is not exactly as it might well be considering the qualities of that wood. In fact there seems to be a real movement back to quartered oak. The Chicago market is taking this wood with increasing favor, just as it is reported from other hardwood centers. Low grades are generally practically out of the market, particularly cottonwood, poplar and basswood. Both rock and soft elm are in fair request. Ash is particularly active, as is also chestnut. Plain red oak still maintains its leading position.

NEW YORK

The hardwood market shows little change in the past fortnight. The general demand has increased so that local manufacturers find it difficult to secure desirable stocks within a reasonable length of time. Generally the stocks on hand are below normal and in some cases inadequate for current needs. The car shortage is not as severe as a month ago. Inquiry and demand continue strong and prices rule generally firm. Some items have shown an advance of two dollars, notably thick chestnut and plain

oak. There has been a change in price on maple flooring, but only slight. Birch and maple are in good call, and other stocks are in demand. Low grades are moving with more freedom. There is nothing to indicate an immediate change in the general situation.

BUFFALO

Members of the hardwood trade are looking for a lessened amount of activity this month, but this far there has been a pretty good number of inquiries. Prices are generally holding very firm and little complaint is heard over conditions, except for the shortage of cars, which has hampered the yards in getting in and shipping out lumber. The lake season is now over and supplies from that direction at some yards are quite heavy.

Good oak continues to be in best demand and stocks are relatively small, as they have recently been. Where dry stocks are secured they find a ready sale. Quartered oak is not as strong as plain, but it has begun to be in better inquiry. Birch and maple are moving right along in good volume. Ash, elm and chestnut are also moderately active. Poplar is not doing much, but low grades are still scarce. In most grades mills are said to be well sold up on poplar.

PHILADELPHIA

The last fortnight has shown a considerable expansion in trade, and retail stocks are much depleted. With stocks at mill end sold way ahead, and the lack of sufficient cars for prompt delivery, the lumberman is having his own troubles at this time.

Furniture factories, box manufacturers and other consumers continue active, but are handicapped by a competition so keen that neither of them cares to risk an advance in price for fear

of being undermined by a sharp competitor and losing some good contracts. Every effort is being made to educate the trade up to a new system of prices, but in the interim buyers are naturally chary of buying hardwood lumber beyond actual needs. Prices in all standard woods of all grades have held firm, and in some instances of an extra scarcity of stock, values have moved upward. The trade is hopeful that the hardwood manufacturer will not blindly force figures up to prohibitive values, and so put a check rein on the neck of a dawning prosperity.

Oak continues to be the leader; quartered oak is gaining, and chestnut of all kinds is in good demand. Birch and maple are making new friends; poplar holds steady and ash is fairly active. The veneer and mahogany markets are in good shape.

PITTSBURGH

So far as demand is concerned, the hardwood market in Pittsburgh was never in better shape than just now. There is even more inquiry than two months ago. Of course there has been a drop in the orders and inquiries from yards due to the inventory season. On the other hand, purchasing agents of factories, corporations and railroads are putting in big requisitions for 1913 stock. The tendency is toward large orders and early delivery is demanded. Prices on this account are going up instead of going down. A few purchasing agents and yards are holding off from placing their next year's contracts in the hope that prices will tumble. According to wholesalers, however, this is a vain hope. There is no possibility, they say, of prices for good hardwoods being lower than at present, for all mills are rushed. The car shortage is not quite so bad as two weeks ago but shipments are still slow and wholesalers are quoting very cautiously on orders where early delivery is required.

BOSTON

There has been no abatement in the strength of the hardwood market. Demand in this market has been of fair volume but buyers are not anticipating their wants to any extent. The shortage of cars has handicapped both buyers and sellers for a month or two and reports from producing centers state that cars are still scarce. Manufacturers continue to hold prices with a great deal of strength. Their stocks of dry lumber are small and the majority of manufacturers show no anxiety to make sales. Money is much firmer, which may result in some manufacturers trying a little harder to make sales. So far there has been little indication of the money market affecting the price of hardwood lumber.

Manufacturing plants which are large consumers of hardwood have been fairly busy. Those plants making office furniture have been doing a large business. There has also been a strong demand for veneers and the plants producing this class of stock have been running very full and have a good volume of orders on hand.

In the market for plain oak there is considerable strength. Many sales have been made at the top price. Quartered oak continues to sell well at firm prices. Maple is in very fair call and well held. Walnut is in small offering and prices are high. Cypress has been in rather moderate demand. Some lots have been offered at slightly lower prices.

BALTIMORE

Even the most conservative members of the trade will admit that the hardwood business keeps up in a surprising manner, and the view is now generally accepted not only that there will be no excess of stocks throughout the win-

ter, but that if the weather should be such as to interfere with the operation of the mills to any extent, the assortments practically all along the line will be short. The car situation is better than it has been, only the southern roads being in a position where they cannot supply cars in anywhere near the required number. The northern lines generally are in fair shape, and while some delay occurs, no real embargo is now encountered. With respect to steamship facilities, a decided improvement has also taken place, although it is to be said that the volume of lumber and logs going over on the other side of the Atlantic is so large as to tax the space available on steamers. At the same time, the heavy forwardings do not appear to have an unfavorable effect upon the foreign markets. All of them appear to be taking lumber and logs in such quantities that there is really no surplus, and the interest shown in stocks tends to keep the quotations decidedly firm. The foreign buyers even feel that the situation warrants them in going up and meeting the terms of the exporters, who are obliged to advance their prices because of the sharp rise in the ocean freight rates and other expenses.

Apart from the ocean rates, the quotations in the domestic market are also on the upward trend. All grades of chestnut are strengthening. Even sound wormy chestnut is in good request at satisfactory figures, although the advance in this grade has been moderate. As far as can be learned, the mills are still in the position where they dispose of their product as fast as it can be turned out, and much lumber is being shipped before it is dry. Oak has perhaps never before been higher, and the interest in this wood is most active, both here and abroad. Export planks are being taken up with much freedom, and the mills are getting very attractive margins. The whole range of poplar is acceptable, if extra wide lumber be excepted, the price for such stocks somehow keeping appreciably below the figures which they should bring. In the main, however, the trade is in fine condition, and the mills are doing all they can to expedite operations, as the buyers are evidently ready to take up any more lumber.

CINCINNATI

There is a very strong tone to the hardwood market. All items on the list are selling well and dealers are having more trouble in locating desirable stocks than they have to dispose of them. Prices are very strong, especially plain oak, which is gaining in strength almost daily. Quartered oak, too, is showing much improvement and has passed from a drag on the market to a very good seller at the present time. Cottonwood in No. 2 and 3 common is the hardest hardwood to secure, and many dealers are not selling it for the present, at least, as it is impossible for them to get supplies from the mills with which to fill their orders. Red gum has had the call all season and is now in a very strong position, as is also sap gum, all grades of which are moving fast at good prices. Ash has become one of the best sellers on the list and thick stock is very scarce. Much buckeye is being used as a substitute for cottonwood whenever it can be obtained, and numerous other woods not formerly used to a great extent are finding a market. Maple is in great demand, as is also hawthorn, which is hard to obtain. All yard men report low stocks and while stock is coming in a little faster, owing to the easing up of the car shortage, the demand is so strong that little can be accumulated. However, dealers expect to be able to stock up fairly well in order to take care of the expected good spring business.

Hardwood flooring dealers are still doing a capacity business. Shipments during the past week have been unusually heavy and there is bound to be a steady demand all winter. Mills are all running full time and there is every

reason to believe that the present heavy demand will continue. High prices are the rule for all grades of hardwood flooring.

The poplar trade is considered fair but not quite what dealers would like. All low grades are in very heavy demand, and considerable trouble is experienced in supplying No. 2 and No. 3 common, both bringing top prices to the consuming trade. Trade in No. 1 common and better has been only fair for several months, although lately the demand had improved somewhat. Wide stock also is a little slow. Southern manufacturers do not seem to have any large stocks in any grade, and claim to be well supplied with orders.

Building operations are still active. More interior work is on hand for the finishers for the winter work than for several years and the planing mills are sure to be kept busy getting out this class of material. Wholesale dealers are doing a nice trade with the millwork men in rough lumber of all kinds from which this finish is produced.

TOLEDO

While there has been some little falling off recently in the demand for hardwoods from the building trades, the factory demand continues to exhibit a healthy activity. There is a heavy call from the interior finish concerns, and furniture and vehicle factories are using heavily of oak, hickory, ash and poplar. Poplar is quite plentiful on this market and there is considerable hickory coming in from the Southwest. Oak in dry stocks is hard to get and local stocks are running low. There are plenty of odds and ends on the market but dry stock in oak in wanted sizes is scarce and hard to get. Prices continue the same as heretofore.

The boxing concerns are heavy users this season and have plenty of business. Flooring continues in unusually good demand and is bringing satisfactory prices. The car situation continues bad and shipments are extremely slow.

INDIANAPOLIS

Hardwood dealers over the state are showing a tendency to hold off placing orders for replenishing their stocks for a while, in the belief that prices will break before long. Inquiries made among the manufacturers and wholesalers disclose that a decrease in prices at any early date is improbable.

While the car shortage is still on, hardwoods are moving a little better than they were a few weeks ago. Prices are steady and the demand among the retailers is fairly good, but the manufacturers and wholesalers are complaining because the dealers will not take hold.

The present year has been fairly satisfactory to local hardwood interests.

MEMPHIS

Business in hardwood lumber continues of very satisfactory proportions. Nearly all of the wholesalers and manufacturers here say that they are able to sell practically all of the lumber they are in position to offer and that it has been more difficult to secure cars and also to find the necessary lumber in shipping dry condition than to obtain orders. In fact, the latter have been coming in with a rush for the past few weeks in nearly all items on the hardwood list and the volume of business has been about as large as could be expected under the circumstances. It is also noteworthy that prices have been unusually well maintained. There has been no accumulation of hardwood lumber, particularly in shipping dry, during the past few weeks, and none is anticipated in the near future, if the lumber is being shipped out as rapidly as it is in condition.

General business conditions at Memphis are extremely satisfactory. Bank clearings during November broke all records for any single month in the history of this city, with a total of \$55,000,000. The large cotton sales and the excellent prices obtained thereon have in some measure accounted for this unusual gain in clearings, but other lines have made substantial contributions to this splendid showing. It is certain that the lumbermen have rendered more assistance than for several years at this time. It was in November, 1907, when the lumber business began the decline which lasted for several years. This is the first November since that time when business has really been satisfactory to the lumbermen of this city and section.

NASHVILLE

Conditions of the hardwood trade here continue favorable. The demands are still good and are being well sustained, although letting up slightly, perhaps, with the approach of the Christmas holidays. After the holidays, however, it is confidently believed there will be much activity all along the line. Red and white plain and quartered oak continue to lead in the demands, while cottonwood, gum and chestnut are still in good call. The box makers are especially calling for low-grade stock. High-grade poplar shows improvement. Walnut, hickory, beech, maple and other woods are about holding their own. There are good calls for railroad ties and timbers. The builders are rushing their work in an effort to get through with outside operations before the advent of real winter weather. The general tone of the market continues good. There has been a remarkable continuation of good weather for this season of the year. The consuming factories and mill working plants are making active calls for the season. Furniture prices bid fair to remain firm for the present at least notwithstanding advances elsewhere.

BRISTOL

Hardwood lumbermen of this city report trade more brisk than for some time. There is a decided scarcity of stocks and in some quarters a serious car shortage, but a large volume of

business is being done. Prices are slightly more favorable, with prospects of further improvement during the winter and spring. About all the mills are busy and the railroads are taxed to their capacity in moving the heavy traffic.

ST. LOUIS

The hardwood trade is seasonable, the nearness to the holidays and stocktaking time reducing the selling to small buyers. The large dealers, however, are buying whenever they can get the right kind of stocks. There is an excellent demand for plain red and white oak and the call for quarter-sawed white oak is getting better. All grades of cottonwood are selling well and so is red gum. There is a good request also for thick ash. Other items on the list are fairly active. Considering the lateness of the season, a fairly good volume of business is reported by the local cypress dealers, although stocktaking time is cutting down sales. Most of the sales now being made are for small lots and for quick shipment.

NEW ORLEANS

The hardwood lumber trade in all branches continues to share in the general prosperity, the only unfavorable feature being the scarcity of transportation equipment.

Dealers are pleased to report that some of the lower grades of hardwoods are very active at this time and that satisfactory prices are being obtained. With the lower grade business to fall back on, they can afford to await the freshening up of the movement of upper grades, and as the factory demand for uppers is improving steadily it is the opinion that it will not be many more weeks before all the local trade is back on its regular fall and winter basis and all dealers will be getting their share of the trade. While transportation facilities have had a slight effect on the local business, it has in some cases seriously affected the export hardwood trade.

In volume, the exports, as usual at this season, have been at a low figure the past few weeks and so far as it can be estimated the figures have shown a falling off for November. On the other hand, the shipments from New Orleans have equalled if not excelled those for November, 1911, and a complete compilation will probably show where the movement has been somewhat larger. For the remainder of the year, the prospect is for light movement, but as for a long time the limit is placed upon it by transportation facilities, and the market on the other side of the water will create demands on these facilities to their capacity.

Those shippers who have ocean contracts extending to the end of the year are making special efforts to get off as much as possible under the old rates, but this business is not of sufficient magnitude to affect the general situation, a great many contracts having expired Oct. 1. Outside of this, it is to be expected that December will be a comparatively quiet month, but there is no reason why the shipments should not equal the standard of the month for previous years.

MILWAUKEE

Although the demand for hardwoods is largely only for immediate wants, business is holding up especially well and is decidedly larger in volume than it was at this time a year ago. To a certain extent, this is due to the excellent weather which is keeping the building activity high above the point usually experienced at this season of the year. Conditions in the Milwaukee building field may be taken as a criterion of the situation all over the state.

Local wholesalers look for the sash and door

factories and other manufacturing plants to begin stocking up soon after the beginning of the new year, when inventories are out of the way and business for 1913 begins to make itself manifest. Dry stocks in all lines are still at a low ebb, in fact, were never lower at this season of the year. Reports from the northern mills would indicate that both logging and sawing operations will attain a new high mark this winter, if weather conditions are favorable. Considerable trouble is being experienced in getting stocks from both the North and the South.

Birch and maple in all grades are hard to get and advanced prices are being paid cheerfully in most cases. Basswood is wanted, but stocks in both upper and lower grades are light. Plain red and white quarter sawed oak are still the leaders in southern hardwoods and prices are somewhat higher.

DETROIT

Notwithstanding serious handicaps the Detroit hardwood market is in first class condition. One of the big problems the hardwood men are facing is the shortage of freight cars and resultant delays in shipments. Practically every dealer reports orders on hand which cannot be filled owing to delayed consignments. Prices have been steadily advancing and dealers expect further increases.

Red oak, maple, birch, ash and cypress have been the leaders in the demand. Red oak and maple stocks are reported scarce. Poplar is again in demand, automobile interests placing orders for this wood quite liberally. The building boom in Detroit, which has continued well into the winter months, has also done its share towards strengthening the hardwood market. The hardwood flooring and interior finish factories are all busy. The box and veneer trades also show considerable activity.

LIVERPOOL

The market position here is exceptionally strong and firm, even stronger than was reported in last report. The mahogany export is very firm. Very "bullish" reports have been received of the future market from the West coast. All the leading people prophesy even higher figures than were ruling at the last sales. The next sales will occur the second week in December and although there are three down on the fixture list, the wood offered is only small in quantity. Advices from Africa are that prices will have to advance still higher as the present supplies are being drawn further from the seaboard and consequently the cost of importation is much higher. The first shipments of hickory and oak logs this season have arrived and were sold at extraordinary prices. Hickory brought 2/11 and the 2/7 ex quay Liverpool. Round ash logs of any size are also wanted badly and prices are very firm for the small stocks on hand. Birch of any quality is practically non-existent. Only a few logs—old shakey stock—is on offer and this is not of much commercial value. Wagon oak specifications are going very well, and firm prices are being realized for all sizes. Coffin oak specifications are also very firm and are bringing good figures. Several orders for oak scantlings are much overdue, probably because of the high freights. Much grumbling is heard among trades here at the absence of shipments when the market is against the shippers. Of course the shippers who do not fulfill their contracts at times like these will lose much sympathy and it would be a more business-like policy for those who want future business to deliver all the stock they have contracted for. The volume of business during the past fortnight has been quite bad even in spite of high prices though it is mighty difficult to get anyone to contract far ahead at present values.

Baldwin Geared Locomotive

Logging Locomotives must operate on steep grades, sharp curves and uneven tracks. This is what the geared locomotive illustrated has been designed to do. It is symmetrical in construction, and power is transmitted to the axles through a central drive. The valve motion is simple and accessible, and all new features have been tried out in service.

This locomotive is well-designed, well-built and fully guaranteed. Various sizes can be furnished, to suit different track and operating conditions.

WE CAN
DOUBLE
THE CAPACITY OF YOUR
DRY KILN
(GRAND RAPIDS VENEER WORKS)

If you attempt to dry two-inch oak in your kiln in fourteen days the result will probably resemble the above illustration.

The lower picture is from a photograph of two-inch oak dried by the Grand Rapids Veneer Works Process in fourteen days, and every plank as sound as the sample.

The absence of checks is not the only saving due to this process. The lumber is straight, soft and free from sap or acids.

For a small sum of money your old kilns can be converted to G. R. V. W. Process Kilns, with a guarantee to give the results above described.

DON'T TRY TO FOOL YOURSELF

About veneered panels. It will
cost you dearly in the long-run

Whenever you begin to figure on manufacturing your own panels for furniture or interior finish, etc., and save (?) the panel manufacturer's profit, you are trying to fool yourself.

Just consider that we have been in business for 25 years. That means long and tried experience—we have long since learned how to make panels at minimum cost.

Specializing in the manufacture of panels—making them in large quantities—we can make better panels cheaper than the consumer can make poor panels.

Again, when you buy panels from us at a given price, you KNOW just what they cost. If you make them in small lots, the cost varies and you probably lose money.

We make panels for almost every purpose, in any wood. We shall be pleased to have your specifications.

The Gorham Bros. Company, Mt. Pleasant, Mich.

VENEERS AND PANELS

Ahnapee Veneer & Seating Co.

HOME OFFICE, FACTORY AND VENEER MILL, ALGOMA, WIS.
VENEER AND SAWMILL, BIRCHWOOD, WIS.

We manufacture at our Birchwood plant single ply veneers of all native northern woods and deliver stock that is in shape to glue.

From our Algoma factory, where we have specialized for twenty years, we produce panels of all sizes, flat or bent to shape, in all woods, notably in Mahogany and Quarter-Sawed Oak.

We make no two-ply stock, and do not employ sliced cut quartered oak. Our quartered oak panels are all from sawed veneer.

Every pound of glue we use is guaranteed hide stock. We do not use retainers. Our gluing forms are put under powerful screws and left until the glue has thoroughly set.

If you seek a guaranteed product that is the best, based on results accomplished by most painstaking attention and study of every detail, combined with the use of the best stock and an up-to-date equipment, our product will appeal to you.

If you are a "price buyer" we probably cannot interest you.

Custom Mill Work, Storage, Inspection

ON

Foreign Fancy Woods, Mahogany, Cedar, Circassian

We receive the logs, store or warehouse them, manufacture them into lumber, cut or saw veneers, pile and store the product, and ship via any railroad. Also furnish inspection returns on logs or lumber. Can furnish accommodations and economies which it is impossible to secure elsewhere. We always have on our yards parcels of plain and figured African, Mexican and Cuban Mahogany, Circassian Walnut and Cedar logs, placed here for sale by direct foreign shippers, from which advantageous purchases can be made.

Astoria Veneer Mills & Dock Co.

Long Island City, New York

CHESTNUT DOOR STOCK VENEERS

WE make a specialty of rotary cut Chestnut Door Stock Veneers for one, two, three and five panel doors, and are prepared at all times to fill orders promptly. We make it a point never to substitute brown ash when chestnut is ordered.

☐ We also manufacture door stock veneers in Red and White Oak, Poplar Cross-banding, Drawer Bottoms and special dimension Poplar, White Oak Veneers for furniture and piano makers, and other rotary cut products in Chestnut, Poplar, Red and White Oak not listed above.

☐ For prices and other information write to

Don't Delay Placing Your Lumber Orders

There's always danger of disappointment when you let the order go until just a few days before you require the lumber; transportation is not always reliable and no matter how prompt the shipment, you run a risk.

However, it is one of the strong points of the McILVAIN Service to make prompt shipments, and RUSH orders are always given the attention they demand.

So let us talk Lumber with you, and bid on your specifications.

J. GIBSON McILVAIN & Co.
1420 Chestnut Street **PHILADELPHIA**

"Git aplenty while yer agittin'," said the Hoosier Schoolmaster, and it is sound advice to any one who invests in a natural resource such as

Pacific Coast Timber

Get your plenty from a concern with a record of success covering thirty-two years; from one that has perfected an efficient timber handling organization; from one that has the experience, the knowledge and the enterprise to select tracts of timber that are right for your purpose.

We furnish our clients with complete, dependable information regarding the timber we offer. Our reports are reliable. They are the basis upon which bond issues, aggregating millions of dollars, have been issued and upon which millions of dollars have been invested by those who demand the best and from which investments millions of dollars in profit have been made.

"It is not what lumber costs you, so much as what you can get out of it, that decides its value for your work."

OUR OWN MANUFACTURE

**Something New
For Your Factory Floors**

Utility Joined With Economy

We are now manufacturing what we call a No. 2 Factory grade of Hardwood Flooring which can be used successfully in factory buildings where good wearing qualities rather than appearance are required. This Flooring is made from the hardest portion of the log, and while the Flooring shows the heart defect to a considerable extent, nevertheless it will wear with wonderful durability. It is "Rockhard" flooring at a rock bottom price.

It is 13/16 x 2 1/4" face, and the Flooring is kiln dried, hollow backed, bored, end matched, steel scraped and bundled.

Write us about it. This is a grade of Hardwood Flooring you should know about. Address MITCHELL BROTHERS COMPANY, Sales Department, CADILLAC, MICHIGAN.

A floor to adore

For thirty-three years Wilce's Hardwood Flooring has been among the foremost on the market and because it stands today "unequaled" is the best evidence that its manufacturer has kept abreast of modern methods and the advanced demands of the trade. To convince yourself of the above statements, try our polished surface flooring, tongued and grooved, hollow backed, with matched ends and holes for blind nailing—you'll find it reduces the expense of laying and polishing. Our Booklet tells all about Hardwood Flooring and how to care for it—also prices—and is free.

The T. Wilce Company

22nd and Throop Sts. CHICAGO, ILL.

Going up—Hardwood Timber

We have the following hardwood and pine timber for sale at prices that have not as yet been advanced with the rise in value on timber lands. For a short time we offer—

150,000,000 FEET HARDWOOD IN SOUTHEAST ARKANSAS — A SPLENDID OPPORTUNITY.

7,600,000 FEET OF HARDWOOD IN SOUTH-WEST ARKANSAS

We also have timber in British Columbia and on the Pacific Coast and Oregon.

SAVE YOUR MONEY BY USING THE

RED BOOK

Published Semi-annually
in February and August

It contains a carefully prepared list of the buyers of lumber in car lots, both among the dealers and manufacturers.

The book indicates their financial standing and manner of meeting obligations. Covers the United States, Alberta, Manitoba and Saskatchewan. The trade recognizes this book as the authority on the lines it covers.

A well organized Collection Department is also operated and the same is open to you. Write for terms.

Lumbermen's Credit Assn., ESTABLISHED 1878

608 So. Dearborn St.

SECURE BETTER PRICES

AT LESS SELLING COST BY REACHING MORE CUSTOMERS. HARDWOOD RECORD PUTS YOU BEFORE THEM ALL TWICE A MONTH.

ASK US ABOUT IT

How's This for a 1913 Platform?

"Resolved, That I will give to the purchase of my lumber the same discriminating care that I devote to manufacturing it into the finished product and distributing it to the trade in which I am interested.

"Resolved, That in ordering hardwood and veneer stocks I will remember the truthful saying that a man gets just about what he pays for, and that cheap lumber is usually cheap lumber.

"Resolved, That I will deal with concerns which have shown themselves to be square and honest in their dealings with me; with which I have no friction as to measurement or grade; which have the facilities for taking care of my orders, and which can fill orders promptly with material sufficiently aged to insure satisfactory use in my factory.

"Resolved, That I keep tab exactly on the results experienced in working lumber purchased from different concerns, to as great a degree as practicable, with the end of determining which of them have justly earned my permanent business."

We recommend the adoption of these resolutions for 1913 by every hardwood lumber buyer in the country. Our reason, to be perfectly frank, is this: It would mean a lot of new business for

WE WOULD IF WE COULD, BUT WE CAN'T **DEFIANCE** WOODWORKING MACHINES

Could not be built better, no matter how much time was spent in their perfection. No better material could be used in their construction, for we buy the best the market affords. Skilled labor of the highest grade and cost is employed to complete their absolute perfection.

THE RIGHT VISIBLE EXPRESSION

In the finished product of our tools is always of the most satisfactory nature. Possessed of all the positive qualities of extreme intrinsic value, their superiority and distinctive advantages cannot in any way solicit a comparison.

They are a necessary and indispensable means for the up-building of every organization and serve as the practical means for increased efficiency. Let us get in touch with you by your request for our new No. 200 Catalog. It's well worth your time.

THE DEFIANCE MACHINE WORKS

414 Perry Street, Defiance, Ohio

"THE IMPRINT OF SATISFACTION"

No. 1 Patent Double Spoke Throating Machine

Elmes' Presses are Better

DONE IN A MINUTE

ASK FOR Elmes' latest in hydraulic veneer presses, pumps and retainers—a labor saver, highest in production and quality. You can get full pressure in less than one minute, and in less than one-quarter minute you can be back in position ready for another pressing.

Press and pump self-contained (with or without motor) with tank, valve, gauge, and all fixtures attached and mounted on top of press.

The base and platen are extra heavy and planed smooth. The piston and cylinder are of semi-steel and the piston is water-ground.

Pump frame, base and guide for plunger are cast in one piece, making the pump rigid and comparatively indestructible.

Four-way valve of bronze, operated with one handle.

No low pressure pump is required, as cylinder is filled automatically.

The pumps and manifold are of bronze, and plungers are made of tool steel, hardened and ground. The crank shaft and eccentric are made in one piece, extra heavy. Eccentric straps are rabbitted and bored.

Our retainer rods have the best quick release. They can be tightened or released without the use of a wrench, and without fear of breakage.

With one press you can easily handle 100 packages a day.

A comparison will convince you that Elmes' presses are better.

50 years' experience in hydraulic press building.

GENERAL OFFICES:
CONTINENTAL BUILDING.

Baltimore, Maryland

YOU pay a *little* more for our hardwood lumber than you do for many others, but it's worth *much* more.

With our modern and first-class equipment and expert operatives, we couldn't make bad lumber if we tried to, because the *quality* and *size* of our virgin tough mountain white ash, red birch, yellow poplar, buckeye, maple, red oak, cherry and basswood, averaging less than three logs to the thousand, and 95 per cent sixteen feet, is the best type of hardwood timber growth in the United States, and shows a larger percentage of *firsts*.

If you are a discriminating buyer let's get acquainted.

Review and Outlook

The greetings and felicitations of the Christmas season are extended by **HARDWOOD RECORD** to its friends, and the good will is accompanied by the wish that progress and increased prosperity will crown all efforts to enlarge business, extend influence, and increase fields of usefulness during the coming year.

General Market Conditions

In contrast with the usual course of lumber purchases at this time of the year, there seems to be a proportionately small falling off in trade on account of the approach of the inventory season. It is true that a good many buyers are holding off on purchases and further that a great many small orders are placed rather than a lesser number of larger orders. On the whole, however, the percentage of postponed business is small in comparison with other years. This condition is not true alone in any one place, but is reported from most of the large hardwood centers of the country.

Another gratifying feature is a report coming from the main shipping points to the effect that a continued improvement is noted in the car situation. It is, of course, not true that the car shortage is over or that marked trouble and delay due to inability to secure cars is a thing of the past. The chief difficulty is encountered in the smaller shipping points, but at all competitive points the report is that cars are coming in in fairly satisfactory numbers. This should mean that in the South the shortage of logs will be wiped out and that sawmills will soon have in their log yards plenty of timber to carry them through the winter. It is not to be anticipated, however, that the next few months will show any marked accumulation of hardwood lumber, as the vast volume of business that is booked will take care of any excess production for some time to come.

All of the consuming lines are showing continued activity in purchases. The building trade has maintained a healthy condition with the possible exception of certain large eastern cities. In this terri-

tory real estate interests, in an effort to prevent a slump in the real estate market, have exerted considerable pressure with the view of preventing excessive building operations. The wisdom of this policy will undoubtedly be felt in the future as an undue boom in building at the present time would surely lead to hardship in this line in the months to come. However, the situation in building in all sections is good.

Among hardwood consuming factories there is reported a slight disposition on the part of buyers to look doubtfully at advanced prices. Some buyers are hesitant about placing orders because of the fact that enhanced lumber values might necessitate their raising their own prices. If such a raise were not general, it would react to the detriment of those concerns putting advanced prices into effect.

The export business has not shown any marked change one way or the other during the last two weeks. Good conditions prevail abroad and there is a very considerable demand for American hardwoods. Concerns on the other side in many cases are meeting markedly advanced prices asked by sellers on account of increased freight rates. It is reported from some sources that rates are liable to advance further during the coming year.

About the same relative position is being maintained by the different woods in the nature of their acceptance by buyers and values asked.

One of the most notably strong items in the general hardwood field is ash in varying thicknesses, although thick ash is stronger than inch stock. Some little advance in price has been noted in ash lumber during the last week or ten days.

All items of oak are being called for. Plain red oak is as usual the leader, with plain white oak a close second. Continued improvement in demand and price for quartered oak is being maintained throughout the country. There seems to be no question but that quartered oak has "come back."

The situation of birch, beech and maple is in a continued healthy state. In the North basswood is also very active, No. 3 basswood being practically completely out of the market.

One important Indiana point reporting on hardwood market conditions makes the gratifying statement that 1912 showed ten per cent better in volume of business than 1911, although the first six

SUBSCRIPTION TERMS: In the United States and its possessions, and Canada, \$2.00 the year; in foreign countries, \$1.00 extra postage.

In conformity with the rules of the postoffice department, subscriptions are payable in advance and in default of written orders to the contrary, are continued at our option.

Instructions for renewal, discontinuance, or change of address, should be sent one week before the date they are to go into effect. Both old and new addresses must be given.

Both display and classified advertising rates furnished upon application.

Advertising copy must be received five days in advance of publication dates.

Entered as second-class matter May 26, 1902, at the postoffice at Chicago, Ill., under act of March 3, 1879.

months of this year were behind the first six months of the previous year. December in this particular section was by far better than December, 1911.

With the buyers actually scouring the country for stocks which they want, and no prospect of production in excess of present orders and demand in the immediate future, there is everywhere the sincere belief that 1913 will show up to be one of the best years ever experienced in the hardwood business. This condition is not one of boom, but is one which is founded on strong fundamental conditions as governed by supply and demand.

The Car Situation

The car shortage has been more acutely felt in the cotton producing states probably than in any other section of the Union and its effect upon the lumber trade in that territory has been more serious than in any of the other lumber states. Word comes now, however, from Missouri, Arkansas and Mississippi points that the lumber movement is showing a gratifying improved condition and that while many mills in the Memphis territory have been running with but a few days supply of logs ahead, their transportation facilities in the nature of freight cars are in better condition than for several weeks. This does not by any means signify that car shortage is a thing of the past or that its back has been broken. It does, however, offer a ray of hope to the many shippers of lumber who have been caused no end of anxiety and trouble because of their inability to make delivery due to their lack of shipping facilities. The situation in other points of the country has shown some improvement for several weeks and if the Memphis roads at least hold their own in the matter of supplying cars to the lumber trade, the situation generally will be gratifying to lumbermen. It is to be hoped that all shippers will continue to do their utmost to help the transportation companies facilitate the movement of rolling stock.

Through Bills of Lading on Lumber May Result

As a precedent the recent ruling of the Interstate Commerce Commission compelling railroads operating in Texas to issue through bills of lading on cotton shipments for export trade going out of New Orleans should be of some value in the fight being carried on by lumber interests to secure such a ruling as applied to railroads west of the Mississippi. The weak point in the decision is the admission by the Commission that it has no authority over the steamship companies and can only compel the roads to issue such through bills of lading when they are acceptable to the steamship lines which will carry the goods. Nevertheless a number of the lines have signified their willingness to accept such bills and with the power of the Commission behind them, cotton shippers will have achieved a material victory in this controversy. That element of the hardwood trade interested in export shipments is thoroughly conversant with the serious effect upon the export trade which has resulted from the refusal of the railroads to issue such through bills of lading. They should feel somewhat encouraged by the Commission's decision in the cotton case and should feel that they at least have a precedent on which to work in pressing their own case before that body.

Rush Sawing versus Good Lumber

The continued lack of stock in the northern woods preventing the getting in of logs for the winter's cut and the shortage of cars in the South, equally effective in the matter of keeping down the supply of logs for the southern hardwood mills, make it increasingly apparent that when the mills actually have enough logs on hand to start operations, the rush of business in getting out accumulated orders will occupy the first attention of the mill owner. Alarmingly high values on stumpage throughout all the hardwood producing territories of the country have kept constantly before the millman's mind the question of how he can best turn this stumpage into the class of lumber which will produce the most value when turned into cash. His attention has been focused most closely upon the matter of sawing the right dimensions and thicknesses to meet the demand of the consuming market and second to this he has given his attention to the production of the absolute maximum in quality. Necessity of

demand will continue to force his attention to the first question and it is to be hoped that his vigilance will not be relaxed in the matter of producing the highest class of lumber which he can get out of his logs. Not considering the question of consumer's wants or the matter of satisfying a customer, the mere value of hardwood timber as it stands today should be a sufficient reason for the sawmill man's giving his closest attention to the matter of the highest grade and quality of production. Rush work involving overtime and double crews is never in accord with the best ideas of quality production in any line of manufacture. Under these conditions the most difficulty is experienced in maintaining the interest of the men and in effecting a close supervision of production. Nevertheless overtime work is a necessity under certain conditions and those conditions will undoubtedly exist this winter. Millmen can undoubtedly give good thought and close attention to provide beforehand for some means of mill operation which will result in the production of that class and those grades of lumber which will mean the fullest possible value from the sawlogs at hand.

Why We Need Accident Prevention

The bare statement that in one year there were 12,000 employes killed or injured in the state of Washington alone is in itself a sufficient argument to offset any doubt as to the entire necessity for radical provisions working toward the prevention of accidents in industrial plants. This condition does not apply strictly to Washington as undoubtedly if records were compiled from every other state in the Union they would be proportionately as appalling. It is gratifying to note the tone of discussions, at the various meetings of lumbermen and others affiliated in different ways with wood producing and using industries on this question. In no case has there been any active opposition to the establishment of the rules and methods for prevention of accidents among employes. In fact, the whole controversy has narrowed down to the question of the most efficient and practical means of establishing safeguards which will actually safeguard. The chief difficulty has not been in finding suitable appliances to protect workmen from machinery or from injury in connection with dangerous employment, but is rather in the education of the workman to the absolute necessity for his observing instructions and utilizing such appliances and following such regulations as will reduce to a minimum his chances for injury while at work. In the sawmill, the veneer and panel plant, and woodworking factories and in the woods and logging camps many new devices have been introduced and methods of applying them and instructing workmen have been devised; but in every instance where an employer has reported on conditions he has expressed the same opinion,—that it is extremely difficult to provide a safety device or to put into effect a rule which is fool proof.

It would seem that the difficulty lies in the fact that the appeal has been made directly from the employer's office to the mechanic in the shop. It would seem further that if means were taken whereby the foreman, who is in close personal contact constantly with his men, were brought in close sympathy with the intentions of the employer and if the new ideas through him were transmitted to the workman, the effect would be more satisfactory. Such a scheme has been used in a number of plants, which schemes have embodied regular conferences between the employer and the heads of the various shop departments in which the foremen were given minute instructions as to education of the men and strict personal supervision looking toward their strict adherence to rules and constant utilization of safeguards. If such a method were in adoption generally, half of the difficulty of safeguarding employes would be eliminated and with it the expense contingent upon casualty insurance would be materially reduced.

Standardizing Hubs

Manufacturers of farm wagon wheel hubs have lately worked up the idea of standardizing hub manufacture with a view of reducing the confusion of variety and eliminating unnecessary machine changes. They are co-operating with wagon manufacturers and this working together will eventually result in doing away with a great many

useless sizes and patterns. The smaller number of standard sizes and patterns will be introduced. The inevitable result of this move will be a better class of work and greater efficiency and economy in manufacture. It will also mean improved service to customers as the ability to carry in stock any article of commerce greatly reduces the difficulty of sales and delivery. Besides saving a great deal of time in useless changing of machinery, it will also do away with the necessity for carrying extra equipment for lathes and mortises. The direct result of standardization in hub manufacture will be a reduction in the variety of spokes manufactured. The good effects as felt by spoke manufacturers will be equally noticeable as those felt by the manufacturers of hubs.

An Opportunity to Reduce Fire Risks

The approach of the annual shut-down season should bring to the mind of the lumberman ideas involving other efforts than merely to improve the various mechanical features of his plant such as repairing machinery, in shop construction, taking out old equipment and putting in new, etc. The strong campaign which a certain mutual fire insurance company carrying lumber risks exclusively has been carrying on with the view of educating the lumber trade to the necessity of improving conditions at the plants, should awaken the lumbermen and owners of other woodworking plants to the necessity for doing everything possible to safeguard their properties and hence materially reduce the cost of their fire insurance. A great deal has been written by this company involving many suggestions for producing this effect. One of the most important things pointed out has been the advisability of entirely whitewashing the interior of sawmills covering all points inaccessible while running, on which dust can accumulate. This whitewashing is a means of materially reducing the risk of fire, and is such a simple operation and so inexpensive that there is no excuse for any sawmill owner not to take advantage of it while his mill is not running. Numerous fires often result from sparks, matches, cigarette or cigar butts and other points of fire lighting on grease soaked wood. It would seem that it would be a pretty good policy of self-protection to thoroughly scour such surfaces and cover them with a coat of paint from which grease can be cleaned daily rather than allowing it to accumulate and soak into the wood. It would seem, too, that this is a good period for a general cleaning up, eliminating all dust from cracks, crevices and beams throughout the mill. It is these little accumulations of refuse that are often the breeding spots of what eventually are disastrous fires. It surely is to the interest of the sawmill man or owner of the woodworking factory to take advantage of this period to do everything possible that will result in lowering his insurance costs.

Trade in Forest Products Between the United States and Canada

Statistics on the export value of wood products from Canada to the United States covering the fiscal year ending March 31, 1912, show that the value of these exports is the smallest during the past five years with the exception of 1909. The total this year was \$30,065,206. The same can be said of the export value of manufactured wood specifically, the total in this case being \$25,444,986. The exports of planks and boards during the fiscal year ending

March, 1912, aggregated in value \$13,634,108. This represented the total shipment of 776,992,000 feet. The total during the preceding fiscal year was 847,948,000 feet, valued at \$15,948,791. In this line of export also the fiscal year ending last March shows the smallest total of any year in the last five. The value of pulp-wood export during the same period was less than either of the two preceding years, aggregating \$5,697,901, representing a total of 879,775 cords.

On the other hand, the import value of sawed boards, planks, etc., subject to duty entering Canada from the United States has increased rapidly during the last few years, the total during the fiscal year ending March 31, 1912, amounting to 52,538,000 feet, with a value of \$687,659. The imports of oak lumber during the period amounted to 62,280,000 feet, with a value of \$2,411,766. This is a greater import value than any of the four preceding years.

What Is Christmas Without a Tree?

A Canadian lumber journal of merit, in commenting upon the cutting of young evergreen trees for purposes of decoration and sentiment in connection with the Christmas season, says that it has called attention to this matter regularly at Christmas time each year and that it hopes that the authorities will do something to stop the attendant waste which results from the celebration of an event which can just as well be celebrated in some other manner or with trees equally effective if made of some artificial material. The fact that an enormous number of young trees are cut each year for Christmas tree purposes is pretty general knowledge, as is also the fact that in cutting these trees, there is an enormous unnecessary waste attendant through poor judgment in cutting and poor packing. It is very doubtful, however, if any but a very small percentage of even such practical men as lumberman will feel any sympathy for a plea having as its object the elimination of one of the most pleasing customs of civilized people. One needs but to think of the extreme joy which the sight of a beautifully trimmed Christmas tree creates in the heart of the small child and then compute the number of such children and the aggregate of such joy to be fully convinced that the

elimination of this so-called waste will cause a waste of far more importance,—that is, it would be one step toward the destruction of a sentiment which is one of the strongest and most securely cemented stones in the foundation of our civilization. The elimination of the Christmas tree custom would undoubtedly destroy half of the sentiment attached to Christmas. This would certainly not work to the ultimate advancement of our people.

What we want rather is an intelligent regulation governing the cutting of Christmas trees and their shipment and marketing. There is no reason why ultimately special plantations could not be set aside for the growth of Christmas trees, creating a perpetual supply of these trees and doing away entirely with the destruction of natural growth which would eventually be of suitable size for sawlogs and pulp-wood. The trend of modern conservation would certainly indicate that such a plan is not at all impractical. The question has been discussed at different times by interested authorities and it is not at all improbable that not many years hence we will see this scheme in actual operation.

While it is true that this custom is not general in Canada and that the editorial referred to is opposing the cutting of Canadian trees,

UNSOLICITED TESTIMONIAL

Clyde Iron Works

Manufacturers of

Steam Log Loaders, Steam Skidders, Logging Tools, Hoisting Engines, Derricks, Excavating Machinery

Duluth, Minn., Dec. 13, 1912.

HARDWOOD RECORD,
Chicago, Ill.

Gentlemen:—I am returning herewith the slip authorizing you to continue our advertising for 1913 on the same basis as for this year.

I will take this opportunity to remark that my records for the past six months prove your paper to have been among the most valuable of our advertising mediums. We sincerely hope that such will continue to be the case during 1913 and that the good results you secure for your advertisers will add immensely to your own prosperity during the coming year.

Yours very sincerely,

CLYDE IRON WORKS,
Chas. Mackintosh, Adv. Mgr.

it is also true that the opposition to the Christmas tree tradition is seen generally among the stern old Scotch element, and that the custom is being experimented with by the younger generation. Our Canadian neighbors should try it and see how much fun it is. There is no question but that, if they would bend their cold dignity to that extent, they would reap a rich reward in the added pleasure lent to the Christmas season and would amend their views on conservation in this particular. It is to be deplored that the mere thought of monetary aggrandisement would take precedence over the celebration of a custom which has given so many of us so much pleasure.

Canadian Shippers Also Suffer

That the many aggravating questions which constantly face the shippers in this country and which command so much of their time, thought and capital are not confined alone to our American industries is instanced in a protest emanating from Canadian lumber territory against a decision of the Dominion Board of Railway Commissioners handed down recently. This board is a body similar to our Interstate Commerce Commission and works very much on the same basis. The question in dispute is one involving an increase in demurrage rates, the commissioners having granted permission to the railway companies to increase demurrage charges. While railways are not permitted to put into effect the total increase which they asked, they were granted the privilege of doubling the charge on the first demurrage day and allowing a charge of \$3.00 for each succeeding twenty-four hours. A Canadian contemporary, speaking editorially on this decision, says that the speed with which the commissioners handed down the decision in the interests of the railroads as contrasted with the length of time it usually requires to arrive at a decision in the interest of the shippers, argues that the commissioners did not give due consideration to the shippers' interest.

This point merely illustrates the fact that the controversy between different factors in the commercial world engaged on the basis of trading service or commodity for coin of the realm is a perpetual one and one of universal extent. The time will probably never come when there is not some question up for dispute between these different factors. The question should not be one looking toward the elimination of such dispute,—which is impossible,—but rather toward a sure and quick means of amicably settling them.

Where the Panel Man Is Weak

Probably in no other item entering into panel construction is there such a variety of opinion and lack of authentic and uniform information as in glue. Consumers of glue using it for gluing up purposes in panel work have long resorted to "rule of thumb" methods of determining the adaptability of certain grades of glue for their work. In view of the extreme importance of uniformity in glue used and of constantly employing a high class quality, it would seem that in the interests of their reputations manufacturers of panels would exercise every precaution to secure a uniform quality in their glue purchases. That this is, however, not generally done is conceded by anyone conversant with conditions.

Various practical methods have been employed for testing glue but there seems no reason why scientific methods which in themselves are extremely simple should not be used generally by panel manufacturers. In treating of this subject an authority, speaking before the recent meeting of veneer and panel manufacturers, explained the simplicity of scientific treatment of the glue question.

He advocated instead of the old so-called practical methods of glue testing, many of which are really no test at all, that manufacturers make their tests based on two principles—namely, the viscosity and the jelly strength of the glue. As most people know, viscosity means the rate of flow, and it is gauged by timing the rapidity of flow of a glue solution through a small hole in the bottom of a receptacle containing it. The number of seconds required for a certain amount of glue to pass through this opening at a certain temperature constitutes its viscosity. By the jelly strength is meant the amount of compression required under certain conditions to force a steam plunger into the mass of glue. This is measured in pounds.

It has been demonstrated that the best grade of commercial glue

has a viscosity of 34.5 seconds, and a jelly strength of 48 pounds, while the poorest grade has a viscosity of 6 seconds and a jelly strength of 7.2 pounds, which points to the condition on which the whole question hinges,—namely, the extreme variability of glue quality. It has been demonstrated that no two concerns or any one concern at all times will produce the same grades of glue. In some instances shipments from the same concern supposedly of the same grade have been known to vary forty per cent in viscosity. This would surely argue that some means should be constantly employed for regular testing of all glue shipments. Inasmuch as the panel manufacturer's reputation stands behind his product and as glue is one of the most important of raw materials entering into the product, he cannot be too particular about his grade of glue.

Lumber Exports from Baltimore 1911 and 1912

A study of the custom house records on export shipments from Baltimore furnishes an indication of the general trend of the export trade and will therefore prove of interest. Comparisons of the current year with 1911 are impossible except in so far as totals are concerned, for the reason that the method of classification was changed last July a year ago. Previous to that time all exports of logs were entered in one column, but since then they have been separated, the chief classifications being hickory, oak, walnut and "all others." A similar rearrangement with respect to lumber has taken place, the returns being divided into short leaf pine, pitch pine, spruce, gum, oak, poplar and "all others." It is only by adding up the various classifications and comparing them with the totals for last year that the loss or gain can be shown. These totals almost invariably represent a large increase for 1912 over 1911. The only item in which there is a considerable decrease is timber, the value of the exports for 1912, with December estimated, being \$128,640 against \$174,625 for 1911. In boards, deals and planks, with December, 1912, estimated, there was an advance from \$1,288,133 to \$1,603,679; in staves one of from \$33,886 to \$63,250; in doors one from \$28,812 to \$40,632; in furniture one from \$28,325 to \$30,509; in moldings and trimmings a decrease from \$6,015 to \$5,120, and in all other items an increase from \$242,763 to \$360,938. The exports of this year, therefore, be it observed, are of far greater value than were those of 1911. A comparison of quantities is difficult with respect to logs for the reason that under the old classification cubic feet were counted, while at the present time the measurement is board measure. The number of feet of boards shipped this year is much larger than the total for 1911, the figures being 49,005,000 feet for 1912, against 33,606,000 in 1911.

Taking the figures for the current year, it is seen that the following stocks went forward, December estimated: Hickory, 1,041,000 feet, valued at \$28,246; oak logs, 1,649,000 feet, worth \$119,150; all other kinds of logs, 534,000 feet, worth \$18,945. Of boards there were exported through this port 39,000 feet of cypress, worth \$1,874; 31,620,000 feet of oak, worth \$1,088,269; 422,000 feet of white pine, worth \$34,306; 2,468,000 feet of poplar worth \$85,129; and 3,061,000 feet of other woods besides pitch pine, spruce and similar soft woods, worth \$133,264. Of staves a total of 987,629, worth \$63,250, went out, while 15,329 headings worth \$72,807 were exported.

An analysis of the figures for 1912 also shows that there was a decided falling off in shipments during the last six months or at least during the latter part of the summer, as compared with the first half of the year, the shipments of hickory up to July 1 having been 771,000 feet as against 270,000 feet for the last six months. The shipments of oak logs ran ahead, but of walnut 1,021,000 feet was exported in the first six months against only 628,000 feet in the latter half of the year. The decrease in all other classifications was from 325,000 feet to 209,000 feet. In the shipment of oak planks there was a sharp gain from 13,098,000 feet to 18,522,000 feet, while poplar and all other woods also increased. This shows the effect of the stevedores' strike and the subsequent rush to send stocks abroad.

Taken altogether, the year has been a very satisfactory one, both in point of quantity and of value, and the indications for 1913 are most encouraging, for the movement continues to be large, while prices are higher than ever.

Pert, Pertinent and Impertinent

How Differently It Looks Now!

While sitting idly dreaming in my office chair to-day,
My thoughts are roving backward in a retrospective way,
And I ponder over changes that the present year has wrought,
And wonder if we lumbermen are pleased with what it brought.
When 1912 came rushing in, the Presidential year,
We felt 'twas wise to travel slow, a panic might be near.
We trembled, sad affrighted at each unusual sound,
When shipping culls were in the piles and mill culls on the ground.
We sold stock under contract and chuckled at each sale,
Delighted when fat orders came slipping in by mail.

The great accumulation of low grade stock would go
And in its place we'd substitute a fair sized bunch of dough,
So cars were spotted on the tracks and loaded to the brim,
And every man without a job we quickly froze to him.
The wheels of industry began to move around and round
When the shipping culls were in the piles and mill culls on the ground.
But soon our order books were filled and stocks were getting low,
The higher that the prices were the faster it would go,
Until in desperation and with no relief in sight
We made a rule to add a dollar to each price each night.

But still the orders flooded us, our yard was getting bare,
The Yard Man soon reported "No low grade anywhere."
We mourn about low contracts by which we're tightly bound,
For no shipping culls are in the piles or mill culls on the ground.
Our wives say we have nightmares on each succeeding night,
Our mutterings and grumblings would give Old Nick a fright.
We growl (and maybe something worse) about the stock we've sold
Too early at low prices, we weep to see the gold
That might have filled our coffers with that good old dinking sound
If our shipping culls were still in pile and mill culls on the ground. A. S. B.

THE TRUE CHRISTMAS SPIRIT—NOT

Once upon a time the producer looked like the above gentleman with the whiskers, and the buyer took all that was coming. Santa has realized, however, that he can't keep the "Missus" and reindeer fat and warm without a little profit on his goods—now the buyer's mouth curves the other way.

A Fair Exchange

"Father, won't you buy me a watch for Christmas?"
"What do you want a watch for, my boy?"
"I want to swap it with Billy Wiggins for one of his pups."

Barred from Lumber Associations

"I hear Jones is in the lumber business."
"Yes, on rather a small scale."
"How's that?"
"He's peddling toothpicks."

A Gallant Answer

"You seem to be an able-bodied man. You ought to be strong enough to work."
"I know, mum. And you seem to be beautiful

enough to go on the stage, but evidently you prefer the simple life."

After that speech he got a square meal and no reference to the wood pile.—*The Meddler.*

Spoiled Her Secret

"My first husband and I kept our marriage a secret for nearly a year."

"Didn't you find it rather difficult?"

"Oh, no, not at all. We could have gone on for a much longer time if the horrible reporters hadn't been snooping around when I applied for my divorce."

Plenty of Them

Lawyer—"You claim to be a college graduate. Can you prove you have been given any degree?"

Prisoner—"Yes, sir; the third degree."—*Baltimore American.*

Followed Host's Advice

"Mr. Pigg is altogether too literal."
"How so?"

"The last time he was at my house I told him to make himself thoroughly at home, and in less than five minutes he had quarreled with my wife, kicked the cat out of doors, discharged the cook, spanked the baby and told me I was a fool."—*Tit-Bits.*

When a man takes his wife to the theater he thinks it's up to him to go out between the acts and telephone home to see if the house is still there.

American Forest Trees

ONE HUNDRED-SECOND PAPER

OREGON MAPLE

(*Acer Macrophyllum*—Pursh)

Botanists prefer to call this tree broadleaf maple. The name is not inappropriate, as its extraordinarily broad leaves constitute the most striking feature of the tree where it stands in the woods. The leaf is usually wider than it is long. Some exceed a foot in both measurements. Bigleaf maple is not an uncommon name for the tree in Oregon, where it attains its highest development in damp valleys where the soil is good. The name white maple is not particularly descriptive of any feature of the tree, though the name is applied in both Oregon and Washington. In California it is known simply as maple. There is small likelihood in that region that it will be confused with any other member of the maple household; nor is there much danger of such a thing in any part of the Pacific coast, for, though four species of maple occur there, no one of them bears close enough resemblance to this one to be mistaken for it.

The Oregon maple's range north and south covers twenty degrees of latitude. In that particular it is not much surpassed, if surpassed at all, by any maple of this country. Its northern limit lies in Alaska, its southern close to the Mexican boundary, in San Diego county, California. Its range east and west is restricted. It has a width of about one hundred and fifty miles in California, where it grows from the coast to the foothills of the Sierra Nevada mountains. An altitude of 5,600 feet appears to be the limit of its range upward. It attains altitudes above 5,000 feet at several points in the Sierra Nevada range. It descends nearly to sea level. Its geographical range is similar to the ranges of several other Pacific coast species which occupy long ribbons of territory stretching north and south parallel with the coast of the Pacific ocean.

This maple's leaves change to a clear reddish yellow before falling. Flowers appear after the leaves are grown, and the seeds ripen late in autumn. Some of them hang until late in winter, but the habit varies in different parts of the range, as is natural in view of its great extension north and south. The trees which stand in open ground are very abundant seeders, but those in dense stands produce sparingly, in that particular following the habit of most trees. This maple often grows in dense, nearly pure stands in Oregon and Washington where soil and conditions are favorable.

The sizes and forms of Oregon maple vary greatly. John Muir spoke of forests whose trees were eighty to one hundred feet high, so dense with leaves and so abundantly supplied with branches that moss and ferns formed a canopy with foliage and limbs high over

head, like an aerial garden; while George B. Sudworth described it in certain situations as a short-stemmed, crooked tree from twenty-five to thirty feet high and under a foot in diameter. The forms are the extremes, and there are all sizes and kinds ranging between.

This maple has been called the most valuable hardwood of the Pacific coast, but that claim is made also for others. Some persons rate it with the hard maple of the East, in properties which commend it for use. It is doubtful if the claim can be substantiated. According to Sargent's figures for strength, stiffness, weight, and full value, it lacks much of equalling the eastern tree. It is twelve pounds per cubic foot lighter; has not three-fourths the fuel value; and is little more than half as strong or as stiff. The comparison is more in favor of the western tree when color of wood and appearance of grain are considered. The wood is light brown with pale tint of red. The rings of annual growth are tolerably distinct, with a thin, dash line separating the summerwood of one year from the springwood of the next. The pores are scattered with fair evenness in all parts of the ring. They are small and numerous. The medullary rays are thin and abundant. In quarter-sawed wood they show much the same as in hard maple, but are rather darker in color. The mirrors are decidedly tinged with brown. The wood is reported poor in resisting decay when in contact with the soil; and in that respect it is like the other.

The largest use of Oregon maple appears to be for furniture, second, for interior finish, and following these are numerous miscellaneous uses. Statistics of the cut of this wood, as shown by sawmill reports, are unsatisfactory. Census returns include it with all other maples of the country, without figures for species. The cut of maple for all the western states seems too small to give this wood justice. The amount reported used in Washington, Oregon, and California exceeds

the total reported sawmill cut in the West.

The wood of the Oregon maple is an important handlewood. The smooth grain appeals to broom makers. The wood is made into axe handles, but for that use it is much below hickory, or even hard maple or white oak. It is converted into pulleys in Washington, also into saddle trees, and tent toggles. Boat makers employ it for finish material, in which capacity it fills the same place, and must meet the same requirements, as in interior finish for houses. Curly or wavy wood is occasionally found and this is worked into

FOREST GROWTH OREGON MAPLE, PIERCE COUNTY, WASHINGTON

finish and also into furniture. The figure is as handsome as in eastern maple, but bird's eye is less frequent. Counter tops for stores and bar tops for saloons are sometimes made of figured maple. It is seen also in grill work and show cases, but in order to show the figured wood to the best advantage it should be worked in flat surfaces.

Oregon maple is converted into flooring of the ordinary tongued and grooved kind, and also into parquet flooring. Rotary veneers are made into boxes and baskets. Solid logs are turned for rollers of various sizes and kinds. Mill yards use them for offbearing lumber, and house movers find them about the best local material to be had.

This maple has been successfully stained in imitation of mahogany, and is said to pass satisfactory tests where the color is the principal consideration.

The amount of this species available in the Northwest is not defi-

LEAF AND FRUIT OF OREGON MAPLE

Oregon ash 58,000, Oregon oak 197,000, western birch 315,000, Oregon maple 932,500, red alder 1,881,500, and black cottonwood 32,572,200.

nately known, but it is a relatively scarce wood. No attention has ever been given to planting it as a commercial proposition. It is not of very rapid growth, and unless it is in dense stands, it develops a short trunk and large crown. It is better suited for shade and ornament, and is to be seen as a street tree in some western towns. It does not flourish in the eastern states, but has found the climate of western Europe more congenial and is occasionally found as an ornamental tree there.

The relative importance of this maple in the state of Washington is indicated by the amount used annually compared with certain other hardwoods. In 1911 the consumption of willow was 2,000 feet, vine maple 10,000,

Lumbermen's Interest in Toys

The lumberman should not "despise the day of small things." Toys may seem trivial to a man who deals in forests, mills and factories; but there is reason why he should take an interest in things made for the amusement of the little people. The matter is important to him in a business way. The toy maker buys lumber and puts wood to use. The quantity demanded in this country is not as small as many suppose, though, of course, the quantity cannot be compared with what is used by box makers, furniture manufacturers and the makers of vehicles. Complete statistics of the toy business in this country have not been compiled. Toys are of various materials—metal, plaster, rubber, wood, etc.—but in the present instance those of wood alone need consideration.

Statistics have been collected in three states showing the quantity and kinds of wood made into toys. These figures give a fairly good idea of the business for the whole country. However, the three states are in the North, and it is not probable that southern states use as much wood for toys, because the country's toy business is principally in the North. The three states are Massachusetts, Michigan and Illinois. Thirteen different woods go to toy factories in Illinois, and the quantity is 673,000 feet a year; eleven woods are used in Massachusetts, to the amount of 933,500 feet annually; and in Michigan the quantity per year is 3,714,692 feet; it is supplied by twelve woods.

The wooden toys displayed in shops, particularly while the holiday trade is on, are not all made in this country. In fact, most wooden toys offered for sale here are made in Germany and Switzerland. That applies particularly to toys which are not intended to be useful, the primary idea being to amuse the child. Those which belong in that class and are principally of foreign make imitate animals, houses, building blocks, circuses, Noah's ark, and various other things meant for indoor amusement. Most American made toys are in a different class, and it is in these that the lumberman feels a business interest because he supplies the material for their manufacture.

The prevailing idea governing their construction is that they shall be useful as well as amusing; at any rate, they belong more with out-of-doors sports than in the house. They consist of toy sleds large enough to ride and haul things on, and wagons of like dimensions; swings and slides; tools with which a little work can be done by the child, such as spades, rakes, hoes and brooms; tent poles, stakes and toggles for erecting wigwams, and numerous other things of similar size and kind. American toy makers excel foreigners in producing useful toys, and pay less attention to things flimsy and grotesque. Americans generally use better wood. The German and Swiss toy makers have choice of comparatively few woods. Europe is exceed-

ingly poor in kinds compared with America. The shop which makes toys on the other side of the water depends largely on what they call "fir." Some of it is fir, but more is spruce and pine. A little hardwood, commonly birch or some species or variety of cottonwood, is mixed with it. The manufacturers buy the cheapest woods that can be made to answer their purpose, in order to keep the price of the finished toy down, and still get something for their labor. They use the refuse and scraps from shops where furniture and other commodities of considerable size are made, and they are able to utilize pieces so small that an American match factory or shoe peg mill would reject them. As is well known, a large part of the wood used in western Europe is produced by planted forests, and, though it is usually poor stuff, it costs more than good woods in this country.

Americans can afford to use better woods and they are not stingy with it. They put good material into their product. Sleds, for example, will stand all kinds of strains and collisions, and wagons will stand up under long service and surprising abuse. In Michigan the only softwood reported by toy makers was Norway pine, which constituted less than four per cent of the total quantity used. Beech was forty-five per cent, and the strength of the sleds made in that state is due to the beech employed in their construction. It is a strong wood; and though it is apt to snap square off if it breaks at all, it is so stiff that it seldom breaks. Elm is used in Michigan toys to the amount of 900,000 feet, and that is fine material for commodities which are expected to stand rough usage. Elm is tougher than beech, but not as strong. The other woods reported by Michigan toy factories are, basswood, sugar maple, bur oak, white oak, sweet birch, white ash and soft maple.

Woods used in Illinois by the makers of toys, in addition to most of those reported in Michigan, were black walnut, Spanish cedar, butternut, red gum, cottonwood and shortleaf pine. In Massachusetts nine hardwoods and two softwoods were reported. The softwoods were hemlock and white pine, and the hardwoods chestnut, red oak, white oak, black cherry, hard or sugar maple, paper birch, basswood, yellow poplar and beech. Those used in largest amounts were beech and birch.

Foreign trade of this country for 1912 will exceed all records. Figures just compiled at Washington show that imports will approximate \$1,800,000,000 against \$1,563,000,000 in 1910. Exports will aggregate \$2,400,000,000 against \$2,093,000,000 in 1911, the previous high mark. The increase in import occurs especially in manufacturers' raw materials.

VENEER AND PANEL MEN IN SESSION AT ANNUAL MEETING, CHICAGO, DEC. 10-11, 1912

Veneer and Panel Men Meet

Members of the National Veneer and Panel Manufacturers' Association held their eighth annual meeting at the Auditorium hotel in Chicago on December 10 and 11. An unusual attendance marked the meeting. Besides the gratifying attendance, another feature of particular interest was the unusual character of the papers presented and the interest with which the members entered into various discussions. On the whole the meeting can be voted one of the most profitable which was ever held by this association.

President C. T. Jarrell opened the meeting with an address in which he outlined the development in the veneer industry during the past five or six years. He spoke of conditions as prevailing immediately after the panic of 1907, when the mill capacity was very much in excess of the legitimate consumption. This resulted in a continuous fight for business regardless of values, which condition prevailed for several years, although there has been a natural and steady increase in demand during that time. In speaking of present conditions and the unusual demand, President Jarrell said that, while there is ample market to take care of all the production of the members, still there is also ample manufacturing capacity to meet all possible calls for stock made by the veneer and panel companies. The excess of immediate demand over supply was attributed by the speaker to unusual circumstances. In the South the last winter proved to be the most unfavorable for getting out rough stock that has ever been experienced by the mills in that territory. Northern mills have in many cases been closed down during the fall because of shortage in timber supply, and will be unable to start up again until this can be replenished after the winter sets in.

President Jarrell sounded a note of warning against overproduction, recalling the dire results on account of increase in capacity in 1907. He stated that veneer and panel manufacturers are now in position to realize a profit from their manufactures and that each should resolve to do his utmost to prevent a repetition of the errors of that time.

Co-operation, according to the speaker, is one of the essentials which the veneer and panel business has lacked to a marked extent since its inception. "In the past," the speaker said, "the veneer and panel manufacturers have been entirely too exclusive in their demeanor, too cold and distant, and too many of them have been for

themselves alone, overlooking the fact that when they are trying to help someone else by free discussion of their methods, they are also helping themselves." The greatest possible good from association work can come from this very point through co-operation. Conditions are ripe at present for complete co-operation and new plans for stronger and more effective co-operation have been made and put in effect. By reason of these plans, more manufacturers are today interested in the association work than ever before.

Touehing on prices, the speaker said that they are not what they should be and that he feared the item of cost is not claiming sufficient attention. He suggested that every mill should employ an adequate cost system and every manufacturer be able to tell exactly what his goods cost.

The president deplored the condition of the various states in the matter of industrial liability. He stated that in many instances there is practically no defence in case of accident and that consequently the rates of liability insurance companies have been advanced several hundred per cent. In addition to this factor, the increase in transportation cost and the cost of logs and stumpage and labor must be taken into consideration in figuring value of products.

Secretary E. H. Defebaugh delivered a strong talk to the members in which he touched on various vital questions. The theme of his address, however, was, as with President Jarrell, co-operation. Through co-operation veneer manufacturers will be able to buy logs on a more just basis of cost and will be able to work out many questions vitally affecting individual membership. The speaker brought out the point that in figuring prices, costs of various items entering into production as existing a year ago cannot be used. Log values have advanced so materially, cost of labor has changed so remarkably, and other items have taken on such a different aspect that an entirely new status of conditions prevails. He suggested that overhead charges are usually figured much too low and that contingent expenses, such as are encountered for instance when mills are shut down, are seldom considered concretely in arriving at cost of production. He strongly urged members to consider that the philanthropists in business are in business for the sake of the buyer only and not for the sake of working out a living profit for themselves and their families.

The report of the treasurer showed balance on hand June 11, 1912, \$49.51; receipts during the year amounted to \$593.75; disbursements, \$366.32; cash balance on hand is \$276.94; to this can be added accounts receivable amounting to \$532. The report was referred to the auditing committee which later reported favorably upon it.

C. E. Gorham of the Goshen Veneer Company, Goshen, Ind., delivered a strikingly vital paper on factory safeguards against accidents. Summarized, the paper was as follows:

In every factory there are some machines on which the element of danger of operating is greater than on others and the nature of the work will not permit of guarding so as to absolutely prevent accidents where the work is carelessly handled. The best safeguard in such cases is to see that careful and competent men are employed to operate these machines and to prohibit any but the regular men to work on them.

The manner of handling logs in the yard and in and out of the vats varies to quite an extent in different institutions. I think that better results are obtained by my company and the chances of accidents less by placing the entire log in the vat with derrick, and after boiling or steaming, removing in the same manner to the drag saw to be cut into proper lengths, rather than to drag saw first and then place the blocks in vats as we used to do.

I also wish to call your attention to the manner of placing blocks in the lathe. There are several ways of doing this work and the most dangerous one, seems to me, is the hand derrick or windlass, such as is most commonly used for this work. My experience with the air hoists have been very satisfactory and we have never had an accident in this particular work since air hoists were installed in our factory. Several accidents occurred, however, during the time we were using the hand derricks or windlass which might have resulted more seriously than they did. We were simply lucky. I am not in a position to comment upon chain hoists which are utilized for this work, having never used them.

All belts which run from line shafts or counters to the floor or to machines where it is necessary to pass them, should be protected with wood or wire netting in a substantial manner. All clippers should have a guard in front and I should strongly recommend that you issue a strict order that two operators work at all times when these machines are in use, one to place the material under the knife and one to remove the clipped edges and stock. The habit of one man trying to do both jobs even for a short time may result in a loss of fingers.

The practice of clipper operators cutting scrap veneer into small pieces instead of immediately getting rid of it as soon as it becomes waste or scrap is one that should be absolutely prohibited. With us more accidents can be charged to this useless and unnecessary operation than from any other one cause, and it interferes with getting legitimate work through the machines.

Hand planers should be fitted with safety cylinders and guards. Shapers should also have proper guards, emery wheels fitted with safety collars and goggles or eye protectors provided, for use when hard grinding is being done.

When electric wiring for power and light is installed in accordance with the rules and requirements of the National Board of Fire Underwriters, there is but little danger from contact except at switches and fuse blocks. Knife switches and fuse blocks should always be placed in cabinets with doors. A copy of the rules for resuscitation from electric shocks should be posted so that prompt action can be taken in case of emergency.

Another matter I think worthy of mention and one that has been of great assistance to me in safeguarding our plant: I have made it a rule to personally accompany inspectors for the state and liability insurance companies through our factory rather than to turn them over to our superintendent or our foremen, and have always profited by so doing.

Mr. Gorham was called upon to answer many questions propounded by interested members. One man stated that ninety per cent of the accidents of his plant came from clippers and saws and asked for suggestions for some practical guards for these machines. Mr. Gorham suggested the difficulty of providing an efficient guard but said that in some instances a bar of iron is employed in front of the knife, allowing just room enough for the stock to pass through. Many guards, according to the speaker, curtail the production and are actually of very low efficiency. It was brought out in the discussion that the chief difficulty in efforts to safeguard workmen is in the attitude of the workmen themselves toward safeguarding devices. They usually disregard them entirely where any inconvenience is encountered in working with them. Proper safeguarding of the boiling vats seemed to interest most of the members present particularly. All agreed that one of the essentials to accident prevention at the boiling vats is to absolutely prohibit anybody working around them who is not directly connected with that work. One member employs an iron railing completely surrounding the vat, which is high enough above the ground to roll logs under. Men are

absolutely prohibited from going inside of this rail. At the log outtake there is a similar railed passage and the men are further provided with poles so that there is no danger of falling into the tank if the regulations are adhered to. One member who is from Kentucky reported that he got just as good results from steam as from boiling water. He reported that cost is about the same. Others, however, said that while steam is efficient in summer, it is absolutely worthless in winter and that exceptionally poor results were gotten from exhaust steam.

J. W. Beiger, glue expert of Mishawaka, Ind., read an exceptionally valuable paper on glue and its proper use and application in the panel and woodworking industries. The paper is reproduced in full elsewhere in this issue. Discussion following the paper, however, proved pretty conclusively that the average panel man's idea of the proper handling of his glue room to get out the most satisfactory results at the lowest possible cost is rather crude.

Henry Walseheid of the Veneer Manufacturers' Company of Chicago, a prominent veneer jobbing house, read a paper showing the jobber's view of the relation between the jobber and manufacturer. Mr. Walseheid's paper, which is published in full on another page of this issue, proved pretty conclusively the value of the legitimate jobber as distinguished from the commission man to the manufacturer. The sentiment which was brought out in the discussions following Mr. Walseheid's paper was notably favorable to the jobbing trade, considered as jobbers and not as commission men. One member differed with Mr. Walseheid in his assertion that the jobber could often find a market for cut-downs, the speaker contending that such stock is not marketable as it is in such a variety of sizes that handling of it would not be profitable. Mr. Walseheid contended, however, that if the manufacturer would state sizes which he can furnish in this class of material, it could be successfully handled through a jobber as this line of stock is usually bought on long-time orders and there is plenty of time in which to accumulate a sufficient quantity of it.

One of the most profitable features of the meeting was a series of talks on the log situation as it prevails in various parts of the country. Members from different sections were detailed to give their ideas on the condition in their territories. N. M. Willson of the Pearl City Veneer Company, Jamestown, N. Y., in telling of the situation in his territory outlined specifications for logs which he buys, saying that they take up nothing under fourteen inches and that they run usually from fourteen to sixteen inches. Maple is the principal wood bought by Mr. Willson. He gave an interesting comparison of log values prevailing fifteen years ago and now, stating that maple logs which were delivered at that time for twelve to fourteen dollars, now cost from eighteen to twenty-six dollars in extreme cases. Basswood logs then delivered for twelve dollars now cost from thirty to thirty-six dollars and can be had in small lots only. Eight years ago, according to the speaker, all the logs that were required could be drawn in in the winter on sleds from the surrounding country. Now three-fourths of the stock has to be shipped in by rail, some of it on as high as a five-cent freight rate, and the condition is getting more difficult from year to year.

The situation in the North, principally Michigan, as outlined by A. E. Gorham of the Gorham Brothers Company, Mt. Pleasant, Mich., is about the same as in New York state. Maple conditions are approximately the same, although basswood is not as expensive. Oak veneer logs now cost from thirty to thirty-eight dollars delivered. The situation, particularly in maple, is serious with northern manufacturers of veneer. This condition is traceable mostly to the fact that manufacturers of hardwood lumber throughout the state are fully alive to the condition regarding hardwood stumpage and are buying up every important hardwood tract which they can get hold of. This necessarily means that the veneer man who cannot afford to tie up his money in stumpage is up against it for log supply. Mr. Gorham predicted that oak logs will be from four to ten dollars higher during the coming year than they are now and particularly urged that veneer and panel manufacturers fully consider the unusual conditions prevailing in connection with stumpage in marketing their finished product.

R. C. Dayton, in telling of the situation in the Northwest, including principally Wisconsin points, said that the price situation there is serious and that there will probably be a general advance of twenty-five per cent during the coming year. Sawmills of recent years have not been heavily in the market for logs on account of trade conditions but this year the demand has been abnormal and there is great competition for birch, ash, maple and basswood.

W. F. Morris of the Paducah Box and Basket Company, said that gum logs are now bringing from two to three dollars more than last year. Where gum stumpage exists it is being bought up in any quantity by the hardwood mills. This condition is responsible for the fact that gum stumpage, which five years ago could be bought for four to five dollars an acre, is now bringing from fifteen to sixteen dollars.

President Jarrell stated that he now finds it necessary to get considerable of his timber from as far south as Mississippi and that there is great competition. He said further that the new regulations governing milling in transit are serious obstacles in shipping logs and that advanced freight rates is another factor contributing to the veneer man's troubles. One member, speaking of conditions in the West, said that poplar stumpage for veneering purposes which not many years ago cost eighteen dollars, now costs twenty-four and sometimes as high as thirty dollars. It increased during the past year thirty-three and a third per cent, which increase it is believed is permanent.

Following the discussion of log conditions, Secretary Defebaugh brought up the question of whether the association should join the newly organized Chamber of Commerce of the United States. It was voted that application should be made for membership and B. W. Lord was elected delegate to represent the veneer and panel association at the next meeting of that body.

It had been anticipated that discussion of standard weights for veneers and panels would prove particularly valuable. A special committee had been appointed to investigate this and to compile such a schedule of standard weights from information received by correspondence from the members of the association. It developed, however, during the committee report that the membership had responded very unsatisfactorily and the results as compiled showed such a marked variation that it was apparent that they were not actual weights but merely approximate weights. In view of the great variation it was not deemed advisable to take any action on the schedule but it was referred back to the special committee which was instructed to work the matter out on a more comprehensive and authentic basis and report back at the next meeting. Members were particularly requested to keep actual figures on veneer and panel weights so that they could respond to the committee's request on an intelligent basis and enable the committee to compile a schedule of standard weights which could be profitably adopted by the association. It was pointed out that in compiling standard of weights on crated veneer, one of the most serious drawbacks is the lack of uniformity in crating methods. To remedy this it would be necessary to create a standard method of crating or to compile weights on uncrated stock and let each man figure weights on actual stock, including actual weight on his own crating.

Reports of standing committees followed. Committees on constitution and by-laws, resolutions and arbitration had no reports to make. The executive committee recommended that the work of the association be carried out along the same lines as during the past year. It stated that it has under consideration various features which will be taken up at the next meeting. The membership committee reported on its efforts to secure new members for the association, which efforts resulted in the application of six concerns for membership. These concerns are the Buena Vista Veneer Company of South Bend, Ind.; Kile Manufacturing Company, Akron, O.; Knoxville Veneer Company, Knoxville, Tenn.; Jamestown Panel Company, Inc., Jamestown, N. Y.; Georgetown Manufacturing Company, Georgetown, Miss.; W. H. Gillen Veneer Company, Jackson, Ala. These applications were accepted.

Next followed the report of the railroad committee by B. W. Lord, chairman.

The question of the elimination of the railroads' practice of considering thickness in classification for veneers brought forth considerable discussion. The official classification specifies that veneers one-sixteenth of an inch thick and under take veneer rate and stock thicker than one-sixteenth of an inch takes lumber rate. In order to eliminate this classification, Mr. Lord reported that it would probably be necessary to eliminate fancy figured woods and quartered oak, which would undoubtedly cause considerable hardship to mills handling such stock. Mr. Lord recommended that the matter be left as it is at present. Another member expressed himself as believing that the railroads should put thick and thin lumber for both lumber and veneers under one classification. He said that in shipping mixed cars, different rates were charged on the different character of shipments. The speaker said that he understood that Illinois manufacturers can ship mixed carloads of thick and thin stock under one rate. It was pointed out by Mr. Lord that this is entirely an intra-state proposition. He said further that in shipments where there is a small amount of thin stock which takes the veneer rate and the bulk of the stock is heavy, the heavy stock can be billed at a minimum carload rate and the thin stock as a local shipment. Mahogany, according to the speaker, takes the first class rate and cannot be shipped as lumber under the official classification. Mr. Lord said there are three classifications in this country—the official, southern, and the western—and that they all differ as to the minimum thickness and as to weights. He cited the condition as existing on shipments from his mill in Kentucky, saying that if he shipped through the official district the shipments are under control of three different classifications, so that not only the rates may be different, but the minimum weights also. Mr. Lord said that there seems no way at present of changing this condition, but that the Uniform Classification Committee is trying to put into effect more reasonable classifications. This committee has not yet come to lumber products, but it is hoped it will do so in the near future. President Jarrell commended Chairman Lord of the railroad committee on his work. He said that the association had conferred with the Western Classification Committee and that they had the information just as Mr. Lord explained it; namely, classification on stock one-sixteenth inch and above as lumber and everything under that as veneer.

Mr. Lord said his concern discontinued cutting one-sixteenth inch stock two years ago and now manufactures one-fifteenth instead. He quotes on one-fifteenth and bills it out that way, the orders being accepted as one-fifteenth. The railroads, however, put the veneer rate on the car and Mr. Lord took it up with the Southern and Western Classification committees. The gentlemen sent representatives to Mr. Lord's mill, where he proved to them that he manufactured only one-fifteenth inch stock and shipped it as such. The committee of representatives took it up with the different railroad officials, who would not, however, accept the one-fifteenth stock as lumber. The question, however, was fought out to a finish and several months ago the railroads rescinded their former decision and are now accepting the one-fifteenth inch stock on the lumber rates. The difference is .1240 of an inch. Mr. Lord said that he believed the Uniform Classification Committee will figure on the basis of one-sixteenth and thinner instead of on the Southern and Western Classification of one-eighth inch and thinner. President Jarrell closed the discussion with a statement that the committee is ready at any time to take up any matter which any member submits of interest to the question of railroad classification.

The nominating committee recommended the re-election of the present officers as follows:

PRESIDENT, C. T. Jarrell.

FIRST VICE-PRESIDENT, B. W. Lord.

SECOND VICE-PRESIDENT, A. E. Gorham.

THIRD VICE-PRESIDENT, C. H. Barnaby.

SECRETARY and TREASURER, E. H. Defebaugh.

Three directors to take place of three whose terms expire: J. C. Hill, H. J. Barnard, M. W. Perry.

It was decided by vote to hold the next meeting of the association at Chicago. At a previous meeting it was decided that all annuals shall take place at Chicago, but the meeting place for the semi-annuals has been open. The meeting then adjourned.

Glue Economy

Editor's Note

The importance of glue to the panel manufacturer is too well known to need argument. The accompanying article, read by J. W. Beiger, mechanical engineer and glue expert, Mishawaka, Ind., before the National Veneer and Panel Manufacturers' Association in convention at the Auditorium hotel, Chicago, December 10-11, 1912, gives some valuable suggestions on the subject.

We will for a few minutes look at the source and manufacture of glue. The organisms of all animals, but more especially of the higher classes, contain tissues which are insoluble in cold as well as hot water. However, by continued boiling, they become dissolved and yield on evaporation of the solution a glutinous mass. By further drying this mass exhibits, according to the degree of purity of the material, a more or less transparent and brittle substance, which in its pure state is devoid of color as well as odor; it swells up in cold water and dissolves upon being heated in that liquid. This substance—that is, the conversion of the so-called glue or gelatine yielding tissue—is what is known to the trade as glue.

Neither glue nor gelatine exists ready formed in the animal organisms, except under abnormal conditions of disease, but they are the products of various transformations.

The raw materials used in the manufacture of glue consist of a variety of animal offal. The principal substances employed are refuse of tanneries, such as scraps of ox and other thick hides, the waste of workshops of leather dressers, etc. The tendons and intestines of many animals, rabbit and hare skins deprived of their fur, cat and dog skins, scraps of parchment, waste of tanners and button makers, and the offal of butcher shops and households help to swell the series of materials used for the manufacture of glue.

The materials are collected and sold either directly to a glue boiler, or to a dealer making a specialty of glue stock. The glue stock is then placed in large vats containing a strong solution of lime water. This frees it from all fleshy and bloody particles, and especially decayed matter. The stock is then treated with an acid so as to neutralize and preserve it. From here the stock is placed in large kettles and boiled. After separating it from all settlements and grease, it is put into coolers and allowed to chill, forming a stiff jelly. The jelly is then sliced and dried. It is then run through a crusher and broken up. This is the commercial appearance in which it is generally found.

So much for the source of glue.

A matter in which you will be more interested is how to determine the value and grade of a glue at the time it is delivered at your plant. There are few places where the consumers are equipped to scientifically analyze glue, and to those who are not it will be interesting to know just how this work is carried on, so that the covering capacity as well as the strength of a glue may be determined before any of the glue in question is put into the spreader.

This system is of vital importance to you, for without it it is rather dangerous business to experiment with a glue out in the plant and then put the reputation of your house back of that glue.

The glue manufacturer grades his glue in some cases by viscosity, in others by the stiffness of the jelly and the remainder by the price he can get for any old glue.

Taking the first means of testing, we will look into that and see of what value it is to you. By viscosity, we mean the body or thickness. For example, take milk and cream. Milk is thin and has a very low viscosity, while cream is thick and has a high viscosity. The above will also serve to explain that the viscosity of a liquid has nothing to do with the specific gravity, and cannot be determined by any floating glass instruments or hydrometers, which so many of

J. W. BEIGER, MISHAWAKA, IND.

the consumers believe.

To determine the viscosity of a liquid we allow a constant volume of that liquid to flow out of some containing vessel through a small opening at the bottom, and catch the time required to empty the vessel. The time in seconds is the viscosity, and the instrument is called a viscosimeter.

The value of this instrument to you can best be explained by an example. We will take the following conditions of a glue consumer—he is using a glue at 10 cents a pound. The viscosity of that glue in a 33.3 per cent solution is 15 seconds. Now he wishes to determine whether a certain glue he has received is worth the price quoted, and if a more economical glue for him to use. He will therefore make up a small batch of the glue in question and take its viscosity in a 33.3 per cent solution. We will assume that the result of that test was 10 seconds. That being the case, one thing is certain, the glue in question does not make up as heavy a liquid as the glue he is using, therefore it will be necessary

to add more of the test glue to the solution, so as to bring up its viscosity. By the use of tables and curves, he is able to determine that the glue in question will have to be made up in a 37.5 per cent solution so as to have the same viscosity as the glue he is comparing it with. That is, the glue he is generally using has a viscosity of 15 seconds in a 33.3 per cent solution, while it takes a 37.5 per cent solution of the test glue to give the same viscosity.

From the data now at hand it is an easy matter to figure the value of the glue, and the result of that calculation gives 8.9 cents. Therefore, this is the value of the glue to our consumer, and he will have to buy it at that price in order to get the same efficiency out of it as he is getting out of the glue he is using generally.

So that the above line of reasoning will be better understood, the following statement should be made: A batch of 100 pounds of liquid glue having a viscosity of 15 seconds, will cover the same amount of surface, if used in the same glue spreader, on the same kind of work, at the same temperature, regardless of the amount of dry glue there was put into that batch. Viscosity determines spread.

The word viscosity seems like a very scientific expression and is generally pronounced with great stress. But, gentlemen, it is only a term that tries to explain what every practical user of glue has endeavored to determine, the exact thickness of the body of glue. However, by the use of a viscosimeter there is no guesswork, and once the proper body of glue has been established for your work, you can always maintain that body, regardless of the grade of glue you have at hand. By being able to maintain a uniform body you have taken one step toward uniform work, and one step toward uniform cost of work.

While this system is not being used universally as yet, it is going to be used more and more as time goes on. It may seem strange to you that while there are a great many manufacturers of glue in this country, no two of them produce the same grades of glue, and stranger still, not any one of them can produce exactly the same grade from day to day. Each boiling must be analyzed for its grade. That being the case, unless you are checking up the quality of glue as it is delivered to you, there must be a variation in the grades of your glue. A statement of facts on this variation will seem very large, but there has been found on shipments of glue from the

same house, supposed to be the same quality and paid for at the price, a variation of 40 per cent in viscosity.

The second means of testing, viz., the jelly strength, is used very largely by the manufacturers in grading their product. The old finger test is being used in many places at the present time. This finger test is very inaccurate and is conducted as follows: Samples of the different glues as well as standard glues are all made up in the same per cent solution, and allowed to cool. They are then compared with the standards by pressing on the jelly with the finger to determine jellies having the same stiffness. Any glue having the same stiffness as one of the standards, is equal to that standard and priced according to the standard.

A more accurate way to test the jelly strength of a glue is to make them all up in the same per cent solution and allow them to come to a standard temperature. Then actually weigh the pressure required to force a plunger through the jelly. In making this test, the temperature is a very important factor, as one degree makes a difference of two pounds in the jelly strength. The greater the pressure required to force the plunger through the jelly, the better the grade of glue and the greater will be the adhesive power.

Referring to the standard glues as they are advertised on the market, the best grade has a viscosity of 34.5 seconds, and a jelly strength of 48 pounds, while the poorest grade has a viscosity of 6 seconds and a jelly strength of 7.2 pounds. From the consumer's standpoint, he cannot be guided by either one of these tests alone; he must take both, for in the case of viscosity foreign matter is apt to be in the glue, which would make it appear to be very heavy in body, but upon taking the jelly strength we find that it is low, therefore the viscosity was not the true viscosity of the grade, but was due to foreign matter. A glue must have for its viscosity the proper jelly strength, and by making the two tests side by side, the true value of a glue can be determined.

Not only does this allow the consumer to take advantage of the best values that are offered him, but he is in a position to compel the glue manufacturer to deliver the same grade to him in every shipment. Should any shipment arrive that is not up to the standard he has the means of rejecting the shipment, and thus avoid any inferior glue getting into the work.

By the use of these same tests, the heat damage done to the glue as it is in use out in the plant can be determined, and where it is large, means to stop that loss are effected. In places where the consumers have the equipment to make these tests, it is a fact worth mentioning that with the very best of results as to quality of work, the cost is around two dollars per thousand square feet, and in places not equipped the cost is much higher, and in many places the quality poorer.

There are several good reasons why this system is not in common use by the consumers at the present time. The first is, that it is not to the interests of the glue manufacturers to have the consumers educated along these lines. Another is, that it has never been shown to them from a practical standpoint. The work was always laborious, and the results hard to get. By the present system all unnecessary work has been eliminated and the results are absolutely accurate, short and simple.

One other advantage of this system is that when the glue salesman comes to call on you, you can tell him the exact value of his article instead of having to listen to him expound on the value of his glue. You need spend no time with him, because you can pick the best value for yourself.

Leaving the laboratory and going into the plant, without a doubt the greatest loss is in the heat damage. A twelve-cent glue will lose in value at about the rate of one-half cent per pound per hour. This fact is hard to see, for as the glue is going down in grade water is being evaporated out of the solution. The two will offset each other and the body of the liquid will remain about the same. But, nevertheless, the quality of a joint made by a twelve-cent glue after it has been under the action of heat for ten hours, is no better than a joint made from a fresh batch of glue of eight-cent value. There are at present a great many paying a good price for glue and allowing the heat damage to cause them to use a very poor adhesive.

Equipment for making up a batch of glue in as short a time as possible, not allowing it to stand around or soak, having the apparatus so arranged that only a small amount of liquid glue is on hand at one time, and last, but not least, having it so the place can be kept clean and sweet, these are a few of the things an expert must look after for his clients.

There are other materials used as adhesives, and no doubt vegetable glue comes next to the animal glues. However, by shrewd judgment in buying and using of materials a saving equal to that in the animal glue can be accomplished.

In concluding, I wish to thank you for the opportunity of speaking here today. I only hope that you will be benefited by my remarks. If you have, then this address has accomplished its purpose.

Eucalyptus for Cordwood

The government has just issued Forest Service circular 210 in which the proposition of growing eucalyptus for cordwood is discussed. This is an attempt, and one of the first, to consider the growing of eucalyptus on its merit. If it is good for anything, it is good for cordwood, and a discussion along that line is refreshing. Although it is not very good cordwood, it has some merit as fuel.

The Forest Service, co-operating with the California State Board of Forestry, carefully measured a number of eucalyptus plantations in that state, some of the best as well as some of average growth. The object was to ascertain how much an acre will yield in a given time, what the cost and expense are, and what the income will likely be. Non-irrigated land, such as is suitable for grain farming, may be had in California at \$30 an acre. It will cost additional \$26.25 per acre to plant eucalyptus and care for it during ten years, by which time it will be large enough to cut for cordwood. The total cost up to that time is \$56.25. It may be expected that the wood will then be worth \$160 per acre. That is a profit of \$103.25 an acre in ten years, when the crop is taken off, and a ten years' wait for another crop will follow.

These figures are based on averages of a number of plantations. It is pointed out that no income except from cordwood need be expected, unless the trees are left to grow thirty or forty years to produce saw timber, and even then, a sale for any purpose except cordwood would be doubtful, because lumber from young eucalyptus trees is not in demand. It shrinks and warps too much. The claim that merchantable lumber can be sold from ten-year-old plantations is emphatically denied. Nobody buys such lumber. The average diameter of logs of that age is considerably under twelve inches when green, and they shrink about fourteen per cent in drying.

The fraudulent claims made by some of the eucalyptus promoters, who have land for sale, are exposed. Their offer of planted land at \$250 an acre is a good thing for them, but mighty poor business for the investor. It does not require much arithmetic to show a loss for the man who pays \$250 an acre for planted land, keeps it ten years, and sells the crop for \$160, which is \$90 less than he paid. The government report speaks directly to the point on this subject. "If the total amount paid out," it says, "exceeds \$160 per acre, obviously there is a loss of capital, aside from the failure to secure any interest upon it."

The report attacks another preposterous claim made by some of the California eucalyptus land promoters who represent that an acre of eucalyptus will produce 100,000 board feet of lumber in ten years. It is shown that the best thirty-two-year-old plantation in California scales only 57,820 board feet, by actual measurement. "It should be borne in mind," the report further says, "that nowhere in the history of the world has any such quantity of wood as 100,000 board feet been produced per acre in ten years."

It may pay to grow eucalyptus cordwood in California on cheap, unirrigated land, but on good, irrigated land it will pay five or ten fold more to grow fruit, or field crops, and even on unirrigated land it will probably pay better to grow wheat and barley. There is no evidence that the growing of this wood for lumber will pay anything under any circumstances; and according to the report it will not pay to grow cordwood except on a pretty large scale.

Possibilities of Cork Oak in U. S.

One is not apt to think of cork being a very important commodity but in reality the importations of the United States of crude and manufactured cork now amount to considerably over four million dollars every year. Not a dollar's worth of cork is grown in this country although there appear to be no valid reasons why this should be so. The cork-producing territory of the world covers practically the whole of Portugal, extends eastward through the southern districts of Spain known as Andalusia and Estremadura, and from there northeast to include thousands of acres in Catalonia. Algeria, with Tunis, ranks next in importance in bark production, followed closely by southern France, including Corsica. Italy, Sardinia, Sicily and Morocco also contribute a share. The total area covered by cork forests is estimated at about four and one quarter million acres, producing annually about 50,000 tons. A large proportion of this is exported to the United States.

The cork of commerce, or "corkwood" as it is usually termed, is the thick outer bark of cork oaks, the most important species being *Quercus suber*. The natural growth or virgin cork, as the first stripping of bark is called, is so rough, coarse and dense in texture that it is practically useless. If it is removed carefully further development of commercial cork takes place and after eight or ten years is thick enough to remove. Subsequent stripings follow at regular intervals of about nine years.

The first commercial crop of cork is obtained from trees 35 to 40 years old, which have at that time a circumference of about 2.11 feet and yield cork worth about 30 cents a tree; the second crop, occurring between 40 and 50 years, is worth 58 cents a tree; the third crop, at the age between 50 and 60 years, is worth 94 cents; the fourth crop, between 60 and 70 years, \$1.40; the fifth crop, between 70 and 80 years, \$1.93; the sixth crop, between 80 and 90 years, \$2.56; the seventh crop, between the ages of 100 and 110 years, \$4.04 a tree; and the ninth crop, between the ages of 110 and 120 years, \$4.90 a tree; making a total of \$19.92 a tree.

Cork is stripped from the trees during July and August and care must be exercised not to injure the trees. By means of a long-handled hatchet or a curved saw the bark is cut through entirely round the base of the tree and at a point just below the insertion of the main branches. These two incisions are then connected by one or two longitudinal cuts and the bark pried loose with the wedge-shaped handle of the cutting tool. The larger branches are also stripped and yield thinner but generally a finer grade of cork than do the trunks. The thickness of the bark varies from one-half inch to two and one-half inches. While the yield ranges from forty-five to five hundred pounds, depending on the size and age of the tree. The bark is allowed to season for a few weeks and is then boiled and scraped. In this way it is cleaned and purified, becomes more pliable and soft, and can be flattened out readily for packing and shipping.

The uses of cork are very numerous. Besides the most common one, as stoppers for bottles, there are also: seine and gill corks, bobbers for fishing lines, instrument and fishing rod handles, bicycle grips, pen holders, discs and washers, gaskets in lubricator cups, life preservers, ring buoys, yacht fenders, shapes for mounting animal heads, buttons on fur coats, hat linings, glass polishing wheels, cigarette tips, and many others. The waste in the manufacture of these articles is made into composition cork, which can be used for many of the same purposes as the original. Cork shavings are em-

ployed in stuffing mattresses and boat cushions, in packing eggs and other fragile articles, and in making cork floor tiling. Cork flour is one of the chief constituents of linoleum. Granulated cork is widely used for heat insulating purposes, often in the form of cork board made up either with or without an asphaltic binder. The low conductivity and great durability make cork almost ideal for insulating cold storage and refrigerator rooms.

It should be interesting to note what has been done in the way of growing cork in this country. In 1858 the United States government distributed cork oak seedlings to interested persons in several states, but the Civil war interfered and the experiments were lost sight of. In the latter part of the 80's, 5,000 more seedling were raised and distributed by the Division of Forestry to people in the South Atlantic and Gulf Coast states and also to a few growers in Arizona and California. Repeated efforts to obtain reports of the results obtained evoked no replies, so that nothing definite is known regarding them.

There are, however, quite a number of cork oak trees of considerable size growing in South Carolina, Georgia, Louisiana, and California. So far as known there have been no attempts to treat these trees so as to enable them to form layers of commercial bark. Such experiments are much needed to demonstrate what quality of cork the trees grown in this country would produce. A number of the trees have been successfully grown at the forest experimental station in Chico, California, under direction of the University of California, and individual trees have done well when planted for shade and ornamental purposes in the Napa Valley, in California State Park in Sacramento, and other points in central and northern part of the state. No commercial plantations have been established, however.

Within the last year the United States Forest Service has planted cork oak on a considerable area on the Choctawatchee division of the Florida National Forest. Nearly all of the acorns came up, but those planted in January were killed back by frost and later sprouted from the stub. In January, 1912, a shipment of 100 pounds of acorns was received and planted on the Florida forest and at Summerville, S. C., in co-operation with the South Carolina Agricultural Experiment

INSIDE OF CORK FROM TREE GROWN IN LOUISIANA

Station.

One of the chief difficulties involved in introducing cork oak into this country lies in the poor keeping qualities of its acorns. The acorns mature in Spain, Portugal, Algeria or southern France in October or even November, and usually sprout the same winter. Most of such acorns shipped to this country are therefore received in a spoiled condition unless the greatest precautions are taken in their packing. Charcoal has been found to be the best packing material for preserving the acorns.

The minimum temperatures which cork oak can withstand are from 25° to 21° F. The maximum temperature is 104° F., and the minimum precipitation which is necessary for its growth is about 20 inches. On a basis of these figures it is apparent that the potential range of cork oak in this country is quite large. To what extent it will be economically profitable to produce our cork in this country instead of importing it from Spain or Portugal is a matter which can be decided only by actual experience.

S. J. R.

Maple is becoming almost as popular for making factory floors to run trucks on as it is for making the trucks themselves.

Need for the Veneer Jobber

Editor's Note

The following paper was read before the meeting of the National Veneer and Panel Manufacturers' Association at Chicago on December 10 by Henry Walscheid of the Veneer Manufacturers Company of Chicago. It proves the contention that the jobber is here to stay and will always have an important part in the veneer business.

When I was asked to read a paper to the National Veneer and Panel Manufacturers' Association on the advantages of the jobber, I hesitated because I have never done anything of that sort before, but finally agreed to do so because it has always seemed as though the millmen considered the jobber their enemy, and I believe if they would give this matter careful consideration they would find that they are not only their friends, but that their interests are mutual and the jobbers are necessary to the best interests of the veneer business from the millman's standpoint.

Before taking up some of the arguments for the jobber, I would like you to clearly understand what a jobber is.

A jobber, in my mind, is not one who represents a mill or sells on commission, but is one who buys outright and sells outright—one who buys car lots and in large quantities and generally sells in smaller quantities. A jobber buys on his own responsibility and knowledge; when he purchases stock and accepts it, the millman's responsibility ceases, and when this jobber sells this stock the responsibility of the stock, both as to inspection and credit, are entirely upon him. There are hardly any manufacturers to-day who do not sell to jobbers; there always have been jobbers; there are jobbers to-day and probably always will be.

In the first place, most of the veneer mills are located where the timber grows. The birch, basswood and maple mills are in the North, and as you all know, the gum, poplar and pine mills are in the South; the figured wood mills are scattered here, there and everywhere, consequently there are practically no mills that manufacture a complete line, such as the jobbers are obliged to carry.

The jobbing houses are most generally located in the largest veneer markets. This enables the consumer to secure stock on very short notice. Most of the veneer users cannot anticipate their wants and cannot wait to have the stock manufactured to their order or cannot wait for the stock to come from a distance.

As stated before, the jobber makes it a point to purchase in car lots, and not only does he save a great deal in freight and handling, but stock shipped in carloads goes through in very much better shape. Comparing it with local shipments, especially from where the timber grows, it is apt to be transferred several times at junction points, it is broken, damaged by handling, and if same is not properly packed it probably would not answer the purpose for which it was intended.

The largest veneer consumers order direct from the mills, and these orders are usually for dimension stock, so that the mills in manufacturing this dimension stock are certain to have a large amount of random stock and cut-downs which they accumulate. This accumulation is invariably bought by the jobber, as he is able to place this in small lots to people who do not order in large enough quantities to have their stock cut to dimension and to buyers who cannot wait, so that the jobber helps to keep the millman cleaned out of odd lots of stock, which the millman would find difficult to market to the consuming trade.

The veneer men have been trying for several years to encourage the use of log-run stock in random sizes and to discourage the use of dimension stock. The way to accomplish most good in encouraging the log-run and random size stock is through the jobber, as that is what he buys and sells, and the jobber has probably done a great deal to educate the consumers along these lines.

HENRY WALSCHEID, CHICAGO

Most of the veneer mills specialize upon woods in their locality. A jobber goes to the different mills and he will buy one or more carloads of their woods, taking different thicknesses, different sizes and different grades. He will ship this assortment of stock to his warehouse and then he will have similar shipments from other mills in other locations, so that he has a general line of stock suitable for mostly all wants.

A great many of the buyers want a small lot of mahogany, some walnut, some oak, several kinds of native woods in different sizes and thicknesses, and if they order this stock from the mills they would probably find it necessary to order from six to eight different mills. Some mills would ship more promptly than others, and consequently the consumer could not tell when he would get all of the stock together so he could start on his job. On the other hand, this consumer can go to a jobbing house, buy what he wants and just the quantity that would be required for his purpose; he can therefore afford to pay more to

the jobber than he would be obliged to pay direct to the mills. If he cannot find the exact piece of wood that would be suitable for his job, he is better able to judge a substitute than the millman, who in many instances does not know for what purpose the veneers are going to be used.

The panel manufacturers, no doubt, have a great deal of experience in this connection. They also know that the jobber is of great advantage to them, inasmuch as they get many rush orders for different kinds of work that requires many different kinds of woods. Immediate delivery must be had—and from whom? The only one qualified to serve them is the jobber.

Where the jobbing house is located in a large city there are a great many instances where work must be finished in a specified time. For instance, with interior finish work there is often a heavy penalty for delay. Suppose you eliminate the jobber, in which case the contractor is obliged to send away for his lumber and veneer, you can readily see how difficult it would be for him to collect his stock, depending upon shipments from the mills, with a possible shortage of cars, and then after this stock arrives it might not be up to requirements and it would be out of the question to wait for another shipment on account of the length of time it would take, and he would therefore be obliged to use the stock shipped to him, which would be unsatisfactory to all concerned.

As the situation is at present, when this interior finish man or any other contractor has a rush job, he goes to the jobber located in his town and he can probably pick up all the stock he needs for his entire order from one or two jobbing houses. The stock will be shipped promptly to his place or, possibly hauled right to his door, and then he is in shape to go to work. He can finish his job on time and know exactly what he will put into it.

Again oftentimes a man in getting out a figured wood job would have to submit samples of the veneer to the architect or his customer. Of course in such cases the jobber is not an advantage to the millman, but he is an absolute necessity to the buyer of veneers.

The above is mentioned to show the necessity of a jobbing house, which carries all kinds of plain and figured woods of different thicknesses, ready for immediate delivery. This is quite an advantage to the consumer, also to the manufacturer, and is a saving of time and expense to both.

A representative of one of the large veneer mills once told me that they never have over twenty-five or thirty accounts on their books. In our little business we carry over one hundred accounts, which shows how many more people the jobbers come in contact with, and a jobber is certainly more able, on account of his location and acquaintance, to market a great deal of stock that the millman would find very hard to dispose of.

There are so many buyers who use small amounts. The jobbers are able to sell them random stock, which they are compelled to match up for their work, when if all the users ordered their stock

direct the mills would simply be flooded with an unlimited number of small orders for special size stock, which I do not believe you would find profitable. I also think the jobbers relieve the millmen of a great many petty annoyances that otherwise they would have to contend with.

If you gentlemen will give this matter your careful consideration, and instead of feeling that the jobber is working against you, try to think that he is working with you. If both work together, I believe you will find that I am correct when I say that the jobber is an advantage to the millman.

Traffic Matters Around Memphis

A large delegation of Memphis lumbermen have gone to St. Louis to attend the hearing before the Interstate Commerce Commission in connection with the advance on hardwood lumber shipments from points in the southern territory to Canadian destinations. The lumbermen recently secured an order from the commission restraining the advance until the case could be heard on its merits. The outcome of this particular hearing is regarded as of wide importance because of its probable bearing on the other rate cases which are to come before the commission in the near future. The lumbermen are arguing that no further advances are either reasonable or justifiable and are asking that present rates be maintained or that these be reduced. Included in the list of those who went from Memphis are the following: James E. Stark, D. D. Nellis, S. B. Anderson, S. L. Sledge, Walker L. Welford, O. M. Krebs, S. M. Nickey, Elliott Lang, Frank May, W. A. Ransom, L. E. Brown and C. B. Dudley.

There was a hearing in this city during the past week in connection with the subject of estimated weights on hardwood lumber shipments, at which a number of the members of the hardwood lumber fraternity as well as prominent traffic men presented evidence. The commission has been holding hearings of this character at a number of other points. The lumbermen claim that the present system of weights is one that places them under a serious handicap. Commissioner Prouty was in Memphis. No decision has been announced but it is expected that after Chairman Prouty has reported the result of his hearing at Memphis something will be given out by the commission.

It is proposed to somewhat widen the scope of the Lumbermen's Traffic Bureau, although the exact method of accomplishing this proposition has not been decided upon. In the case of James E. Stark & Co., et al., vs. the Illinois Central Railroad Company, et al., an amended petition has been filed before the Interstate Commerce Commission. This step has been taken in order that there might be a number of firms shown as joint petitioners not included in the original action. The advances which are fought through this petition affect an extremely wide territory and lumbermen from many points are showing a keen interest in the work being done by the Lumbermen's Traffic Bureau in the direction of opposing these advances and also of securing lower rates than those now current. A number of them have asked to be allowed to participate in the work, and this is in reality the foundation for the movement which has been launched, looking to the creation of a traffic bureau which can take in outside members of the hardwood lumber trade as well as those of Memphis proper. There has been much discussion of this subject recently. In the meantime, it is announced from Washington that the advances proposed by the railroads have been indefinitely postponed, and it is suggested that there has been some disagreement on the part of some of the railroads in connection with the subject.

John R. Walker, a prominent attorney and rate expert of Washington, has been in Memphis for the past few days. He has been going very carefully over the rate matters to be presented before the Interstate Commerce Commission in behalf of the Lumbermen's Traffic Bureau of Memphis. He has held several conferences with the advisory board and other members of this organization, and an effort has been made to map out a plan of procedure calculated to secure

the best results in the forthcoming litigation before the commission.

Lumber interests are very much pleased with the recent decision of the Interstate Commerce Commission, holding that the railroads in Texas must issue through bills of lading on cotton shipments if the steamship companies are willing to honor these documents. The commission held that it had no authority to compel the steamship companies to accept these through bills but that it could and would compel the railroads to issue them if the steamship companies were willing to accept them. The steamship companies operating out of New Orleans have declared their willingness to accept through bills on lumber shipments through that port, and it is believed by lumber interests here that the commission will force the railroads west of the Mississippi river to issue through bills of lading on hardwood lumber shipments just as they have done in connection with the railroads in Texas on cotton shipments. This subject came before the commission December 21 in the case of the Anderson-Tully Company brought for the purpose of securing an order from the commission on this point.

Hearings on Schedule D

January 13 is the date set for a meeting of the Ways and Means Committee of the House of Representatives at Washington, for the purpose of drawing up a draft for a new bill on Schedule D covering wood and manufactures of wood, to be worked out by the new house after March 4.

Christmas for the Lumberman

The Christmas season is at hand; your money you must spend on folderols and knick-knacks and presents without end. As lumbermen we really think the idea would be good to send each friend a present made entirely of wood.

Unto your epicurean friend whose mouth is rarely shut, 'tis well to cloy his hunger with a piece of Butternut. While to your friend who's sporty (with the ladies quite a leader), you send a handsome little plank quite commonly called Cedar (seed-her).

To father who has lots of boys, who leave him in the lurch, a present that he'd welcome would be some strips of Birch. While to your Isaak Walton friend with wish for fishing good, he'd see the point most certainly if sent some nice Bass-wood. To your own girl, quite young of course, with laughter sweet and merry, you'd send a token for her lips—a nice red piece of Cherry. When Christmas day comes rolling round she'd take you for a goose, unless you wore your handsome clothes and dressed up slick and Spruce.

And even dear old Schneider, that sleepy canine bore, could have a toothsome bone boxed up in Quartered Sic-em-more.

The boys, Lord bless their little hearts! Just rush right out and tell 'em, they can have a nice toboggan made of A one Slippery Elm. When Uncle Silas comes around to get his noonday snack, he'll hang his hat inside the house on Northern tamarack.

All womankind, when Christmas comes, with fond emotions stir at any present from a man made up and trimmed with Fur. Or if you have a little one, and want to make things hum, just send by Santa down the flue a quarter's worth of Gum.

Use of Hardwoods in California

The California State Board of Forestry has published bulletin 3, devoted to the timber resources of the state, and particularly to the uses of woods by various industries in California. A footnote says that the statistics on which the bulletin is based were collected by C. Stowell Smith of the United States Forest Service, and cover one year, ending August 1, 1911.

The bulletin contains 114 pages, and is filled with valuable information, but unfortunately the editing was not well done, and the reader may encounter some difficulty in finding what he is looking for. However, if he is patient he will probably find it, for the report contains a little of nearly everything connected with the utilization of wood in the state. The greatest defect consists in not bringing together in one place the uses of a particular wood, so that an inquirer who is interested in that wood may get at one time all there is on the subject. Instead, it is necessary to go through the whole bulletin, picking out the desired information, a little here and a little there. The publication contains no index to the woods, by which they can be quickly found, but the industries are indexed. In one instance a single wood appears as though it were two woods, by giving it two names. It is listed first as "genisaro" (genesero), and as such is carried through the report, and under the name prima vera it is carried through the report a second time, making it appear that they are different woods. The error doubtless crept in through an oversight.

The defects in the bulletin are very small compared with its merits. It is a valuable publication, and contains information never before brought together. It shows much research and investigation. It is the first report of the kind ever issued for California. In scope and design it is similar to the state wood-using reports which the Forest Service has been publishing during the past three or four years.

California is not usually regarded as a hardwood state. It is not a large producer, but it consumes enough to make it of interest to hardwood dealers in the East. Some of the hardwoods used in the state were as follows:

	Feet.
Eastern white oak.....	25,624,091
Oregon oak.....	2,005,000
Japanese or Siberian oak.....	1,386,615
Eastern red oak.....	93,500
Eastern maple.....	1,017,950
Oregon maple.....	20,500
Eastern ash.....	701,698
Siberian ash.....	18,000
Oregon ash.....	14,600
Hickory.....	619,401
Elm.....	160,040
Black cottonwood (western).....	5,011,175
Birch (eastern).....	1,493,873
American mahogany.....	1,136,537
Philippine mahogany.....	33,792
African mahogany.....	33,620
Yellow poplar.....	565,158
Prima vera.....	286,818
Red gum.....	237,258
Beech.....	160,000
Australian ironbark (Eucalyptus).....	152,000
Black walnut.....	112,916
Teak.....	89,795
Cal. blue gum (Eucalyptus).....	55,350
Eastern cottonwood.....	49,225
Locust.....	45,000
Basswood.....	27,995
California sycamore.....	17,000
Australian blue gum (Eucalyptus).....	13,000
Orange.....	8,450
Circassian walnut.....	8,000
Black cherry.....	7,575
English willow.....	5,470
California laurel.....	5,200
Manzanita (California).....	2,000
Mountain mahogany (California).....	1,000
Blue myrtle (California).....	1,000
Chestnut.....	1,000

Australian mahogany (Eucalyptus).....	1,000
Camphorwood.....	1,000
Osage orange.....	50
Boxwood (sawdust).....	By weight
Rosewood.....	By weight
Japanese.....	By weight
Lignumvitæ.....	By weight
Ebony.....	By weight

It will be noted that four of the woods listed in the above table are eucalyptus, but there are three species of it. The California blue gum and the Australian blue gum are the same, except that one is a planted tree in California, and the other a wild tree of Australia.

A good deal has been said of late concerning the value of eucalyptus grown in California. Promoters who have land for sale and who are interested in disposing of it for planting this tree, insist that the wood is first class and that fortunes await the planters of blue gum. Other persons have combatted that claim and insist that thus far the eucalyptus grown in California has had little value because of the wood's inferior physical qualities. The contribution which the California State Board of Forestry, in the bulletin, makes to the discussion is of interest. The purpose which the board has is certainly not to belittle any of California's resources, but to give them the best report possible. It may be assumed, therefore, that eucalyptus was given the best recommendation, consistent with truth, that was possible. The first use reported for it was in the repair of furniture (page 49 of the report). After saying that the wood is strong and finishes well, this is added: "One firm reports having manufactured 1,000 feet of blue gum into furniture. It was found that it was too heavy; the gum destroyed the glue joints; it was difficult to nail, and warped after finishing. This firm plans to experiment again."

The next reported use for it was as driving blocks in oil-well work, where dry logs from eight to twelve inches in diameter were employed. No statement is made as to its success or failure.

The third and last use reported for it was in vehicle manufacturing where it was tried for axle beds, bolsters, poles, reaches, shafts, bars. This comment follows: "One manufacturer reports having made felloes for a set of wagon wheels out of this material, which gave good service the first summer, but which rotted to pieces in contact with the ground when stored under a shed for the winter. Another manufacturer reports its use to be satisfactory while moisture is retained, but it becomes very brittle when thoroughly dry."

The uses of different species of eucalyptus from Australia were apparently satisfactory, as no adverse report occurs in the bulletin.

The values of some of the hardwoods employed by manufacturers in California are of interest. The figures represent the average cost per thousand board feet delivered at the factory:

Plain white oak.....	\$ 76.15
Quarter-sawed white oak.....	89.21
Oregon oak.....	48.13
Japanese or Siberian oak, plain.....	91.09
Japanese oak, quartered.....	111.46
Red oak.....	58.85
Black cottonwood.....	23.51
Common cottonwood.....	96.48
Birch.....	79.85
American mahogany.....	178.53
Eastern maple.....	80.67
Oregon maple.....	58.83
Eastern ash.....	93.47
Siberian ash.....	82.78
Oregon ash.....	44.93
Hickory.....	101.23
Yellow poplar.....	98.39
Red gum.....	79.53
Elm.....	50.85
Beech.....	100.00
Black walnut.....	157.69
California blue gum (Eucalyptus).....	88.06
Australian blue gum (Eucalyptus).....	105.85

Basswood	63.44
Orange	90.06

Several hardwoods used in California have not yet appeared in Eastern markets, or at most in very small quantities.

Yucca is not, strictly speaking, a hardwood or soft wood. It is a palm and is cut in veneers from logs about a foot in diameter.

California sycamore is not the same species as the eastern. Trees are smaller, but the wood is by some considered superior.

The state grows the orange and olive wood demanded by California manufacturers of manicure sets and novelties.

California laurel is an evergreen, but otherwise resembles the eastern sassafras in size and appearance. The furniture of the Palace hotel, destroyed in the San Francisco earthquake, was of this wood.

Manzanita (the name meaning "little apple") is a small, crooked tree, with dark red wood, so brittle that when a branch is broken, the pieces fly in various directions.

Mountain mahogany is not a mahogany, but its dark-colored wood is made into small articles. Trees are generally only a few inches in diameter.

Blue myrtle, or mountain lilac, is seldom ten inches in diameter. The wood is yellowish brown.

The report does not make much of the California tanbark oak, probably for the reason that it was not found in use. It is the opinion of some persons that this oak has a future for other purposes than supplying tanning material. Though it checks badly in seasoning, its hardness and figure qualify it for service as flooring and furniture. The largest trees are from sixty to eighty feet high and two or more in diameter. It is an evergreen and the form of leaf suggests chestnut. It is the most important source of tanbark on the Pacific coast.

A summary of the wood-using industries of California, with the

quantity of wood used, and the cost, is shown in the table which follows:

TABLE 2. SUMMARY OF CONSUMPTION BY INDUSTRIES.

Industries	Quantity used annually		Average cost per 1,000 feet	Total cost	Grown in California, per cent.	Grown out of California, per cent.
	Feet, board measure	Per cent				
Boxes and crates	309,406,285	46.8	\$15 63	\$4,635,289	79.1	21.9
Sash, doors, etc.	131,519,498	19.9	22 78	2,995,841	73.6	26.4

Preventing Insect Damage to Hickory

Of all American hardwoods none would be more difficult to replace with a substitute than hickory. There is a greater demand for hickory for distinctive uses than for any other wood, and the rapid decrease in available supply is a matter of serious concern. In 1910 the reported cut of hickory lumber was 272,252,000 board feet. An additional amount, equivalent to approximately 150,000,000 board feet, was worked up directly into other products such as spoke billets, handle blanks, rim strips, etc. This does not include wood used for fuel or wasted in logging and manufacture.

One way of lessening the drain on the hickory timber is to prevent the waste of seasoned stock or finished material due to powder-post beetles. Most insects require considerable moisture for their activities, so that all that is necessary to guard against their attacks is to season timber thoroughly and maintain it in that condition. The powder-post beetle on the contrary prefers dry wood and the damage from its ravages has been enormous. Stored supplies of handles, rims, shafts and many other hardwood articles are likely to suffer severely, sometimes resulting in complete loss. The extent of the damage is usually concealed from view unless careful inspection is made.

Only the sapwood is attacked by the powder-post beetles. The larvæ feed on the starch and other forms of plant food which are found in the sapwood but not in the heartwood, and reduce everything to a fine powder except a thin outer shell. Hickory, ash and oak seem to be the most liable to injury. When finished material is once attacked it is usually worthless for the purposes for which prepared, and therefore must be replaced with new material. It is estimated that the average losses have been as much as ten per cent on nearly all sapwood material that has been in storage more than a year. The decided preference of manufacturers for white hickory (i.e. sapwood) accounts for the especial liability of hickory products to attack.

Such injury, however, can be prevented or at least greatly lessened by taking proper precautionary measures. At least once a year all material in the yards and storehouses should be inspected, preferably during November or February. The presence of powder-post beetles is indicated by fine powdery boring dust on the surface of the material or on the floor beneath it. Material showing such attacks should be removed at once and either destroyed or otherwise disposed of. If there is any old and useless sapwood material about, it should be sorted out and removed to prevent it affording favorable breeding places for the insects.

So far as possible no infested material should be allowed entrance into lumber yards or store rooms. A careful inspection is necessary to prevent this, but it is well worth the effort.

It is also a good plan to classify all dry or seasoned hardwood stock according to age and to kind of wood. Since material one year old and over is far more liable to injury, effort should be made to utilize it first. If sapwood and part sapwood stock is separated from pure heartwood there will be less to inspect. In the same way the species most liable to attack should be separated from the others to reduce the labor of inspection.

Damage by powder-post insects can usually be prevented by treating the sapwood with linseed oil or kerosene, either by immersing it in the oil or by applying the oil with a brush. The application should be made as soon as possible after the articles are finished from uninjured stock. Slightly injured articles should be tested for required strength and, if found of sufficient value for retention, should be treated with kerosene oil. They should not be returned immediately to the store room but kept by themselves for sufficient time to determine the success of the treatment. If new dust appears, a second application of oil should be made or the material destroyed. These measures are not difficult to carry out and will mean a great saving of valuable material.

* Not shown on diagram because the production within the State is relatively small in comparison with other kinds.
All other—No. 18 and No. 20—also include small unclassified quantities of the specified kinds.

PRODUCTION OF

PREPARED FOR THE

Based on figures received by correspondents.

The diagram in each State shows:

1. The output. By squares one billion.

2. The proportion of softwood (S) to hardwood (H).

3. The proportion of the kinds of wood. Figures indicate the kinds of wood.

4. The number of mills reporting.

The average mill value per thousand feet.

Graphic Map of Lumber Production

In the issue of HARDWOOD RECORD of October 10, 1911, was published a map for 1909 in which the latest statistics of lumber cut for the United States was shown by figures and diagrams. A similar map for the year 1910 is shown in this issue through the courtesy of O. T. Swan of the United States Forest Service. The figures given are the official returns and were collected and tabulated by the Bureau of the Census in cooperation with the Forest Service. Statistics of this kind are necessarily a year or more late, because of the great labor involved in collecting the information. The map as issued by the Forest Service is in colors, each one of the leading woods being shown by a separate color; but it is impracticable to reproduce the colors in the accompanying print, and the diagrams are depended upon to tell the story of lumber cut. A square inch diagram on the accompanying map represents four billion, the map herewith presented being only one-fourth the size of the original.

The map is largely self-explanatory, but some of the facts may be emphasized by calling attention to special features. The letter S accompanying the diagram means softwoods, and H hardwoods.

Figures refer to species, the first ten numerals to the softwoods and the second ten to hardwoods. Or, more specifically, 1 is southern yellow pine, 2 Douglas fir, 3 white pine, 4 hemlock, 5 spruce, 6 western pine, 7 cypress or redwood, depending upon the region, the redwood being found only in California, 8 cedar, 9 larch or tamarack, 10 all other softwoods.

Among the hardwoods 11 is oak, 12 maple, 13 yellow poplar, 14 red gum, 15 chestnut, 16 beech, 17 birch, 18 basswood, 19 elm, 20 all others.

The total for softwoods is 31,161,000,000, and for hardwoods 8,857,000,000; grand total, 40,018,000,000. For the sake of comparison, the totals for the year 1909 are given: softwoods 33,897,000,000, hardwoods 10,613,000,000; grand total, 44,510,000,000. There was a falling off in total cut from 1909 to 1910 of 3,492,000,000 feet, of which 2,756,000,000 feet was softwood and 1,736,000,000 was hardwood.

The falling off was doubtless more apparent than real, the census for the year 1909 being much more complete than that for 1910. In the former year reports were received from 48,112 mills, and in the latter year from only 31,983. The 16,129 mills from which no reports were received for 1910 were generally small concerns, yet if their average annual cut was only 220,000 feet, they would more than make up the apparent decline in lumber output from 1909 to 1910. It is therefore reasonable to conclude that there was no actual falling off in cut.

The apparent decline in hardwood cut was proportionately greater than in the softwoods.

That was doubtless apparent only, and was due to the fact that hardwood mills average smaller than those which cut softwoods, and consequently more of them were omitted when the 1910 census was taken.

Following are the leading hardwood states in which fewer mills reported in 1910 than in 1909:

	Mills Reporting 1909.	Mills Reporting 1910.
Mississippi	1,795	1,061
Arkansas	2,060	1,260
Missouri	2,076	1,325
Illinois	827	452
Indiana	1,604	1,044
Kentucky	2,372	1,660
Tennessee	2,643	1,774
Ohio	1,632	1,148
West Virginia	1,524	1,069
Pennsylvania	3,054	1,847
Michigan	1,323	898
Wisconsin	1,241	872
New York	2,308	1,468
Maryland	729	431
Virginia	3,511	2,286
North Carolina	3,307	2,268
Total	32,006	20,963

In the sixteen hardwood states named the decrease in the number of reporting mills was 11,043. It is not claimed that there was actually a decrease in the number of mills, but simply in the number reporting, as many of the small mills were not asked to make reports.

Because of the less complete returns for 1910, the basis of comparison of certain species with figures for the preceding year is destroyed. Maple is the only hardwood which shows as large a cut in 1910 as in 1909, and it shows an increase so small as to be practically nothing. The softwoods make a better showing and there was an increase on the face of the returns for Douglas fir, western pine, redwood, cedar, white fir, sugar pine, and lodgepole pine.

A comparison of average mill values for 1909 and 1910 for some of the principal woods are given:

	Average Mill Values, 1909.	Average Mill Values, 1910.
Yellow Pine	\$12.69	\$13.29
Douglas Fir	12.44	13.09
White Pine	18.16	18.93
Hemlock	13.95	13.85
Western Pine	15.39	14.26
Cypress	20.46	20.51
Spruce	16.91	16.62
Oak	20.50	18.76
Maple	15.77	16.16
Yellow Poplar	25.39	24.71
Red Gum	13.20	12.26
Chestnut	16.12	16.23
Beech	13.25	14.34
Birch	16.95	17.97
Basswood	19.50	20.94
Elm	17.52	18.67

No important differences in values occur. The general average mill value of all lumber cut in the United States in 1909 was \$15.33, and in 1910 was \$15.30, showing a very slight downward tendency.

Profit-Paying Sawing Wrinkles

For stock well manufactured the discriminating buyer of lumber will readily pay a better price than for the same grade of stock poorly or indifferently manufactured. He may well do so, too, for it is worth more; it will dress out and come smooth to the thickness expected of it, and not leave the marks of long saw teeth, and rough spots where the board was too thin. This is the best kind of argument in favor of the millman taking some pains to see that his stock is well manufactured, and it is also splendid selling argument for the man on the road selling the output of a mill.

The common interpretation of the term well manufactured, is to have the saw cutting smooth, and in a straight line, so that the lumber not only looks smooth, but also runs even in thickness, thus making it easy to dress and comparatively light on the planer. Also, we may add as a trimming to this interpretation, the careful edging and trimming of boards that there may be no ugly wane nor ragged ends. This latter interpretation is pretty well understood by the millmen, and is pretty generally followed by the progressive ones, so there does not seem to be much cause for complaint, except the occasional lapses on the part of some, and the failure on the part of others, the less progressive, to attach enough importance to proper manufacturing. But there is a much broader interpretation of this term than the commonly accepted one. We can go further with the matter and fare still better, make the term "well done" cover every step of the process from the cutting of the logs in the woods to the final delivery of the product to the consumer.

Well manufactured, in the broad sense, means getting the most out of the timber of the stock for which it is best fitted, as well as smooth, straight sawing, careful edging and trimming. That is why it begins in the woods where the logs are cut. The man marking off the logs for length should not only know timber, but he should also be well informed as to what the mill intends to cut, so that to quite an extent he can fit the length and character of the logs to the mill requirements.

The really competent mill sawyer knows how to place his logs, slab and box hearts, and what particular stuff any given log should best work into. Also, he knows the wrinkle of getting some clear stock here and there out of rough logs, so these points need no

elaboration. There are certain incidental things, though, that may be overlooked or not thought of. Striving to keep straight with the grain, or to keep the grain straight with the cuttings, is one of them.

There is a certain mill where the edging strips from inch oak are reduced to about $5\frac{1}{2}$ " by 1" and wound into a coil for a certain hoop-like use that will serve to illustrate the meaning here. It is evident that the grain in these must run pretty nearly straight for the strips to stand coiling even after steaming or boiling. It means that the sawyer is particular about his slabbing, and that the man at the edger is also careful at his work.

At another mill where wagon stock is quite a feature at times another detail comes out. Hickory, for example, is not only cut to single axle length before sawing, but the sawyer is duly mindful of the disposition to spring in even these short lengths. He knows, too, that it will not be as harmful for an axle to be sprung edge-wise as for it to be sprung sidewise. So in flitching, say for $3\frac{1}{2}$ by $4\frac{1}{2}$, he makes his flitch for the thick way wherever it is practical in flitching from the side of the log, for he knows the flitch is likely to do more springing in this original flitching off than it will in the final ripping up. It is not always that he can do just as he wants to in this, but he keeps it in mind, and it helps him turn out what is well manufactured stock in even a broader sense than the usual interpretation of the term.

In flitching oak or cutting thick stock, springing oftentimes is an aggravating factor. It is possible by a little study and experiment to find not only what kind of logs do the most springing, but also how to saw them to reduce this trouble to a minimum. There are often hard sides and soft sides to logs, sides with growing strains set up in them and other sides comparatively free from these, and it helps to find out about these things and take advantage of this knowledge.

Then, beyond all this, in edging and trimming out, there is a chance to redeem lumber that might otherwise be classed as poorly manufactured—boards that are thin and thick in spots, or thin on one edge and thick on the other. Some of this will happen in the best of sawmills, and especially is it likely with the last board on

the carriage. If it is a wide board, thin on one edge and thick on the other, it may be ripped into two narrow boards, one of which will pass as full thickness and the other as a thin board. Or, if it is thin at one end, it can be cut to a shorter board of full thickness and the thin end used for whatever it will make. A board thick and thin, sent full length to the factory planer, will have to dress down to the thinnest point to be good, and thus there is heavy work for the planer and an unnecessary waste of good timber unless it

is cut so as to eliminate the thin part and use it for something else.

One can dig up by patient and persistent study a whole string of details of this kind, each of which may seem insignificant in itself, but all of which make an important enough factor to be worth including in a broader interpretation of the term, well-manufactured stock. Attention to these things should pay just as well and just as surely as it pays to make what the trade commonly terms well-manufactured stock.

J. C. T.

The Mail Bag

Any reader of HARDWOOD RECORD desiring to communicate with any of the inquirers listed in this section can have the addresses on written request to the Mail Bag Department, HARDWOOD RECORD, 537 South Dearborn Street, Chicago, and referring to the number at the head of each letter and enclosing a self-addressed stamped envelope.

B 365—Has Cottonwood Box Boards to Offer

Des Moines, Iowa, Dec. 12.—Editor HARDWOOD RECORD: We will have about 200,000 feet of good cottonwood box boards for sale, and we would appreciate your putting us in touch with a market for this class of material.

The above inquirer has been supplied with a list of a few concerns who would be interested in this material.—EDITOR.

B 366—Want Poplar Electric Casings

In the November 25 issue of HARDWOOD RECORD an inquiry was carried regarding a source of supply for poplar electric casings. As it was not quite clear just what is meant by this, the correspondent was requested to give a little further information on this subject. Below is the reply.—EDITOR.

Cincinnati, O., Dec. 12.—Editor HARDWOOD RECORD: We are in receipt of your favor of Nov. 11, and regret to advise that we are not ourselves in a very good position to say just what is required. From the inquiry we have from our customer, we understand that the stock is wanted in widths of $1\frac{1}{8}$ inches, $1\frac{1}{4}$ inches, $1\frac{1}{2}$ inches, $1\frac{3}{4}$ inches, 2 inches, $2\frac{1}{2}$ inches and 3 inches. A larger proportion of $1\frac{1}{2}$ inches and a smaller proportion of $2\frac{1}{2}$ inches and 3 inches than of other sizes.

The stock is required to be dressed all sides and includes the necessary cappings as well as casings, that is, the top is separate from the body. We are not quite clear as to whether the capping is not moulded in some way.

We trust we may be successful in finding a good supplier of these, with whom we can arrange some business.

B 367—Wants Gum Veneers

New York, N. Y., Dec. 10.—Editor HARDWOOD RECORD: I use large quantities of rotary cut gum veneers $\frac{1}{8}$ inch thick and 6 and 8 inches wide. Can you send me the addresses of several southern mills that could manufacture this sort of stock, large plants preferred?

Thanking you in advance for the favor.

The above party has been placed in communication with a number of southern mills manufacturing the stock desired.—EDITOR.

B 374—Hickory Picking Sticks

Liverpool, Eng., Nov. 30.—Editor HARDWOOD RECORD: We are asked to put in a quotation for a quantity of the above, the sizes of which are to be 2 feet 10 inches long, $1\frac{1}{2}$ inches x 2 inches. We understand that it is the intention

of the buyers to cut them up the middle, that would mean we presume, $\frac{3}{4}$ inch x 2 inches, or 1 inch x $1\frac{1}{2}$ inches. Perhaps you may have had a similar experience, and know what they mean. However, we shall be glad if you will get us a price, and the time of delivery.

No quantity is mentioned, so we cannot give you any lead in this direction. All they say is—that each piece must be perfect, and any which does not come up to this strict demand, will have to be put out, as it would be useless.

— AND SON.

The above firm has been given a list of several manufacturers of hickory dimension stock.—EDITOR.

B 368—Wants Oak Dimension Stock

Grafton, Wis., Dec. 13.—Editor HARDWOOD RECORD: We are in the market for ten ears oak dimension stock of the following sizes:

$1\frac{3}{4}$ x $1\frac{3}{4}$ x 19,
1 x 3 x 16,
1 x $2\frac{1}{4}$ x 16.

B 369—Has Black Gum to Dispose of

Breading, W. Va., Dec. 11.—Editor HARDWOOD RECORD: Can you give me any information as to consumers of log run black gum? This stock is band sawed and can furnish it in any thickness.

Any information relative to above will be greatly appreciated.

The foregoing correspondent has been advised that the material he wishes to market is consumed in the manufacture of hubs, boxes, mauls, etc.—EDITOR.

B 370—Seeks Bone Dry Hickory

Newark, O., Dec. 13.—Editor HARDWOOD RECORD: We are in the market for about 75,000 feet of bone dry 4 4 hickory, grade of common and better or firsts and seconds. Positively no log run.

We would thank you for anything you could do for us in this matter. — COMPANY.

The above inquirer has been advised of several sources of supply for hickory.—EDITOR.

B 371—In the Market for Dimension Stock

Port Washington, Wis., Dec. 13.—Editor HARDWOOD RECORD: We are in need of oak, ash and hickory dimension stock of all sizes in large quantities.

B 372—Wants Specialties for Export

Toronto, Ont., Can., Dec. 12.—Editor HARDWOOD RECORD: Can you put us in touch with any manufacturers of broom handles, dowels, skewers and shovel handles, suitable for the English market, who are in a position to fill large orders?

We are told your paper circulates largely among this class of trade and would like to see a copy of it. — LTD.

B 373—Seeks Source of Supply for Dimension Stock

Elora, Ont., Dec. 11. Editor HARDWOOD RECORD: Would you kindly send us the address of

any manufacturer in the United States who cuts dimension hardwood, and oblige?

— AND CO.

A list of manufacturers of dimension stock has been sent the above correspondent.—EDITOR.

B 375—Record Lake Shipments

A prominent New York hardwood concern maintaining an extensive branch at Buffalo reports an unusual amount of hardwood lumber shipped on the lakes during the past year. A portion of the letter from this concern says:

Buffalo, Dec. 14.—Editor HARDWOOD RECORD: We have had a very successful year here with our new yard in Buffalo. We now have a very complete electric remanufacturing mill and what we consider a very up-to-date hardwood lumber yard. We handled on the Great Lakes this year about 19,000,000 feet of hardwood lumber and still have one steamer, the "Picaus," to arrive. This steamer will close our season on the lakes.

HAMILTON H. SALMON & Co.

B 376—A Correction

Hartford, Conn., Dec. 13.—Editor HARDWOOD RECORD: Your postal calling our attention to item on page 45 of the issue of December 10 is at hand.

The Hartford Lumber Company has been organized since 1889 and the company mentioned in your item must have been organized in some other state, as our secretary of state would not allow an organization of another company under the same name as ours.

THE HARTFORD LUMBER CO.

Per WM. J. RILEY, Treasurer.

This should have read Hartford, Vt.

Prolonging Life of Cross-ties

The Forest Products Laboratory at Madison, Wis., has published bulletin 118, which should be of much interest to railroad men. It is a summary of various publications dealing with timber treatment to hinder decay, which have been issued in recent years by the government. It is stated also that much has been taken from unpublished reports, and to that extent the bulletin is new. Three phases of the subject are discussed: Treating the wood with chemical preservatives; protecting the ties from mechanical wear; and the use of sawed in place of hewed ties. It is claimed that by these three means the enormous consumption of cross-ties in the United States can be reduced by at least one-half, with a yearly saving to the railroads of at least \$16,000,000.

In 1909, the railroads of the United States, including steam and electric, bought wooden cross-ties to the number of 123,751,000, at a cost of \$60,320,700. Thirteen per cent of these were purchased for new construction, the others were used for renewals. On an average for the whole United States, 358 ties per mile were removed from tracks and were replaced by new ones. The average cost per tie, exclusive of labor of handling, was 49 cents, or a cost to railroads of \$175 per mile, which for the whole country amounted to \$52,500,000. That heavy expense was paid by the railroads to make good the losses by decay and mechanical wear. To produce the ties for renewals it was necessary to cut about 710,000 acres of timberland, averaging 150 ties or 5,000 board feet per acre.

News Miscellany

The "Tarriers" Meet

Irish Night, Saturday, Dec. 14, at the Chicago Lumbermen's Club was another example of the splendid ability of the entertainment committee of the club. "Bob" Sullivan and "Bill" Eager performed their duties with unusual thoroughness, much to the delight of the many members of the club who were in attendance.

The entertainment committee followed the wise policy of engaging professional talent to assist the local talent with which the club is unusually well favored. The old saying "familiarity breeds contempt" usually makes its truth pretty well manifest at such gatherings where the entire entertainment is furnished by members. An excellent line of professional talent was provided, including a male quartet, a short skit by two young hopefuls of the other sex, and a stellar performance by Miss Vera Long, who got close to the hearts (and it might be added to the arms) of various members of the club. It may be poor policy to publish an account of this meeting, as undoubtedly if it got into the hands of any of the wives of some of the dignified club members they might consider it suitable grounds for divorce. However, if no names are mentioned it can probably be published with impunity.

The feature of the evening was the Irish theme which was carried out through all the performances. Irish songs were sung by the quartet, and "Bob" Sullivan acquitted himself very pleasingly with a couple of solos, which "the Chauncey Olcott of the Lumbermen's Club" can "get off" in a way equaled by no one.

The refreshment features were beer and sandwiches served at long tables. The members were also provided with clay "jimmies." Young and old, dignified and boyish members of the club were all compelled to don green paper caps.

On the whole the evening was a decided success, and the attendance entirely worthy of the efforts of the entertainment committee.

Banquet of the Sawdust Club

The Sawdust Club of the Union League, Philadelphia, held its annual banquet at the Union League club house, Dec. 11, 1912. This select body of lumbermen, who are also members of the famous Union League, is particularly distinguished for its original and unique entertainment of members and guests. Although less spectacular than in former years, the program this year was equally enjoyable, as a concert, orchestral and vocal, in which some of the finest classical compositions were rendered was the principal feature of the evening. The walls of the banquet hall were completely concealed by appropriate Christmas trees and other greenery gracefully disposed, and on the four sides columns were erected on which canaries in cages poured forth a continual melody. The table was of oval shape, in which was cut a large oval hollow, which was artistically filled with a huge bank of ferns and poinsettias, in the midst of which were inserted electric bulbs for further enhancement of beauty.

Frank C. Gillingham, president of the club, extended a hearty welcome to the members and guests, after which John T. Riley officiated as toastmaster, an office for which he has an acknowledged happy gift. Speeches were made by George V. Massey, Judge W. W. Porter, James Sherlock Davis and Richard S. White. A handsome solid silver penknife, on which were engraved the initials of each recipient, was encased in a satin-lined box bearing the name of each member and guest and placed before each plate, serving as place card as well as souvenir.

The menu, names of members and guests and musical program were published in booklet form, of which the fine style of lettering is notable,

and the cover distinctly a thing of beauty: the latter is a skillful composition representing the curly maple with the tint of mahogany, on which rich background the name of the club and date of annual in artistic gift lettering show to advantage. The annual of 1912 was, as usual, a successfully conducted affair and largely enjoyed by all present.

Memphis Club Elects Officers

John M. Pritchard of the John M. Pritchard Lumber Company will preside over the Lumbermen's Club during 1913. He was chosen president at the annual election held Dec. 14, having defeated John W. McClure of the Bellgrade Lumber Company. The race between these two gentlemen was very close. The election was one of the most warmly contested in the history of the club and the interest was at a very high pitch. The other officers elected at the same time follow:

First Vice-President: Harry B. Weiss of George C. Brown & Co.

Second Vice-President: D. D. Nellis of John M. Woods & Co.

Secretary-Treasurer: Charles G. Kadel of the P. F. Stone Lumber Company.

Directors: L. W. Ford of the Goodlander-Robertson Lumber Company, James V. Rush of Moffet, Bowman & Rush, J. S. Morris of the Bennett Hardwood Lumber Company.

The newly elected officers, including Mr. Pritchard, pledged their heartiest efforts in behalf of the club during the administration. They were all duly appreciative of the honors conferred upon them and said that they would try to show their appreciation through their accomplishments. Those who were beaten accepted their defeat in a most philosophic manner and without any trace of bitterness whatever. This was quite clear from the fact that they pledged their loyalty to the club and asserted that they stood ready to do whatever they were called upon to do.

The newly elected officers will assume their duties at the first meeting of the new year. The retiring administration is headed by Frank B. Robertson of the Anderson-Tully Company, who has made a remarkably successful president.

Charles Barnaby, president of the National Hardwood Lumber Association, was a guest during the election. He was called upon and said that he was very much pleased to be in Memphis during an election of the club and that he was all the more delighted because the club had honored an Indiana boy with the highest office in its gift. He said that both Mr. Pritchard and Mr. McClure were very highly thought of by the "powers-that-be" in the National Hardwood Lumber Association, as both were members of one of its most important bureaus, that on inspection, Mr. Barnaby referred to other pleasing features of his Memphis visit and said that the only disagreeable thing that had happened was the fact that he had been mistaken for Charlie Ransom. He did not mind being taken for the gentleman in question except for the manner thereof. He said that shortly after his arrival at the Peapody Hotel he was walking through the corridor and some man said in a rather loud voice: "There goes that d—d fellow, Ransom, now."

St. Louis Club Elects Officers

The regular monthly dinner and business meeting, as well as the annual election of officers of the Lumbermen's Club of St. Louis, took place at the Mercantile Club, Tuesday evening, Dec. 10, at 6:30.

After the dinner, a toast was drunk standing, in silence, to the memory of C. F. Liebke of the C. F. Liebke Hardwood Mill & Lumber Company,

and C. F. Querl of the Chas. F. Querl Lumber Company, two members of the club who had died during the last twelve months.

Immediately after the dinner, and before the regular business was taken up, Harry B. Hawes spoke to the members of the club on the Home Rule Bills, drawn up by the Business Men's League and endorsed by it. The bills were indorsed by the club.

When the regular order of business was resumed, the minutes of the previous meeting were read and approved.

The membership committee reported the name of W. H. Elbring of the Elbring Lumber Company for membership. He was unanimously elected.

The traffic committee, through its chairman, Henry A. Boeckeler, reported as follows:

Your committee begs to report that on May 6 of this year the Interstate Commerce Commission rendered a decision upholding the 19-cent rate to St. Louis on yellow pine from points west of the Mississippi.

The advance on hardwood rates to St. Louis and other points announced by the railroads to take effect Dec. 1, was suspended by the Interstate Commerce Commission until April 1, 1913. Your committee was represented at the meeting here with the railroads, when it explained to them that the lumbermen of St. Louis would not oppose this advance, provided the railroads would use their endeavors to restore St. Louis to the old rate basis. After this meeting adjourned it appeared that the hardwood men held a meeting, at which they decided to protest against the advance, and as they all worked together, the Interstate Commerce Commission granted their request and ordered suspension of the rates.

Acknowledgment is due to P. W. Coyle, traffic commissioner of the Business Men's League, for his getting together the chief railroad officials of the Frisco, Missouri Pacific, Cotton Belt and M., K. & T. Railroads, and ably explaining to them what St. Louis desired.

Your committee took up with the M., K. & T. Railroad the question of switching absorption on inbound lumber, and is pleased to report that this road will now absorb connecting line switching not to exceed one cent cwt. in order to make delivery to industries or public trucks on connecting lines. In addition to that switching, the switching charges of the intermediate lines will be absorbed when the M., K. & T. does not directly connect with the delivering line. This is according to Supplement No. 5, M., K. & T. Switching and Terminal Tariff 4280-B, effective Dec. 18, 1912.

The reports of the retiring secretary and treasurer, John B. Kessler and E. C. Robinson, respectively, were submitted and approved.

The treasurer reported that the club was in a good financial shape and that there was a nice little balance in the treasury.

The secretary's report gave the doings of the club during the year.

The election of officers for the ensuing year resulted as follows:

PRESIDENT—Thos. C. Whitmarsh of the W. T. Ferguson Lumber Company.

FIRST VICE-PRESIDENT—R. B. McConnell of the Huttig Sash and Door Company.

SECOND VICE-PRESIDENT—S. J. Gavin of the S. J. Gavin Lumber Company.

TREASURER—E. C. Robinson of the E. C. Robinson Lumber Company.

SECRETARY—John B. Kessler.

The two latter officers were re-elected.

After the result of the election had been announced, President H. G. Rolfe named Thos. W. Frye to escort President Whitmarsh to the chair.

President Whitmarsh in assuming the chair said that he was sorry that more hardwood men were not present at the meeting; that he wanted the retailers, yellow pine as well as hardwood, to bury the hatchet and if the hardwood people had any grievance against him, to forget it, as he had always acted aboveboard in any opposition that he had made and they always knew where he stood on every question and that he never fought them underhanded in any manner.

R. W. McConnell, first vice-president, S. J. Gavin, second vice-president, E. C. Robinson, treasurer and John B. Kessler, secretary, in turn thanked the members for electing them to their respective offices.

After a rising vote of thanks had been given to all the retiring officers for their services during the year and to the chairman of the entertainment committee, James E. Gatewood, in particular, the meeting adjourned.

Death of Prominent Industrial Leader

In the death of George Burnham, Sr., father of George Burnham, Jr., of the Baldwin Locomotive Works, and long time the financial head of these works, the largest industrial plant in Philadelphia, and the largest locomotive builder in the world, which occurred on Dec. 10, ends an exceptionally long and useful life. He was ninety-five years old.

From Springfield, Mass., where he was born in 1817, he came to Philadelphia a youth of fifteen, and served as a clerk in a grocery store until he met Mathias W. Baldwin, the builder of "Old Ironsides," the first locomotive built here, and so crude in construction as to be equal to running to Germantown, about eight miles from the city and back only in fair weather. He was employed by Mr. Baldwin to keep the books, attend to the correspondence and pay the mechanics. In 1835 he became the right hand of Mr. Baldwin, who had steadily gone on perfecting the locomotive until five locomotives, considered a wonderful achievement at that time, had been placed on three railroads. One was put on the Germantown railroad, three on the Philadelphia and Columbia Railroad, the predecessor of the Pennsylvania Railroad, and one on the Philadelphia and Trenton Railroad. Mr. Baldwin soon became known all over the country as a successful locomotive builder. Money was not plentiful as soon as it became necessary to extend the works, and workmen of the right kind were hard to get. Mr. Burnham was expected to supply both. One day he told Mr. Baldwin there was no money in the safe to pay the mechanics. "Go get it! Go get it!" was all the satisfaction he got. Well, he got it, and always did get it—he was a skillful financier. Of incalculable help and relief to Mr. Baldwin in this part of the business, Mr. Baldwin could devote all his time to building better locomotives until by 1837 he was turning out twenty a year. He built the first eight-wheeled locomotive, which has served as the standard type for engines in America. Larger accommodations were taken for conducting the business, which soon grew inadequate, and to the building on Broad street extensions were made until the acreage of the works in Philadelphia at the present time amounts to seventeen, and the new works at Eddystone, near Chester, Pa., has an area of eighteen acres.

The panic of 1837 plunged the works into difficulties, but the financial genius of Mr. Burnham saved it. Mr. Baldwin died in 1866, and in 1873 the firm style became Burnham, Parry, Williams & Co. Mr. Burnham was now more than ever (if possible) the financial head, and in many a crisis it was his skill in this direction that carried the business safely through. He was something of an inventor, too; when he was comparatively a young man he contrived a diving machine which stood the test in the Delaware river; other attempts in this direction were eminently successful. It was the custom to test the locomotives before leaving the works by building a fire in their fire boxes. In the case of one or two locomotives a year this primitive method worked very well, but when there were more and more to test, the smoke from the furnaces filled the works and the smoke stacks erected to carry it off would have to be too many to be endured. "Why not pipe the steam from our stationary engine?" says Mr. Burnham. The suggestion was immediately followed and there was no more trouble with smoke, the problem was solved and from that time the Burnham method of testing locomotives was adopted.

Mr. Burnham leaves three children: George Burnham, Jr., of the Baldwin Locomotive Works; William Burnham, president of the Standard Steel Company, and Miss Mary Burnham, a member of the vice commission and a well-known philanthropist.

Eastern Retail Suit Begun

Arguments in the case of the government against the Eastern States Retail Lumber Dealers' Association began December 17 in the United States court in the federal building. Assistant District-Attorney Clark McKecher was heard on behalf of the government, and for the defendant associations A. B. Cruikshank of Atwater & Cruikshank. This case against the Eastern States Retail Lumber Dealers' Association, which includes in its membership the New Jersey Lumbermen's Protective Association, the Retail Lumber Dealers' Association of Philadelphia, the New York Lumber Trade Association, the Lumber Dealers' Association of Connecticut, the Building Material Men's Association of Westchester County (New York), the Massachusetts Retail Lumber Dealers' Association, the Retail Lumbermen's Association of Baltimore and the Lumber Dealers' Association of the State of Rhode Island, was the first of a chain of suits brought against organizations in the lumber trade for alleged violation of the Sherman anti-trust law, and in it the government seeks to restrain the affiliated organizations from circulating the so-called black list and other information of interest and value to their members. The petition was filed in the spring of 1911, since which time testimony has been taken before an examiner. This suit has held the attention of the entire lumber trade of the country and the decision is awaited with interest.

Death of F. W. Gilchrist

In the death of Frank William Gilchrist of Alpena, Mich., on the morning of Dec. 13, the lumber trade lost one of its oldest and most highly respected members. Mr. Gilchrist died after a short illness, which he had felt only since the fourth of the month. The disease was diagnosed as uremic poisoning.

Mr. Gilchrist had long been associated with the lumber trade, and his father before him was a lumberman. The deceased was born at Concord, N. H., Feb. 9, 1845. He came to Michigan in 1850 with his father, Albert Gilchrist, who had been in the lumber business in New Hampshire before that date. His father took up his residence at Marine City, Mich., where he engaged in lumber manufacturing for several years.

The recently deceased obtained his public schooling at that place and upon graduation took a two years' college course at Oberlin, O. It was natural that in connection with his father's business he would get considerable training in the lumber business, and equally natural that upon his breaking off from his scholastic training he should go into that line of endeavor for himself. This he did in 1867, at which date he moved to Alpena, Mich., and started in on his own account. One of his earliest activities was his interest in lake transportation of lumber. His early efforts in that line broadened out so that at his death he was widely interested in lake carrying concerns.

The sawmill at Alpena has been operating continuously since its erection in 1867, and until the latter part of the present year, at which time it was shut down permanently as its entire source of timber supply was exhausted. Mr. Gilchrist's lumber and timber interests have greatly expanded and at the time of his death he was interested in concerns in a dozen different sections of the country. Among these was the Gilchrist-Fordney Lumber Company, Laurel, Miss.; the Rust-Owen Lumber Company, Drummond, Wis., and the Three States Lumber Company of Memphis, Tenn.

Mr. Gilchrist married Miss Mary Rust in 1868. Miss Rust was a daughter of A. Rust, who was one of the pioneers in the lumber business in the Saginaw valley. The deceased leaves, besides his widow, three sons and a daughter. They are Frank R., William A., Ralph P. and Miss Grace Gilchrist. William A. is now managing the Three States Lumber Company.

The funeral and interment took place at Detroit on Dec. 16.

Mr. Gilchrist's passing away means a sincere bereavement to a great many men actively connected with the lumber business. His friends among the old line of lumbermen were many. He was a man to inspire lasting friendships and deep respect among those who were not favored with an intimate acquaintance. He was a man who did much for the public interest and took an active part in many things working toward the betterment of his state and city.

Meeting St. Louis Lumbermen's Exchange

The Lumbermen's Exchange of St. Louis held its annual meeting and dinner at the Missouri Athletic Club, Tuesday evening, Dec. 17.

Several changes in the constitution were made, among them being one increasing the dues of the exchange on a sliding scale, which will place it on a better financial footing and will make it self-supporting, independent of inspection fees. During the past year, owing to various changes, the inspection fees fell off greatly, necessitating a special assessment on the members in order to pay operating expenses.

President Thos. E. Powe gave his annual address in which he reviewed the year's progress of the exchange. He told of the work being done toward strengthening the inspection certificates by appointing a committee on re-inspection, composed of three representative members. The by-laws were changed to cover this move and it has proven an excellent one. In order to induce new membership to the exchange, an additional fee of ten cents a thousand to non-members was added to inspection charges.

The floods and difficulty in getting a competent inspector materially reduced the amount of lumber inspected during 1912. In 1911 there were 7,400,000 feet inspected. President Powe strongly supported the inspection bureau and equally emphatically urged its continuance and growth.

The committee on public affairs appointed by President Powe early in the year made a strong effort to induce woodworking and other plants to locate at St. Louis, but without much avail.

The president further told of the monthly noonday meetings which had been held during the year, and said that they had proven an excellent means of getting together for mutual discussion. He reported a slight increase in membership during the year.

President Powe told of the efforts of the exchange to secure a larger representation of St. Louisans on the board of the National Hardwood Lumber Association. These efforts were not successful at the last meeting. The exchange was successful in getting members on important committees, however.

In closing, President Powe thanked the members for their support and co-operation.

The report of the traffic committee stated that the strong efforts of the committee to abolish the advanced rates from the Southwest to St. Louis, which became effective Jan. 5, 1911, finally resulted in an adverse decision by the Interstate Commerce Commission. The report expressed the belief that the reason for this failure was the problem of putting the Cotton Belt route in position to haul lumber into St. Louis via East St. Louis with no less rate than to East St. Louis. The report also regretted that its protest against the rate advance of one cent to St. Louis from southeastern points was ineffective. St. Louis is not unduly affected inasmuch as competitive gateways had to take the same advance.

The committee was successful in having suspended the advance from one cent to three cents against certain southwestern points, to St. Louis, Cairo, Memphis and all junction points. This rate was to have become effective Dec. 1, 1912, and is suspended by the Interstate Commerce Commission to April 1, 1913.

The report outlined what has been done, and what is necessary to do further in opposition

to proposed advances on rates to Canadian points via Ohio river crossings.

The committee suggested that inasmuch as the rate work is of extreme importance and demands more time and effort than a busy business man can give, it seemed advisable that the exchange secure the services of a competent traffic man to give his entire time to the work.

The committee also recommended that the St. Louis Lumber Exchange work in connection as far as possible with the Lumbermen's Traffic Bureau of Memphis.

Nominations were then made for officers to serve during the coming year. Two tickets were named, one by a committee appointed by the president and the other by a committee named from the floor. The candidates named for president were W. W. Milne and F. H. Smith.

The election will be held at the offices of the exchange on Jan. 5.

The Rate Hearing at St. Louis

The hearing of the proposed advanced tariff on hardwood lumber and yellow pine lumber from southern points to the Mississippi river gateway and Canada and including Cairo and East St. Louis, was heard by United States Commissioner B. H. Meyer of the Interstate Commerce Commission, at the Planters hotel, Monday and Tuesday, Dec. 16 and 17. Further hearing was postponed until Jan. 24, in Cincinnati.

A notice of the proposed increase in the tariff was filed with the commission a month ago. The lumbermen protested and the proposed rate was ordered suspended until Apr. 1, 1913, pending the result of the investigation by the Interstate Commerce Commission.

The lumbermen say that the added charges, if sustained by the commission, will cause an increase in the cost of hardwood in St. Louis alone of from \$7,000,000 to \$10,000,000 each year, as the lumbermen will be forced to recover the increase by raising the prices on their products.

This will eventually come home to the consumer, adding somewhat more to the high cost of living. Including the lumber shipped to St. Louis to be dried, graded and reshipped, it means a total increase in the freight bills of St. Louis merchants of from \$15,000,000 to \$25,000,000.

Under ordinary conditions the lumbermen say that they will grant everything commensurate with their interests to the railroads, realizing that without the conveyors they are practically helpless, but they feel that the new rate is altogether too high.

No substantial advances in the tariffs on other articles have been made and the St. Louis dealers consider that the railroads are showing unjust discrimination against them, especially as the hardwood trade lasts throughout the year, and can be carried by any sort of an equipment.

In January, 1911, the railroads got permission to advance the rates on lumber to St. Louis alone, giving the other competing centers a tremendous advantage over this city, say the local dealers, and in their opinion the proposed new advancement is merely another blow at the St. Louis lumber yards.

The southern lumbermen consider that the granting of the new rates will mean a death blow to many of them, as it will ruin their trade in the marketing of low-grade lumber, which constitutes a majority of the business of most of them.

The time of the hearing on the first day, was taken up with testimony from railroad officials. Their testimony was of a technical nature. They testified, in substance, that the proposed advance would not increase the revenue of the Canadian roads, as several reductions are made in the new schedule as well as advances. The testimony on Tuesday was largely a repetition of that of Monday, at which the railroads contended that the proposed advance in lumber rates would not injure the lumber interests, who could add the additional cost of transportation to the price to the consumer.

In the afternoon on Tuesday the lumbermen began giving their evidence, the railroads having closed their case early in the afternoon.

James E. Stark of Memphis, Tenn., was the first witness for the objectors. His company, he testified, handled almost 2,000 carloads of lumber a year, of which about 150 are sent to Canadian points. He expressed the opinion the proposed rates would work a great injury to the hardwood dealers of the South by enabling dealers in Idaho to place fir lumber on the market cheaper than the southern dealers could.

National Inspection for November

President Charles H. Barnaby of the National Hardwood Lumber Association has issued a statement of inspections by the inspection bureau of that organization for November, 1912. This statement shows that there was a total of 17,180,640 feet inspected under the bonded certificate during the month. Car shortage seriously affected the work of many inspectors, but in spite of this the figures show an increase of 4,510,243 feet over November, 1911.

Fourteen new applications for membership were reported since November 14, which brings the total of new members admitted since the June convention to sixty-five.

The executive committee, as reported in a previous letter from the association, decided to call a meeting of the inspection rules committee in Chicago. A call has been sent out to all members of that committee to meet at the Hotel Sherman, Chicago, Jan. 13, 14 and 15. Chairman J. M. Pritchard requests that all members having any suggestions for changes or additions to present rules submit their ideas in writing prior to Jan. 13, in order that the inspection rules committee may be given ample time to consider all recommendations before drafting its final report.

President Barnaby's letter says that there have been fewer complaints during recent months on account of the inspection department than ever before.

Improvements at Nashville Flooring Plant

The Nashville Hardwood Flooring Company at Nashville, Tenn., has just completed extensive improvements at its Nashville plant, involving the construction of two large Standard dry-kilns at a cost of \$8,500. Orders have also been placed with the Berlin Machine Works of Beloit, Wis., for additional moulders, which will double the output of the interior moulding plant.

The Nashville Hardwood Flooring Company is controlled by John B. Ransom & Co. of Nashville. It manufactures the famous "Acorn" brand of hardwood flooring, which has gained a wide reputation throughout the country.

Bulletin on Chestnut Blight

The Pennsylvania Chestnut Tree Blight Commission has just issued for the information of the public, Bulletin No. 1, a brief, illustrated publication giving the means of identifying the chestnut blight disease and suggesting remedies for its control and eradication.

The interesting document points out the great danger of extermination that menaces Pennsylvania's vast chestnut resources, and urges a prompt and vigorous co-operation generally in the effort in progress to stamp out this new, but terribly destructive pest of our native chestnut trees.

The disease has already entailed losses to timber owners in Pennsylvania amounting to fully ten millions of dollars, having been especially virulent in southeastern Pennsylvania, where thousands of both old and young chestnut trees were killed by the blight. West of the Allegheny mountains, a concentrated effort on the part of the employes of the commission and with the co-operation of timber owners and others, the blight will practically be wiped out by the close of the year, thus giving the assurance that a large portion of Pennsylvania's many millions of dollars' worth of chestnut may be

saved, and the disease checked before it can spread into the valuable timber of adjacent states.

The bulletin describes many phases of the blight, and the warfare that is being waged to control the outbreak. It defines very clearly that contrary to the erroneous opinion advanced by one or two writers, the blight is of a parasitic form, and the trees are not killed by any insects, as has been stated. The fungus is spread, however, by the wind, animals, birds, insects, etc., and when trees are infected, it soon girdles the twigs, branches and trunks, thus causing their death, since the supply of sap beyond the girdled part is thus effectually cut off.

At this season of the year, when chestnut trees are found with branches bearing dry leaves and immature burrs, cankers, orange-colored pustules, etc., it is an indication that the tree is seriously diseased, and the facts should be reported to the Commission and the owner.

Every county in the Commonwealth is under surveillance, and the wisdom of the law creating the commission has been fully demonstrated by the recent favorable developments in various sections of the state where serious outbreaks were promptly averted.

The bulletin also refers to the economic and profitable utilization of trees killed by the blight. The commission acquired much valuable information upon the subject, and can therefore prove of genuine service to those seeking markets for commercial products of the chestnut. The Pennsylvania Railroad Company also conceded special low rates on blighted chestnut cord-wood consigned to tannic acid factories, in order to aid timber owners to find a ready market for such products.

Chestnut nursery stock can only be sold and shipped after it has been carefully inspected by the agents of the commission and properly tagged. A tree that does not appear to be entirely free from the disease is condemned and burned. Nurserymen, generally, are in sympathy with this action of the commission, having no desire whatever to aid in the dissemination of the disease.

It is a source of satisfaction to learn that thus far the blight has confined its ravages to the chestnut tree exclusively.

Copies of the bulletin are available and will be sent without charge upon request, by writing to the commission, at No. 1112 Morris building, Philadelphia.

Buffalo Lumbermen at Head of Distinguished Function

For a year Orson E. Yeager of Buffalo has held the office of president of the Buffalo Chamber of Commerce, which organization has done marvelous work in boosting the Bison City. During the administration of Mr. Yeager many new ideas have been suggested and carried out, and his administration has resulted in a vast amount of good to the business of the city.

On the evening of Dec. 14 this body held its annual banquet at the Hotel Statler, Buffalo. The banquet was a brilliant affair, attended by practically every important business man of the city. The gallery was filled with a brilliant array of feminine beauty embodied in the wives of many of the members.

President Yeager presided and gave a forceful talk, outlining what the chamber has been trying to do, and entering the plea to the young men of the city to draw up into the positions which will gradually be vacated by the older element.

Another lumberman, James B. Wall, who is actively identified with this body, was one of the banquet committee.

Market Report Hardwood Manufacturers' Association

From the executive offices of the Hardwood Manufacturers' Association of the United States at Cincinnati there has just been issued the market analysis for the month of November. The association is developing this market condition

report to a state of high efficiency through the use of the facilities that it possesses to secure confidential information from its membership.

This market publication is intended as a guide to the member, whether he is a producer, wholesaler or consumer, by furnishing a comprehensive and at the same time an accurate analysis of market conditions of recent sales for the various hardwoods.

The method used in compiling this report is interesting. The membership of the association is divided into seven classes, according to the woods they handle, as follows:

Class No. 1. Oak, Oak Construction and Car Material.

Class No. 2. Poplar Planing Mill Operator.

Class No. 3. Poplar, Chestnut, Basswood and Buckeye.

Class No. 4. Gum and Cottonwood, rough and dressed.

Class No. 5. Ash, Cherry, Walnut, Hickory, Butternut, Beech, Birch, Maple, Elm and Sycamore.

Class No. 6. Chair, Furniture and Vehicle Dimension.

Class No. 7. Mahogany.

On the first of each month report blanks are mailed to the membership. Each class has a separate report sheet. The member inserts the prices he has been receiving during the preceding month for the various grades of hardwoods enumerated, together with such comments as may come to his mind.

This information is then compiled at the association's office. All the reports on each grade of wood are assembled, and as there are about three hundred on most of them, this gives a comprehensive idea of just what the market is for each particular wood. The highest and lowest prices are used for the range of the market, as well as the average price determined. All the prices submitted are then carefully studied for the analysis of the market, which is reached by taking into consideration the volume of business and other general conditions surrounding the market.

The reports also take into consideration demand, car supply, thicknesses, etc., with the result that they are an indispensable feature in the hands of the millman in the back woods, whose only outlook over the market for his product is his selling correspondence and maybe the daily newspapers, as well as such stray information as may drift his way occasionally.

Faust Lumber Company Organizes at Antigo

The Faust Lumber Company recently completed its organization at Antigo, Wis., the company being capitalized at \$100,000. Casper Faust is president and treasurer, James H. Worden, vice-president, and Edward Faust, secretary.

The new company will operate the mill erected by the Antigo Lumber Company two years ago. The entire holdings of the former Antigo Lumber Company have been taken up by the Faust company. In addition, it owns considerable land in Langlade, Forest and Vilas counties. It is expected that the first year's run will be in the neighborhood of 8,000,000 feet. Part of its timber will come from the neighborhood of Pelican and about 2,000,000 feet will be shipped from the vicinity of Bowler. It is not expected the company will do any logging on its own lands this year, as it has arranged for a considerable supply of logs, those already contracted for being sufficient to carry it for five months.

Some changes will be made in the mill which will facilitate the handling of logs and lumber. A 650 foot side-track along the east side of the mill pond will be constructed. This will facilitate the handling of logs and enable the company to have more cars switched in each day. It will also eliminate the old expensive and dangerous method of unloading from the railroad bridge into the creek.

The company will start log shipments some time in January and will start the mill up as soon as enough surplus stock is on hand to insure the continuous operation of the mill.

Forked Deer Lumber Company Organized in Tennessee

The notice was published in the last issue of *HARDWOOD RECORD* to the effect that the Tennessee Hardwood Lumber Company of Nashville had purchased the holdings of John Rose of Jackson, Tenn., for \$35,000 and would operate his plant at Jackson in connection with the Tennessee Hardwood Lumber Company.

This information was correct as far as it went, but did not cover the fact that the new move involves the incorporation of a new concern called the Forked Deer Lumber Company. This concern is capitalized at \$35,000, paid in. Its incorporators are T. B. Johnson, H. A. Batchelor, G. W. Killibrew, and H. C. Merritt, Jr., of Nashville, and T. J. Bailey of Jackson. The company's purchase involves the big band mill at Jackson and considerable hardwood stumpage near that city. This tract consists of a fine stand mainly of white oak and red gum.

Additional machinery will be added to the plant and everything done to make it complete and efficient. The company owns enough hardwoods to afford a cut of several years. Operations will be begun in the near future.

T. B. Johnson is president of the company and H. A. Batchelor is secretary and treasurer. The new concern is affiliated through mutual stockholders with the Tennessee Hardwood Lumber Company and the Tennessee Oak Flooring Company, both of Nashville, but will market its output entirely through its Jackson offices.

The Outlook in Germany

An esteemed English contemporary published the following commentary on 1913 prospects in Germany in wood goods:

From a well-informed German source we have received information which points to the existence in that country of almost analogous conditions to those prevailing over here as regards the problem which high prices are exerting upon the consumption of wood goods. In the consuming markets of Germany, the manufacturing industries, we learn, are still able to withstand the burden of enhanced wood values, as these enterprises are enjoying a full share of world-wide good trade. As in this country, however, it is the German house-building industry which can least afford to be saddled with the ever increasing cost of building materials. It is curious to note that questions which are detrimentally affecting the building trade in this country have their counterpart in Germany. Taxation has been augmented and new impositions put upon land, whilst restrictions are now in course of promulgation as to the height of dwellings. So onerous are these difficulties that, according to our correspondent, "the game is no longer worth the candle, and it has been left to the shady elements of the building trade to carry on." Property mortgages in Germany, since the American crisis a few years back, have lost popularity, and are not now so easily obtainable as they formerly were: added to which the high bank rate affords little inducement to building operations. An unfortunate sign of the times is that in several of the most active centers of the coal and iron industries the building trade is passing through a crisis and failures are becoming the order of the day. Next summer, we gather, an agreement now existing between the master builders and various trade unions expires, when the alternative of higher wages or a disastrous strike will probably have to be faced. Although a redeeming feature of present trade is that German municipalities are yearly adding to their public buildings, our correspondent thinks there is little reason to take an optimistic view of the German market as far as consumption is concerned.

New Car Stakes Recommended in Wisconsin

Members of the Wisconsin Industrial Commission held an informal hearing on the sixteenth to discuss the question of adopting safety car

stakes for logging cars. No permanent order has been issued and none is likely to be until the commission holds more meetings, but eventually Wisconsin shippers of logs will undoubtedly be compelled to use the safety car stakes recommended. The stakes make it possible to release logs on the opposite side from which they are to be unloaded. These stakes are a recent invention.

The cause of the hearing was an investigation by the commission which determined that the cause of most of the injuries received in unloading logging cars is the fact that it has been difficult to release the stakes without putting the workmen in an extremely dangerous position.

Hardwoods in Liverpool

Reports from leading importing firms in Liverpool indicate a very healthy condition regarding most kinds and grades of American and other hardwoods. The mahogany situation is particularly good. A statement on recent mahogany sales by one fancy wood house in Liverpool says there was a large attendance and that the American demand was very heavy. The entire list was cleared out, and while prices on the first sale were very much as the preceding month, on the second sale they were materially higher. This concern has forecasted unusual demand at this time and its forecasts have been more than fulfilled. It again points out that during the next nine or ten months the longer buyers wait before placing orders the worse they will fare. The earnest advice of this concern is to buy now and save money.

No change is reported on conditions with ash lumber. The arrivals of ash logs have been moderate and good stock of fair size meets with ready sale at satisfactory prices. There is an active demand for good quality walnut logs of good size.

The arrivals of black walnut lumber have been light, and their value is steadily improving. It is reported that the demand for hickory logs is active and that early shipments should meet with ready sale with good prices.

Prime oak logs of good lengths are in active demand. Quartered oak lumber continues to be asked for, but buyers and shippers can not get together on the question of value. Firm values prevail for plain stock, the arrivals having been light. There has been considerably more demand for prime oak cabinet planks, but inferior quality stock of poor dimensions has not been selling actively. Oak coffin planks of good specifications are in good demand. The same is true of oak wagon plank. The arrivals of this stock have been but moderate.

Good size, sound, clean poplar logs are meeting with considerable call, although inferior stock finds little sale. The arrivals of poplar lumber have been light, but high prices being asked are preventing business. No change is reported in the red gum lumber market.

Receiver Appointed for Harding-Finley Lumber Company

Judge Thompson, in the United States district court, on Dec. 14, appointed Frederick S. Underhill of Wistar, Underhill & Nixon, receiver for the Harding-Finley Lumber Company, Philadelphia, Pa. Bond was fixed at \$100,000.

Action was taken on a bill in equity filed by Dougherty, McKay & Co., J. S. Moore & Co., and E. H. Morrow, creditors and stockholders of the concern. The complainants averred that the company was unable to meet maturing obligations and that, if the assets were properly conserved under a court receivership, enough will be realized to meet the indebtedness. The outstanding liabilities are estimated at \$160,000, and the assets \$200,000. The company, through its president, W. J. Harding, filed an answer admitting the averments of the bill and joined in the application for the receiver. Judgments were entered against the concern on Dec. 14 for \$499,17, favor K. B. Johnson; Dec. 16, \$2,285.21, favor Miami Valley National Bank.

Sister of Well-Known Manufacturer Becomes Bride

A wedding of exceptional interest to the lumber trade by reason of the fact that the groom is an officer in one of the leading hardwood corporations in Baltimore, while the bride is a sister of the president of the company, took place on Dec. 11, when Miss Olive W. Wood became the wife of James Harlow Yost, secretary and treasurer of the R. E. Wood Lumber Company of that city. R. E. Wood, president of the company, and brother of the bride, gave her away, and G. L. Wood and Clarence E. Wood, general manager and assistant general manager respectively, acted as ushers. L. Y. Warren of Atlanta, Ga., was best man and Rev. John William Smith performed the ceremony at the house of R. E. Wood, 1729 Park avenue, where both of the young people have been making their home. The bride wore a handsome gown of white charmeuse, trimmed with flandre point lace. Among her jewels was a beautiful heart of pearls, a gift of the groom. She carried a bouquet of lilies of the valley. Miss M. Agnes Powers was maid of honor and little Kathleen Powers served as ring-bearer. Mr. and Mrs. Yost received many presents and were overwhelmed with congratulations. They are spending the next two weeks in New York, and will be at home after the holidays at 1729 Park avenue.

Log Conditions in England

To a person familiar with logging conditions and methods in this country, conditions which prevail abroad must necessarily seem somewhat peculiar, to say the least. A short story on the coming winter fall of timber as published in the *British Timber News*, outlines conditions which prevail among the timber buyers taking up native trees in England. This article states that there is generally an amount of home grown timber freshly felled on the market, but very little that has been stored for a couple of years and is in good condition for sawing into boards. A few timber merchants have a supply of dry oak, ash, and elm suitable for wheel making and cartwrights; but dry home grown timber, either in the round or in planks is hard to get. Even on large estates the same holds good and a great majority of the home timber is converted in the green state or when only a few months felled. The article comments that it is not to be supposed that home grown timber will ever take the place of that from abroad for house building and other constructive purposes, for the reason that it is of inferior quality, much rougher, and rarely gotten out in the size and scantling required. It nevertheless deplors the fact that little is done in the matter of seasoning logs of specific size and quality for sawing into planks and boarding as required.

The significance of this article can only be appreciated after one considers that the conditions outlined are similar to those which would prevail if sawmills and manufacturers of lumber in this country relied entirely for their log supply upon the scattered cuttings made by farmers on their woodlots and by individuals owning private estates. It is an ominous fact, however, that undoubtedly at one time the tree growth in the section referred to in the article was prolific. We should not lose sight of the fact that in this country where the prodigality of our timber supply has made us rather extravagant in our utilization of it, there is a possibility of the forests eventually attaining the same condition as is outlined by our British contemporary.

Fire Underwriting Alliance Bulletin

The December bulletin, No. 60, of the Lumbermen's Underwriting Alliance, U. S. Epperson & Co., attorney and manager, Kansas City, Mo., recently came from the press. The only fire reported for November occurred at Graysonia,

Ark., where the feed warehouse of the Graysonia-Nashville Lumber Company was destroyed. There was an attendant loss of \$3,000. This makes a total loss to date of about \$106,000.

General mill cleaning, which is so difficult under ordinary circumstances, can be affected with the holiday shutdown, and the bulletin recommends that while the opportunity presents, all parts not accessible while the mill is running be whitewashed, and all oil and grease be scraped and scrubbed from wood surfaces and the surfaces then painted.

The general labor shortage throughout the fall has resulted in the postponement of necessary improvements until the mills close down at Christmas. If the promised attention is given these betterments and a thorough clean-up is made, it is likely that the low loss ratio will be maintained even through the windy spring period.

The bulletin warns members of the Alliance not to put off too long the boxing and packing of hydrants, and the use of brine in the water barrels to prevent freezing.

It is pointed out that the low loss ratio for 1912, which is one-third less than that of last year, does not mean that there have been proportionately fewer fires. Fifty loss claims varying from \$6 to \$20,000 have been paid. The distinguishing feature of this year's fires was their quick control. In only six cases did the damage exceed \$5,000. Nearly all the fires occurred while the plants were in charge of the night watchmen, and in a few cases night crews were also on duty. The handling of nearly fifty night fires with so small an aggregate loss at plants where the constructive material is highly combustible and the operation attended with considerable inherent hazard, is the strongest possible proof of the value of efficient watch and water service.

The bulletin pays a marked tribute to the efficiency of night watchmen in general. Employers of watchmen, however, are warned not to relax for a moment in a rigid adherence to the rule that stations must not be skipped. No work connected with the entire operation can be so important as that of the watchman if a fire comes, and it is not good policy to "chance it" for a single night that it will not come.

The bulletin contains mostly suggestions as to efficient watch service and the main theme is that the watchmen should be able-bodied, intelligent and well-trained, and should be equipped with every assistance to enable them to extinguish incipient fires.

Cut and Shipments in November, 1912 and 1911

The following comparison of cut and shipments by the same 56 firms in November, 1912, compared with November, 1911, is compiled from the Northern Hemlock and Hardwood Manufacturers' Association's records:

	Cut, M feet		Shipped, M feet	
	1912.	1911.	1912.	1911.
Hemlock	18,190	14,167	32,555	29,892
Ash	231	136	957	1,088
Basswood	1,907	1,276	5,563	4,972
Birch	2,878	1,689	8,390	6,392
Elm	732	358	2,837	1,967
Maple	4,096	3,045	6,503	3,829
Oak	42	29	155	179
Mixed	250	421	2,262	2,179

All hardwoods... 10,136 6,954 26,607 20,606

Total 28,326 21,121 59,162 50,498

Increase in hemlock cut, 28 per cent.

Increase in hemlock shipments, 9 per cent.

Increase in hardwood cut, 46 per cent.

Increase in hardwood shipments, 29 per cent.

Increase in total cut, 34 per cent.

Increase in total shipments, 17 per cent.

Woods Used for Piling in Foreign Countries

Daily consular and trade report for Dec. 7 gives an interesting account of piling methods and materials abroad. Conditions are outlined and the species used are enumerated for the various countries.

In Cuba, it is shown, several woods are used,

including various American species and mahogany. Native hardwoods are used to a limited extent. Where these hardwoods are utilized they receive no preservative treatment whatever in the matter of impregnating materials although a method of treatment somewhat in vogue is to give them a coating of concrete.

At Martinique a native wood is used for piling, called *poirier*. This is very hard and seems immune to the attacks of marine borers. It has a life in the water of from ten to twenty years. Water seems to have a preservative effect on this particular timber. It is also used for railway ties because of its durability. This wood has the appearance of being soft and coarse grained, but is said to be nearly as hard as mahogany.

The Trinidad wood piles are used, mainly of greenheart. This is a durable hardwood and in being used is usually coated with four inches of concrete. In this way the piles are made to last as much as fifty years.

In Austria little wood is used and of the wood species oak has an important position. Other woods are fir, pine and larch.

In France quite a little beech is used for pile purposes. Along the seacoast at maritime ports and all places where the piles come in contact with salt water, teak or Vienna greenheart is used. In all cases the species are employed in the green state. Beech and pine in the natural state last about twenty years although when attacked by borers they may be destroyed much sooner. Teak and greenheart last much longer.

The most important species used for piling in Australia are various species of eucalyptus. Seven species of this genus are used going under the name of dark red iron bark, gray iron bark, red iron bark, red gum, flooded gum, gray box, Jarrah, and callowood.

Drugs and Chemicals from Forest Trees of the United States

An inspection of the "drug and chemical" page of the *New York Commercial* shows that at least twenty-five of the commodities listed on that page are obtained from trees growing in the United States.

Under "Essential Oils" there are found six which are obtained from various parts of different trees by distillation with steam. Birch oil is obtained by this method from birch bark and twigs; this oil contains the same substance, methyl salicylate, which gives to wintergreen oil its characteristic odor and on this account is often called wintergreen oil and sold as such. Cedar leaf oil and cedar wood oil are obtained, respectively, from the leaves and twigs and from the wood of cedar trees. Both white and red cedar are used indiscriminately, although the oils from the two trees are quite different in composition. The eucalyptus oil, on which the price is quoted, is specified as Australian, but some oil is produced in this country from the eucalyptus trees which have been introduced so successfully into California. Hemlock oil and spruce oil are obtained from the pitchy leaves of these trees.

Canada balsam and Oregon balsam are obtained from the balsam fir and the Douglas spruce, respectively, by cutting or chipping the bark and collecting the sticky liquid which runs out.

Wood alcohol, acetic acid, acetone and acetate of lime are produced from hardwoods directly or indirectly by the process known as destructive distillation. Pyroligneous acid is the name given to a crude liquor obtained during the same process. Gallic and tannic acids are contained in the tanning materials extracted from hemlock bark and from the wood of the tanbark oak.

The barks from the following trees are listed as regular commodities of the drug and chemical trade: cherry, elm, prickly ash, sassafras, white pine, witchhazel and hawberry.

Potash is contained in wood ashes and is extracted by a leaching process. Spirits of turpentine and rosin are the main constituents of the crude turpentine which runs from the "chipped" yellow pine tree. The crude turpentine is distilled with steam and the spirits pass over into the condenser while the rosin remains behind in the still.

Pine tar is obtained from "fat" pine either by charring in a tar kiln or by a process similar to the destructive distillation mentioned above.

This is not a complete list of wood products of chemical interest, but it gives some idea of the variety of useful materials which are obtained from the trees of this country.

A New Species of Oak

A daily paper of Tuscaloosa, Ala., reports that Dr. R. M. Harper, botanist of the state geographical survey, has discovered what he believes to be a new species or at least variety of oak in the southeastern part of Alabama. The tree is found in a peculiar bit of woodland in Pike county, known locally as "the rocosin." The leaves and acorns of the supposed new oak differ from those of any known oak. It is possible that the tree is confined to that particular locality.

Miscellaneous Notes

The Jesse C. Foster Lumber Company has been incorporated at Norfolk, Va., with a capital of \$50,000.

The Beatrice Veneer Works, Beatrice, Ala., will soon commence the erection of an addition to its plant.

The Black Manufacturing Company has been incorporated at \$20,000 to do a general wood-working business.

The Ward Furniture Manufacturing Company of Fort Smith, Ark., has increased its capital stock to \$100,000.

The Evansville Carriage Wood-Stock Company has been organized at Evansville, Ind., with a capital of \$20,000.

The American Veneered Column Company has been incorporated at Brooklyn, N. Y., with a capital of \$10,000.

The Texarkana Lumber Company of Texarkana, Tex., has increased its capital stock from \$10,000 to \$40,000.

The Iron City Lumber Company, Youngstown, O., recently increased its capital stock from \$50,000 to \$100,000.

The woodworking mill of A. Koller & Son, Summerville, Mo., was recently destroyed by fire, with a loss of \$75,000.

The Thompson Hardwood Lumber Company, Cincinnati, O., has increased its capital stock from \$30,000 to \$80,000.

The Sheffer Timber and Lumber Company was incorporated at Kalamazoo, Mich., with a capital stock of \$15,000.

The Franklin & Kennebec Manufacturing Company has been incorporated at Farmington, Me., with a capital of \$10,000.

The Tall Timber Lumber Company has recently been organized at Texarkana, Ark., with an authorized capital of \$250,000.

The Miller-Wells Lumber Company, Cleveland, O., was recently incorporated at \$30,000 to do a general manufacturing and wholesale lumber business.

The Bailey Lumber Company was recently incorporated at Bluefield, W. Va., with a capital stock of \$50,000, to do a general manufacturing business.

The Maryland Timber Company has recently been incorporated at Baltimore, Md., with a capital stock of \$100,000, to do a general manufacturing business.

The woodworking plant of Gilman & Son, Springfield, Vt., which was recently destroyed by fire, was fully covered by insurance and will soon be rebuilt.

The Jackson Manufacturing Company has been incorporated at Rockford, Ill., with a capital stock of \$25,000 for the purpose of manufacturing washing machines.

The plant of the Woodstock Lumber Company

of Woodstock, N. H., was recently destroyed by fire with a loss of \$100,000, covered by insurance. The plant will be rebuilt.

The Porter Lumber Company has been incorporated at Charleston, W. Va., for the purpose of erecting a single band mill to have a daily capacity of 35,000 feet of lumber. The company is capitalized at \$100,000.

The Comrades Manufacturing Company of St. Louis, Mo., has been incorporated with a capital stock of \$100,000 to do a general manufacturing business. The incorporators are E. H. Comrades, J. H. Comrades, Jr., Wm. F. Bauman and others.

The Jones Lumber Company has been organized at Warren, Vt., with a capital of \$10,000, to do a general wholesale and retail business in manufacturing lumber, boards, boxes, butter tubs, flooring, etc. The organizers are O. M. Jones, Jennie L. Jones and Mildred F. Jones.

The Robinson Lumber Company, 717 Whitney-Central building, New Orleans, La., has succeeded the Robinson Lumber, Veneer & Box Company, manufacturer of yellow pine, cypress and hardwood lumber, and which company makes a specialty of crossties and piling. The company has mills in Louisiana and Mississippi.

Col. George W. Clark of New Jersey recently sold 2,000 acres of hardwood stumpage on Jonathan Creek in Haywood county, N. C., to O. H. Kerr and S. B. Hayes, comprising the Jonathan Creek Lumber Company. The timber consists of a high quality of oak, birch, maple and chestnut. The company has also purchased from S. Montgomery Smith the sawmill at Sprucemont and the lathe and shingle mills at Bellwood. The mills will be operated as soon as the Jonathan Creek flume extension is completed to the sawmill which is to be located on the timber tract just purchased.

Hardwood News Notes

CHICAGO

HARDWOOD RECORD acknowledges receipt of the following 1913 calendars:

From the Midland Lumber Company, Parkersburg, W. Va., a large practical, plainly printed paper calendar;

From the Simonds Manufacturing Company, saw maker, Fitchburg, Mass., a calendar affixed to a card bearing the photograph of their "Satisfied Old Carpenter";

From The Johns-Mowbray-Nelson Company, hardwood wholesaler of Cincinnati, a beautiful panel containing a head by Frank H. Desch;

From the Central Veneer Company, Huntington, W. Va., a green Japan veneered card containing a drawing entitled "In the Grampian Hills," by Daniel Sherrin;

From George C. Brown & Co., Proctor, Ark., a large card with calendar affixed on which appears a panel entitled "Nellie Custis' Rosebush," by J. L. G. Ferris;

From The Huddleston-Marsh Lumber Company, Chicago, a plain calendar for practical office use containing letters large enough to be seen across any office.

HARDWOOD RECORD acknowledges receipt of a letter from the Logan-Maphet Lumber Company of Knoxville, Tenn. The style of this concern has been changed to the J. M. Logan Lumber Company. This will be a change in name only, the present officers, directors and stockholders being the same as for the past year.

Arthur Jarvis of the Steven & Jarvis Lumber Company, Eau Claire, Wis., spent Thursday of the past week in Chicago. Mr. Jarvis was in conference with his Chicago representative.

H. E. Christiansen of the General Lumber Company, one of the new wholesale concerns at Milwaukee, was in town for a day last week. Mr. Christiansen was formerly with the Maxson Lumber Company of that city.

B. C. Tully and Frank Robertson of the Anderson-Tully Company, Memphis, Tenn., spent a few days last week in this city on business.

J. F. McSweyn, president and general manager of the Memphis Saw Mill Company, Memphis, Tenn., was in town Thursday of last week.

W. E. Vogelsang of the Turtle Lake Lumber Company, Grand Rapids, Mich., spent a few days last week with the local trade.

J. W. Thompson of the J. W. Thompson Hardwood Lumber Company spent the latter part of last week in this city on business.

D. S. Watrous, manager of the Lansing Company, Parkin, Ark., spent a few days last week in Chicago.

P. J. Darke, general sales manager for the J. S. Stearns Lumber Company of Odanah, Wis., was in the city last week.

E. H. Klann, hardwood wholesaler, Fisher building, has changed the style of his concern to the E. H. Klann Lumber Company in anticipation of incorporation. J. L. Anderson of Chicago has been engaged to travel the territory within 150 miles of Chicago. The company will now handle northern hardwoods as well as southern.

A catalogue showing various styles of blocks, sheaves and wire rope as gotten out by the Clyde Iron Works of Duluth, Minn., has just been received in this office. The publication is printed in the same high-class style of all the catalogues and similar literature issued by this company.

Eugene McDonough of the McDonough Manufacturing Company, Eau Claire, Wis., spent a few days in Chicago on a business trip last week.

W. B. Burke, general manager of the Lamb-Fish Lumber Company, Charleston, Miss., was in Chicago last week in conference with Vice-president Lamb of that concern.

W. L. Wheeler of the Bissell-Wheeler Lumber Company, Marshfield, Wis., spent a few days in the city the early part of last week on business.

A. P. Goldsmith, president and treasurer of the Radford-Portsmouth Veneer Company, Radford, Va., attended the meeting at the Auditorium hotel of the National Veneer & Panel Manufacturers' Association held two weeks ago.

Charles Dudley of the Dudley Lumber Company, Memphis, was in town a day or two recently.

O. H. Babcock of the Babcock Lumber Company, Pittsburgh, Pa., spent several days here recently in conference with his local manager, J. H. P. Smith.

NEW YORK

William J. Jones, secretary of the Rowland Lumber Company, headquarters Norfolk, Va., spent a few days in town recently.

The Mexican Hardwoods Company has been incorporated in Manhattan, with a capital of \$1,500,000.

A petition in bankruptcy has been filed against the Column Manufacturing Company, manufacturer of built-up columns, of 206 Broadway, Manhattan. The company was incorporated in September, 1902. The columns were manufactured at South Norwalk, Conn.

Rufus L. Sisson, the head of the A. Sherman Lumber Company, Potsdam, N. Y., was a visitor in New York last week, where he spent most of the time at the local office, 1 Madison avenue. In discussing the condition of business, Mr. Sisson reports the general lumber market satisfactory and believes that 1913 will prove a good

year for lumber traders. The A. Sherman Lumber Company will manufacture about 15,000,000 feet of spruce and hemlock, in addition to which it will have supplies of hardwoods, flooring and sundry lines, which will be handled through the local wholesale department of the business.

A meeting of the board of trustees of the National Wholesale Lumber Dealers' Association was held on Dec. 19 at headquarters, 66 Broadway. The trustees reviewed the work of the year and discussed the plans in connection with the annual meeting to be held soon.

A meeting of the stockholders of the Dunbar Box & Lumber Company was held at the office at 282 Eleventh avenue, recently, to take such action as was necessary in the interest of the company by reason of the death of Thomas T. Reid, its former president. Hugo Reid, A. M. Hirsh, W. H. Gillespie, Fred Mueller and Frank C. Hughson were elected a board of trustees to serve until the next annual meeting. The following officers were also elected: Hugo Reid, president; W. H. Gillespie, vice-president; Fred Mueller, secretary-treasurer.

The Hudson Lumber Company, 152 West Eighty-second street, is the name of a selling company new in the ranks of the local wholesale trade. This company handles hardwoods and cypress lumber, making a specialty of oak, ash and gum. T. W. Hudson is manager in New York.

Among the visitors to New York during the past fortnight were Gen. Francis E. Waters, Stry Lumber Company, Baltimore; M. S. Tremain, Montgomery Brothers Lumber Company, Buffalo; C. L. Robinson of the timber department of the Chicago Lumber & Coal Company, St. Louis; F. C. Rightor, Sparkman Mill & Lumber Company, Little Rock, Ark., and W. M. Weston, W. M. Weston Company, Boston.

The New Jersey Veneer Company has purchased the mill on East Railway avenue, in the Lakeview section of Paterson, N. J., and will overhaul the plant. The company will manufacture high grade doors, panels and veneers for automobiles and other high grade work.

BUFFALO

The annual banquet of the Chamber of Commerce proved an entertaining social event. Addresses were made by O. E. Yeager, the retiring president, and others. The committee in charge of the affair had I. N. Stewart as its chairman and other members were O. E. Yeager, J. B. Wall and A. W. Kreinheder. Fully as interesting a social event was the election and smoker of the Automobile Club of Buffalo, over which organization M. M. Wall will preside as president during the coming year.

The J. E. Dominick furniture factory at Salamanca was badly damaged by fire on Dec. 14, with a loss of about \$15,000; insurance \$2,000. Many men were thrown out of work by the blaze.

George W. Colie of the long established furniture concern of Colie & Son, of this city, died on Dec. 17, aged seventy-two years. He leaves a son and two brothers.

The Interstate Commerce Commission has granted a hearing to the Buffalo lumbermen on Dec. 30 to discuss the reloading privilege on lumber, having points which it wishes to clear up before taking action.

At the recent inspection trip and meeting held by the government engineers here to discuss harbor improvement for Buffalo, the Lumber Exchange was represented by H. F. Taylor, H. I. George, W. P. Betts, M. S. Burns and M. M. Wall. A. J. Elias also took part in the advocacy of local harbor improvement.

A. W. Kreinheder, who has just been elected treasurer of the Automobile Club of Buffalo, will this year retire as director of the Chamber of Commerce, in which, however, he retains an active interest.

J. B. Wall has lately been in the South, looking after the lumber interests of his company, which has been getting a large stock of oak from that direction for some weeks.

Hugh McLean has returned from Haymarket, Va., where he attended the wedding of his nephew, H. J. Gates, a member of the Louisville Point Lumber Company of Louisville, Ky.

The National Lumber Company has completed and is now occupying its new storehouse which will be used especially for maple and other flooring. The company reports business as very good.

Miller, Sturm & Miller's additions to stock since opening the yard early this month have been oak and maple chiefly. Trade is reported to be satisfactory.

Anthony Miller has a large stock of general hardwoods at the inventory season, although trade is stated to have been pretty good during the past month, especially in oak and maple.

I. N. Stewart & Bro. have been filling some orders for mahogany lately, a wood which has not been doing much in this market for some time. They have also sold fair amounts of oak and ash.

O. E. Yeager states that the hardwood trade is improving and that a good quantity of business has been placed for shipment immediately after the taking of inventories.

The office of T. Sullivan & Co. states that there is a larger demand lately for Nos. 2 and 3 common basswood and that low-grade poplar is also in better sale.

H. T. Kerr is doing considerable business in Pennsylvania hardwoods and expects to cut 200,000 feet of cherry next year, besides a liberal amount of soft maple and birch.

PHILADELPHIA

E. M. Bechtel, sales manager for William Whitmer & Sons, Inc., testifies to an all round good business. Mills are all active and shipping out stuff as fast as cars are available.

Frank E. Schofield of Schofield Brothers reports a banner year's trading, and signs potent for a prosperous 1913. The Saltkeatchie Lumber Company's mill, Schofield, S. C., is running full capacity, and the Honaker, Va., plant with its three band mills is turning out from 2,500,000 to 3,000,000 feet of lumber a month.

Daniel B. Curl reports a big year's business, and is confident that 1913 will cap the record. His brother, H. M. Curl of Seattle, Wash., where he has interests in the lumber business, is spending the holidays in Philadelphia, and may eventually make this city his home.

The Summit Lumber Company has moved its office from 1019 Real Estate Trust building, this city, to 503 Bennett Block, Wilkesbarre, Pa.

Charles L. Meckley, formerly of the Meckley, Lance Lumber Company, which went out of business recently, has returned to James Strong & Co., with whom he became associated when quite a lad. He joins the selling staff of this house.

Among the recent visitors to the Lumbermen's Exchange rooms were John F. Bertles of Bertles & Bertles, Spokane, Wash., and Edwin W. Adams, Atlantic City, N. J.

P. M. Lachmund, sales manager for the Potlatch Lumber Company, Potlatch, Idaho, while visiting the local trade recently, was the guest of Owen M. Bruner.

J. W. Difenderfer of J. W. Difenderfer Lumber Company, reports satisfactory trading all along the line. He is making a short stay at the mill in east Tennessee.

W. R. Taylor president of the W. R. Taylor Lumber Company, recently returned from North Carolina and Tennessee, where he made a satisfactory deal for about 3,000,000 feet of white pine, hardwoods and hemlock. He reports shipments easier, and anticipates a prolific business for 1913.

Charles F. Kreamer of Kreamer & Co., says good orders are coming in right along and the

outlook is favorable. He reports a decided improvement in the coal region situation.

Thomas B. Rutter, Jr., of Mings & Rutter, speaks philosophically of trade conditions. He says things are keeping up well for this time of the year, and is optimistic as to the near future.

The Fulton-Walker Company, extensive wagon builder, is obliged to seek new quarters on account of contemplated improvements by the Pennsylvania Railroad. It recently purchased the Lengert building, 237 to 245 South Twelfth street, formerly occupied by Michael Lengert, carriage manufacturer.

PITTSBURGH

The De Voss & Adelman Lumber Company has been dissolved and the business will be continued under the name of the Adelman Lumber Company with offices at 311-313 House building. The members are A. and C. H. Adelman.

The A. M. Kinney Lumber Company has bought two more small tracts of maple and oak in Ohio and will cut it off at once. It has three mills now working in the Buckeye state.

The Garling & Splane Company has moved its offices to suite 1201 House building. The company reports an excellent outlook for lumber next year.

The Germain Company announces that it is passing up some very good business because of a scarcity of cars. Export business is still very dull but the company's officials look for a big improvement in general trade after the first of the year.

President W. D. Johnston of the American Lumber & Manufacturing Company announces that 1912 has shown at least twenty per cent more business on the books of the company than last year. He believes that with the better business conditions prevailing and a more hopeful spirit everywhere, the lumber business will improve right along next year.

The Pittsburgh Lumbermen's Mutual Fire Insurance Company wrote over \$400,000 more direct business this year than in 1911. Through its secretary, Carl Van der Voort, it is cutting out much of the undesirable business that always runs down and the company is making fine headway at present.

The Balsley & McCracken Company is doing a very nice business in the new First National bank building and bids fair to be one of the real hardwood concerns in this city.

BOSTON

Charles O. Skinner of the C. O. Skinner Company, Boston, died Dec. 10, following an operation which was performed a few weeks before and from which he did not rally. He was forty years old. Mr. Skinner was one of the most popular of the younger men in the lumber trade in Boston and was well known throughout the South and West. The lumber dealers of Boston met on the day of the funeral and passed resolutions on his death. The funeral services were attended by a large delegation of his business associates.

George P. Clark, formerly one of the most active lumber dealers in Boston, died at his home in this city Dec. 9 at the age of eighty years. Death was due to heart failure.

William E. Litchfield, a prominent hardwood lumber dealer, Boston, returned from a western trip a week ago. He visited the mill of Litchfield Brothers at North Vernon, Ind.

Alexander Neeley, a lumber dealer in Mobile, Ala., has been visiting his brother in Boston this month.

The export lumber business from the port of Boston to South America is being resumed after a period of several months dullness. A large amount of plain oak and pine is being loaded for shipment this month.

The S. A. Smith Manufacturing Company, Brattleboro, Vt., has been incorporated with a capital stock of \$150,000. The incorporators are

Frank L. Hunt, A. B. Clapp and F. L. Smith, all of Brattleboro. The company plans to begin the manufacture of toys, woodenware, carriages, etc.

BALTIMORE

Stephen S. Mann and Frank A. Parker of Mann & Parker, which went into the hands of a receiver some months ago, have been discharged from bankruptcy in the United States court here. The assets of the old firm, however, are still in the hands of the trustee, but will be distributed as soon as possible.

It was announced here with much detail that Henry Gassaway Davis, who is one of the pioneers in the development of the resources of West Virginia and has acquired a great fortune from timber, coal, railroads and enterprises, was about to retire from active life, relinquishing the presidency of the Coal & Coke Railroad of West Virginia. But on the occasion of his visit in Baltimore this week, Mr. Davis, who is now eighty-nine years old, denied the report, stating that he had no intention to get out of harness. He ran with Judge Parker on the ticket for Vice-President in 1904, has served in the United States Senate and still takes a keen interest in public affairs.

C. C. English of the Asheville Planing Mill Company, Asheville, N. C., was in Baltimore last week. He came here in search of stocks, having visited other sections. He was especially after chestnut, which he had found unusually scarce. There appeared to be a sufficient supply of poplar, but offerings of chestnut were very limited, he ascertained prices had stiffened appreciably.

George W. Eisenhauer of the Eisenbauner-Maelea Company, who has been ill for some time, continues to improve slowly and is able to make short trips in the open air. He has not yet been at his place of business.

James Baer of Richard P. Baer & Co., has returned from a trip to northern points, his travels having extended as far north as Montreal. He states that a good demand for hardwoods prevailed everywhere and that prices were either firm or higher. Richard P. Baer of the same firm is back from a visit to Mobile, Ala.

The National Lumber Exporters' Association recently adopted resolutions of regret on the death of E. E. Goodlander.

COLUMBUS

L. B. Schneider, sales manager for John R. Gobeys & Co., says the demand for all grades of hardwoods at this time is very good. Prices are well maintained and the volume of business is entirely satisfactory. He says oak is the strongest feature of the market. Both hemlock and chestnut in the sound wormy grade are strong. The yard trade is a little slow, but factories are taking advantage of every opportunity to lay in supplies.

F. B. Pryor of the W. M. Ritter Lumber Company says trade conditions at this time of the year are very satisfactory. He says stocks in hands of dealers are light. Factory trade seems to want to stock up, but the yard trade is a little slow, expecting a drop in prices in the near future. Prices are being well maintained and the volume of business in all of the lower grades is entirely satisfactory.

M. A. Hayward reports a good business for the time of the year. Oak is in good demand, as is also poplar and chestnut, especially the sound wormy. Prices are firm. The car situation is somewhat easier than last week, but there is still room for marked improvement.

W. L. Whitacre of the Whitacre Lumber Company says trade in hardwoods has been exceptionally good considering the time of year. Prices are being well maintained and stocks in the hands of dealers are light. The car situation is a little better than during the past week. The outlook for the future is very bright.

A. C. Davis of the A. C. Davis Lumber Company says the hardwood trade is very satisfactory for the time of the year. Prices firm and show a tendency to remain so.

CINCINNATI

Wreckers have been busy all week tearing down the remaining walls of the famous old Gibson House which was destroyed by fire last week. Wells Brothers of Chicago are assembling material as fast as possible to start to work erecting the new Hotel Gibson, which, when completed, will be of fireproof construction throughout, twelve stories in height and covering one-half acre of ground space. It will have a convention hall on the second floor second to none in the country.

Another big improvement and a very much needed one is the new Union Depot and Terminal Company, which is now an assured fact. It will house all of the railroads entering the city, excepting the Pennsylvania, which will build its own depot in another section of the city later on. Work on the new depot started last week.

The new firm of the Johns-Mowbray-Nelson Company is doing all that was expected of this bustling young but experienced firm. Mr. Johns, just home from a trip, states that business is in a flourishing condition and that the company placed some very heavy business during this month.

C. M. Clark, local manager of the Swann-Day Lumber Company, states that his company is very well satisfied with conditions and that the poplar market seems to be much improved in the upper grades, while the low grades have been going at a premium during the last several months.

Ben Dulweber, the active head of the John Dulweber Company, was seen at his office in the west end, adjoining the company's big hardwood yards. He stated that business has been beyond expectations and that the company is doubling its efforts at its own mill in the South to increase the output. It is also buying desirable hardwoods when offered at reasonable prices. He says that the outlook for next season is very bright.

Fred Mowbray of Mowbray & Robinson was in town this week and spent quite a little time at the office and looking over the yard. He stated that the three big mills of the company at Quicksand and Irvine, Ky., are running to capacity and that they have a comparatively small stock of lumber of any kind on hand, the consumption being quite equal to the output. He sees no reason why conditions should change and looks for a big year in the hardwood field next season.

At the M. B. Farrin Lumber Company's big plant on the outskirts of the city all is activity. Stock on hand here is below the amount usually carried by this big concern, and while stock has been arriving freely during the last week or so, the big hardwood flooring mill is using it up as fast as received. The flooring industry is rapidly growing and the brand of century oak as produced by the company is widely known. Vice-President W. J. Eckman stated that conditions are entirely satisfactory.

INDIANAPOLIS

The planing mill of Samuel Lanum at Bloomington was burned Dec. 14, the loss being \$6,000, covered by insurance.

George C. Fuller, Lebanon, suffered a loss of \$6,000 when his sawmill and woodworking plant were burned recently. About \$1,000 insurance was carried.

The Eaglesfield Company, which was succeeded by the Eaglesfield-Stewart Company, manufacturer of hardwood flooring, has sold its old plant in Alford street to Alonzo E. Robbins for \$17,-

000. Mr. Robbins was a stockholder in the Eaglesfield company.

For a consideration of \$12,000, Nelson A. Gladding, vice-president of E. C. Atkins & Co., has bought a site for a new home in Washington Boulevard.

The Indiana Better Roads Convention, held here Dec. 11, 12 and 13, adopted a resolution in favor of placing all highway construction and maintenance under a state board of highway commissioners and to raise a fund for the work by a special tax of one-half cent on each \$100 of taxables in the state and by an annual license on all motor vehicles including traction engines. Such a fund would amount to about \$1,000,000 a year. A bill incorporating the recommendations will be introduced in the legislature next month.

The death of Hugh Murdoch occurred at his home in this city on the night of Dec. 16, as the result of an operation for the removal of a goiter. He was a member of the Murdoch Veneer and Lumber Company and also had veneer and timber interests in the South. Mr. Murdoch was born in Shelbyville, coming to this city in 1908. He was thirty-three years old. A widow survives. Burial was at Shelbyville.

MEMPHIS

Among the recent prominent visitors to Memphis have been Charles Barnaby, president of the National Hardwood Lumber Association, and Lewis Doster, secretary of the Hardwood Manufacturers' Association of the United States. Both of these gentlemen gave out encouraging accounts of the outlook for business and were in a rather optimistic mind regarding the future. Mr. Doster comes to Memphis every few weeks, but this is the first visit Mr. Barnaby has paid to this center for quite a long while.

W. H. Russe of Russe & Burgess, Inc., will be named chairman of the special committee to be created by the Business Men's Club for the purpose of keeping Memphis and Memphis products before European buyers. Mr. Russe has for a number of years been quite prominently identified with the export business and is quite familiar with the foreign methods of business as well as with the needs of European buyers. This committee will be charged with the duty of seeing that Memphis manufacturers and distributors are enabled to do a more extensive business with foreign markets than at present.

Visiting lumbermen will find the secretary of the Lumbermen's Club on the sixth floor of the Business Men's Club, or if he is not there he can be located by communication with J. M. Tuther, general secretary of the Business Men's Club. The recent adoption by the Lumbermen's Club of the affiliation agreement of the Business Men's Club has resulted in the foregoing arrangement. The secretary of the Lumbermen's Club will do all of his work at this office and in order to facilitate matters for him the Business Men's Club has agreed to furnish stenographic service and to render any other assistance necessary. The new arrangement is regarded as particularly advantageous to the Lumbermen's Club inasmuch as it secures free clerical work and also headquarters. It likewise has in this way the moral support and backing of the Business Men's Club in all problems coming up for consideration.

The Muirhead Lumber Company has branched into the manufacture of hardwood lumber, with special reference to hickory and oak dimension stock. The company has purchased a large tract of timberland near Weldon, Ark., and a tramway has already been built to facilitate the development thereof. This firm formerly had its headquarters at Newport, but has moved these to Weldon in order to make the development of its holdings easier. The firm operates plants at both Weldon and Gregory. In addition to hardwood manufacture, the gentlemen identified with this firm are operating a stove plant under

the name of the Weldon Stave Company. There is also an allied firm known as the Muirhead Sblingle Company. The latter is engaged in working up cypress timber which belongs to members of the firm.

NASHVILLE

During the past month the building permits here totaled more than four times the amount for November a year ago, those for November, 1912, being \$256,958 and the amount for November, 1911, being \$62,801.50. Some large permits have been issued during the past month, including one for a handsome \$80,000 business house.

The Milne Chair Factory plant was totally destroyed by fire at Cleveland, Tenn., Dec. 6, the loss being fully \$150,000. The origin of the fire is unknown. There is talk of rebuilding the plant at Chattanooga but this is being resisted by the citizens of Cleveland who have offered special inducements in the way of tax exemptions, etc., if the company will remain in that town.

The Mobile & Ohio Railroad has been given the right by the Interstate Commerce Commission to establish a thirteen-cent rate per hundred pounds on lumber in carloads from main line points north of Meridian, Miss., to Antesia, Miss., inclusive of Nashville.

Active logging operations have opened on the Tennessee river and during the week past more than 160,000 feet of poplar, oak and other timber have been rafted down this stream.

Indications point to an early advance in furniture prices throughout this territory. Representative manufacturers from throughout the Middle South met in Nashville the other day and the above statement followed their conference. The decision was unanimous on the part of those present. Steady advances in the prices of labor and material, especially the latter, are the causes assigned. This question has been under consideration for some time and the decision here is merely a part of a movement that is sweeping the entire country. About twenty-five representative men were at the meeting which was called at the instance of Nashville, Memphis and Chattanooga manufacturers.

Dan Rose of the Knoxville lumber fraternity was a visitor on this market recently.

C. L. Dews of the Woodcliff Lumber Company, Monterey, Tenn., was here recently on a business trip and reports activity in the lumber business in his section.

Tom Le Sneur has returned from a vacation trip to Arkansas where he hunted and fished with good luck.

LOUISVILLE

T. M. Brown of the W. P. Brown & Sons Lumber Company attended a meeting of the board of trustees of the National Wholesale Lumber Dealers' Association in New York last week.

D. E. Kline of the Louisville Veneer Mills has returned from the annual meeting of the National Veneer and Panel Manufacturers' Association, held in Chicago.

Barry Norman, vice-president of the Norman Lumber Company, has come up from Holly Ridge, La., where he has been looking after the operations of the company's mill there, to spend Christmas with his relatives. The J. A. Fay & Egan saw ordered for the mill will be in operation by Jan. 1.

Local lumbermen have received advices to the effect that the Louisville & Nashville Railroad Company has made tentative proposals looking to the substitution of flat rates for the present milling in transit arrangement at Evansville, Louisville, Nashville and Memphis. If the present net rates can be retained under the flat rate arrangement, it is believed that it would be favored by lumbermen. The matter is not yet definitely in hand.

The Louisville & Nashville Railroad Company seems to be in for a beating on its switching proposition in Louisville. It refused to deliver cars originating at competitive points to shippers having an outlet only upon its tracks. The Board of Trade, backed by the lumber and other shipping interests, has started a fight which will be taken to the Interstate Commerce Commission, and the presentation of a bill in Congress by Representative A. O. Stanley of Henderson, Ky., in which it is provided that carriers must receive such competitive business, seems to top off the action needed to bring the Louisville & Nashville around.

Louisville hardwood men have received notice that the next hearing of the Interstate Commerce Commission on the proposed advance in rates on lumber from the South will be held at Cincinnati Jan. 24. It will take up the question where it was left off at St. Louis last week.

The Louisville & Nashville Railroad Company is to spend approximately \$140,000 for a creosoting plant to be erected at Guthrie, Ky. It will treat ties, bridge timbers, etc.

Owing to the alleged depredations of log thieves along the Kentucky river, who sink logs and then recover them, being permitted by statute to require the payment of salvage on such logs, the sawmill men along the stream have organized the Kentucky River Sawmill Association and will handle all of the business of raising and disposing of sunken logs through this organization, which is incorporated with \$800 capital stock. The members of the association are the Ohio Valley Tie Company, Louisville; Mowbray & Robinson, Cincinnati; Reliance Manufacturing Company, Jackson; Eversole Lumber Company, Frankfort; Belle Point Lumber Company, Belle Point; J. D. Hughes Lumber Company, High Bridge, and Basil Kenney Lumber Company, Frankfort. The officers are E. O. Robinson, president and treasurer; J. D. Hughes, vice-president, and W. S. Rosson, secretary. Mr. Rosson's address is Frankfort, Ky.

S. P. Chandler of the Buckeye Veneer Company, Dayton, O., was in town recently. He reported that the Capital slicer installed July 1 has been working overtime to supply the demand for slice-cut oak stock.

ST. LOUIS

The Garetson-Greason Lumber Company is having a steady demand for railroad and car material. Mr. Garetson, president of the company, was at the Brockett mill last week, having been called there on account of an accident to one of his old employes. W. W. Dings, secretary of the company, says he is well satisfied with the volume of business being done and the prices obtained.

E. H. Luehrmann of the Chas. F. Luehrmann Hardwood Lumber Company states the company is having a good call for the majority of its principal lumber stocks. This is especially true as to choice red gum, of which it makes a specialty. Oak is also in good request. Although the calls have been frequent and numerous it still has a big stock of nearly everything in the hardwood line and can fill all orders.

Charles E. Thomas of the Thomas & Proetz Lumber Company visited Memphis on business a short time ago.

The Thomas E. Powe Lumber Company recently suffered a loss of lumber worth about \$6,000 by fire.

R. F. Krebs of the Krebs-Scheve Lumber Company reports a good volume of business for this time of the year. The outlook, he says, is good for next year and he believes business will start early.

George A. Cottrill, secretary of the American Hardwood Lumber Company, reports that while the market has been quiet recently owing to the nearness to the holidays, conditions are satisfac-

tory. The car shortage is easing up gradually and will soon be normal.

The Steele & Hibbard Lumber Company is having a seasonable volume of trade, with every indication of an early start soon after the beginning of the new year.

MILWAUKEE

The offices of the state free employment bureau advise that lumber camps in northern Wisconsin and the upper peninsula are no longer in need of men. Some time ago the shortage of help was severely felt at the logging camps, although good wages were offered. Many concerns applied at the free employment offices to secure men to work in the woods, which resulted in securing positions for a large number.

Two timber companies have been formed at Janesville and articles of incorporation filed with the secretary of state. The Coquille Timber Company, with a capital of \$150,000, and the Union Timber Company, also with \$150,000 capital. Both companies are incorporated by O. A. Oesterich, L. A. Avery and L. Westlake.

E. C. True of the American Timber Holding Company and Albert Leeland, both of Milwaukee, are at the head of a new motor boat factory to be located at Waukegan, Ill. The concern will be incorporated under the laws of Maine with \$100,000 capital stock, and will be known as the Waukegan Motor Boat Company. A \$50,000 factory will be erected. Mr. Leeland will be resident manager.

The building inspector of Milwaukee reports that permits issued during the first week of December brought the record for the year above the \$15,000,000 mark and that the total building record for the year would be close to \$15,500,000. This will mean an increase of about \$3,000,000 over the building record of 1911 and is largely responsible for the tremendous gain in the lumber business during the past few months.

The warehouse of the Menasha Woodware Company, Menasha, Wis., was destroyed by fire on Dec. 7. The loss is estimated at \$10,000, and includes a large stock of unfinished staves.

The North-Western railroad was ordered to reduce its rate on tan bark from 11½ to 8½ cents by the State Railway Commission. A refund of \$298.05 was also ordered by the commission on excess charges by the railroad on shipments of tan bark from near Wausau to Sheboygan by the Barker & Stewart Lumber Company.

A contract for logging 1,500,000 feet of hardwood timber for the Kiel Wooden Ware Company, Kiel, Wis., has been awarded to Scheldt & Dekeuster of Wausaukee. The timber is situated at Mitchell Spur, near Channing, Mich., and will be used in manufacturing cheese boxes and veneers.

Frank Whitlock of Wausaukee has started a logging camp at Randville, Mich., where he will cut 6,000,000 feet of timber, mostly hardwood, for the J. W. Wells Lumber Company. The contract covers three season's work, and the logs will be shipped to Menominee for sawing.

About 350,000 feet of timber will be cut this winter at Taylor Rapids by John Regan of Oconto. Mr. Regan has been cutting on this tract for the past two seasons for the J. W. Wells Lumber Company, who again gave him a contract this year.

The sawmill of the Hatten Lumber Company at New London, resumed operations last week after a shut down of two weeks for repairs and overhauling. With the exception of a few days during last summer's flood, the mill had a steady run since Dec. 16, 1911. As soon as a fall of snow facilitates the getting out of logs, the mill will run both night and day.

The McDonough Manufacturing Company of Eau Claire, has received several more large orders for sawmill equipment. Orders which will require both day and night shifts for sev-

eral months were received from Ludington, Mich.; Ruel, Ontario, and the Bahama Islands.

Erny Brothers of Racine have acquired the new veneer factory at Edgar, which was erected about a year ago. It will be converted into a basket factory by the new owners, who expect to start operations about Jan. 1, with a capacity of 400 dozen baskets a day. About a hundred men will be employed at the start.

The Willison Manufacturing Company of Appleton, now holds third place in capacity among meat and shoe block manufacturers in the country. Six new machines, making eighteen in all, will increase the capacity forty per cent. The capital stock has been increased to \$30,000.

DETROIT

The Cadillac Motor Car Company has put out a requisition for 1,200,000 feet of hardwood lumber, mostly ash, walnut and birch. Other automobile companies have been placing generous sized hardwood lumber orders and the dealers have derived a very good business from this source alone.

R. A. Stitzinger of G. G. Stitzinger & Co., New Castle, Pa., was in Detroit on a business trip during the week.

The Brownlee-Kelly Company reports business in a booming condition and that many big orders were received during the past month. Mr. Brownlee says the demands for hardwoods of all kinds is very brisk and prices are still climbing.

The steamer Hugh Hovey with a cargo of hardwood arrived at the Brownlee-Kelly Company

docks Dec. 18, which was exceedingly late in the season for a lumber boat to be in service. She carried 400,000 feet of mixed hardwoods.

J. H. P. Smith, Chicago representative of the Babcock Lumber Company, Pittsburgh, Pa., was in Detroit this week on a business trip.

George I. McClure, who represents the Hanson-Ward Veneer Company in Detroit, says that that company intends to cut 8,000,000 feet of timber, mostly hardwood, during the winter. Mr. McClure expects that large consignments of this cut will be shipped to his lumber yards at Clark and Plummer avenues. He predicts a large demand for hardwood lumber in Detroit next spring and summer and cannot see how prices will drop.

J. P. Scranton & Co. report that low-grade hardwood is very scarce and that crating stock is also hard to get. Labor conditions have improved and there is but little trouble in getting men.

Thomas Forman of the Thomas Forman Company says that on account of the tremendous amount of building going on in Detroit, the mill will be busy all winter turning out hardwood flooring. It is doubtful whether this year's orders can be cleaned up by the time building operations begin in the spring. At present the mill is working on an order for 335,000 feet of two-inch maple flooring. Mr. Forman says that dry stock is scarce and prices are sure to advance before spring on this account.

Claude Sears of Louisville, Ky., visited the Detroit market during the past week.

attending shipments for export make this business less desirable, and exporters are cautious about forwarding stocks.

PHILADELPHIA

Notwithstanding the near approach of the holiday season, an unusually strong activity obtains in the buying market, and the most conservative lumbermen are positive in their belief that 1913 will see an aggressive expansion of the lumber business. There is no apparent change in the hardwood stock situation at this time, and it is safe to assume that the stock pile in standard woods will increase but little for months to come. Never in the history of the lumber business have so many buyers in one season been obliged to scour the lumber regions for necessary material. But for unreliable mill connections and the inadequate car service the lumberman this year could look forward to a bountiful and joyous Christmas.

The consuming industries continue busy, but a slight let-up in buying may be looked for as the stock-taking season advances. Yard men in both Philadelphia and New York, who enter extensively to builders, have been naturally affected by the dearth of building work during the summer and fall, but as there has been a concerted action on the part of the builders and trust companies to curtail operation work for the prevention of a slump in the real estate market, the general advantage in the future will more than counterbalance the present gap in this line of business.

Oak, red and white, still holds front rank, with red oak climbing; quartered oak is advancing. Ash, chestnut, birch and beech are all well up in place. Maple is strong. Poplar is unchanged with the exception that low-grade stock is active. Gum continues to gain favor in the eastern market and mahogany and veneer trading holds firm. Cypress makes new friends.

The Hardwood Market

CHICAGO

Unchecked activity in all lines of hardwoods marks the situation in Chicago. In a few cases buyers are resorting to small orders in anticipation of inventory taking, but the bulk of orders are of the usual proportions, being mainly for delivery some time after the first of the year. It is expected that the last week of 1912 will see more of a slacking up in immediate orders than the two weeks preceding, but there is every evidence that continued increase in demand and values in hardwoods will be resumed after the opening up of the new year's business.

Healthy business is reported at all the consuming factories, and fair weather conditions have materially enhanced building operations in the Chicago territory. Car building has continued on an active basis calling for a greater quota of hardwoods than it had been using for past months preceding the car shortage.

Difficulty is still experienced in making shipments on account of the inability of getting cars in some instances. This has resulted in rather depleted stocks of hardwoods in the yards, and there seems to be little opportunity of stocking up in anticipation of the spring orders. The same condition regarding the different woods is manifest in the Chicago market as in other markets. Ash is one of the strongest items in hardwoods all over the country and is particularly strong in the Chicago territory.

Plain oak is extremely scarce and quartered oak is gratifyingly active. The latter wood shows every evidence that its consumption and price will continue to be highly satisfactory. The usual demand from the box manufacturers keeps cottonwood, poplar and the gum situation in good shape.

BUFFALO

The hardwood trade has been as good as could be expected during December, having been bet-

ter the latter part of the month. At present there is general holding off until the completion of inventories, but trade is counted on to pick up again about the middle of January. Some trouble has been experienced in getting cars to load, and receipts of lumber have been a little slow on account of the congestion existing in the South.

The yards have been shipping out a good amount of oak and buyers are willing in many cases to take either red or white, depending upon which is the easier to get. Thick ash is very strong. Chestnut also is firm, high-grade stock selling about as fast as it comes in. Maple and birch are moving fairly well and sales this year in these woods have been quite heavy. Elm and basswood are in fair sale.

NEW YORK

The hardwood market continues firm and active. The call for quick shipments is still heard and the yard trade is steadily in the market for stocking up. The low supplies on hand and the steady demand of the past several months are features of the market. The yards are still buying freely and it is expected that they will continue in the market for some time. The local manufacturing trade is busy and a steady buyer. Ash is in stronger demand than anything else on the list, and is selling at advanced prices, particularly 5 4 and thicker. Plain oak is also in active demand and low-grade poplar is in good call. The remainder of the list is showing up well.

The export demand is good, but dealers are slow to go after the business. The recent ruling of the Interstate Commerce Commission on through bills of lading is one reason why shippers are not anxious for export orders, and the heavy advance in freight rates which has been announced for next year and the difficulties

BOSTON

The market for hardwood lumber shows no abatement in the strength with which prices are held but actual demand for prompt shipment has ruled rather slow during the past two or three weeks. Many of the consumers of hardwoods are not oversupplied at the present time, but they are not anxious to take on larger stocks until after the turn of the year. This is not unusual, as buyers always figure on having their stocks reduced at inventory periods. Some orders are being placed with the request that no delivery be made until after the first of January. Advice from the mills indicate comparatively small stocks. There is no desire on the part of manufacturers of hardwood lumber to force sales. Many of the large manufacturers of the country write their correspondents in this city that they have plenty of orders yet unfilled on their books and that they are not anxious for additional orders excepting at full asking prices.

There is a very good demand for plain oak in this market and prices hold firm. Quartered oak has also been in very good call and values are well held. Black walnut is in fair demand. The small offerings force buyers to make several inquiries for the same lot of lumber with the result that the market has a more active appearance than really exists. Maple is firm and in demand. The call for birch and basswood is moderate.

PITTSBURGH

Hardwood men are feeling good over the outlook for 1913. Their business this year has been considerably better than in 1911. Nearly every hardwood concern in the city is well satisfied with the trade the past four or five months. Many of them are planning to increase their sales force or strengthen their connections the first of the year in anticipation of a much larger

business. Factory trade is showing up remarkably well in the requisitions. Purchasing agents are asking for more lumber and seem more willing to pay a good price for their stock than last year. Trade with the mining and industrial concerns has very seldom been better in this district than just now. Railroad work will require an enormous amount of lumber next year, and the prospects for oak sales on this account were never better. In fact, oak is now so scarce that it is almost impossible to get enough good white oak to fill the orders. Yard trade is a little quiet this month on account of the inventory season. The prospects are that it will be very much better as soon as spring building starts, for stocks are low and contractors look for a much better building season next year.

BALTIMORE

With the year drawing to a close, interest in the results of 1912 is intensified among lumbermen. It is known in a general way, of course, that the trade has been very active for some months, and that the inquiry continues to be so brisk as to cause a general scarcity of stocks. Under the influence of the inquiry and the inadequacy of the offerings, prices have gone up until oak is perhaps higher than it has ever been, while the weak spots in chestnut have been strengthened until there are none left, all other hardwoods being in satisfactory shape, with the single exception of extra wide poplar.

The producer of lumber, provided he has a good lot of timber and an effective mill organization, stands in the way of making large profits, for intending buyers do not haggle over the price, being intent chiefly on their ability to get what they want. The manufacturers have been and still are in a position to dispose of their output as fast as it could be gotten ready for the market. In numerous instances they are behind in their deliveries, and it has happened often that lumber was sent out green, buyers being in urgent need of supplies.

Varying explanations are given, some members of the trade taking the view that the present apparent scarcity is due not so much to a comparative increase in the demand as to the shortage of last winter, when for several months the mills were entirely out of it. The fact is emphasized that when the severe cold had abated, heavy rains transformed the roads into quagmires and rendered it impossible to get logs to the mills and lumber away from plants. The first half of the year, therefore, must be credited with a material deficiency in the production, and this shortage has not been in reality made up, though under circumstances of an indifferent demand there ought to have been a considerable gain in the production over the distribution in the latter half of the year, the weather having been such as to favor mill work. Account must be taken of the fact, however, that labor has been scarce during the greater part of the year, and manufacturers have often been unable to get workmen in sufficient numbers to run plants at their full capacity. On the other hand, the distribution was much impeded, first by the stevedores' strike here, which lasted for about two months, the steamship companies finding it impossible to get their vessels loaded, and the coastwise traffic being similarly affected. After this difficulty had been removed came the advance in the ocean freight rates, which naturally caused hesitancy among the exporters because of the fact that the increase assumed proportions which made it necessary to adjust the trade upon a new basis, for the augmented expense could not be absorbed by the shippers. This impediment is still exerting a decided influence upon the trade. When all these factors have been taken into account, however, the fact remains that even though exports were checked, the offerings in the domestic market did not show any indications of becoming larger, which ought to have been the case

unless the domestic requirements at the same time expanded. The conclusion, therefore, is almost unavoidable that an actual shortage of lumber exists and that this is primarily, perhaps solely, responsible for the present high prices and the firmness in the market.

COLUMBUS

The lumber trade in Columbus and surrounding territory is holding up remarkably well for the time of year. Prices are stiff and there is a good demand for all grades of hardwoods. A continuation of the good business is expected. The hardwood market at this time is very active, there being a good demand for oak, especially in flooring and quarter-sawed stock. The lower grades of hardwoods are also a strong point in the market, especially ash and poplar, and there is a good demand for chestnut in the sound wormy grade. Yellow pine does not show much activity at this time of the year. The factory trade continues good with manufacturers and millmen wishing to lay in large supplies. The yard trade is a little slow and dealers seem to think that prices will drop, after which they will stock up. The car situation shows a slight improvement over the past week, but is still felt in certain locations. Building operations are active.

CINCINNATI

Weather conditions are again ideal for lumbering, after a touch of winter, which only lasted a few days last week. The fall this year has been remarkable for beautiful weather, and every line of trade has been benefited more or less, especially the building trade, which has been one of the heaviest in several years. Consequently the retail lumber dealers have done a very big and profitable business in all kinds of building lumber and millwork. Planing mills have been rushed to supply the demand right up to the present time, and owing to the weather holding out so long and favorable to building operations, builders have gone right ahead with new work. The hardwood dealers have been much benefited by this big building season, as this year hardwoods are largely used for interior finish in place of yellow pine. Plain and quartered oak is used to a great extent, but much red gum has also been used this season and the results are so satisfactory that architects will not hesitate to recommend it to prospective builders of homes who are seeking something different in finish.

Stock is coming in more freely than for the last couple of months and the dealers are getting some stock ahead and will be big buyers all winter, taking all offerings of hardwoods in all kinds and grades at reasonable prices. At producing points millmen report plenty of logs and plants running full time with favorable weather. The demand is quite up to the production; in fact, nearly all of the mills are sold ahead, many of them well into next season and at stiff prices. The dealer who is not covered for several months' supply is not in any too strong a position, and will find much difficulty in picking up hardwoods from which to supply his trade. This supply will come mostly from the small millman and the buyers are so numerous in the producing fields among both large and small mills that it will be quite a problem for the dealer to get what he will require.

Trade conditions are about as good as could be expected for this time of the year. Prices on all stock are high and none of the dealers are looking for cheap lumber, as they know it is not to be had. Plain and quartered oak are very much in demand. Low-grade cottonwood is very scarce, as is the same in poplar, gum, basswood and buckeye. Thick ash is very high in price and called for daily in quantities. The high grades in hardwoods are most in demand at this time and are bringing good prices. Hardwood

flooring is moving very fast at top prices. All mills are running full time and will do so all winter in an effort to stock up for next season.

INDIANAPOLIS

The hardwood trade in this locality has been about ten per cent better than it was in 1911. Hardwood men are especially well pleased with the volume of 1912 business, considering the fact that for the first six months of the year the business was behind that of the corresponding period of last year.

Business has not slackened up so far in December, as was expected, but has been better than it was during the corresponding period of last year. Prices are steady, with no indications of a decline soon. The principal demand is for plain oak with a fair trade in ash.

Hardwood men report that the car shortage is loosening up and that they are no longer bothered or inconvenienced on this score to any great extent. The trade as a whole is in a very satisfactory condition.

MEMPHIS

The car situation is considered very much better. The movement of both timber and lumber is showing some increase as a result of this condition. The improvement is quite notable from many points in Arkansas and Mississippi, where cars were exceedingly scarce only a short time ago. It is not possible even yet for all shippers to secure their full quota of cars, but the improvement now in progress is quite rapid and the outlook is regarded as decidedly more favorable.

The movement of timber to Memphis continues on a pretty liberal scale. It is noteworthy, however, that there is such activity on the part of manufacturing plants that there is little, if any, accumulation of logs at local yards. Most manufacturers say that they have enough logs on hand to last them for only two or three days. There is a great deal of timber awaiting transportation to Memphis, and it is possible that the log supply of local plants may become a little fuller. However, this depends very largely upon the ability of the railroads to furnish all the equipment that is needed. Although the situation in this respect has very much improved, the Valley Log Loading Company says that it is still restricted somewhat in the handling of log shipments by scarcity of equipment.

One of the features of the hardwood situation has been the tendency toward improvement in export demand during the past few days. There have been numerous inquiries, and it is said by prominent exporters that they could do a large business if transportation problems were solved. The railroads west of the Mississippi river are still refusing to issue through bills of lading on hardwood lumber shipment intended for export with the result that shippers are having a great deal of trouble.

NASHVILLE

The local demands for hardwoods are good for this season of the year, when trade is generally getting rather slack on account of the holiday season and the time for the annual taking of stocks.

Plain oak is scarce and the prices show an upward tendency. Quartered oak is more plentiful and is maintaining high figures. Chestnut, gum, ash and hickory are selling well. There is continued good call for maple and walnut. No change is noted in the poplar market. Other woods are about holding their own.

There is much railroad traffic activity. There are heavy log shipments reported on the Tennessee river. Dry stocks are getting low and all available is in ready demand. Manufacturers anticipate much activity beginning early in 1913. Some orders have already been received for

1913 shipments but most manufacturers do not seek such advance orders.

There continue to be active calls from the furniture, vehicle, railroads, car building and other consuming concerns. Cold weather has caused a slight falling off in the retail trade. General rains have brought a return of a good boating season and this means renewed activity all along the Cumberland river. The box, sash, door and blind makers are after good material. Inside finishing materials are in good call.

ST. LOUIS

Business in hardwoods is unusually good, considering that the holidays are so close at hand, owing to the fine weather which has prevailed up to the present time, more than the average trade has been done. Lumber, too, is coming in better than it did, on account of more cars being available for shipments. This has increased the receipts considerably. Nearly all items on the list are being called for. Plain red oak leads in the demand and it goes out as fast as it comes into the market. Plain white oak is also in excellent request. Red and white quartered oak are holding their own. Inch stock ash and thicker is moving nicely. Poplar is a poor seller. Both gum and cottonwood are holding their own. Cypress is holding its own, but dealers are well pleased with the volume of business they are doing. The demand is not quite as active as it was, but that could be expected when one considers that the first of the year is now only a few days off. Most of the factory demand is for quick shipments and in small lots. The yards have shut down buying almost entirely.

LOUISVILLE

The demand for hardwood lumber has slowed up somewhat, as far as new business is concerned, on account of the holidays. The prospect of taking an inventory on January 1 always chills the ardor of the buyer, and enforces a desire to travel light as to supplies. This is a case of not letting the right hand know what the left is doing, and many men keep a lot of secrets from their books. The refusal to purchase for immediate delivery has not stopped buying altogether, however, as a lot of orders

are on the books of local concerns providing for delivery immediately after the turn of the year. Thus far December has been an extremely good month, shipping going right ahead without a let-up, orders already placed being more than sufficient to insure activity in the yards.

Some canny buyers who placed a lot of orders for plain oak a good while ago, months, at any rate, are now digging these up and making specifications for immediate deliveries. Lumbermen who were hoping that they would not be called upon to deliver on the basis under which the business was secured are now beginning to realize that plain oak sold all too cheaply last summer.

The feature of the situation continues to be an active demand for quartered oak, with quartered white leading, naturally, and plain red holding the fort in that line. Thick plain oak is a scarce item at present, and an inquiry for 75,000 feet of 3" No. 1 common has circulated through several markets herabouts without producing anything definite. Hickory, ash and chestnut are good. Poplar is slightly dull in the upper grades. Cottonwood and gum are in good demand, and mahogany is firm.

MILWAUKEE

The hardwood business is holding up especially well for this season of the year and wholesalers do not anticipate the bad slump usually experienced during the holiday season. Demand is good from most sources, but especially so from the general factory trade. Practically all the sash and door and interior finish manufacturing concerns are looking for a record breaking business next year and are preparing their stocks accordingly.

The head of a large sash, door and blind house says that business is better than it has been at this time in the past fifteen years; that the trade has increased at a remarkable rate during the last quarter of the year and that all prospects indicate that a big business will be experienced all of next year. He believes that the total business of the past year in the Milwaukee sash and door field would show an increase of at least fifteen per cent as compared with that of 1911.

The box factories are stocked up fairly well and are not buying quite so heavily in low-grade hardwood. Most of the manufacturing concerns have been farsighted enough to buy rather liberally in the past few months and thus to a certain extent have avoided the high prices. However, many concerns are low on stocks and have very little chance at the present time of getting what they want. There is still a genuine shortage in some lines.

The demand is good for inch birch and prices in this line are strong. Reports from some northern lumber points say that birch stocks will hardly last until the middle of January. Maple is selling well in all thicknesses, but there is very little No. 1 and No. 2 on the market. Low-grade maple is much in demand, however. Basswood is in brisk demand, with the possible exception of No. 3, which is about out of the market. Elm is scarce. In the southern woods, both plain and quartered oak are in the lead.

DETROIT

Orders and inquiries have been plentiful in the Detroit hardwood market the past fortnight and excellent business is reported in every branch of the trade. A feature of the market has been the steady increase in prices on most every grade of hardwood. There has been a big demand for ash, walnut and birch from the automobile body and accessories companies. A large automobile concern recently sent out a requisition for 1,250,000 feet of hardwood lumber, mostly ash but also good quantities of walnut and birch. Other motor car companies have also been purchasing liberally.

The box and crating companies have been

buying in good lots and great activity is reported in these trade. Exceptionally good business is also reported in the hardwood flooring trade. The majority of dealers and manufacturers are extremely optimistic for spring and summer business, believing that the building boom predicted for this spring by architects and builders will keep hardwood moving at a lively rate.

GLASGOW

The business in this market is quite satisfactory, a cheerful tone being maintained, with no special line outstanding. Prices of all kinds of wood are advancing and with the light imports and dwindling stocks, the tendency is still upward. Inquiries are numerous for prompt and forward delivery, but in many cases the prices prohibit anything further being done. At present it seems that buyers who are covering their requirements at current rates will consider themselves fortunate later on, as with advanced yearly contract rates coming into operation in January, c. i. f. values will be further inflated, so that nothing can be gained by waiting. So far as brokers are concerned, there is no undue anxiety to enforce sales, but to hold out for top figures, and even if storage charges are incurred, it will be to their ultimate advantage. With prices for the various lines advancing toward the end of the season, buyers will not readily pay such advances, but, had the advances taken place earlier in the season, which could easily have been done and obtained, buyers long ere this would have become reconciled to the higher values.

The spruce and pitch pine markets are unique at present in this respect. Freight to the United Kingdom are not nearly so high as those quoted and paid to other parts; supplies are plentiful, but still shippers have held back all along. The current prices for spruce of a year ago have seen an advance of not less than 33 per cent, with the prospect of a further rise in the near future. Most buyers in this market, however, will not pay this increase, as Litgas can be bought at lower prices.

The steamship Indrani has arrived from Newport News with the usual varied cargo, particularly oak and poplar. This shipment has met with a good request, as is evident from the large quantity being cleared on ex quay basis. The demand for oak is quite equal to the supply. Some of the oak, however, is not up to the standard grade, but as the policy just now is "take it or leave it," complaints are unheard of. However, if the supply were in excess of the demand, this would not apply, as buyers would not take up the goods. Wagon builders are very busy and 12-inch x 5-inch and 3½-inch sizes are rapidly bought up. Consignment parcels should do particularly well. Furniture makers are also busy and enhanced prices are being obtained both for parcels ex quay and ex stock. Quite a number of oak squares have been coming in, ranging from 2-inch x 2-inch to 3½-inch x 3½-inch, and these have sold well. A carload of quartered oak flooring strips has arrived, but price asked has not been given so far. No difficulty should arise in obtaining a full price once they have been stored for a few weeks. Any consignment of walnut boards arriving meets with prompt disposal provided quality is right.

Contracts for birch planks and logs are now briskly proceeding and increased prices are being obtained for the lower port shipment.

Shipbuilders continue busy, as also are packing-case makers, whose supplies require to be drawn chiefly from the Baltic.

The exporter has seldom had so many problems; current freights for ports not governed by contract arrangements are astonishingly high and shippers are finding transactions difficult. Troubles are further increased by restrictions on through bills of lading, demurrage charges and shortage for inland transport and also by sea.

WHY DO more than 320 of the most prominent and successful lumber manufacturers exchange nearly \$26,000,000 of indemnity against fire loss at

Manufacturing Lumbermen's Underwriters

B E C A U S E !

BECAUSE it is the oldest and strongest inter-insurance association among lumbermen, being now in its fourteenth year.

BECAUSE \$728,910.41 cash savings have been returned to members.

BECAUSE \$756,787.21 cash surplus, owned entirely by the members, has been accumulated.

BECAUSE \$2,012,427.96 has been paid in losses under prompt and equitable adjustments without resort to quibbling or technical controversy.

BECAUSE it was the first to settle lumber losses on a market value basis.

BECAUSE the regular, frequent and thorough inspections given the plants of all members help them to prevent fires, thus materially reducing both the fire waste and the cost of indemnity.

200,000 ft. 12" and up Walnut logs.
50,000 ft. 12" and up Cherry logs.
C. L. WILLEY, 2558 S. Robey St., Chicago.

TIMBER LANDS FOR SALE

VIRGINIA TIMBERLAND TO BE SOLD AT AUCTION JANUARY 10, 1913

Over 700 acres in Botecourt County, Va., about one mile from Compton's Switch, to be sold free and discharged from all liens and encumbrances, at the old lumber camp on the premises, Friday, January 10, 1913, at 3:30 p. m.

Property can be reached by N. & W. R. R. to Buchanan, Va., thence via C. & O. R. R. to Compton's Switch. A deposit of 10% cash or certified check to be made at time of sale. The property belongs to the American Coal & Lumber Corp., bankrupts, and is sold by order of the U. S. District court, subject to confirmation. For further particulars apply to

WILLIAM P. DAVIS, JR., Trustee,
1200 Betz Bldg., Philadelphia, Pa.

For the convenience of purchasers, bids will be received by the auctioneer, W. S. Greenway, in front of the Roanoke Court House, Roanoke, Va., on Friday, January 10, 1913, at 11:30 a. m., and the bids then made will be cried by the auctioneer at the sale on the premises in the afternoon; the auctioneer reserves the right to sell the property to the highest bidder on the premises.

FOR SALE—TWO HUNDRED MILLION

Feet stumpage hardwood; very fine proposition; on railroad western N. C. J. M. ASKEW, 79 Cumberland Ave., Asheville, N. C.

ARE YOU INTERESTED IN GUM and Red Oak?

I own in fee simple two small and carefully selected tracks of high-class gum and red oak stumpage. Will sell at price to make the buyer good money either as an investment or as an operating proposition.

Will deal with principals only. Address in confidence, "BOX 22," care HARDWOOD RECORD.

TIMBER LANDS WANTED

WANTED TO BUY

400 or 500 acres of good hardwood timberland, mostly oak and ash, suitable for bending purposes. Address

"BOX 125," care HARDWOOD RECORD.

TIMBER FOR SALE

FOR SALE—HARDWOOD TIMBER

6,118 acres in fee simple of virgin timber land having on it the following: Oak, 15 million feet; cypress, 12 million feet; gum, 12 million feet; pine, 10 million feet. This is located in North Louisiana and is fine timber. Address "OWNER," care HARDWOOD RECORD.

LUMBER FOR SALE

500 Copies Sold Within a Week After Prospectus Was Issued

Hardwood Record announces the issue on January 1, 1913, of an Authoritative Commercial and Scientific Book

American Forest Trees

By **Henry H. Gibson**, Editor *Hardwood Record*
 Edited by **Hu Maxwell**, Wood Utilization Expert

The Work Involves:

First: A botanical description of the more than 300 species of American forest tree growth.

Second: A physical description of the wood of these species.

Third: A recital of the chief uses of all important American woods, together with suggestions of advantageously broadening their uses.

Fourth: Complete information concerning the range of growth of all varieties.

Fifth: Related trees are logically grouped according to families and spe-

cies; important species covered in substantial detail, and brief mention of the woods of minor importance.

Sixth: Scientific name of each tree is recited, as well as the various common names by which it is recognized in different parts of its range of growth.

Seventh: The properties of the various woods are carefully analyzed, particularly weight, hardness, stiffness, strength, elasticity, toughness, color, figure, and seasoning and lasting properties.

☐ The book will contain between 650 and 750 pages, will be printed on the best quality of enameled paper, and handsomely bound in half leather, dark green roan back and corners, with basket cloth sides, silk head-bands, gold stamping on the back, and gilt top.

☐ The work will be illustrated with more than 100 full-page pictures on plate paper in sepia, outlined in orange, from photographs, covering all the chief commercial varieties of virgin forest timber growing in the United States; and also with numerous engravings, from drawings and photographs, showing leaf and flower forms, etc.

☐ The price of the work is \$6.00, delivered by express or mail, and is sold only on subscription.

☐ An order blank, and a prospectus, showing the character of the paper, size of page and style of printing will be forwarded on application.

veneers AND PANELS

Ahnapee Veneer & Seating Co.

HOME OFFICE, FACTORY AND VENEER MILL, ALGOMA, WIS.
VENEER AND SAWMILL, BIRCHWOOD, WIS.

We manufacture at our Birchwood plant single ply veneers of all native northern woods and deliver stock that is in shape to glue.

From our Algoma factory, where we have specialized for twenty years, we produce panels of all sizes, flat or bent to shape, in all woods, notably in Mahogany and Quarter-Sawed Oak.

We make no two-ply stock, and do not employ sliced cut quartered oak. Our quartered oak panels are all from sawed veneer.

Every pound of glue we use is guaranteed hide stock. We do not use retainers. Our gluing forms are put under powerful screws and left until the glue has thoroughly set.

If you seek a guaranteed product that is the best, based on results accomplished by most painstaking attention and study of every detail, combined with the use of the best stock and an up-to-date equipment, our product will appeal to you.

If you are a "price buyer" we probably cannot interest you.

PUTNAM VENEER & LUMBER CO.
ROACHDALE, IND.

H. I. CUTSINGER, Gen'l Mgr.

Custom Mill Work, Storage, Inspection

ON

Foreign Fancy Woods, Mahogany, Cedar, Circassian

We receive the logs, store or warehouse them, manufacture them into lumber, cut or saw veneers, pile and store the product, and ship via any railroad. Also furnish inspection returns on logs or lumber. Can furnish accommodations and economies which it is impossible to secure elsewhere. We always have on our yards parcels of plain and figured African, Mexican and Cuban Mahogany, Circassian Walnut and Cedar logs, placed here for sale by direct foreign shippers, from which advantageous purchases can be made.

Astoria Veneer Mills & Dock Co.

Long Island City, New York

Veneers and Panels with a Reputation

WE manufacture Veneers in all the native woods and for all purposes. Also Built-up Panels in native and foreign woods—three and five-ply—and have established a reputation for furnishing high-grade material. Send us your inquiries and orders and become one of our satisfied customers.

The joints which you make are perhaps satisfactory, but are you satisfied with a method that takes several operations to do the same work that can be done on the

“Linderman” Automatic Dovetail Glue Jointer

which joints lumber together and builds panels up to any width desired without lumber waste, on one machine and at one automatic operation, offering an improvement in cost reductions with as perfect a glue joint as can be made by any method?

Three Hundred and Fifty Manufacturers Now Use the “Linderman”

with more than satisfactory results as to economy and quality; no matter how many men you use in your jointing department, you pay them from \$400.00 to \$700.00 each per year. With the “Linderman” in your factory the labor cost would be reduced more than one-half and your yearly labor costs would be reduced to \$200.00 to \$400.00 per man.

Taper Wedge Joints Are Thoroughly Glued

because when the joint begins to slide together there is a 16-in. opening. The glue is not forced out but forced into the wood—the Tapered Dovetail then permanently clamps the boards together.

The names of some of the users here represent practically every line of jointing and the automatic method means a big saving in these factories in labor, lumber and glue.

Saving Edge Waste

The new feeding fence is a very important feature in saving lumber. Rough edge lumber can be jointed, saving the ripping, the saw kerf and edge waste. Can we send you leaflets explaining this feature with others?

"It is not what lumber costs you, so much as what you can get out of it, that decides its value for your work."

OUR OWN MANUFACTURE

Something New For Your Factory Floors

Utility Joined With Economy

We are now manufacturing what we call a No. 2 Factory grade of Hardwood Flooring which can be used successfully in factory buildings where good wearing qualities rather than appearance are required. This Flooring is made from the hardest portion of the log, and while the Flooring shows the heart defect to a considerable extent, nevertheless it will wear with wonderful durability. It is "Rockhard" flooring at a rock bottom price.

It is 13/16 x 2 1/4" face, and the Flooring is kiln dried, hollow backed, bored, end matched, steel scraped and bundled.

Write us about it. This is a grade of Hardwood Flooring you should know about. Address MITCHELL BROTHERS COMPANY, Sales Department, CADILLAC, MICHIGAN.

A floor to adore

For thirty-three years Wilce's Hardwood Flooring has been among the foremost on the market and because it stands today "unequaled" is the best evidence that its manufacturer has kept abreast of modern methods and the advanced demands of the trade. To convince yourself of the above statements, try our polished surface flooring, tongued and grooved, hollow backed, with matched ends and holes for blind nailing—you'll find it reduces the expense of laying and polishing. Our Booklet tells all about Hardwood Flooring and how to care for it—also prices—and is free.

It's Still a Bull Market!

Every buyer likes to take advantage of whatever opportunities happen to be offered for getting bargains in materials.

The attitude of the user of any commodity is naturally bearish—because it's to his interest to be so. He wants prices to decline, and the wish being father of the thought, according to some noted genealogical authorities, he proceeds to think that quotations are due for a slump.

This is just a little hint to remind the buyer who is temperamentally bearish that the signs are all ag'in him just now. Prices at this present moment are not high; in fact, on some items, considering the intrinsic value of the wood and its manufacturing cost, they are particularly low, and this stock would make a good buy for anybody, be he wholesaler or consumer.

The mills have had some good weather during the past few months, and have piled up considerable lumber. But consumption is running ahead so fast that this incidental increase in production is merely an anchor to windward, a kind of safety valve for the outlet of any particularly rapid development of business. It is certainly not enough to justify any idea as to lower prices.

Talk to people in other lines, from pig iron to dry goods, and you'll find that everybody is busy, and everybody's buying. That means firm market conditions, with the tendencies constantly upward. Hence our tip, based on conditions which anyone can analyze for himself, is to buy.

Incidentally, just remember that the best place to go for hardwoods, including special orders, mixed cars and veneers and panels, is Louisville. Address

Hardwood Record announces the issue on February 1,
1913, of an Authoritative Commercial and Scientific Book

American Forest Trees

By **Henry H. Gibson**, Editor *Hardwood Record*
Edited by **Hu Maxwell**, Wood Utilization Expert

The Work Involves:

First: A botanical description of the more than 300 species of American forest tree growth.

Second: A physical description of the wood of these species.

Third: A recital of the chief uses of all important American woods, together with suggestions of advantageously broadening their uses.

Fourth: Complete information concerning the range of growth of all varieties.

Fifth: Related trees are logically grouped according to families and spe-

cies; important species covered in substantial detail, and brief mention of the woods of minor importance.

Sixth: Scientific name of each tree is recited, as well as the various common names by which it is recognized in different parts of its range of growth.

Seventh: The properties of the various woods are carefully analyzed, particularly weight, hardness, stiffness, strength, elasticity, toughness, color, figure, and seasoning and lasting properties.

☐ The book will contain between 650 and 750 pages, will be printed on the best quality of enameled paper, and handsomely bound in half leather, dark green roan back and corners, with basket cloth sides, silk head-bands, gold stamping on the back, and gilt top.

☐ The work will be illustrated with more than 100 full-page pictures on plate paper in sepia, outlined in orange, from photographs, covering all the chief commercial varieties of virgin forest timber growing in the United States; and also with numerous engravings, from drawings and photographs, showing leaf and flower forms, etc.

☐ The price of the work is \$6.00, delivered by express or mail, and is sold only on subscription.

☐ An order blank, and a prospectus, showing the character of the paper, size of page and style of printing will be forwarded on application.

Review and Outlook

General Market Conditions

WITH NO POSSIBILITY of a material change in the stock situation during the next five or six months, the general hardwood market continues on the same firm basis that it has maintained for several months in the past. The upward trend of prices has continued and it is anticipated that further advances will be noted in some items. No excess stock is reported in any section of the country, even though northern mills are having splendid logging weather and are now equipped with their full quota of woodmen, but the unusual shortage will more than offset any increased production that might result from increased mill activity.

With modern methods of perpetual stock reports, the inventory season does not stretch out over the long period that it used to. As a consequence a fair percentage of the buyers have gotten back into the market. There is still to be noted, however, a tendency to give inventory-taking as an excuse for not placing orders. It is doubtful though that this hesitancy is with the view of waiting for a break in prices, as every intelligent buyer is undoubtedly well aware of the staunchness of present market values on hardwoods.

The general opinion of the trade continues to be that the coming year will be one of the strongest that hardwoods have ever experienced. The opinion is usually expressed, however, that the strength will not be in the nature of a boom, but of a healthy and steady increase in the demand for products of the hardwood forests.

The Hardwood Situation—Past and Present

IT IS CUSTOMARY at this time of the year for the average lumberman to review the immediate past of his business and analyze the immediate future prospects in as careful and painstaking a manner as possible. As history notoriously repeats itself, this is the only means he has of making logical plans for the future.

To go back to 1911: This year was really the final one in which all commercial enterprises were dragging, and the hardwood lumber business was no exception to other lines of endeavor. Business was dull, stocks accumulated; and while the good end of the hardwood product was sold, but at much below its true value, the coarser grades piled up in what was then regarded an appalling magnitude.

Quite early in 1912 hardwood lumber commenced moving more freely, at advanced prices, and even before midsummer there was very little high-grade lumber either in first hands or in the

possession of ultimate consumers; and users of hardwood commenced to figure seriously on the utilization of lower grades in the belief that they could be profitably employed. The sales of low-grade lumber gradually increased until at the end of 1912 there was just as serious a shortage in low-grade stock as there was in high-grade. To be sure, the extreme coarse end of hardwood went into the crating and box business quite largely, but the medium low grades have to a wonderful extent taken the place of No. 1 common and firsts and seconds in many lines of production.

At the opening of 1913 hardwood stocks are very low the country over, and in a good many lines there is an absolute famine. This is notably true in plain oak, but a good many other woods are in nearly the same situation.

To epitomize: Desirable hardwoods of all varieties are in remarkably short supply at the present time, and the demand is strong with prices steadily strengthening.

In hardwoods there seems to be no menace in sight in the way of a possible over-production. While there are many more small operators in hardwoods than there are in the building wood manufacture, the small operators are gradually growing fewer in number and timber holdings are now quite largely grouped in large blocks and are in the hands of strong ownership. It is doubtful if it will be possible to ever again create a marked over-stock of hardwood lumber, as the hardwood areas of the country are very much proscribed and essentially all important sources of supply are now in the hands of operators.

The hardwood situation is in very much better shape prospectively than the building woods. The Northwest has still untold millions of high-class conifers that undeniably will be crowded onto the market for years to come, but in hardwoods this condition cannot obtain. A comparatively small hardwood area must supply the entire country east and west, as well as a not inconsiderable foreign demand.

It must be borne in mind that hardwood production today constitutes only about twenty per cent of the total lumber produced in the country, and beyond this there is a fast-growing demand for hardwoods that can scarcely be met by the supply. The increased wealth of the nation, better taste and better judgment all contribute to a marked increased use of hardwoods for flooring and finishing purposes in all building construction. Even low-priced cottages are today finished in hardwoods of beauty and permanence. This demand will probably increase rather than diminish for years to come, as the attempts to introduce steel and other alleged fireproof materials for the finishing of high-class structures generally seem to be regarded as futile and unde-

sirable as compared with the beautiful results obtainable in high-class hardwood finish. At one time steel as a finishing material was regarded as a menace to future utilization of hardwoods for this purpose, but it is fair to assume today that this is a bugbear which will never seriously militate against hardwood utilization.

From every viewpoint then hardwoods and the prospect of money-making in their production is the one best bet in the entire lumber business. No owner of hardwood stumpage who does business on even reasonably good lines can fail to achieve a handsome profit out of lumber production. Hardwood stumpage is the best and cheapest thing there is on the market today, and the one good place for logical investment.

On Oak Grading

AN ESTEEMED AND COMPETENT southern hardwood lumberman writes *HARDWOOD RECORD* substantially as follows: "I am coming in contact with all kinds of oak values being shipped under the same name, i. e.: firsts and seconds, No. 1 common and No. 2 common coming from different points, in which the values of these grades, from one point in some cases, are almost double what they are from another.

"Another method that I find is being pursued quite largely is the splitting up of the different grades, making two and sometimes as high as three different values from one grade of lumber, not described by either of the grading rules of the two chief hardwood associations. As a matter of fact as things are now conducted I find that the name of the grade of lumber does not signify very much. Some people are offering one grade of lumber on a given grade and name, where the other is on another, and the buyer is not justified in paying the price that is asked in certain places. I find that there is as much as five dollars a thousand difference being asked for the grades of firsts and seconds, No. 1 common and No. 2 common, and also that there is fully that much difference in the value of the stock. This is the only demoralizing thing in the hardwood situation today.

"For the present, closer utilization of oak in ultimate consumption seems to be the desire on the part of buyers, who seek specific grades made best suited for their use, and I believe the time has come when more grades should be made in oak. Consumers of lumber today are getting to a point where they are figuring on getting values in the lumber they buy, and are specializing more on the grades they use. They are willing to pay a premium in order to get the grade they require that will show as little waste as possible. With this tendency in view I believe the time has come when those having inspection matters in charge should accommodate their grading systems to the requirements of the buyers, which at the same time would develop a better profit for the manufacturer."

The matter of inspection of hardwoods is one that is perennial, and inasmuch as the present system, which no one holds is perfect, is fairly satisfactory, it matters not how desirable amendments may be in the grading of lumber, and is quite doubtful if the majority will ever consent to any radical amendments in the present rather crude, and in many instances unsatisfactory methods of inspection. However, there is meat in what *HARDWOOD RECORD*'s correspondent has to say on the subject of oak inspection. There really is no accurate basis today for determining values.

The Consignment Evil

FOR THE FIRST TIME in four years Gustav A. Farber, London representative and partner of Russe & Burgess, Inc., Memphis, Tenn., is visiting the United States. He spent the holidays with a number of his relatives at Baltimore, and incidentally called on a number of his old friends among whom his memory is kept green. While in this country, Mr. Farber will visit several of the hardwood sections of the country, and then go to Memphis to confer with members of his company on business matters.

Mr. Farber was interviewed by a *HARDWOOD RECORD* repre-

sentative a few days ago and talked most interestingly and instructively about trade export conditions. Mr. Farber makes the emphatic assertion that the foreign business can not be successfully conducted except by the aid of a foreign representative who is always on the ground to look after shipments and settle any possible controversies that may arise between seller and buyer.

Mr. Farber certainly has made a great success of his work abroad, and being not only a thorough lumberman, but a linguist as well, has helped him greatly in his ability to grapple with the constantly changing conditions arising in the hardwood export business. He is a man of extreme perseverance and tactfulness, and has attained a reputation for fairness that makes him very popular with buyers of Great Britain and the Continent.

While Mr. Farber's relations with foreign wood brokers are pleasant, he does not hesitate to assert that many of them do not always carefully look after the interests of the shippers as they should, and that their position as intermediaries between the exporter and buyer renders them less zealous in securing at all times for the shipper his just due. They seem to feel that they can not afford to incur the ill will of the buyer and this tends to make them unmindful of the interests of the shipper.

To illustrate this point Mr. Farber stated an instance in which a broker having information that a shipment of lumber was in transit, went around among the trade offering it for sale. The prospective buyer knowing that the lumber was being forwarded on consignment was not willing to pay the very fair price mentioned, which would have left the exporter a small margin of profit. The broker immediately asked the buyer what he would give for the stock. A price was named, which meant a definite loss to the shipper, but which price the broker accepted and advised the exporter that this was the best figure obtainable. This situation Mr. Farber states is merely a sample of what is being repeated with great frequency on consignment shipments, and illustrates the weakness and foolishness of this system of doing business. Almost invariably customers who do business on these lines unload their stock at a heavy loss and at a much less price than they could get for the lumber at home.

Mr. Farber says that one of the greatest drawbacks to the export lumber trade is the English credit system under which the buyer demands six months' terms of settlement. This method imposes a financial strain upon the seller which few of them can stand, and furthermore is bad all around for the reason that it places business upon a false basis. It virtually gives the buyer the use of the seller's money for six months without any return to the seller and renders it extremely difficult to hold the buyer down to a volume of credit to which he is entitled within the limit of safety.

Under this system the broker has found his opportunity, and usually allows the exporter to draw against shipments for a portion of the amount due and carries the buyer. This system places the exporter and to some extent the buyer at the mercy of the broker. Mr. Farber insists that the only correct method of handling the export lumber trade is to handle it as other lines are handled, i. e., on a cash basis at the usual discount, with the six months' time feature eliminated. He is further insistent that the consignment business for the best interests of all concerned should be eliminated as at its best it is full of dangers and pitfalls, which have resulted in very few American hardwood exporters ever having made any considerable profit out of foreign business, where logically they should have made no inconsiderable profit.

Cover Picture

COMMENCING WITH THIS NUMBER of *HARDWOOD RECORD* the front cover of each issue will be embellished with a picture illustrating some important phase of forest growth, woods operations, or lumber utilization. The picture on the front cover of this issue illustrates the most recent and economical type of log slides, which is of the plank type. This system of getting logs off steep mountain sides

has been practiced for many years in the rough country of both the East and the West. The earlier types of these slides were made of logs which were never entirely satisfactory on account of their initial cost, the waste of forest material and general crudeness.

The plank slide here depicted is an evolution in slide building which is far in advance of a timber slide, and in efficiency and cheapness of operation ranks second only to the logging railroad, and in some instances can be employed economically to better advantage than a railroad, where slopes are too steep to make the operation of a logging road possible.

The details of the construction of these slides has previously been described in HARDWOOD RECORD. This picture was made in the operations of the Little River Lumber Company in Sevier county, Tenn.

Policy of Hardwood Record

THIS ISSUE of HARDWOOD RECORD will go to its numerous clientele involving timber owners, lumber manufacturers, woodworking machinery makers, veneer and hardwood flooring producers, furniture and other woodworking factories, etc., with a new make-up and with broadened plans for increased usefulness.

The average astute lumber producer who is a close student of his affairs is of the opinion that lumber production and utilization in the United States has yet achieved scarcely fifty per cent of its ultimate efficiency. That is, he avers that less than fifty per cent of possible forest utilization has as yet been attained.

To assist in better efficiency is certainly the province of the logical lumber trade newspaper, and it is with this end in view that hereafter HARDWOOD RECORD will be transformed into what will be practically a hardwood magazine, devoted to both scientific and commercial matters, inclusive of news and market reports, that are germane to the hardwood forest and the products thereof. To a large extent trivial and unimportant alleged news matter and the accompanying "con, bunk and piffle," with which the trade press is burdened, will be eliminated, and an earnest attempt be made to produce a periodical that shall not only be of interest, but of essential educational value to everyone connected with the production, distribution and utilization of hardwood lumber.

The editors do not propose to tell the lumber trade what they know about the lumber business, but will attempt to reflect the best opinions of the best talent covering all phases of forestry, logging, manufacture, seasoning, assorting, sales, distribution and utilization of the splendid remaining hardwood forests of the country.

While the editorial staff of the publication remains unchanged, co-operating with it will be a large number of contributors who will write on topics on which they are authorities. There will also be a series of articles from scientists, who up to this time have had but small distinction or even respect, but whose studies and knowledge of sundry phases of the subjects involved are now being regarded as of paramount educational value to the trade.

What the lumbermen of this country do not know about the lumber business is astounding even in comparison with the more specific and accurate knowledge possessed by foreign wood users. It is safe to say that the average Englishman or German has a better knowledge of the physics and value of American woods than the vast majority of American operators. It is held that the majority of

American lumber manufacturers have been too busy in "sawing wood" to find time to make themselves scientific students of the great business in which they are engaged, without which a high and desirable efficiency is impossible of attainment.

Then, what HARDWOOD RECORD is attempting is to assist in helping every element of the trade with information to a better knowledge of the calling, and ultimately to a much higher efficiency along every line of the business, that the prevailing scandal of less than fifty per cent efficiency shall become past rather than current history of the hardwood industry.

Northern Cut and Shipments for 1912

THE NORTHERN HEMLOCK AND HARDWOOD Manufacturers' Association has issued an interesting statement of the cut and shipments reported by association members covering the period December 1, 1911, to November 30, 1912. The statistics were compiled on a basis of reports of an average of seventy-four concerns, members of the association. The report shows a total cut of all hardwoods aggregating 259,017,000 feet with shipments aggregating 319,062,000 feet. It is interesting to note the excess of shipments over cut during the year.

The cut of hemlock during the year was 405,626,000 feet, and the shipments 545,935,000 feet, also a decided excess of shipments over cut.

In ash the cut was 6,085,000 feet against shipments of 10,370,000 feet; for larchwood the cut was 40,308,000 feet and the shipments 50,730,000 feet; for birch the cut was 72,454,000 feet and the shipments 99,249,000 feet; the cut of elm was 23,770,000 feet and the shipments 29,062,000 feet; the cut of maple was 65,279,000 feet and shipments 76,605,000 feet; in oak there were 2,563,000 feet cut and 3,614,000 feet shipped. Thus it is seen that in every item there is a decided excess of shipments over cut.

All these items showed a gradual increase in the cut month by month up to early summer months, after which

time the cut gradually decreased. The aggregate hardwood cut showed a decided increase during the first four months. The same figures were maintained then for March and April, 1912, after which there was a rapid falling off up to September. October showed a slight increase over September cut, but for the month of November a further decrease was noted from the figures for the preceding month.

With the exception of January, 1912, shipments of all hardwoods were maintained fairly uniformly until the end of April. January showed a considerably lesser shipment than the other five months. From April to May there was a decided jump, though May and June were approximately the same in shipments. The months of July and August, however, each showed a gain of about five million feet in hardwood shipments, while September showed a falling off of about seven million feet. October came back with a gain of six million feet, while the shipments for November were three million feet less. This would indicate that the heavy snows last January seriously affected the shipments, but that when they did start there was a steady demand which was maintained throughout the summer, and gradually increased up to the end of the summer months, the car shortage then effecting less steady shipments.

E. B. Brown

Dealer in

Wholesale Wagon Stock

Buffalo, N. Y., Nov. 12, 1912.

Hardwood Record,
Chicago, Ill.

Gentlemen:—Will you kindly cancel my ad in your classified ad section.

In the four insertions, I have received fifteen applications to date, and have secured a first-class man to represent me in the South. I cannot say enough for your paper as an advertiser. It certainly reaches everybody in the lumber business.

Yours very truly,

E. B. BROWN.

Coming Meetings

THERE IS EVERY REASON to believe that the coming meeting of the Indiana Hardwood Lumbermen's Association, which will be held at the Hotel Dennison, Indianapolis, on Thursday, January 16, will be a successful function in every way. A program of the meeting just issued shows that some mighty good papers will be read. E. M. Elliott, prominent in railroad circles in Indianapolis, will talk on "Co-operation Between Railroads and Shipping Interests." He will be followed by W. M. Prall, superintendent of car service at Pittsburgh, who will talk on "Interdependent Relationship of the Shipper and the Railroad in Service, with Direct Relationship to Demurrage Rules and Regulations." Judge Wood, chairman of the railroad commission of Indiana, will follow with a talk on "The Shipper and Railroad Regulation." This offers an excellent trio of speakers, as they are amply qualified to talk instructively and authoritatively on the various questions bearing on the important subject of transportation. Chandler Coulter of Purdue University will then give a talk on "Forestry." The banquet will follow the business meeting in the evening.

The annual meeting of the American Forestry Association took place at Washington, D. C., on January 8, 1913, at the Hotel Willard. This was the thirty-first annual meeting of this association. The program included regular business, directors' meetings and many addresses of value. A luncheon was served at noon at the hotel.

A call for the second Lake States Forest Fire Conference has been issued by Governor Charles S. Osborn of Michigan, the conference to be held at Lansing, Mich., January 21 and 22. The call comes directly from the governor and states that:

Whereas, the timber resources in the lake states are rapidly decreasing, and largely through the agency of forest fires; and,

Whereas, a complete realization of this loss, together with the knowledge of means of control and prevention, would be welcomed by all interests, the governor of state of Michigan invites all those interested to meet in conference, and to devise ways and means to obtain and spread such knowledge relative to the preservation of timber as may be possible.

Secretary-Treasurer J. P. Bartelle of the Union Association of Lumber and Sash and Door Salesmen, with headquarters at Toledo, O., announces the banquet of that association at 7 p. m., January 20, at the Hotel Statler, Cleveland, O.

The American Wood Preservers' Association will hold its ninth annual convention at the Sherman hotel, Chicago, January 21, 22, and 23. A number of papers, by experts in particular lines, are listed for presentation, and promise to make this meeting of much interest and value to those who attend. The field of the wood preserver is a broad one. Among other commodities, it includes railway ties, car material, bridge and other structural timbers, piling, poles, cross arms, and paving blocks. There is constantly something new being discovered in preservative materials, and the exchange of ideas and comparison of experiments at these annual meetings always mark an advance. Progress in wood preservation has been rapid in recent years, but there is no reason to suppose that it is to be less rapid in the future. It is acknowledged to be one of the most practical ways of conservation. It is better to double the period of service of one set of timbers than to use two sets. It is cheaper and in other ways more economical. By treating cheap or quickly decaying wood it can be made to take the place of timbers that are scarce and high priced. The field is constantly enlarging, and methods are improving, with the object constantly in view of making present supplies of timbers wear out instead of rotting out.

R. S. Kellogg, secretary of the Northern Hemlock and Hardwood Manufacturers' Association, with offices at Wausau, Wis., announces the annual meeting of his association at the Hotel Pfister, Milwaukee, on Wednesday, January 29.

The annual meeting of the Michigan Association of Traveling Lumber and Sash and Door Salesmen, with headquarters at Detroit, Mich., will be held at Kalamazoo, Mich., on February 3, 1913.

To Check Forest Fires

A CIRCULAR has been distributed throughout the country, with Curt Thiersch as author, advocating a new plan, which is not altogether new, of checking fires in coniferous forests by planting belts of broadleaf species at intervals. The method consists of cutting lanes of sufficient width through the forests and planting hardwoods in place of the needleleaf trees removed. Cross lanes of the same kind will complete the scheme of defense. The evergreen forests will thus be divided into blocks or squares of such size as the forest engineer in charge shall decide upon.

The plan is based on the well-known fact that a broadleaf forest usually burns more slowly than one of the needleleaf type. In the former, the fire creeps along the ground, consuming the mat of fallen leaves, and is seldom fierce or fast, unless dry ground litter is unusually abundant; but the reverse is generally the situation when resinous trees, such as pines, firs, and spruces, burn. Fire is apt to climb to the crowns and envelope the whole forest, from ground to tree tops, in a mass of flame. This is particularly liable to occur if the wind is strong. Such a fire is difficult to check. In fact, it frequently gets beyond human control and runs until it is stopped by open country, or is extinguished by rain.

The plan proposed by Mr. Thiersch has some merit, but it is evidently based on theory rather than practical experience and a recognition of the laws of tree growth. Some railroads have tried it along their rights of way with success. The green crowns are good spark arresters; and the dead leaves can be raked from the ground to prevent surface fires from creeping through. Under similar conditions strips of hardwoods through pine forests would do as well; but the conditions would seldom be similar. Unless the ground were kept raked clean, a fire would approach through the pines, crawl across the belt of hardwoods, and in five minutes be running wild on the other side. The hardwood belt would, however, provide an admirable line of defense for fire fighters. If they were there at the right time, and in sufficient numbers, they could generally stop the fire, provided it were a moderate one. They could not, however, stop a violent crown fire, unless the hardwood belt were very wide. Crown fires have been known to leap half a mile. Fires of that kind are, however, an exception to the rule and should not be urged as a reason against trying the hardwood belt method, if it seems otherwise practicable.

A fundamental fact seems to have been overlooked in suggesting the plan. It has been assumed that broadleaf trees will grow in strips where the pines are cut out. In some cases they will, but in most cases they will not. If the climate and soil were such that hardwoods could grow, the pines would not be there. The broadleaf trees would already be in possession. The principal needleleaf forests needing protection against fire are those on the high, dry, sterile mountains and plateaus of the West. Only hardwoods of the most miserable sort, often mere brush, and sometimes not even that, will grow there. It is impossible to put the hardwood belt scheme into practice in that region, and it comprises about a million square miles, and includes nearly all the softwoods forests that are now suffering greatly from fire.

The broadleaf species are generally much stronger and more aggressive than the softwoods, in fighting for ground. When both have an equal chance, the former generally get possession and hold it. But the pines can get along on ground so poor and dry that their competitors cannot grow there. The result is that in the natural arrangement of forests in this country, the needleleaf trees have been crowded from the fertile ground and have occupied dry, poor, and cold situations where their broadleaf competitors would starve to death if they tried to follow. Therefore, to advocate the planting of the hardwoods in such situations is to ignore one of the facts of nature.

It should not be supposed that the forest areas, belts, and stands simply happen to be where they are. They have arranged themselves in accordance with laws of plant ecology which have been developed during thousands of years of competition and struggle, and it is not in man's power to change these laws, or to annul them, except to a very limited extent.

Pert, Pertinent and Impertinent

The Test of a Man

The test of a man is the fight he makes,
 The grit that he daily shows,
 The way he stands on his feet and takes
 Fate's numerous bumps and blows.
 A coward can smile when there's naught to fear,
 When nothing his progress bars,
 But it takes a man to stand up and cheer
 While some other fellow stars.

It isn't victory, after all,
 But the fight that a brother makes.

The man who, driven against the wall,
 Still stands up erect and takes
 The blows of fate with his head held high.
 Bleeding and bruised and pale,
 Is the man who'll win in the by-and-by.
 For he isn't afraid to fail.

It's the bumps you get and the jolts you get
 And the shocks that your courage stands.
 The hours of sorrow and vain regret.
 The prize that escapes your hands.

That test your mettle and prove your worth,
 It isn't the blows you deal,
 But the blows you take on the good old earth
 That show if your stuff is real.

Nowadays

Old Opportunity mopped his brow,
 And hung around a spell.
 "No use," he grumbled, "of knocking now—
 'I've got to ring the bell!'"

HARDWOODS

One Better

A western buyer is inordinately proud of the fact that one of his ancestors affixed his signature with many a curve and flourish. The salesman's patience becoming exhausted in waiting for the buyer to recognize him, he finally observed:

"You have a fine signature, Mr. So-and-So."
 "Yes," admitted the buyer. "I should have. One of my forefathers signed the declaration of independence."

The Way the Books Balance

"So?" said the caller, with rising inflection. And then he added:
 "Well, you ain't got netting on me. One of my forefathers signed the ten commandments."

No Assistance Needed

As the train neared the city, the colored porter approached the jovial-faced gentleman, saying, with a smile:

"Shall Ah brush yo' off, sah?"
 "No," he replied; "I prefer to get off in the usual manner."—*Princeton Tiger.*

Things That Went Wrong

A flashily dressed man whose name may be given as John Doe had just registered at a hotel in a thriving young city in Kansas. "Is there any place here," he inquired, addressing the hotel clerk in a low tone and with a scarcely perceptible wink, "where they sell wet groceries to thirsty travelers?"
 "Wet groceries?" said the clerk, with a bewildered look. "O, you mean tomato catsup, canned soups, and such things as that. Yes, sir, you can get them at any grocery store."

American Forest Trees

ONE HUNDRED-THIRD PAPER

MADRONA

(*Arbutus Menziesii*—Pursh)

Madrona is an interesting tree which ranges from British Columbia southward to central California, attaining its greatest development in the redwood forests of northern California, where trees are sometimes one hundred feet high and six or seven feet in diameter. It is not only an interesting tree itself, but it has many interesting relatives, some of which are trees, others shrubs, and still others only small plants or vines. It may be called a second cousin to the common huckleberry, the mountain laurel, trailing arbutus, the azaleas, the tiny wintergreen, and the great rhododendron. It has some poor relations, but many that are highly respectable. It belongs to the heath family, of which there are seventy genera, and more than a thousand species; but less than half of them are in America, the others being scattered widely over the world.

The madrona, when at its best, is one of the largest members of the family; but it is not always at its best. It sometimes degenerates into a sprawling shrub, where it grows on poor ground and on cold, dry mountain tops. It is manifestly not fair to study any tree at its worst, and it is particularly not fair to the madrona, which varies so greatly in its appearance. At one place it may be scarcely large enough to shade the lair of a jackrabbit, and at another it spreads its branches wide enough to shade an army—a small army, however, say, about two thousand men. A tree of that size may be found within a few hours' ride of San Francisco. Its branches cover an area of from eight thousand to ten thousand square feet.

When madrona grows in the open it throws out wide limbs like a southern live oak, though not so large or long. Its crown is rounded and graceful; but when it grows in forests, where other trees crowd it, the trunk rises straight up to lift the crown into the sunlight and fresh air. The madrona is seen in all its glory in northwestern California, where it catches some of the warmth and the moist air from the Pacific. It follows the ranges of the Siskiyou mountains eastward near the boundary of California and Oregon. It is usually mixed with other forest trees, but sometimes large stands nearly pure are encountered, and there the long trunks, rather gray near the ground, but wine-colored above, rise in imposing beauty and are lost in the evergreen crowns.

The leaves suggest those of laurel, but are broader. The large clusters of white flowers are among the glories of the vegetable kingdom. George B. Sudworth, dendrologist of the United States Forest Service, who usually describes in strictly prosaic terms, breaks away from that habit long enough to compare madrona

flowers to lilies of the valley, in his "Forest Trees of the Pacific Slope." The flowers appear from March to May, depending on latitude and elevation.

The brilliant orange-red fruit ripens in the fall, and is often borne in great abundance. It renders the crowns of the trees very beautiful. The fruit is about half an inch long and contains many small angular seeds. The fruit is said to contain a substance which puts to sleep wild creatures that feed on it. The claim is probably mythical, for birds breakfast extravagantly on it in the morning, and apparently do not do any sleeping until after sunset.

This tree was discovered by and named for Archibald Menzies, a Scotch botanist who traveled in the Northwest more than a hundred years ago. It has several local names, among them being mandrove, laurel wood, mandrone-tree, laurel, and manzanita. The last is the proper name of another small tree which is associated with mandrona and is closely related to it.

The wood weighs 43.95 pounds per cubic foot. It is a little below eastern white oak in fuel value, a little above it in strength, and somewhat under it in stiffness. The color is pale reddish brown, resembling applewood in tone, but generally not quite so dark. The wood is porous, but the pores are very small. Medullary rays are numerous but thin. On account of the rays being of a little deeper red than the other wood, quarter-sawed stock is handsome and of somewhat peculiar appearance. The figure is much like quarter-sawed beech, but of deeper, more handsome color. The contrast between springwood and summerwood is not strong, though easily seen. Generally, the summerwood constitutes about one-fourth of the annual ring. The tree grows slowly, but with much irregularity. The increase in one season may be four or five times as great as in another. The bark exfoliates, and is quite thin.

Madrona has never been put to much use. Difficulties in seasoning it have stood in the way. The wood warps and checks. Similar difficul-

ties with other woods have been overcome, and such troubles should not be unduly discouraging. The beauty of the wood is unquestioned. It presents a fine appearance when worked into furniture, particularly in small panels and turned work, like spindles, knobs, and small posts. When made into grills it shows a surprising richness of tone. The wood polishes almost to the smoothness of holly. Small quantities are made into flooring; a little goes to the furniture makers; lathes turn some of it for novelties and souvenirs; fuel cutters sell it as cordwood; and tanbark peelers cut the trees for

MADRONA TREE NEAR THE NORTHERN LIMIT OF ITS RANGE AT SEATTLE, WASH.

the thin, papery bark. In that case the trunks are left to decay, unless they happen to be convenient to a cordwood market.

One of the most extensive uses for the wood of madrona is for charcoal burning. Blacksmiths buy it because it is cheaper than coal, and some is used in shops where soldering and welding are

done; but the most exacting demand comes from gunpowder manufacturers. They find this wood almost equal to alder and willow as a source of charcoal suitable for powder.

The accompanying illustration is from a photograph taken by the editor of HARDWOOD RECORD near Seattle, Wash.

Modern Cruising Valuable in Logging

A man of long and successful experience in hardwood logging stated, in a discussion of logging efficiency with the writer, that if one knew with some degree of accuracy the amount of timber to come out of a given hollow or other logging unit, the choice of the cheapest and best method for logging that hollow would be comparatively simple. But, he said, that fact was practically never known. Usually a practical logging man, after going over the timber, makes a guess at what is there, and feels satisfied if his estimate is under the actual cut by a very good margin.

The truth of his statement is obvious. Almost every man of experience knows from the records of past operations the cheapest way he can log a hollow, provided he knows how much is coming out of it. In other words, the stand is the key to the amount and character of the improvements which are economical. In fact, it is and almost must be the key to the choice of the most efficient method of logging a given unit.

Most lumbermen "take a chance" on what will come out of a hollow, and log accordingly, in nearly every case preferring to spend too little on improvements in order to be absolutely sure of "playing safe." The writer knows personally of cases where a different method would have been chosen—and at a great saving—if this important factor of stand had been known.

The reason for this is undoubtedly that most lumbermen believe an estimate far too expensive to justify itself. It is a fact, however, that in Maine estimates are made of townships, including a tree to tree caliper measurement of two and one-half to three per cent of the area, and clearing and blazing of section lines which divide the township into mile squares, for less than ten cents an acre. In addition to this estimate, and from data gathered in this work, a topographic map, showing roads, streams, lakes, etc., is prepared, the whole thing costing, as stated before, not over ten cents per acre.

For the purposes of the mountain logger a great deal of this is not necessary. The section lines are of little value and as they cost a little over one-third of the total cost of the cruise, leaving them out would be a great saving. Furthermore, a carefully drawn topographic map, while a very desirable thing in itself, is far from necessary, and further saving could be effected here.

A very practical and cheap method for making a sufficiently accurate estimate of a logging unit in the hardwood region is as follows: A compass and chain traverse should be run around the cutting area. This would require a compassman and two assistants to drag the chain. At stated intervals lines could be run across the topography and every merchantable tree within an area one-half chain wide on either side of the lines could be calipered. The compassman could take notes as he goes along, of streams and other topographical features. Every ten chains of a line like this gives one acre calipered. It would then be necessary only to run enough lines, evenly distributed, as to cover the required percentage of the area. In hardwoods probably a minimum of five per cent should be so calipered. The spacing of the lines can be easily figured after the traverse of the cutting area has been plotted.

The remaining work would consist in computing the average contents of trees of different diameters. Often this is known closely enough for this purpose; if not, a little time spent in following the saw crews and measuring the contents of felled trees will get it.

From this work the stand of the average acre is easily figured, and the area of the whole hollow may be computed from the plotted traverse. A compassman worthy of the name can then figure for a hollow the amount of timber in it; he can draw a sketch map showing the streams and the lay of the land, and, more important than that, the traverse will show him the length, width and shape of the hollow, this last point being important in that it will show the skidding distance, and length of poled road, slide, tramload, or other improvement necessary. Surely, if he knows this, the lumberman can figure out the cheapest way of logging that hollow.

Now, this would not be necessary for the whole area covered by the operation, although it certainly would be desirable; but for those hollows where the method is in doubt it would be invaluable.

Let us look at the cost of such work. If in Maine from two and one-half to three per cent estimates can be made, section lines cleared and blazed, and a map prepared for ten cents an acre, certainly in the hardwood region a five per cent estimate, with no clearing of lines, and only a rough sketch map, can be made for not over ten cents an acre. Assuming, now, a very light stand of merchantable timber, say, two thousand feet per acre, we have a cost of five cents per thousand. But against this cost we have the advantage of knowing closely what we can get out, and being able to figure, with a good degree of certainty, on the amount and character of the improvements possible.

It is the writer's firm conviction that this expenditure of five cents per thousand—and in many cases it would be less, where the stand per acre was heavier—would save itself many times over in the cost of logging. Even in the cases where the estimate merely confirmed the lumberman's opinion of the way he should log it, the additional cost would have insured him against the choice of the wrong method, to find it out only when the work was finished and the money spent beyond recall. In the case of logging by contract it would save just as much, or possibly more, by giving the lumberman a safe basis for estimating what he ought to pay and a proof to the contractor that the price is fair.

Odd Use for Wood Toothpicks

Toothpicks are associated with restaurants rather than with funerals and cemeteries, but, in fact, a very large number of them are consumed in the manufacture of floral designs. Every flower and every leaf which forms a part of a wreath or other design is first wired to a toothpick, and the wood imbedded deep into wet sphagnum moss until the natural stem reaches the moisture, and thus the flowers are supplied with sufficient water to keep them fresh for several days. The toothpicks are put up in cases of 100,000 each and about 6,000 cases are consumed annually in the floral business alone. Here also butchers' skewers and round sticks, eighteen inches in length, are used for the heavier leaves and flowers.

Scarcity of Wood for Pencils

The supply of wood suitable for pencil stock is so reduced that in Tennessee the pencil factories buy logs from old cedar barns and fence rails, in some cases paying as high as ten cents a rail in addition to putting up a new wire fence. The average stumpage value of cedar of saw-log size is \$20.

Wood Industries of New Hampshire

The Forest Service has completed its investigation of the wood-using industries of New Hampshire and the report has been published by the State Forestry Commission in a bulletin of over one hundred pages. This is one of the series of reports which the Forest Service is compiling and which will ultimately cover the whole country, state by state. The government and the states co-operate to the extent that the government collects the data and prepares the reports and the states print them.

The New Hampshire bulletin was written by Roger E. Simmons, statistician of the Forest Service. He compiled similar reports for Illinois, Kentucky and North Carolina, which were published some time ago.

New Hampshire is a large producer and consumer of both hard and soft woods, but softwoods predominate in both output and consumption. The sawmills of the state cut about 443,000,000 feet a year, and the factories consume approximately 423,000,000 feet. The production and consumption of wood are more nearly equal in this than in most states.

The factories of the state report the use of sixteen softwoods and thirty-nine hardwoods, but more than half of all is white pine. The four soft woods most largely used are white pine, red spruce, hemlock and Norway pine; and the four leading hardwoods are yellow birch, sugar maple, aspen and beech. The most costly woods are foreign, and are mahogany at \$136; rosewood, \$206; padouk, \$250; lignum-vitæ, \$347. This last named wood is not usually as expensive as these figures show, and the explanation of its high cost lies in the fact that extra grades were demanded and a comparatively small quantity was used.

The following table shows the various woods used by New Hampshire manufacturers and the quantity of each per year, as well as the average cost of each per thousand feet:

KINDS OF WOOD.		QUANTITY USED ANNUALLY.		AVERAGE COST PER 1,000 FEET.	Total cost f. o. b. factory.
Common name.	Botanical name.	Feet b. m.	Per cent.		
White pine.....	Pinus strobus.....	212,859,653	50.33	\$17.88	\$3,805,690.87
Red spruce.....	Picea rubens.....	69,283,290	16.38	19.53	1,359,775.15
Norway pine.....	Tsuga canadensis.....	22,691,725	5.36	14.28	329,965.37

* Less than 1/4 of 1% of one per cent.

The report is well arranged and edited, and information concerning any wood or any industry may be readily found. This feature, which is too often neglected in compiling industrial reports, is of special value. Few people have time to read through a report, but persons are nearly always interested in certain parts and will turn to them when it can be done conveniently and quickly.

The woodworkers of New Hampshire do not neglect small commodities, and many instructive details are shown. The state has most of the industries which are commonly found in a woodworking region, and some which are rather unusual. For example, few states support a crutch industry, though it is a commodity widely used. New Hampshire utilizes 590,000 feet in producing that article. The crutches are shipped into nearly every state, to Canada, and to most European countries. About 250,000 pairs are made yearly, and it is not believed that any other state produces as many. About two feet of lumber go into a pair of crutches. Yellow birch leads in quantity, followed by paper birch, sugar maple, hickory, lancewood, rosewood and cherry. About nine-tenths of the wood grows in New Hampshire.

It is worthy of note that the manufacturing of agricultural implements is a smaller industry in New Hampshire than crutch-making. The principal thing manufactured was hayrakes. The teeth are made of hornbeam and leatherwood. The identity of the latter wood is not clear, but it is probably foreign, though it costs only \$24 a thousand feet.

It is worthy of comment that flails, grain cradles and scythes do not seem to be manufactured in New Hampshire. It is a mountainous region with many small, steep and rocky farms, and these old-style but highly useful articles of husbandry were to be expected there.

"Refrigerators, hames and musical instruments" are grouped as one industry, with the explanation that each is too small to be considered separately. The explanation is satisfactory, particularly when it is observed that hames are used in this instance to hitch together two quite different industries.

The following table shows the yearly demand for wood by manufacturing industries of the state:

INDUSTRIES.	Total quantity used annually.		
	Feet b. m.	Average cost per 1,000 ft.	Total cost f. o. b. factory.

It is stated that the manufacture of shuttles requires twenty-two separate operations, not counting what takes place in the forest and at the sawmill where the squares are prepared. More shuttles are made of persimmon than of any other wood, but much dogwood is employed. These are regarded as the best shuttle woods of the

United States and inferior only to Turkish boxwood, which has become so expensive that shuttlemakers cannot use it.

In New Hampshire many woods are used for spools. Most of the one-piece spools are of paper birch, but varying amounts of other birches and maples are used. White birch, which in New England is often called oldfield or poverty birch, is coming into use as spool wood. This is a matter for congratulation, for it has generally been looked upon as somewhat of a nuisance where it grows in great abundance, on account of its small size and its habit of overrunning the country.

Chair makers use more red oak than any other wood; beech is second, and sugar maple a close third. Most of the white oak reported was shipped in from the Ohio valley. Half a million feet of chestnut went to the chair factories, much of it going into mission pieces. Its fuming qualities are higher than most woods. Throughout New Hampshire factories generally red oak is more important than white oak. It costs more and more is used. Chair makers often stain them and ash to imitate oak.

The clothespin factories are kept busy with beech. Birch and maple are used also. Half a million bent rims for bicycles, automobiles and racing sulkies are made yearly. Sugar maple, yellow birch and beech are the woods used, with maple leading.

New Hampshire is strong on shoepegs. About 2,500,000 feet of paper birch is used yearly in producing this commodity. The wet pegs are bleached with sulphuric acid and are then tumbled and sifted to free them from splinters. They are measured by the bushel.

White pine to the extent of about 110,000 feet a year is manufactured into "tongue depressors." This article has nothing to do with wagons, as might be inferred from the name, but is a small instrument of late invention used by doctors in examining throats of patients. They formerly used a silver instrument, but for sanitary reasons that has been discarded and those of cheap pine have been substituted. The article is used only once and is then destroyed.

New Hampshire manufacturers found out in some way that aspen makes a capital handle for an oyster-shucking knife, because it is absorbent and never becomes slippery. They have built up a little industry in making such handles. About 20,000 feet of aspen is used yearly, which is good for 300,000 handles, which would seem to be sufficient to supply the shuckers of forty states. Vast numbers of very small handles of other kinds are made, such as those for shoe knives, gimlets, corkscrews, curling irons, awls, screwdrivers, dip-pers and pails. Makers of handles for rakes, hoes and shovels in New Hampshire are using beech, birch and maple, while makers of these articles in the South and West depend largely on ash.

Experimental Kiln-Drying

The Forest Service has issued bulletin 104, from the laboratory at Madison, Wis., dealing with the principles of drying lumber at atmospheric pressure. It is the work of Harry D. Tieman, in charge of timber physics. It pretends to be nothing more than an investigation of principles which govern the proper drying of lumber in kilns. It is stated that the series of experiments has not yet been completed, and that this bulletin is a progress report issued to answer numerous inquiries which are being constantly received at the laboratory.

Mr. Tieman has built a sample dry-kiln for carrying on experimental work. It is constructed with complete apparatus for regulating the temperature, governing circulation of air, and controlling the degree of moisture maintained in the air. He has been granted four patents on his processes, and these patents have been dedicated to the public, so that whatever good there is in them will be free to whoever wishes to use them.

The bulletin is both practical and technical. Part I deals with the subject in the ordinary language of lumbermen; while Part II is evidently intended for engineers who wish to make a thorough scientific study of the principles involved.

What the author calls the basic principles of kiln-drying are set down as follows:

Timber should be heated through before drying begins.

Air should be very humid at the beginning of the drying process, and be made dryer only gradually.

The temperature of the lumber must be maintained uniformly throughout the entire pile. For this an exceedingly large circulation of air is essential.

Control of the drying process at any given temperature must be secured by controlling relative humidity, not by decreasing circulation.

In general, high temperatures permit more rapid drying than do lower ones. The higher the temperature of the lumber, the more efficient is the kiln. It is believed that temperatures as high as the boiling point are not injurious to most woods, provided all the other fundamentally important factors are taken care of. Some species, however, may not be able to stand as high temperatures as others.

The degree of dryness attained, where strength is the prime requisite, should not exceed that at which the wood is to be used.

When the wood can stand the heat without detrimental effects for the intended use, preliminary steaming, not in condensed but in live steam, is beneficial.

The pressure and duration of steaming desirable in kiln-drying are

points which have not yet been thoroughly worked out. From five minutes to twenty-four hours, or even longer, and pressures ranging from atmospheric to fifty pounds gauge have been used in practice. The higher the pressure, the greater is the effect produced, and the longer the time, the more thoroughly the treatment penetrates the wood. Experiments have shown that a pressure slightly above atmospheric for twenty-four hours is sufficient to slightly darken two-inch maple clear through, and a pressure of forty pounds that length of time will turn oak, and probably other hardwoods, almost black. The organic materials or sap in the wood are changed by cooking, and apparently some undetermined chemical change takes place. This is indicated by the fact that the color of the wood is darkened, the degree of coloring depending upon the temperature and duration of the process; and that the wood when subsequently dried has lost some of its original weight and is less hygroscopic. The change in hygroscopicity is beneficial for some purposes, as it reduces swelling and shrinkage of the wood. Very rich color effects are produced in hardwoods by sufficient steaming. Any well-made kiln which will fulfill the conditions required as to circulation and humidity control should work satisfactorily; but each case must be studied by itself and the various factors modified to suit the particular conditions of the problem. In every new case the lumber should be constantly watched and, if checking begins, the humidity should be increased until it stops. It is not reducing the circulation, but adding the necessary moisture to the air, that should be depended on to prevent checking.

The free water in green wood may be driven off rapidly by heating the wood to the boiling point and supplying the heat necessary for vaporization. This will not injure the wood, provided it is done in nearly saturated vapor; hence the applicability of superheated steam in drying lumber.

Progress of Forestry

Thirty out of forty-seven states have laws relating to forestry in some form or another. In the remaining seventeen no provisions whatever are made along this line. Out of the first thirty, seventeen have placed the administration of the forestry work in the hands of trained foresters. Best results are secured where the forester's office is kept untainted from political patronage. There are seven states which accomplish this by having the forester appointed by a non-political board of forestry. They are California, Kentucky, Maryland, Minnesota, Vermont and Wisconsin.

Oak of Size and Character

In this day of closer timber cutting and the handling of cut-over lands and inferior timbered areas, it is becoming quite a rarity to find oak of the surpassing quality that is shown in the accompanying illustrations. **HARDWOOD RECORD** has secured from the Paepeke-Leicht Lumber Company of Chicago these photographs which depict the splendid red oak lumber product that it is securing at the present time from its virgin timber tributary to its Blytheville, Ark., operation.

Illustration No. 1 shows a sixteen-foot red oak log that contained 1,444 feet.

Illustration No. 2 shows the same log on the carriage in the mill. This log developed seventy-two per cent of No. 1 common and better lumber. A specimen of the product is shown in the two longer boards in the picture in the center of this page.

Illustration No. 3 shows a fourteen-foot red oak which is again shown on the carriage in the sawmill in the fourth picture. This log developed 1,272 feet of lumber of which seventy-three per cent was No. 1 common and better. Two of the clean planks out of this log are shown in the middle illustration.

E. A. Lang, manager of the lumber department of the Paepeke-Leicht Lumber Company, Chicago, says that his company never has had a better class of logs than it is working on at the present time, not only in its oak but also in red gum and cottonwood. It goes without saying that lumber of the type being produced by this company is meeting with a ready sale at very satisfactory prices.

In all the history of oak production there apparently never was such a shortage of stock as at the present time.

Artificial Ebony from Oak

A consul in France gives the following process for converting oak wood into artificial ebony:

The blocks of wood are immersed forty-eight hours in a warm saturated solution of alum and sprinkled several times with a decoction of logwood. Smaller pieces may be steeped for some time in the decoction, which is prepared in the following manner: One part of logwood of best quality is boiled with ten parts of water. It is then filtered through linen and the liquid evaporated at low temperature until its volume is reduced by one-half. To every quart of this bath is added ten to fifteen drops of a saturated solution of soluble indigo. After having watered the block several times with this solution, the wood is rubbed with a saturated and filtered solution of verdigris in warmed concentrated acetic acid. This operation is repeated until a black color of the desired intensity is obtained.

The Canadian Railway Commissioners have disallowed the increase of cartage rates on freight proposed by the railway companies to be effective in Eastern Canada. The companies may impose rates not exceeding two and a half cents per hundred pounds and the minimum toll charge for any complete single shipment shall not exceed fifteen cents. This increases the rate by half a cent per 100 pounds in place of one cent.

Impressions of a Tenderfoot

First Paper

I have been "out West."

To be sure, I know I am not the first lumberman or lumber newspaper man who has gone on a tour of discovery to the Pacific Coast, and without any assumption that my impressions, analyses and deductions are in any wise accurate, it is just possible that they may interest HARDWOOD RECORD readers.

It so happened that a couple of citizens of the effete East made a similar trip some years ago, and in the smoking compartment of the Pullman encountered a group of typical Pacific Coast boomers. The two friends listened to the conversation that prevailed. They heard recited details of stupendous enterprises in which the figures ran up into the billions in both quantities and dollars, and they glanced at each other and shook their heads. They got glimmering verbal vistas of stupendous reclamation projects, the irrigation of principalities, wonderful development in mines, stupendous timber areas, marvelous propositions in lumbering, mining, etc. They were interested but astounded by the figures and the alleged facts presented.

It so happened that the two tenderfeet dropped in to dinner at the restaurant of the Washington hotel at Seattle on their arrival at this city, and saw sitting at an adjoining table the bunch of exploiters. Being interested in the culinary possibilities of the Coast, the two friends listened to the order being given the waiter by one of the "barkers." He said to the white-aproned attendant: "Bring me twelve dozen oysters."

One friend turned to the other and observed: "Bill, they're just as big eaters as they are liars, ain't they?"

The nub of this story hinges on the fact that a native Pacific Coast oyster is a coppery-flavored bivalve about the size of a hazel nut.

This anecdote simply makes a basis for the prejudice that gets on the nerves of the conservative easterner as he hears the resounding, glittering and reiterated praises from every citizen of the West concerning the land in which he is a visitor. Every last man in that country is a "booster." To his mind there is no region on earth like the Inland Empire and the Pacific Coast. Its resources, its possibilities, its wonders, its climate, its soil, its inhabitants, its crops, its fruit, its flowers, and everything else concerning it is thrown at you from daylight until bedtime. Of course, you must believe part of the stories that reach you, but all in all it looks to a tenderfoot like a gigantic game of promotion.

And still—they are doing wonderful things in the Inland Empire and the Northwest. There are lots of features that appeal to the stranger. Primarily, in due course of nature it is not an alluring land, the soil is not marvelous, even with the aid of water obtained from the mountains by means of irrigation ditches; the climate is not good—it's either too cold or too hot—too wet or too dry. There is nothing alluring in the landscape, it's cold, it's rugged, it's depressing, but these people of the Inland Empire and the Pacific Coast are doing wonderful things, and every last man is a "boomer." He preaches the gospel of the Great West day in and day out, and the visitor can't fail to be impressed by his enthusiasm and his earnest belief in the fact that he thinks he is telling the truth.

They are doing great things in this country. They are building good towns with good buildings. They are building splendid school houses. They are building fine streets. They are equipping themselves with electric light and electric transportation facilities. They are building monster conduits for water which they are getting out of the foothills of the mountains. They are really making a semi-arid country productive. They are raising grains, fruit, flowers. They are building substantial and handsome homes. Yes, they are doing wonderful things in the Inland Empire of Montana, Idaho and western Washington as well as along the entire length of the Pacific Coast.

The lumber operations are generally on a stupendous scale.

There are comparatively few small operators. Timber holdings generally run up into the billions of feet. They are manufacturing lumber fast, but only reasonably well. They seem to have very little idea about the finer manipulation, seasoning and utilization of their product, but they are crowding the game for all it is worth, and are making what money they can out of it, and doing it as promptly as possible. The general lumber proposition is almost a duplicate of that which obtained in Michigan and Wisconsin a quarter of a century ago, only it is being done on a bigger scale and faster. As a general proposition it doesn't look particularly alluring to the conservative eastern lumberman. Not only is the lumber business growing too fast, but the general expense account is too big a factor.

The foregoing statement is a general proposition, and by no means intended to be specific, because there are sagacious and experienced lumbermen in that region who have a system embracing low cost and high efficiency that is scarcely excelled in any other part of the United States.

Referring specifically to the region known as the Inland Empire, which forms a source of supply to the general consuming building world markets of the East, a high freight rate obtains, not very much less than from the Coast. Apparently the real salvation of anything like money-making in the lumber business results from the local demand and the business developed in the nearby territory of Alberta and Saskatchewan. Of course, it is well known that marvelous things are being done in the way of developing the gigantic agricultural provinces immediately north of the Inland Empire, and a vast quantity of low-grade lumber is being marketed in that region. The good end of the lumber product (the so-called western pine, white pine and larch) apparently "can stand the freight" of the long eastern shipments, but the percentage of this good end of stock is comparatively small.

There are quite a number of things that contribute to this hurried and on the whole rather careless lumber production in the Inland Empire and the Pacific Coast. Lumbermen in the East scarcely realize the immediate, almost constant fire hazard that obtains in that region. Every timber owner is sitting on a powder magazine knowing not at what instant his big holdings will be fire swept. He is crowding the game to get what he can get quickly out of his timber holdings rather than take the chance of fire depredations.

Again, with the stupendous internal improvements prevailing, taxation is not an unimportant item. It costs money and big bunches of money to hold an important timber area in the Inland Empire or on the Pacific Coast. The timber may have been purchased almost for a song, but the cumulative cost, resulting from constantly increased taxation, very quickly builds up a scale of stumpage valuation that impels the operator to work fast and put his timber into lumber as quickly as possible.

Back of all these timber holdings again are the immense areas of government timber. This delightful paternal government of these United States holding that it should do everything possible to "hold down the cost of living," of which house-building is an important feature, and that furthermore its timber is ripe and ready for the saw, piles on top of operators more and more timber. In short, it is a matter of over-production, and under existing policies there seems to be no possible chance that timber owners in this region are going to have an opportunity to hold timber back as an investment, reach high efficiency, low cost of production, or refrain from excessive production until the whole region is depredated of its forest wealth. The whole scheme doesn't look good to the conservative tenderfoot.

At an earlier date mining enterprises in which there are untold millions invested, and timber properties in which there are other untold millions involved, were the principal commercial projects of this region. Now the game is going over to agriculture and

fruit-growing as the important features of the land. Every big and little town has its score to hundreds of land promotion enterprises of all sorts and descriptions—good, indifferent and bad—and it requires pretty nearly an agricultural genius to differentiate one from the other. Agricultural land values, through the aid of this booming element, are on a basis that looks wild in price to the self-same eastern conservative tenderfoot. Prices of sod-unturnd prairie and stump lands are scheduled at values of from fifty to three hundred dollars an acre, which when ready for crop raising, bear in mind, entail an added expense of nearly as much more, and in the case of irrigated properties an annual tax against these lands for water, which are thousands of miles away from the principal consuming markets of the world.

Again, it doesn't look good to the amateur tenderfoot from the East.

It is a tremendously big proposition. It's so stupendous in distance, in money, in general investment, in boom and in alluring talk, that it fairly makes the eastern tenderfoot dizzy to consider it. It requires courage to do the stupendous things that these western boomers are actually doing. It requires courage to even spend their own time and talent to boom it. The money being

invested out there doesn't grow there—yet. It has been coaxed into these enterprises, and it has required talent to coax it. Hence, these people have talent and lots of it.

Which is reminiscent of another story.

A quarter of a century ago I was a visitor in a northern Florida city, which has since attained considerable size and commercial prominence, but which I must confess in those days didn't look very much better to me than some of the regions of the Inland Empire and the Pacific Coast, which I have recently visited. After spending some days in the town looking it over very carefully I said to a friend of mine: "Will you kindly explain to me what you people live on down here?"

He very frankly replied: "On fish—and northern people."

Inasmuch as there is no plethora of fish in the Inland Empire I have, in the face of the rather hurried visit and analysis I have made in this country, come to the conclusion that this region lives almost exclusively on eastern people. I confess I was wrong in my analysis and deductions concerning Jacksonville, Fla., and probably am just as wrong now, but then I am more or less of a back-number, and this game out in the Inland Empire is too swift for me.

H. H. GIBSON.

1911 Lumber Cut by States

A preliminary report showing the production of lumber, lath and shingles by states for 1911 has been issued by the Census Bureau at Washington. This covers also the calendar years of 1910, 1909 and 1908. The reported cut since the banner year of 1909, when there was a total cut of 44,509,761,000 feet, has fallen off gradually, being in 1910 40,018,282,000 feet and in 1911, 37,003,207,000 feet.

The report for 1911 was based on returns from 28,107 mills; for 1910 on reports of 31,394 mills; 1909, 48,112 mills, and 1908, 31,231 mills. The data for 1911, 1910 and 1908 was gathered by correspondence, and while including the cut of practically all of the larger or commercial plants for these three years, did not cover the operations of many of the neighborhood or custom mills. Furthermore, the cuts for 1911 and 1910 did not include the output of any mills which reported a product of less than 50,000 feet during these years.

The figures for 1909 were collected by special agents of the census office in connection with the regular census, and hence covered every lumber producing establishment which was in operation during the whole or any part of that year. On the other hand, there were about 4,500 mills reported cutting less than 50,000 feet that were omitted from the reports of 1911 and 1910. The decrease in 1911 as compared with 1910 of about 4,000 mills and 3,000,000,000 feet board measure of lumber, was doubtless due in part to a delay of about two months in mailing the schedule cards to the manufacturers during 1912.

It is further interesting to note that 36 per cent of the total cut was reported from the five states of Washington, Louisiana, Mississippi, Oregon and North Carolina, ranking in the order named.

The cut in Washington remained almost exactly the same as in 1910. Louisiana declined nearly two hundred million feet, Mississippi about eighty million, Oregon nearly three hundred million, and North Carolina about twenty-five million. A study of the accompanying table will show that no state made much advance in the amount of the cut over that of 1910, and that the only states making any advance were Arizona, Idaho, Minnesota, New Mexico, New York, and West Virginia.

The five leading species cut in 1911, ranking in importance in the order named, were yellow pine, Douglas fir, white pine, oak and hemlock. The aggregate output of these woods was 72.5 per cent of the total production of all species. Oak, the leading hardwood, contributed 3,098,444,000 feet or 8.4 per cent of the total.

The following is a summary of the report:

	LUMBER PRODUCTION (M FEET BOARD MEASURE)			
	1911	1910	1909	1908
Washington	4,064,754	4,097,492	3,862,916	2,915,928
Louisiana	3,566,456	3,733,900	3,551,918	2,722,421
Mississippi	2,041,615	2,122,205	2,572,669	1,861,016
Oregon	1,803,698	2,084,633	1,898,995	1,468,158
North Carolina	1,798,724	1,824,722	2,177,715	1,136,796
Arkansas	1,777,303	1,844,446	2,111,300	1,656,991
Wisconsin	1,761,986	1,891,291	2,025,038	1,613,315
Texas	1,681,080	1,884,134	2,099,130	1,524,008
Minnesota	1,485,015	1,457,734	1,561,508	1,286,122
Michigan	1,466,754	1,681,081	1,889,724	1,478,252
West Virginia	1,387,786	1,376,737	1,472,942	1,097,015
Virginia	1,359,790	1,652,192	2,101,716	1,198,725
Alabama	1,236,212	1,465,623	1,691,001	1,152,079
California	1,207,561	1,254,826	1,143,507	996,115
Pennsylvania	1,048,606	1,241,199	1,462,771	1,203,041
Florida	983,824	992,091	1,201,734	730,906
Tennessee	914,579	1,016,475	1,223,849	790,642
Maine	828,417	860,273	1,111,565	929,350
Georgia	801,611	1,041,617	1,342,249	904,668
Idaho	765,670	745,984	645,800	518,625
Kentucky	632,415	753,556	860,712	658,539
South Carolina	584,872	706,831	897,660	560,888
New York	526,283	506,074	681,440	781,391
Ohio	427,161	490,039	542,904	459,259
Missouri	418,586	501,691	660,159	458,938
New Hampshire	388,619	443,907	649,606	606,760
Indiana	360,613	422,963	556,418	411,868
Massachusetts	273,317	239,206	361,200	384,526
Vermont	239,254	284,815	351,571	304,017
Montana	228,416	319,089	308,582	311,533
Maryland	144,078	154,554	267,939	168,534
Oklahoma	143,869	164,663	225,730	158,756
Connecticut	124,661	126,463	168,371	137,855
Illinois	96,651	113,506	170,181	123,319

Lumber and Shipbuilding in Scotland

Before the "wooden walls of Old England" gave place to vessels constructed of steel, a boom in the shipbuilding trade always meant a boom in the timber trade as well. Now, conditions are different, and although the shipyards of the Clyde are experiencing a period of industrial activity, that is almost unprecedented, the timber trade of the west of Scotland is still far from experiencing that revival which has been looked for so long. For many months the trade has not found conditions of too satisfactory a character, and improvement seems to come slowly.

The best outlet for timber has, of course, been the shipyards, for though the metals now enter so largely into the construction of boats, huge quantities of woods of various qualities and descriptions are also required for the making of decks and for many other obvious purposes. Indeed but for the steady flow of orders from shipbuilders, the timber trade would frequently in the past year have been in a condition bordering upon stagnation. It is therefore a comfort to those engaged in the business of woods to know that for many months to come busy times will continue to prevail at the shipyards, and that consequently from that direction, at any rate, there is not likely to be any cessation in the active volume of orders. Some of the larger liners at present being built on the river and others in prospect have meant very large orders for timber in the market, and if other consumers could only have been put in a position to put forward a similar request, the timber trade would now find itself in a decidedly cheerful condition.

The shipbuilding boom is due to the expansion of overseas trade. Shipowners having passed through a long period of depression found that the supply of tonnage, which unfortunately for them was over adequate for the requirements of shippers, was insufficient in face of the increasing overseas trade demands. Such a situation of course means, first, the placing of new orders and, second, a rapid rise in the freight market. The competition for ships has been so keen that it is not surprising that freights have had such a steady upward tendency. It may be asked what of the immediate outlook? Will the present prosperous condition of trade last, or will it begin to dwindle and show a serious shrinkage in the next few months when the large number of cargo steamers at present under construction are ready for the sea. An examination of the principal factors in the situation leads to the belief that the present advantageous times for shipping trade have come to stay for awhile. In brief, the various signs and portents go to show that the demands upon shipping in the months that are ahead will still be enormous. The question of the high rates of freight that now rule are a pretty accurate barometer of the encouraging position in which the shipping trade finds itself. From a ship-owner's point of view one of the most interesting developments of the early future will be the opening of the Panama canal. It is fraught with enormous possibilities for the shipping trade, but first there is the question of the treatment of the ships of this country compared with American tonnage to be settled.

Before touching upon some of the trades whose lack of activity is reflected in the quietness of timber, it is advisable to mention the manner in which labor troubles have this year affected the market. First there was the lockout of the dock laborers at the beginning of February. Business at the harbor was in consequence brought to a standstill and the impossibility of unloading ships containing cargoes and consignments of timber from across the seas inconvenienced the trade to a very serious extent. Happily the dockers' trouble was not of very long duration, but coming quickly upon its heels was the national strike of the coal miners, and, like almost every other important industry in the country, timber interests found business brought practically to a full stop. Considerable difficulty was experienced in delivering supplies at the shipyards; then after a time some of the sawmills were forced to close down through lack of fuel, and, to allude to only one of many other directions in which the timber trade was made to feel the pinch, the demand for pitprops, which is always so lively when

operations are in full swing in the country collieries, fell off to infinitesimal proportions.

The prosperity of the timber trade of the west of Scotland depends to a very fair extent upon the condition of the house building trade. It is hardly necessary to remind readers of the long period of depression through which house-building has passed. Another notable class of wood consumers is that of cabinet-makers and furniture manufacturers generally. In 1911, with a distinct scarcity of orders, and somewhat unremunerative prices, a rather poor year was experienced. The present year opened none too promisingly, but in recent times the outlook has undergone some improvements.

Neither last year, nor this year, has the packing case trade enjoyed anything in the nature of a boom. Sporadically conditions have been busy, and the timber merchants thereby have received little spurts in the volume of orders from time to time, but there has been an unfortunate lack of strong and steady demand. A fair business has been done this year by wagon and carriage builders, though here it has been of a quiet and unexciting character.

For a considerable part of the season the import of wood from Montreal was unusually light, though an exception is provided in the case of birch logs. Surprise has been caused by the paucity of the request for Canadian pine. It has been almost directly directed towards first-class wood suitable for decks, the demand for which, during the opening months of the year was quite good. For other varieties the inquiry has been meager. The outlet for Canadian elm has fallen short of the average, this being attributed to the fact that transactions have been confined within the narrow limits of the small stock on offer, as well as to the stiff quotations in vogue. In the case of birch logs, although as already indicated, the import has been large, it has been speedily absorbed, owing to the low levels merchants' stocks had reached. In contrast to prices for most other woods, values of birch logs have been inclined to sag. The import of spruce has been the lightest known for a considerable time. The freight market had practically all to do with this. Shippers would not risk cargoes, always anticipating a fall in rates. However, supplies from the Baltic were quite numerous and from this direction buyers fulfilled their requirements. The pitch pine market also suffered from the freight situation. Record prices were quoted and paid and those who contracted for supplies at the time when freights first advanced have found it very much to their advantage.

From the foregoing it will be understood that there has been much wanting in the timber market for some time past. The situation from the trade's point of view, however, has not been without its gratifying features. Throughout all these months of restricted demand, prices have preserved a remarkably firm front. This is in some way due to the strength of the statistical position, the stocks on hand having been for the most part low. Indeed, in almost all cases where changes in prices have taken place they have been of an upward character. In staples such as pitch pine and spruce the advances in quotations have been quite substantial.

As to the outlook for the timber trade, it has been shown that it has nothing to fear from the score of shipbuilding. While the laying down of new warships is of comparatively little interest to the trade, owing to the character of the material used for these vessels' construction, the high pressure prevailing in the shipyards in regard to new tonnage for the mercantile marine is of first rate importance, owing to the large amount of wood our modern leviathans in this age of steel require. There is less comfort for the trade in the prospects of house-building and some of the other wood consuming industries enumerated, but whatever happens these are not likely to go backward. The probability seems rather that they will improve. The anomaly of good prices when trade is disappointing is not in the least likely to be followed by the anomalous situation of good trade and disappointing prices.

Passing of the Country Mill

A group of hardwood lumbermen, largely composed of wholesalers, were discussing recently some of the changes in the business which have been wrought with the passing of the years. Most of them were intimately acquainted with the hardwood producing sections of the Central South, and easily recalled the time, not so far distant, when more than half of the lumber offered on the hardwood markets was made up of the product of the so-called "country mills."

"How much lumber do you suppose the little fellows put out now, compared with the total?" inquired a newcomer in the trade, who had listened to the talk with keen interest.

"Not more than twenty per cent, if that," said one of the veterans. The others agreed with him, and the inquirer made a mental note of the fact, presented to him for the first time, that the country mill, as a factor in the commercial situation, is rapidly disappearing. The figures quoted are the estimates of practical men based on their own experience in the handling of hardwoods, and are not the result of a statistical investigation. Nevertheless, it is fairly safe to assume that the proportion is just about as indicated.

The small portable mill, with a boiler, circular saw and little other equipment, is not going into the junk-pile, by any means; it is still working here and there, but it hasn't nearly as much material to work with as it used to have. In Kentucky and Tennessee the timber is getting pretty scattered, and in the districts further south the timber is being manufactured at the big, substantial mills where band-saws predominate.

It is generally agreed that the character of lumber manufactured by the band-mill is an improvement over the circular-sawed stock of the country mill, though many jobbers of hardwoods who handle the output of the latter contend that in many respects the little fellow has it on his larger competitor. For one thing, they argue, the absence of edgers and trimmers at the country mill means that the buyer gets the advantage of width and length which is lost when the manufacturer having those facilities cuts the stock with reference to grade.

On the other hand, the argument is very properly made that this apparent advantage is in fact none at all, since the buyer in order to make use of such stock, must necessarily trim off the bark and equalize the thickness, so that by the time he has added labor and handling charges to the lumber he is no better off than he would have been if he had bought the band-mill's even, well manufactured stock.

This is not to say that the circular saw is not capable of manufacturing good lumber. On the contrary, if such a saw is in good condition and is properly handled, the lumber turned out of it may be as perfect as the product of any other type of mill. But under the conditions which prevail in most cases, where the millman does custom sawing for the timber owners of his community, and bangs his equipment here and there, setting it up in the woods wherever he can get a customer, it is practically impossible to keep it going in the best possible fashion, and while it makes lumber, it is just about lumber and little else.

Indicating the incompleteness of the operation, many band-mill operators which purchase the product of the country mills in their vicinity make a practice of going over this stock and sorting out the boards which should have been edged or trimmed or equalized, and sending them over to the mill for re-working. This results in better lumber for the manufacturer's purpose being produced, and while it raises the grade and thereby enables the lumberman to market it to better advantage, he merely takes a legitimate profit growing out of his possession of complete facilities for producing lumber. It is therefore likely that the consumer who buys country stock expecting to make a big economy merely because he is likely to get longer and wider boards, will probably have to make up for it in the labor expense which is necessary to put it into the best possible condition.

The transfer of the balance of power, so to speak, from the numerous small millmen to large interests controlling modern, permanent

and well-equipped mills, has meant more to the industry and to the consuming trades than merely a change of control. It has made possible the production of better lumber and the practice of economies which were entirely out of the range of possibilities with the small mill in possession of the field for the most part.

Take for instance the matter of applying industrial chemistry to the utilization of the waste products of the hardwood mill. Attention has been called from time to time to the exploits in the pine field, where paper, alcohol, acetic acid and other valuable products have been evolved from the unpromising base of shavings, slabs and sawdust. The hardwood mills are now installing burners and expensive conveying systems for moving their waste; the problem is simply how to get rid of it, and not how to make money out of it. These big mills have not yet taken advantage of their opportunities, but are seizing upon the first method that offers itself. They are big enough and strong enough financially, however, to undertake a little research work in this direction, by means of which to find an outlet for their waste which will enable them to transfer it from the expense to the profit account and change it from a liability into an asset.

This would seem to be one of the greatest possible benefits that may come from the production of the major portion of the hardwood output by large mills backed by strong interests, instead of by peripatetic country mills working chiefly on a custom basis and unable to complete the manufacture of the lumber, as judged by present-day standards, much less make use of the waste created in their operations.

Then, of course, the production of dimension stock is possible in the big mill, whereas it is out of the question at the country plant. As this is now regarded as a department of the hardwood business offering the greatest possibilities from the general standpoint of economy in the use of wood, and also as judged by standards of individual profit and convenience, making it possible to handle an increased percentage of the output on this basis it must be regarded as a step in the right direction.

The erection of the big mill might have been thought to be the knell of the jobber who formerly had received most of the output of the country mills of his district. Apparently, this has not happened; though possibly the result has been to turn the jobber into a manufacturer by making it worth while for him to put up his own mill, and the manufacturer into a jobber by suggesting the purchase of the lumber cut at the country mills still remaining. As much lumber as ever is passing through the hands of middlemen, it seems, so that the existence of the system which has been railed at so much by the theorists in the field of political economy of late is probably not endangered.

A feature of the situation as it affects the country mills has been referred to by wholesalers buying from them. For a long while, with a large part of the hardwood country forested, the population was rather scanty and the local consumption of wood relatively small. Today, with most of the country devoted to farming and only an occasional strip of woodland left, the demands of the immediate vicinity of the mill are sufficient to take care of a large percentage of the production. This is especially true of low-grade material, which goes into the manufacture of barns and buildings of all kinds. The local millman can get more for his low-grade stuff, used in this way, than from the jobber, who consequently buys very little except firsts and seconds and No. 1 common, whereas he used to take the lumber either log run or contract for the entire output on a basis of grades.

The development of agricultural and community interests in the hardwood producing districts may account in part for the shortage of low grades which has been noted during the past few years, and which has resulted in advances in prices on this character of stock all the way through the hardwood stock list. While this affects the country mills chiefly, the big mills are in somewhat similar circum-

stances, through the increased local development of their sections, and also through the establishment of consuming plants, such as flooring factories, in their immediate vicinity, taking a large part of the No. 1 and No. 2 common production.

The schedule furnished by a timberman who recently cut nearly a million feet of oak in western Kentucky by means of portable sawmills may be interesting to those who like to see how costs work out under the old system. He arranged matters so that it cost him \$12 a thousand to get the lumber from the tree to the wharf on the Ohio river where it was loaded for delivery to the buyer, who pur-

chased it f. o. b. the steamboat. The charges were divided as follows: Cutting, \$1; log-hauling, \$2; sawmill, \$4; hauling lumber, \$5.

Judging from this statement, the sawmill man with an investment of a few hundred dollars in equipment can make a pretty tidy profit on his business, especially when it is remembered that he has no worries as to buying the timber, logging it or selling the product, but simply cuts the logs into lumber as they are brought to him. There are some of the big commercial mills which would like to work on the same kind of basis if it were possible.

G. D. C., Jr.

U. S. Forester's Annual Report

The annual report of Henry S. Graves, chief of the Forest Service, has been published. It covers the fiscal year ending June 30, 1912, and contains much that is of interest to lumbermen and those who are concerned with forests, though it deals principally with government land.

The net area of all the national forests in the United States is 138,350,928 acres, and in addition Alaska has 26,643,260 acres, and Porto Rico 32,975.

The whole force employed to care for this forest area and the business connected with it is 2,595 persons. These include supervisors and deputies with headquarters in the forests; rangers and guards who do the patrolling and lookout work; and examiners, assistants, lumber and mining experts, hunters, and clerks.

The money appropriated by Congress for the year 1912, and that received from other sources, totaled \$6,540,861.31. The total expenditure for all purposes from the years 1900 to 1910, both inclusive, was \$18,712,181.03.

It is shown that the annual growth of timber on the national forests is, or would be if properly cared for, 6,000,000,000 feet, board measure. That much could be cut every year for all time, by taking mature timber only, and leaving the rest to grow. At the present rate of stumpage this would give a gross return of \$15,000,000 yearly.

There are national forests in twenty states, the largest amount of land being in California, second largest in Idaho, and third in Montana. The smallest area is in North Dakota, second in Oklahoma.

The report shows how attempts are frequently made by private parties to obtain valuable timberlands and water power sites by means of fraudulent mining claims, and by other methods. If the land is valuable for mining purposes, or for agricultural purposes, the law makes it easy for an honest claimant to obtain it; but the fraudulent claimant, who attempts to obtain valuable timber by crooked means, finds many difficulties in the way.

It is estimated that the total stand of timber in all the national forests, including those of Alaska, is equivalent to 597,478,000,000 feet, board measure. Approximately 348,000,000,000 is mature and over mature, therefore, ready to cut. Much of this is deteriorating through natural decay, fire, and insect attacks. It is the announced policy to increase sales as rapidly as possible until they reach 3,000,000,000 feet a year. It is the intention to sell in larger amounts than formerly so that strong companies can afford to take hold, build the necessary roads and mills, and get remote tracts of timber out.

During the year 1912 the Forest Service sold 799,416,000 feet of standing timber, of the value of \$1,600,773.55. The purchasers cut during the year 431,492,000 feet, valued at \$942,819.21. Some of these sales were for very small amounts. The total sales were 5,772, and of these 5,179 were for less than \$100 worth of timber. It is thus shown that the most numerous buyers of government timber are settlers in the localities, who need a little for sheds, fences, and other ranch purposes. Only forty-five sales were for more than \$5,000 each. A little figuring will show that

the government is not selling more than one-eighth of the timber that grows yearly. It can increase its sales eight-fold and still take only as much as grows from year to year.

In addition to sales in large and small amounts, large quantities were given away, under a provision of law, for the purpose of helping poor people who need it and cannot afford to buy it, or to help miners develop their property, or stockmen build corrals. The total number of such permits was 38,749, the number of feet 123,233,000, valued at \$196,335.41. In Alaska, where it is difficult in remote regions to procure permits, the people—principally miners—are allowed by law to take small quantities for local use, without permits.

The total area of government forest burned in the year was 469,638 acres, with an estimated destruction of 117,174,000 feet of timber. It is of interest to know that 76,301 trees were struck by lightning in the national forests during the year and many fires were started.

About 30,000 acres were reforested by planting trees during the year. Preparations were made for much greater planting work. One such station collected 11,547 sacks of pine and fir cones.

The Forest Service is conducting investigations in Colorado to determine the effect of forest cover on stream flow. The investigation will need to be continued for a considerable period before definite conclusions can be announced; but already it seems assured that the results will show that the forest has a direct and positive influence in regulating flow in a way to lessen excessive floods and mitigate water scarcity.

Grazing stock in the national forests is an important industry. Formerly, when stockmen fought over the ranges, and the best gun fighter got the best range, the forests were greatly damaged by excessive grazing. That has now ceased. Pasturage is equitably apportioned among the various applicants, and ground is not excessively grazed. The change has greatly benefited the stock industry, and at the same time has improved the condition of the forest pastures. During the year the stock grazed under permit was: Cattle and horses 1,861,678; hogs 57,815; sheep and goats 8,502,816.

The Forest Service employs professional hunters to run down, shoot, trap, kill, and destroy the predatory animals which destroy sheep and other grazing stock. In some localities the attacks of wild animals were so frequent and fierce that sheep could not be kept, and even hogs and cattle were killed. The wild animals consisted of grizzly bears, black bears, wolves, mountain lions, wildcats, lynxes, and coyotes. The hunters have made encouraging inroads upon the marauders, and seem to be gaining the mastery. In 1911 they killed 7,971 predatory animals, and in 1912 the total was 6,082.

Heretofore, all the national forests have been in the West, except small areas in Michigan and Florida; but under the Weeks law, land has been and will be purchased in New England and in the Appalachian mountains south of Pennsylvania for national forests. Much of this land will lie in hardwood regions. The total area acquired under the Weeks law to date is 257,228 acres. It is

believed that the total areas to be acquired in the Southern Appalachians will be about 5,000,000 acres, and 600,000 in the White Mountains of Maine and New Hampshire. The areas will lie upon the sources of rivers.

The report goes fully into the coöperative work which the Forest Service carries on with states to control forest fires. Agreements of that kind have been reached with all the New England states, with New York, New Jersey, Pennsylvania, Maryland, North Carolina, Georgia, Indiana, Michigan, Wisconsin, Minnesota, Mis-

souri, Ohio, Washington, California, Idaho, Colorado, Nevada, Nebraska and Kansas.

Studies of wood structure and strength are carried on at the Forest Products Laboratory at Madison, Wis.; and investigations of the uses of wood by various industries are conducted in co-operation with separate states. Work is also carried on to determine suitable woods and best methods for paper making; and to ascertain whether turpentine methods in the South may be changed for the better.

Selling Lumber Mechanically

Reference was made in an article in *HARDWOOD RECORD* some time ago to the methods used by a manufacturer of a specialty involving the use of poplar. It was pointed out that this concern, by reason of the use of patented machines and other advantages, has a practical monopoly in its field; and that in order to make it difficult to lose its grip, it has taken the trouble to have even its lumber bought by men who do not know what the requirements of the concern are, from the standpoint of actual use, but only know in a purely mechanical way that the grade of lumber needed is thus and so. The opinion was ventured that the cost of the lumber used in that factory is doubtless considerably increased, and the percentage of rejects likewise advanced, because of the practical ignorance of the buyer regarding the factory operations of the concern which employs him.

For the same reason many lumbermen are unable to offer the service which they should be in a position to supply when they enter the office of a consumer of hardwoods. In order to give the customer the lumber that he can work to the best advantage, and in order to give him the advantage of the special information and technical knowledge on the subject that he has acquired, the lumberman necessarily must know a good deal about what is going on back of the office or out in the factory. That he doesn't often get there is a well-known fact; though it would help everybody concerned if he were to be initiated into the mysteries of the manufacturing processes of his customers, in order that he may apply this knowledge to his lumber offerings and get more out of them, for both parties concerned, than when he is merely offering, in a mechanical way, hardwoods of certain grades and thicknesses.

The interesting thing about the situation, too, is that the lumber salesman is almost the only representative of a supply manufacturer who is not called on by the factory man to render this kind of service. If the ambassador of a machinery concern comes along with a new device which is intended to increase production or make some particular operation easier and simpler, he is at once taken in hand by the superintendent and made to disgorge, as it were, the ideas which he has accumulated about that machine. Of course, selling machinery is not a case of merely stating a proposition and getting an order; but it is certainly true that the man who has something new in the equipment line gets a fairer hearing than the lumberman.

"What's your price?" is about the chief question that is shot in his direction; while "Nothing doing," is often as not the greeting that confronts him as soon as he gets past the "Welcome" sign on the door-mat. There is a good deal of competition in the sale of machinery, just as there is in the sale of lumber; but the methods used in disposing of the two commodities probably account for the difference in the reception of those handling them.

The superintendent of a model furniture factory in the Ohio valley said not long ago that he puts his varnish problems up to the salesmen who come in to sell him finishing materials; his glue troubles to the representative of the factory putting out that class of goods, and his motor troubles to the electric company supplying him with current or the salesman who got the contract for the installation.

"And when you have trouble with your lumber, I suppose you call on the lumber people for advice?" suggested a visitor, tentatively.

"Hell, no," was the prompt reply. "I have learned that I cannot depend on what they tell me. A lumberman will claim that his oak is nine months old when it is green from the saw; and will mix old stuff with unseasoned without saying a word to me. I'm always afraid they're trying to put something over when they come around, and so I tell them as little about what I'm doing as possible."

Just think of that a moment! The varnish, glue, machinery and power men regarded as helpers, friends, confidential advisers—and the lumberman as a kind of stick-up man who can't quite be turned over to the police! The representative of other lines supplying the woodworker being taken back into the plant and shown what the manufacturer is trying to do; and the lumberman held off at arm's length and permitted to quote on No. 1 common plain white oak, first and seconds poplar or sound wormy chestnut, without ever being given an inkling of what his stuff is going to be used for!

Fine!

Those lumbermen who by sincere and straightforward dealings with a line of consumers have gained their confidence and respect, and are on the proper footing with them in this regard, may think the statement made above rather extreme; but the lumber salesman on the road, the boys who are expected to turn in the bulk of the orders, are perfectly willing to admit that the toughest part of a tough job is finding out what the consumer really wants, which is another way of saying to what uses he is going to put the lumber that is delivered to him.

Sometimes a consumer is doing a lumberman an injustice in grading his stock, simply because he applies the mechanical rules under which it was bought without giving the seller the benefit of the peculiarities of his business. If the latter knew just how the material was to be worked, he could take advantage of the situation to move stock that would be perfectly satisfactory, would help him in cleaning up his yard and possibly would save the consumer money.

An instance of this was found not long ago by a hardwood man who sold a lot of hickory to a farm wagon factory. The inspection of the stock at the factory resulted in a lot of it being thrown out and absolutely turned down because it was pecky. The lumber dealer happened to have some knowledge of the wagon business, and knew enough about the needs of the buyer to feel that the thing could be adjusted. He went to the factory, talked with the general manager, and came out with a check for the rejected lumber, which was taken at a figure only a little below the price originally specified.

The *g. m.* had written back merely with the report of the inspector in mind; but when the lumberman called his attention to the fact that the strength of a heavy hickory axle is not affected by a few pecks, and that brake-blocks, which are heavy pieces not subjected to any particular strain, might just as well be made of that material as not, the head of the factory had to admit that such was the case. The hardwood man admitted that for the manufacture of spokes and some other pieces used in wagon construction absolutely clear stock is necessary; but he convinced the consumer that in spite of his rigid ruling as to the rejected hickory, it could be used to advantage, especially in view of the concession in price that was offered.

Again, the straight grading rules cover a multitude of points, and on the other hand they place the limits far enough apart to admit

of a number of subdivisions. The lumbermen who are making the biggest successes of their businesses are those who have subdivided and subdivided, not artificially or arbitrarily, but as a result of the study of the needs of the consumer. This means knowing what the factory is going to do to the lumber, of course; and that involves making a detailed study of operations in every consuming line.

A lumberman who happened to have some sap-stained stock that was likely to prove a "sticker" used his knowledge of the furniture trade to compile a list of concerns in his section of the country that were putting out furniture finished in mission and other dark effects. Then he wrote to these concerns, explaining that he had a lot of good lumber which was sap-stained and was otherwise excellent stock; that it would be just the thing for use in furniture which was to be finished dark, and that in order to move it the buyer could get the lumber at a price considerably below the usual figure for stock of that grade. The idea took, and the lumberman moved his offering sap no defect, although the rules would have lowered the grade on it if it had been inspected in the old mechanical style.

In order to make himself serviceable to a consumer who was complaining about the character of lumber he was getting, and fearing that he would have to buy firsts and seconds instead of No. 1 com-

mon, a hardwood man who happened to have the run of that particular factory suggested that the men at the saws be instructed to turn over boards which seemed to be defective, inasmuch as the lumber was thick enough to make it likely that the defect would not show on the other side. This could be done in the case of lumber used in furniture and interior finish, inasmuch as but one side was exposed. The use of this simple expedient resulted in enough clear cuttings being added to enable the manufacturer to continue to buy common lumber instead of having to increase his expense through the purchase of upper grade stock.

Selling lumber mechanically means, first, piling it according to the grading rules and not according to a knowledge of consuming needs; and next, offering it to the user merely according to the grading rules, and not with reference to the way it is to be used. The rules of the hardwood associations are immensely important as a standard by which to settle disputes and from which to evolve other special grades; but the lumberman should not bind himself down to them in such a way that he cannot adapt his stock and his services to the wants of the consumer.

Instead of trying to make the user buy what you have to sell, why not find out what he wants to buy and then give it to him?

A New Mexican Hardwood

During the last few years attention has been called to a new Mexican hardwood, which is used extensively for special purposes under the name of chijole or iron wood. While an article in a recent number of another lumber journal gives a brief account of this important wood, it does not inform the reader from what tree it is derived. Without specimens of the leaves, flowers, fruit or wood it is practically impossible to determine the botanical name of the tree. The common name "chijole" may belong to any one of the hundreds of important trees and shrubs in Mexico. Judging, however, from the gross characters of the wood as stated in the journal referred to, one is led to believe that this wood is derived possibly from some leguminous tree. Dr. Jose Ramirez in his dictionary of common plant names gives chijol, cocuile, colorin de peces, flor de papagallo, jabi, jabin, and mata pez de Mexico as the Mexican names for *Piscidia erythrina* L. (*Ichthyomethia piscipula* (L.) Kuntze.) There are no other plants recorded in this work known by this name, and the two names chijol and chijole are sufficiently alike to justify the belief that the corresponding botanical name of chijol (not chijole) is *Piscidia erythrina*, an important leguminous tree growing throughout the West Indies, Mexico, and Central America, yielding to commerce a very valuable wood.

This valuable tree grows also in Cuba and Jamaica, where it affords an excellent timber known as Jamaica or white dogwood. It is much employed there for piles for wharves, and other work in damp or wet situations, because of its strong and durable qualities. Another species of this genus is *Piscidia carthaginensis* L., which is also a native of Jamaica. It much resembles the former both in grain and color; the wood is known as black dogwood or bitchwood, and is more esteemed than any other in the West Indies for making naves of wheels.

The true chijol or Jamaica dogwood is a small tree from twenty to fifty feet in height and from two to three feet in diameter at the base. In the West Indies it is found in the plains and in the hills up to 3,500 feet altitude. In Mexico it occurs in nearly similar situations and often in inaccessible locations chiefly along the Gulf coast, where the chijol is said to grow in great profusion. The tree is a native also of Florida, where it grows on the keys and in the limestone soil on the mainland south of Miami.

The wood is very heavy and hard, tough, more or less brittle, close grained, compact, susceptible of a high polish, containing few large scattered open ducts; pith rays very narrow, inconspicuous; color dull yellow brown, the sap-wood lighter. Sargent in his book entitled "Woods of the United States" records the weight of this wood to

be about fifty-five pounds per cubic foot. Chijol becomes exceedingly hard after seasoning and often does considerable damage to tools used in working it. The wood is, therefore, usually cut and worked when green, for it shrinks and warps very little during seasoning. The popularity of this wood is based almost entirely upon its great durability. Authentic records show that the best grades of chijol surpass iron and steel in durability when placed in contact with the soil. It is stated that fence posts of the chijol which were set in the ground in the ancient city of Panuco, Mexico, more than three hundred years ago are as perfect as the day they were cut from the green log. This extraordinary freedom from decay is due to the presence in the wood of a narcotic or poisonous substance within the cavities of the pores or vessels of the wood and the cells of the bark. This poison acts as a preservative, rendering the wood immune against the attack of insects and fungi, which are, as a rule, very destructive to woods in all tropical countries. The bark, leaves, twigs, and roots are particularly astringent and a decoction prepared from them is said to be used extensively for stupefying fish. The Mexicans generally reduce the bark of the roots to a powder by grinding, and place it in a bag or basket. The latter is then dragged up and down the stream until the active principle has been extracted and the fish are stupefied, leaving them free to be captured.

The wood being tough, hard, and durable, is much used for railroad ties, wharf piles, felloes of wheels, cart and carriage work, rollers of native sugar mills, and for other work requiring a tough wood. In Mexico it is used extensively for posts and is unsurpassed as a building material. It finds an important use in boat and dock building, and for all purposes where great durability is required. In addition to its use as timber, great quantities of chijol are made into charcoal, and in some localities it is used extensively for firewood.

It is said the chijol trees along eastern Mexico grow very large and are abundant, but the present crude methods of cutting the timber and bringing the logs to the places of transportation is too expensive to be undertaken with the expectation of profits. Modern methods of logging have not yet been introduced in removing logs or sawed timber. It will be practically impossible to take out this wood except by up-to-date methods on account of the broken character of the regions in which this species is found; a large part of the timber can not be reached even with these means except at an almost prohibitive price. The present methods employed are gravity slides, oxen, and gangs of men, which are antiquated, laborious and expensive. The methods used by the Mexicans are crude, slow, and wasteful at best.

L. L. D.

The Weight of Wood

Lumbermen often discuss the shipping weights of different woods, and surprise is frequently expressed that no official or reliable table of weights exists to guide lumbermen in figuring out how much a thousand feet of lumber of a certain kind will weigh, or what will be the weight of a carload of such lumber, or how many thousand feet will load a car of a given capacity. It is well known how much a given bulk of coal, coke, iron and many other substances weighs, but there is no definite standard showing what a thousand feet of lumber weighs.

There never will be such a table. From the nature of the case it is impossible, except within a certain degree of approximation. If one kind of wood only were considered, as white oak or yellow poplar, it would still be impossible to name a weight which would hold true in all cases. Some shipments would be heavier, some lighter, depending chiefly on the dryness of the wood, but also on several other factors. This can best be made clear by showing on what the weight of a certain wood depends, and what is likely to affect it.

The actual weight of wood—the real wood substance, with all air, water and other foreign matter excluded—is as constant as the weight of iron, lead or any other metal. If we could get down to actual wood, and deal only with that, there would be no disagreements over weights, for so many cubic feet would always weigh so much, never more, never less. But to deal with the matter in that way is impossible in practice. Chemists handle pure wood substance; lumbermen never do, and probably never will.

Ordinary wood, as everybody knows, is made up of cells, tubes, fibers and the like, most of them too small to be seen except with a microscope. The mass may be compared to a wasps' nest, but it is more complex than a wasps' nest. The cells and tubes form an intricate mass, complicated in the extreme. To the naked eye it looks like a solid body, but it is far otherwise. In some woods, as oak and chestnut, some of the pores are large enough to be seen without a glass, but the real cells are very much smaller.

If a piece of wood could be squeezed until all the water, air, etc., were expelled, it would be practically a piece of solid wood substance. What would that weigh per cubic foot? In round numbers, it would weigh one hundred pounds. A cubic foot of it would weigh just the same whether it were white pine or ironwood. That is, all real wood substances are the same and, bulk for bulk, weigh the same. A thousand board feet of real wood (a thing impossible in practice) weighs about 8,333 pounds. No tree of the known world is that heavy, therefore such a thing as pure wood in practice is impossible, or at least unknown at this time.

Yet small pieces of practically pure wood are not hard to obtain, with proper apparatus. Wood cells are nearly pure wood substance after air and water are gotten rid of. They sink in water. They are exceedingly small and are generally invisible, except with a microscope. A hundred thousand of them would not make a cubic inch. They are shaped somewhat like matches, and are laid side by side and end to end to form a mass of wood. They are hollow, and the cavities are filled with water, air, starch, sugar, albumen, tannic acid, and other substances, solid and in solution. The spaces between them are filled in the same way.

Green lumber weighs more than dry because the cavities in the wood contain more water. When seasoning begins, some of the water passes out, and either air takes its place, or the wood shrinks to close the cavities that are emptied of water. The more water gotten rid of, the lighter the lumber.

The reason that no fixed weight can be named for a thousand feet of any particular wood is that the quantity of water remaining in it is more or less uncertain. Other things affect the weight, but water is the most important in practice.

A thousand feet of green lumber may contain 2,000 pounds of water. It is impossible to drive out more than nine-tenths of this water by air-seasoning alone, no matter how long it is left in the piles. In practice, the best air-dried lumber has much more than

ten per cent of its original water in it. It is in the cells, in the cell walls, and in the starch and other substance in the various cavities, and wind and sun cannot compel it to let go and get out. Therefore, in calculating the weight of air-dry lumber, the amount of water remaining in it must be considered but cannot be accurately measured. One lot of lumber is not a sure guide for another, because they may not be equally dry. A thousand feet of one may easily contain three or four hundred pounds more water than another, with no easy way of finding out which is most nearly dry.

No dry-kiln can drive all the water out of wood without heating it sufficiently to destroy the fiber—make charcoal of it. Therefore, there is no such thing in practice as absolutely dry wood. The person who weighs lumber always weighs more or less water with it. Below is a list of several important hardwoods, with figures showing the weights per thousand board feet, if the lumber were absolutely dry—that is, as dry as it could be made without heating it sufficiently to burn it. Of course, that condition is never reached in practice, and hardly ever nearer than ten per cent.

Wood—	Absolutely dry weight per 1,000 feet B. M.
Cottonwood	2,020 pounds
Yellow poplar	2,197 pounds
Basswood	2,350 pounds
Tupelo	2,697 pounds
Soft maple.....	2,737 pounds
Sycamore	2,940 pounds
Cherry	3,023 pounds
Red gum	3,070 pounds
Black walnut.....	3,176 pounds
White or gray elm.....	3,379 pounds
Red oak	3,396 pounds
White ash.....	3,397 pounds
Beech	3,574 pounds
Sugar maple.....	3,590 pounds
Cork or rock elm.....	3,771 pounds
Locust	3,800 pounds
White oak.....	3,862 pounds
Sweet birch.....	3,956 pounds
Persimmon	4,107 pounds
Shagbark hickory.....	4,347 pounds

No shipper need ever expect to handle lumber of the different species with as low weights as those given, because no dry-kiln turns it out in that state of dryness. The weights above given were calculated from laboratory samples heated to 212 degrees and kept at that temperature until they ceased to lose weight.

The only practical value of the above table is that it enables a shipper of any wood listed to determine approximately how much water he is paying freight on. For example, 20,000 feet of absolutely dry cottonwood weighs 40,400 pounds. If the shipping weight of a car of 20,000 feet is 60,000 pounds, about 20,000 pounds of it is water. A comparison of the shipping weight per thousand feet for any of the woods with the dry weight as shown above, will give approximately the quantity of water still in the lumber. It will often be found ranging from one-fourth to one-third the weight of the lumber.

It should be borne in mind always that figures showing weights of lumber are only averages and approximations. They are as near as can be attained in practice, and are bound to vary more or less.

Though the absolute weights of all woods—the real wood substance with all water and other substances excluded—are believed to be the same (about 1.6 times as heavy as water), there is remarkable difference in the weights of different woods as they are found in practice. Some are three or four times as heavy as others. The six lightest woods of the United States are generally understood to be the following:

	Pounds per cubic foot
Giant cactus of Arizona.....	19.87
Northern white cedar of Michigan.....	19.72
Gumbo limbo of Florida.....	18.71
Big tree of California.....	18.20
Yucca of California.....	16.97
Golden fig of Florida.....	16.30

With these may be contrasted the six heaviest woods:

	Pounds per cubic foot
Stopper of Florida.....	70.02
Vanuelinia of Arizona.....	70.88
Lignum vitæ of Florida.....	71.24
Mangrove of Florida.....	72.40
Purple haw of Texas.....	74.78
Black ironwood of Florida.....	81.14

The heaviest and densest of these woods lacks nearly twenty per cent of being solid wood substance. Pores make up at least one-fifth of the bulk. If it were absolutely solid wood substance, a cubic foot would weigh one hundred pounds. The difference between its dry weight and one hundred pounds represents, in a general way, the open cavities in the wood. The heaviest woods, therefore, are from three-fourths to four-fifths real wood, and the rest consists of cavities.

On the other hand, the light woods have comparatively little of actual wood substance in them. Golden fig, the lightest, is less than one-sixth wood and more than five-sixths cavities.

If woods could be compressed into approximate solids—the sides of all their cells and pores squeezed together—their bulks would be

reduced from one-fifth in the case of the heaviest woods to five-sixths in the lightest. If that were done, all would weigh the same, bulk for bulk; at least, it is believed that such would be the case, but no method has yet been perfected for compressing wood until all cavities collapse and disappear.

The nearest approach to it is accomplished by heating wood in a retort with the air excluded, so that combustion cannot take place. A temperature of 600 degrees has a striking effect on a block of wood under such circumstances. It cannot burn, but seems to partly melt. It turns brown, contracts in size, and it cuts not unlike hard rubber. When dropped in water, it sinks. It is paradoxical that wood may be made so dry that it sinks in water. However, something besides simple drying takes place when wood is treated to great heat in an airless retort. Such treatment has other than scientific value. It is believed that such wood is valuable for many purposes, and may be substituted, in some cases, for hard rubber, and in others for the hardest, heaviest foreign woods in manufacturing commodities like bowling balls, billiard cues, and scientific apparatus. However, few tests have yet been made in that direction. It is a new field which may or may not develop something practical.

New Woods for Gunstock

Black walnut has long been the favorite gunstock wood in this country. It is easy to work, takes a high polish, makes up richly and often displays a very handsome grain. It stands well the strains from ordinary guns, being resilient and tough. There is a decided sentiment attached to the use of black walnut for this purpose, much the same as the feeling that a high-grade handsaw must have an applewood handle. Manufacturers have accordingly stuck to walnut, in spite of increasing difficulty of securing suitable material. The advent of the high-power automatic has demonstrated that walnut is not strong enough to withstand the continued strain from the whipping action and new woods are rapidly coming into use.

Perhaps the similarity of figure of red gum to Circassian walnut, which has long been the favorite gunstock wood in Europe, lead to its trial. Here, as in most other places where given a chance, red gum has proved its merits. A study of the wood-using industries of Connecticut, where the firearm industry is very important, discloses the fact that out of a little over 600,000 feet, board measure, of wood used for gunstocks in 1910, red gum furnished 210,000 feet and black walnut about 390,000 feet. All other woods used, principally Circassian walnut and boxwood, amounted to less than 4,000 feet.

Red gum has a very decided advantage of being obtainable in desirable quantities and sizes at a low price. The average price paid at the factory for the 210,000 feet of this wood used in Connecticut in 1910 was \$44.50 per thousand feet board measure, while that of black walnut was over \$78 per thousand; Circassian walnut, \$250; boxwood, \$115.50. Only the heartwood of red gum is used, and it is stained and treated to add to the beauty of the wood. The use of red gum, however, is confined as yet to the cheaper grades of firearms, though the excellent service it is giving promises more general employment in this industry.

In the returns from the wood-using industries in Connecticut in 1910 no black or cherry birch was mentioned. Since then, however, the employment of this wood for automatic guns has increased very rapidly. The wood is fairly hard, strong, resilient, fine-textured and capable of receiving a high polish. The rays are finer than maple, but, seen on quarter-sawed material, add materially to the appearance. The natural color of the heartwood is reddish brown, which can be greatly enhanced by staining. The wood is considerably heavier and stronger than black walnut, and is also more difficult to season without checking, which would ruin its value for gunstocks. The best grade of cherry birch costs from \$125 to \$150 per thousand feet board measure.

In making a cherry birch gunstock the wood is sawed into two-inch planks and allowed to season thoroughly for a year or more—the longer, the better. Several years in a dry room are required to secure perfect seasoning, and even then small checks may appear after the stocks are cut out. A special ammonia process requiring three or four days is employed to darken the wood and add to its beauty. A kiln-dried plank of proper length for a stock is ripped through the middle edgewise and the pieces reversed so that the inside faces are outside. These two pieces are again sawed through the middle, but flatwise this time. Then one section on each side is reversed end for end, tending to produce a herring-bone effect, alike on both sides. The parts are carefully matched and glued, roughly sawed to shape, and finally turned down to completed form.

The weakest part of any gunstock is the "small" or grip, and in fashioning a stock it is important to see to it that the wood at that place is not cross-grained or weakened from any cause. This is not always easy to secure, since the handsomest woods for stocks are usually wavy-grained, gnarled or otherwise irregular in arrangement of elements. Built-up stocks are stronger than those of a single piece, as the tendency of one part to split or break is counteracted by the different grain in the one adjacent to it. The wood where the butt-plate is attached should preferably be straight and regular, to prevent splitting. The same is true of the portion where the locks are set in, the direction of grain desired being parallel to the barrel of the gun.

Circassian walnut is usually given an oil finish instead of being varnished, as in the case of black walnut and most other woods. Before oil is applied the wood is subjected to a process of repeated wetting and drying to bring out the grain. It is then sandpapered down smoothly and oil applied and rubbed in thoroughly, time and time again. A very high-priced stock is the result, but the handsome product seems well worth the effort.

Bird's-eye and curly sugar maple are used to some extent for rifle stocks. The wood is very hard, heavy, strong, resilient, and capable of taking a very high polish. Highly figured specimens are very handsome in effect.

Black cherry makes gunstocks of exceptional merit, but the supply of the right kind of material is so limited and the price so high that it does not pay to use it. The rich vinous red of the natural wood can be emphasized by careful finishing, and the appearance of quarter-sawed material rivals or surpasses the richest mahogany.

The Mail Bag

B 377—Wants White Oak Dimension Strips

Atlanta, Ga., Dec. 19.—Editor HARDWOOD RECORD: We are in need of a carload of plain white oak dimension strips, mostly $5\frac{1}{2} \times 4\frac{1}{2} \times 8'$, and are writing you to see if you can put us in touch with any mills that can handle an order of this description. As mills that cut this sort of material are not on our regular buying list, we hardly know where to go.

We shall appreciate very much any information you can give us on this line.

This concern has been given a list of a few manufacturers of the material it seeks.—EDITOR.

B 378—About Weighing Cars

Cape Girardeau, Mo., Dec. 13.—Editor HARDWOOD RECORD: I saw with considerable interest your cartoon in your December 10 issue with reference to the method used in weighing cars. I have had several instances of weight charges on shipments in which I thought that the cars were weighed in about this method and so stated in my claims, and when I made claim for what I thought was the proper weight, they came back with the reply that the Interstate Commerce Commission rules that scale weight takes the preference over estimated weight. Now, I am satisfied this is not a fact unless they can show the shipment has been check weighed, and I have so stated to them, but I have never had a decision on this proposition that I can refer them to, as I have not had an opportunity to look up this matter.

Can you tell me what the Interstate Commerce Commission rules are on this point, or was there any decision made in the recent rate hearing of Boston as referred to in this cartoon? If there was, I would appreciate your giving me this information so that I can embody it in my claim for overcharge in weight, etc.

Thanking you in advance for your attention,

The above inquiry was referred to W. S. Phippen, traffic manager for the National Wholesale Lumber Dealers' Association, who in reply referred the inquirer to the Interstate Commerce Commission's decision rendered on December 5, 1910, in what is known as the Noble case. After this decision was rendered various carriers took advantage of it as a basis for declining claims for overcharges in weight with the result that complaints were received from many sources. A number of these complaints having reached the Interstate Commerce Commission in March, 1912, a special investigation was instituted by the commission into the methods and practices employed by the carriers in arriving at the weights of interstate shipments. The first general hearing was held in Chicago last March, since which time several hearings have been held in different parts of the country, the last one having been held at Atlanta, Ga., December 18.

At this meeting the public was permitted to introduce any evidence pertaining to the subject, and railroad representatives were examined as to the construction of scales, methods of weighing, etc. The hearing which was held in Boston, and which was referred to in the December 10 issue of HARDWOOD RECORD, constituted a part of this general investigation. The evidence is now all in and the case stands submitted to the Interstate Commerce Commission for such action as that body may see fit to take.

In the opinion of Mr. Phippen it is quite probable that the commission will recommend a number of changes with a view to bringing about a more accurate system of weighing. Mr. Phippen says that he has no record of any decision having been made by the Interstate Commerce Commission which would confirm the argument of the inquirer that shipments must be check-weighed. It is possible that the commission may issue such a recommendation as a result of these investigations. It may be some little time before a decision is handed down by the commission, as there have been volumes of evidence taken at the different hearings.—EDITOR.

B 379—Seeks Hardwood Connection

Boston, Mass., Jan. 4.—Editor HARDWOOD RECORD: We control a business in hardwoods in the New England territory of approximately fourteen million feet annually, which we have handled for a good many years. On this business our gross loss in twenty years has been less than two thousand dollars. Right now we are seeking new connections based either on direct purchases or commission basis for oak, chestnut, ash and a full line of northern woods. Can you suggest the names and

addresses of any concerns who you think would be interested in putting their output through our hands?

The above letter is from one of the cleanest-cut and most competent hardwood operators of the East, and he is one that can be heartily commended to the confidence of any northern or southern manufacturer who would be interested in developing increased New England trade. The New England hardwood trade is one which very few manufacturers can afford to handle direct, as it is infinitely cheaper and much more satisfactory to handle this business through a competent local representative who knows all the ins and outs of the New England consuming demand.

The address of the writer of the above letter will be supplied to any competent manufacturer in confidence on application.—Editor.

B 380—Seeks Ash, Elm and Maple Dimension

Buffalo, N. Y., Dec. 31.—Editor HARDWOOD RECORD: We will be glad to receive from you a list of dealers in dimension stock who could furnish us ash, rock elm or rock maple sticks $2\frac{1}{2} \times 2\frac{1}{4} \times 30''$, and some rock elm or rock maple $3\frac{1}{2} \times 3 \times 34''$ for delivery at our Indiana factory.

The above letter is from an important manufacturing house which has been given a list of a few possible sources of supply for this material.—Editor.

B 381—Seeks Five-Eighths No. 2 Gum

Laurester, O., Jan. 1.—Editor HARDWOOD RECORD: We are in the market for $5\frac{1}{2}$ No. 2 common red gum. If you know of anyone who can furnish this material, kindly advise us.

The writer of the above letter has been given the names and addresses of several manufacturers of thin gum.—Editor.

B 382—Seeks Wagon Stock

Burlington, Iowa, Dec. 24.—Editor HARDWOOD RECORD: Will you kindly furnish us with the names and addresses of concerns who can furnish wagon stock material as per enclosed list? This stock is to be in the rough, but the list shows finished sizes.

COMPANY.

The foregoing letter is from a leading wheel manufacturing company and is accompanied by a list of hickory axles, oak or hickory bunk bolsters, finished bolsters, sand boards, and oak and hickory sizes covering neckyokes, reaches and all the other parts of wagons and buggies. The writer has been supplied with the names of a few manufacturers of this material.—Editor.

News Miscellany

Memphis Lumbermen in Semi-Monthly Meeting

The first semi-monthly meeting for 1913 of the Lumbermen's Club of Memphis was held at the Hotel Gayoso Jan. 4. The feature thereof was the retirement of the old and the installation of the newly elected officers. Fifty-five members and visitors were present and the usual luncheon was served. A round of cocktails was also enjoyed by those present through the courtesy and thoughtfulness of the new president, John M. Pritchard. In drinking these cocktails toasts were presented embodying the success of the new administration and the welfare of the Lumbermen's Club of Memphis.

F. B. Robertson, the retiring president, delivered his address to the members before surrendering his office to his successor. He assured the club that he had highly appreciated the honor conferred on him in elevating him to the highest office in the gift of the club, that he had found a great deal of pleasure in administering its affairs and that he had himself been very much benefited through the service he had rendered. He briefly reviewed the accomplishments of his administration, referring with particular emphasis to the efficient work of the river and rail committee which had resulted in the formation of the Lumbermen's Traffic Bureau, to the affiliation arrangement with the Business Men's Club brought about through the splendid work of the special committee appointed for that purpose, and to the excellent work done by the executive board and the other standing committees of the organization, all of whom he thanked warmly for their hearty co-operation and support. He predicted that the traffic bureau, owing to the importance of the proper handling of rate and traffic matters, would easily become one of the most important organizations of its kind anywhere in the country and he bespoke for it the support of every lumberman identified therewith. His report on membership changes follows: Admitted during the year, five active and one associate; lost through resignation, six active; dropped, two active; lost by death, two active; transferred from active to honorary, one. The membership now stands: Active 152 against 158

a year ago, associate 6 against 5, honorary 3 against 2, making the total 161 against 165 at the beginning of 1912.

In reference to the finances of the club, President Robertson said that these were not what they should be. He recommended that the dues of active members be increased and that the banquets be given only with the money paid by the members therefor, or dispensed with altogether. He referred to the fact that the past year had been a prosperous one and that the members of the club had had the good fortune to share in this prosperity. He thought that every advantage should be taken of the present excellent conditions to secure the highest possible prices for the lumber sold during the year. He again thanked all the committees for their co-operation and said that in closing he had one more recommendation, that of the gentleman constituting the new administration.

Secretary R. T. Cooper then submitted his annual report. This showed that the income from all sources, including the balance left by the previous administration, had been \$2,858.31 and that expenditures had been \$2,847.80. The club tendered a vote of thanks to Mr. Cooper for the efficient manner in which he had performed his duties during the year.

Mr. Pritchard, on assuming the chair, again pledged his best efforts in behalf of the club and asked for the support of every member. He then proceeded to name the standing committees for the year as follows:

F. B. Robertson, chairman Advisory Board, composed of all the former presidents of the club.

ENTERTAINMENT

F. E. Stonebraker, chairman, J. W. Dickson, S. C. Major, Chas. Dudley, C. C. Latanner.

INFORMATION

J. S. Bailey, chairman, F. W. Dugan, Jas. M. Thompson, R. Soudheimer, U. S. Lambert.

PUBLICITY

Mark H. Brown, chairman, W. L. Crenshaw, A. N. Thompson, C. T. Ransom, C. M. Kellogg.

RESOLUTIONS

W. H. Greble, chairman, Geo. W. Foeshe, W. R. Barksdale, F. E. Gary, W. S. Darnell.

LAW AND INSURANCE

James E. Stark, chairman, S. B. Anderson, S. M. Nickey, R. J. Wiggs, Frank May.

RIVER AND RAIL

J. W. McClure, chairman, C. D. Hendrickson, Geo. C. Ehemann, W. B. Morgan, O. M. Krebs.

MEMBERSHIP

F. T. Dooley, chairman, R. J. Lockwood, W. A. Stark, B. C. Tully, Harry Stimson.

STATISTICS

D. F. Hauer, chairman, Geo. O. Friedel, J. R. McFadden, Keith Blanton, G. E. Bailey.

There were five applications for membership presented at this meeting, as follows: Active—Palmer Kellogg, Christianson Lumber Company, Chicago; Joe Thompson of the Dudley Lumber Company, and R. E. Dickinson of the Anchor Sawmill Company; associate—R. L. Jordan and John Penrod, both of the Penrod Walnut Corporation, Kansas City, Mo. These will be voted on at the next meeting and will make the total membership 166 against 165 at the beginning of 1912.

The resolutions committee was authorized to draw up and forward to the proper authorities resolutions endorsing the National Reclamation Association in its efforts to secure enactment by the federal congress of the Newlands-Bartholdt bill looking to river regulation and flood prevention. This bill seeks an appropriation of \$50,000,000 a year for ten years for the building and maintenance of levees throughout the Mississippi valley and for such other work as may be necessary to prevent a recurrence of the tremendous damage that has followed the floods in the Mississippi and its tributaries during the past few years. The club also directed that the Business Men's Club be asked to take immediate action on the same subject and that other business bodies be requested to appeal to their representatives in congress to lend this matter their strongest possible support, owing to the vast importance of river regulation and flood prevention to the lumber and other interests throughout the Mississippi valley.

A New Thing in Veneer Presses

If the panel manufacturer who doesn't know should be told that he can make one pressing of built-up stock and release his press in forty-five seconds, he would say that the narrator was dreaming. That this can be accomplished, however, has not only been stated but demonstrated by a Chicago firm, the Charles F. Elmes Engineering Works, which concern is marketing a remarkable veneer press that is so arranged and equipped that it can be handled with the facility of an electric runabout.

The press is built on the inverted type, the pressure being supplied by hydraulic force created by means of the Elmes' unsurpassed hydraulic pump. It might be well to insert here that this company was established a half century ago by Charles F. Elmes and is being perpetuated by his sons along the same lines that it was carried on by the father. Absolute perfection in every detail of design and construction was the watch-word of the elder Elmes, and this policy is being followed to the last detail by the firm as it is run today.

The press is built for electric, or shaft drive and requires but a fraction of the power necessary to run the ordinary press. The feature of the inverted press is the fact that slipping of the veneers is absolutely eliminated. The bundle is the stationary factor and the power is applied from above by means of the plunger ram, thus the bundle will be firmly held in its exact position.

Another feature is the newly designed containers, which can be adjusted as the power is being applied, thus eliminating a considerable waste of time necessitated by the older methods. Extra heavy design and smooth finish are characteristic of the entire machine. The plunger ram and cylinder are made of semi-steel and the pump frame, base and plunger guide are cast in one piece, making the pump practically indestructible. It is designed with two high pressure plungers, no low pressure plungers being required, as the cylinder is filled automatically.

The crank shaft and eccentrics are made in one piece, extra heavy, and the eccentric straps are babbitted and bored. Bronze and hardened tool steel are used in all parts where the employment of these metals will make construction more lasting. The retainer rods have exceptionally quick releases. They can be tightened or released without the use of a wrench or without breakage.

It has been demonstrated that one press can easily handle one hundred bundles a day. This fact, together with the assured high-class work turned out by this machine, should well demonstrate its utility in the manufacture of panels.

News of the Manufacturers' Association

The coming convention of the Hardwood Manufacturers' Association of the United States bids well to be the biggest gathering of lumber manufacturers gotten together for several years. Thus far at the offices of the association more requests have been received for accommodations at the hotels from the millmen than ever before. An extra force of clerks is necessary to take care of the additional work in making the necessary preparations, and while the program is not as yet completed, it is given out by President W. E. De Laney and Secretary Doster that every detail looking to the comfort and entertainment of the visiting delegates is to be well looked after. Work on the general program is nearing completion and it will soon be mailed to the lumbermen interested all over the country.

American Hubs in Africa

Wagon makers in Rhodesia, South Africa, at elevations of 5,000 feet above the sea buy American elm for wagon hubs. Native wood which answers in some other parts of South Africa fails to give satisfactory service in the dry climate of Rhodesia because of excessive shrinkage and checking; but elm from the United States meets the requirements. The only other wood which has been found serviceable for hubs in that climate is Australian blackbutt.

NEW INVERTED HYDRAULIC VENEER PRESS

Changes in the C. L. Willey Enterprises

Burdis Anderson, who has been secretary and treasurer of The Hardwood Company, publisher of *HARDWOOD RECORD*, during the past year, and who also has been manager of E. H. Defebaugh's trade publications, The Barrel & Box, Rock Products and American Stone Trade, has resigned both positions, and has engaged with C. L. Willey of Chicago to take the management of his double band sawmill and veneer plant at Memphis, Tenn. This big plant has been closed down for the past twelve months but now will again be put into commission.

Mr. Anderson has added to his previous business reputation in his work with the trade publications noted during the past year, and makes this change simply to increase his opportunities in a commercial way. Mr. Anderson has had long experience in connection with lumber and veneer enterprises, and undoubtedly will make a success in his new position. The details are not entirely complete, but it is rumored that Mr. Willey has recently purchased a large hardwood timber tract in Arkansas, which together with sundry log purchases, will supply a stock for the Memphis sawmill and veneer plant for years to come.

The employment of Mr. Anderson to take charge of the Memphis enterprise gives Mr. Willey an opportunity to devote his entire energies to his large and very important mahogany and other fancy wood veneer and lumber plant at Chicago. This latter business is developing very fast and is of such monumental size that Mr. Willey feels as though his energies should be entirely absorbed in his work at Chicago and abroad in connection with it, even considering the fact that he is most ably assisted by Manager Clarence E. Ingalls and his son, Charles B. Willey.

At the Chicago plant Mr. Willey is now installing a Kraetzer Preparator, through which he will handle his mahogany and other fancy wood output, and soon will erect another single band mill to supplement his present equipment for the cutting of veneer flitches and lumber.

Death of James H. Barr

James H. Barr, Cincinnati, died at his home in that city on Dec. 21. Mr. Barr was a lumberman. He was born about sixty years ago in the suburb of Ludlow, Ky., and commenced the work of life as a boy with his father in the retail lumber business in the yard on Sixth street, Cincinnati, now owned by B. A. Kipp. He succeeded to this business at his father's death, which he conducted for some years. Later he went into the commission lumber business, handling building woods, in which line of work he had been engaged up to the time of his death.

Mr. Barr occupied an attractive home at Mount Lookout, on the hill-tops overlooking Cincinnati. He leaves to mourn his loss not only his wife, and a son and daughter, who have about attained their majority, but a host of friends both in and out of the lumber business. Mr. Barr's leave-taking was sudden and unexpected. He was indisposed for a few days before his death, but was supposedly so far recovered that on the morning of his demise he was out of bed and dressed, and made several business appointments by telephone previous to his intended departure for down town. He died in a chair at his bedside from heart failure.

The foregoing statements are commonplace and perfunctory, and are made to preface the statement that during his entire lifetime Mr. Barr enjoyed not only the respect, but the friendship of everyone with whom he ever came in contact in a business or social way. He was a just man; he was an honest man; he was a kindly man; he was a lovable man. "Jim" Barr never had business of his own of so much importance that he would not interrupt it to do a favor for any of his numerous friends. He spent his life in doing kindly acts, and in his passing he does not leave a big estate, but he has enriched the community in which he passed his life. He has enriched it with his self-sacrifice, with his kindness and with his wonderful humanity. The world is much poorer in the passing of James H. Barr.

The Chestnut Tree Blight

The Pennsylvania Chestnut Tree Blight Commission has issued from its Philadelphia office bulletin No. 1, in which it defines the disease which is affecting chestnut trees, gives estimates of loss, explains how the disease works, and gives advice as to how it may be combated. It is admitted that the entire commercial supply of chestnut in this country is in danger unless successful methods of combatting the disease are found. The loss thus far is not less than \$25,000,000.

The disease is caused by fungus, not by insects as some suppose. This fungus is a parasitic plant which resembles in many ways the moulds that form on decaying food. It grows, however, in the interior of the bark and not on its surface, and feeds on living tissues instead of wholly on dead material, as do the moulds mentioned. It may be described as consisting of great numbers of tiny threads, which branch and grow in every direction through the bark. These threads, collectively known as the mycelium, are so small that a single one can be plainly seen only through a microscope; but they are so numerous in the diseased bark that as mycelium, they may be seen with the naked eye, clustered together in the form of small, buff-colored, fan-like bodies when the bark is pared down. These fungal threads feed in the living tissues of the bark and eventually grow into the sapwood. Wherever they grow they cause the speedy death of the living cells of the trees. After a time the fungus completely girdles the tree, trunk or branch on which it is feeding. This causes the death of that part above the girdled portion, much as if girdled with an axe.

When the fungus has grown for a time in the chestnut bark, it develops on the surface of the latter a series of tiny, irregularly dome-shaped protrusions (called pustules), each rarely larger than the head of a pin. These are the fruiting bodies which produce millions of sticky spores corresponding to seeds, and so tiny that they can be seen only by means of a powerful microscope.

The spores are believed to be carried from tree to tree on the feet of birds, or on the bodies of insects. Strong suspicion rests on woodpeckers and ants. The wind doubtless often carries the spores, and probably long distances.

It is known that periods of dying out of chestnut trees have occurred in the South, in past years, but the cause has not been traced to this disease. Some were as early as 1824. Chestnut trees were once common in central Georgia, but have practically disappeared.

New Geared Logging Locomotive

New devices to facilitate logging operations are always looked upon with interest by lumbermen owning their own timber, and others who carry on logging on an extensive enough scale to employ locomotives for log hauling. A new type of geared logging locomotive has just been turned out by the Baldwin Locomotive Works at Philadelphia, which has been built with a full understanding of conditions to be met. The locomotive is symmetrical in design, and power is transmitted to the axles through a central drive. The pistons are directly connected to a transverse shaft, which is geared through bevel wheels, to two longitudinal shafts. These transmit power to the front and rear trucks respectively. Each truck is provided with its own driving shaft which is spur-gearred to the corresponding longitudinal shaft. The housings for the truck

NEW GEARED LOCOMOTIVE MADE BY THE BALDWIN LOCOMOTIVE WORKS, PHILADELPHIA, PA.

gears are of cast steel. The trucks are of the equalized pedestal type, so arranged that the boxes can have vertical play in the pedestals without throwing the gears out of mesh.

Combined slip and universal joints are placed in the longitudinal shafts to compensate for the changing positions of the trucks when the engine is traversing curves.

The boiler is of the usual locomotive type with a deep firebox, which can be arranged for burning either coal, wood or oil. The supply of fuel and water is carried back of the cab. Other features are cylinders supported on the frames, no part of the driving gear is supported by the boiler, which is free to expand at the firebox end, and is subjected only to such strains as any boiler must carry.

The construction of the trucks results in easy riding and minimum strain on the tracks.

Inasmuch as the Baldwin company has constructed over 38,000 direct-connected locomotives for all classes of service, it has had ample experience in which to work out an effective design of geared locomotive.

Death of J. B. Simmons

Jason B. Simmons of Farmington, Del., one of the best-known residents of that state, died Dec. 19, at the age of seventy-six years. Mr. Simmons carried on a lumber business for many years, making a specialty of white oak car and ship lumber, and furnishing large quantities of this material to the Pennsylvania Railroad Company. Among his customers who were also extensive buyers of this wood, were the Harlan & Hollingsworth Company and the Jackson & Sharp Company, both large shipbuilding concerns. Mr. Simmons was postmaster of his town at the time of his death.

Motor Driven Circular Saw

The accompanying illustration shows a remarkably serviceable combination of woodworking machine made by the Parks Ball Bearing Machine Company of Cincinnati, Ohio. This machine is driven by a 3-horsepower, 60-cycle, 220-volt alternating-current Westinghouse induction motor.

This machine may be used as a circular saw, and also as a boring machine by means of an attachment. It is made in two sizes, light and heavy, the former suitable for driving a 3-inch belt, and the latter for a 4-inch belt, the belt in each case running over a 3-inch pulley and a saw 14 inches in diameter on ripping hard lumber.

The frame is made of heavy angle steel, strongly braced, with overlapping corners securely bolted together. A long substantial wooden base, one on each side, greatly increases the steadiness of the machine, giving more foundation and distributing the strain over more floor space. Angle steel clips are provided on the timbers for the machine to the floor.

The saw table is made of angle and channel steel ground to a uniformly level and true surface. The angle steel side table affords a substantial support, on which to bolt wood extensions of any width or length for work. The table is hinged at the back end so as to permit its being lowered or raised. It is provided with an adjustable depth cut having an opening for a 14-inch saw that will cut 5 inches deep.

The hard wood strip side of the saw is removable so that a 3 $\frac{3}{4}$ -inch cutter-head can be used on a saw mandrel. The table is of sufficient width to permit the addition of a 3 or 6-inch pointer.

The machine, as above stated, can also be supplied with a boring attachment which can be used for routing, mortising and turning rosettes.

A WESTINGHOUSE MOTOR IN SERVICE

This consists of an adjustable sliding support to hold the material being bored and a check attached to the end of the saw mandrel. Holes are provided in the frame for this attachment which can be easily added after the saw has been installed.

The machines are designed for electric drive by motors of from 3 to 4 horsepower capacity. The motor is mounted on the floor and belted to the pulley on the shaft which is mounted on the base timbers.

The motor shown in the illustration herewith, as previously stated is of the alternating-current type with what is known as a squirrel cage rotor or revolving part. This type is particularly adapted to use in woodworking plants because of the absence of any moving contacts and the entire elimination of any danger of fire from sparking.

The motor requires absolutely no attendance, beyond an occasional oiling, and may be started or stopped from any point that is convenient to the operator.

Meeting of the Cincinnati Lumbermen's Club

The regular monthly meeting of the Lumbermen's Club was held at the Business Men's Club, Jan. 7, 1913. The usual course dinner was served promptly at 6:30 p. m., following which President Shiels called the meeting to order. After the reading of the minutes the business of the evening was taken up in regular order.

B. F. Dulweber, reporting for the committee appointed to assist in the prevention of increases in freight rates on lumber from southern points, stated that Traffic Manager G. M. Freer of that branch of the Chamber of Commerce, after protesting against the increases, had secured the suspension of the advances being put into effect. Mr. Dulweber advocated the gathering of statistics that would in his opinion have considerable

weight in preventing the rates from being advanced when the time for a hearing comes. Mr. Freer reported that he had made the trip to St. Louis at the request of the executive board of the club and the result of the Interstate Commerce Commission hearing at that place early in December on the question of increased rates to Canadian points after the railroad side of the question had been presented was a postponement of the meeting until Jan. 24 at Cincinnati, at which time the shippers will be heard.

The matter of taking some part in the convention of the Hardwood Manufacturers' Association, to be held here early in February, was taken up, and the entertainment committee, consisting of J. A. Boser, chairman; Emil Thoman, W. E. De Laney, Harry R. Browne and Charles McCall, were authorized to open up a "Lumbermen's Club headquarters" at the Sinton hotel, and to be on hand during the convention to take care of the visitors and to have plenty of cigars and other things on hand at all times.

After the lively meeting had adjourned, the usual bowling party was formed by some of the enthusiastic bowlers, and the balance of the evening was enjoyed at this sport at a near-by bowling alley.

A Handsome Calendar

The R. E. Wood Lumber Company of Baltimore, Md., which in addition to its own poplar, oak, chestnut and other hardwood products, handles also the output of the mills of the Montvale Lumber Company of Fontana, N. C., is sending its friends as usual a handsome calendar. This year the calendar is an enlarged photograph, sixteen by twenty inches in size, enclosed in a handsome mat, of one of the splendid poplar trees that grow on the company's timber holdings at its Keno, W. Va., plant. This enlargement was executed from a photograph made by the editor of *HARDWOOD RECORD*, and is of a six-foot poplar tree, with a bole nearly eighty feet to the first limb. Beside the tree is pictured Clarence Wood, a brother of R. E. Wood, standing beside his saddle horse. The accompanying figures reflect the immense size and character of the R. E. Wood Lumber Company's poplar timber growing in McDowell county, and no better poplar grows anywhere. The picture is fully worthy of a handsome frame, and doubtless will decorate many lumber offices throughout the land.

J. E. Rhodes Assumes New Duties

On Jan. 1, J. E. Rhodes, the new secretary-manager of the National Lumber Manufacturers' Association, assumed his duties in connection with that office. Mr. Rhodes is located in the Stock Exchange building at Chicago. For several weeks prior to taking up his headquarters in this city Mr. Rhodes traveled, visiting the headquarters of the various affiliated associations making up the National association. He is planning to devote the next five or six months to a general tour, getting into what he terms "the high-grass sections" of the country, where he will get in direct touch with representative individual operators and endeavor to prove to them that the National association is not an association that is beyond their reach, but one which is of direct practical benefit to every lumberman in the country. The aim of the association under its new administration will be to submerge the National association to the interests of the allied associations. The opposite has been the policy heretofore.

In speaking of his trip to the various associations, Mr. Rhodes stated that he encountered everywhere a decided spirit of optimism. The South, according to the secretary, is in a distinct state of financial, industrial and commercial boom. Prosperity is conspicuous everywhere.

Secretary Rhodes' opinion of the effect of the Panama Canal upon lumber shipments and markets is that the question will adjust itself with changing conditions, but that he anticipates shipment of considerable Pacific coast stuff to compete with southern pine. While there is a logical market for the Pacific coast timbers, inasmuch as such stock in the pine forests of the South is becoming comparatively scarce, still, according to Mr. Rhodes, such shipments will involve the shipment in connection with them of a considerable amount of smaller stock to fill out the cargo. Because of the fact that this stock is shipped as a side line which can be marketed at comparatively low prices, the effect of such shipments will probably be felt by southern pine manufacturers. Mr. Rhodes is also of the opinion that the opening of the canal will effect a material increase in the market for hardwoods in the Pacific coast states, as it will result undoubtedly in greatly reducing the cost of such shipments.

Sawmilling in Germany

A recent consular report from the region of Thuringia states that sawmilling and woodworking in that territory are important inasmuch as it is one of the most thickly forested regions of Germany. The streams there are too small for commercial navigation or logging, but are of sufficient size to furnish water power for the numerous sawmills on their banks. Large quantities of lumber in fir, pine, beech, birch and spruce, given in the order of their importance, are cut each season, but the work of logging is carried on scientifically with due regard for the principle of conservation.

The same report tells of two important piano factories in that district. These plants besides using a great deal of American walnut and mahogany for German piano cases, import many fancy cases and piano parts from the United States. Of the latter the most extensively imported in that section is Pianola self-playing apparatus.

Two of the important factories in that section supply high grade pianos in black wood, oak, mahogany, rosewood, cherry and walnut. In the cheap pianos domestic hardwoods are used to produce imitations of the more costly woods. In the medium priced pianos the imported hardwoods are veneered on domestic hardwoods.

Progress of Grand Rapids Firm

The success which the Grand Rapids Veneer Works, Grand Rapids, Mich., is meeting in installing its dry-kiln is best shown in the large number of new orders it is constantly getting. Among the recently closed orders for dry-kilns which will be installed by this company are:

The Hamilton Organ Company, Chicago Heights, Ill.; Meadow River Lumber Company, Rainelle, W. Va.; Northwestern Cooperage & Lumber Company, Gladstone, Mich.; Wood-Brooks Company, Buffalo, N. Y.; Pilliod Lumber Company, Swanson, Ohio; Dickson Planing Mill Company, Dickson, Tenn.; Keystone Furniture Company, Williamsport, Pa.; Baker White Pine Lumber Company, Baker, Ore.; Conrades Chair Co., St. Louis, Mo.; Wilson Saw & Manufacturing Company, Chicago, Ill.; Hartmann-Sanders Company, Chicago, Ill.; Imperial Wheel Company, Flint, Mich.; Griswold Motor & Body Company, Detroit, Mich.; Canada Lumber Company, Ltd., Toronto, Ont.; St. Louis Basket & Box Company, St. Louis, Mo.; Butterfield Lumber Company, Norfield, Miss., and the Staib-Abendschein Company, New York, N. Y.

Biltmore "Doings" for November

The monthly report from the Biltmore Forest School issued for November, 1912, from its winter quarters at Darmstadt, Germany, shows that the school is well established in the Fatherland for the winter months. The students have had their usual splendid opportunities for studying intensive methods of forestry as practiced abroad, and the report suggests various features which have been of unusual interest to the students.

The interesting observation is made that cutting and bucking of pine in stands, averaging fifteen thousand feet board measure to the acre, is more expensive in Germany with cheap wages than it is in the United States with wages three times as high. Regarding the same type of growth, the report observes that this class of timber averaging twelve inches is sold at a net return of four hundred dollars per acre.

The students made a trip to the Spessart mountains in Bavaria, where they examined the famous Spessart oaks. It is astonishing to note that while some of these white oak logs are worth as high as three hundred and fifty dollars per thousand feet board measure in the woods, the forest officials are considering the advisability of planting spruce and pine in their place. The students were given their usual opportunities of observation covering the many different phases and degrees of development of forestry, lumbering and woodworking industries in the European country.

Board of Governors of National Manufacturers' Association Meet

At the call of President E. G. Griggs, the board of governors of the National Lumber Manufacturers' Association met at the Auditorium Annex in Chicago on Jan. 8. Those in attendance were President Griggs of Tacoma; William Irvine, Chippewa Falls, Wis.; Edward Hines, Chicago; J. B. White, Kansas City; W. C. Landon, Wausau; F. E. Waymer, Jacksonville; C. A. Bigelow, Bay City.

The resignations of Secretary George K. Smith and Manager Leonard Bronson were formally accepted and J. E. Rhodes was elected secretary to assume the work of both offices.

The most important action of the governors was the decision to accept the request of the ways and means committee of the House of Representatives to present to it at Washington on Jan. 13 the views of the lumbermen regarding the tariff on lumber.

The matter of the national advertising campaign was fully discussed and on account of the amount of money required to continue the same it was decided to postpone action until such time as the money can be readily obtained.

The next regular meeting of the National Lumber Manufacturers' Association will be held at Kansas City, Mo., at a date to be announced later by the officers.

As the governors of the National Lumber Manufacturers' Association constitute the board of directors of the National Lumber Manufacturers' Credit Corporation, the meeting of the latter board was held and Mr. Rhodes was elected secretary of the credit corporation also. The report of Superintendent W. F. Biederman, covering the details of the work, was presented, showing the credit corporation to be in a very satisfactory condition.

It was decided that inasmuch as moving the offices of the Blue Book to Chicago in conjunction with the general offices of the association would disrupt the organization of the Blue Book, the present offices in St. Louis shall be continued.

In connection with the presentation of the lumbermen's interest to the ways and means committee, Secretary Rhodes was requested to personally represent the association at Washington and to prepare a brief without special instruction from the association covering the views of the lumbermen regarding lumber tariff legislation. The sentiment of the governors was that a dignified, conservative statement be presented which will contend that the present duty on lumber is a duty for revenue only and that it is not desired in any way to protect the lumber industry of the United States. This contention seems particularly true in

view of the increasing prices of lumber in this country. The two arguments which the brief will most strongly advance in favor of the continuance of the present lumber tariffs are the relation of such tariffs to conservation and the disadvantages effected, in the cases particularly of west coast and southern pine lumber, by the iniquitous marine laws. Regarding the relation of the tariff to conservation, it has been amply demonstrated by statistics and actual practice that lowering materially or eliminating duty on such lumber as could be imported from Canada, for instance, would result in a great influx of low-grade Canadian lumber for which stock Canadian mills have practically no market in their own country. This would mean that instead of the Canadian mills burning their low-grade stock and the American mills using theirs for box lumber and similar purposes, the conditions would be exactly reversed. This contention seems to be not merely a theory, but has actually been shown when prices in this country have been high enough to permit of the importation of Canadian low-grade stock.

The injustice of the present marine laws governing coast-wise trade results from the provision which necessitates the shipment of such commodities in coast-wise trade in American ships manned only by American seamen and of American register. This means that coast-wise shipments between American ports are one or more dollars higher than shipments from Canadian or other ports to American ports. The present duty, it is claimed, just about offsets this disadvantage and its elimination would mean a serious hardship to certain classes of American shippers of lumber.

Building Operations for December and 1912

Official reports from some fifty cities regularly reported in The American Contractor, Chicago, show an aggregate increase of 26 per cent during the month of December as compared with December, 1911. The year 1912 shows an increase of 6 per cent as compared with 1911. The latter year was considered quite satisfactory by the building fraternity and the increase noted is accepted with pleasure. Cities which scored a gain of over 50 per cent for December, 1912, are: Atlanta, 183 per cent; Birmingham, 68; Boston, 65; Ft. Wayne, 298; Harrisburg, 213; Kansas City, 100; Los Angeles, 58; Minneapolis, 640; Nashville, 343; Greater New York, 64; St. Joseph, 266; St. Louis, 153; Shreveport, 229; Toledo, 63. The greatest gain for the year was Manchester, 82, and Atlanta, 60 per cent. Particulars will be found in the following tables:

December 1912			The Year 1912		
	Cost	Per cent GainLoss		Year 1912	Per cent GainLoss
Akron	\$ 254,085	44	Akron	\$ 4,799,927	33
Atlanta	918,490	183	Atlanta	9,987,444	60
Baltimore	541,805	22	Baltimore	8,049,575	13
Birmingham	172,194	68	Birmingham	3,813,079	7
Boston	2,119,435	65	Boston	21,361,341	48

Philadelphia Lumbermen in Social Reunion

The Lumbermen's Exchange held its usual social reunion on the last day of the year, in Griffith Hall, in the afternoon of Dec. 31. These gatherings are always largely attended by the members and friends, and a general spirit of good fellowship and camaraderie invariably marks this yearly festivity. At 12:30 p. m. an elaborate luncheon was served, after which came a high-class vaudeville show, which opened with some spirited

rag-time music on the piano, followed by some amazing performances by Charles Thompson, a clever juggler. John Devlin then evoked roars of laughter with his Irish songs and anecdotes, and Edna Brown, a sweet songstress, followed with her up-to-date songs. Billy Morse, a black-face comedian, contributed his roaring best, and Harry Alpighini, unsurpassed in his line, astounded his audience with some incredible sleight-of-hand tricks. Waley and Putnam, song and dance artists, wound up this most enjoyable last day of the old year's entertainment of the exchange.

Dogwood and Persimmon Shuttle Blocks

A considerable part of the American output of shuttle blocks goes to England. A recent consular report gives prices at Manchester, England. Persimmon in the log, 5-inch diameter and upward, is generally quoted at about \$14.60 per ton (2240 pounds), and dogwood about from \$17 to \$19.50 per ton. The majority of the shuttle-makers in the district buy the blocks cut from the wood in the United States, and these are seasoned for about six months and sent over in 200 to 300 gross lots. Sizes are as follows: 13½ by 1¾ by 1¾ inches and 12½ by 1¾ by 1¾ inches, an average price for which would be \$3.90 per gross for persimmon and \$6.30 per gross for dogwood.

Hardwood News Notes

◀ MISCELLANEOUS ▶

The Alabama Lumber Company has been incorporated at Alpena, Mich., with a capital of \$100,000.

The Saginaw Manufacturing Company, Saginaw, Mich., has increased its capital stock to \$200,000.

The Bridgeport Woodenware Manufacturing Company of Bridgeport, Ala., has gone out of business.

A new Philadelphia corporation is the Dresden Box Company, with an authorized capital of \$45,000.

The Bode Wagon Works, Cleveland, O., are planning an extensive addition to their plant at that place.

The Waidstein Lumber Company of St. Louis, Mo., has increased its capital stock from \$50,000 to \$100,000.

The American Woods Corporation of Owls Head, N. Y., has increased its capital stock from \$15,000 to \$25,000.

The S. A. Smith Manufacturing Company has been incorporated at Brattleboro, Vt., with a capital of \$150,000.

The Willson Manufacturing Company, manufacturer of meat blocks, has increased its capital from \$10,000 to \$30,000.

H. R. Lindaberry & Sons, manufacturers of baskets, have removed from Frenchtown, N. J., to East Burlington, N. J.

The Thompson Hardwood Lumber Company of Cincinnati, O., has increased its capital stock from \$30,000 to \$50,000.

The Ward Furniture Manufacturing Company of Fort Smith, Ark., has increased its capital stock from \$75,000 to \$100,000.

The Bond Lumber Company is the name of a new corporation at Covington, Ky., which will operate with a capital of \$300,000.

A new Chicago corporation is the Homer Brothers Furniture Manufacturing Company, which will operate with a capital of \$10,000.

The Giles Brothers Hardwood Lumber Company recently began operations at Forest Hill, La. The company will operate a sawmill.

The Caribbean Manufacturing Company is the style of a new company incorporated at New Orleans, La., to manufacture picture frames.

The Courtade Piano Case Company of Hoboken, N. J., recently lost its piano factory at that place by fire which resulted in a loss of \$150,000.

The Thomas E. Coale Lumber Company, Pittsburgh, Pa., has been succeeded by the B. W. Cross Lumber Company, which is incorporated with a capital stock of \$5,000.

The Reap-Crawford Furniture Company is the style of a new incorporation at Pine Bluff, Ark. The incorporators are J. P. Crawford, John W. Reap and others. The capital stock is \$25,000.

The Philip A. Ryan Lumber Company of Memphis, Tenn., has been granted a permit to do business in Texas, with main office at Houston, Tex. The company will operate with a capital stock of \$75,000.

Instead of at Houston, as was stated in the Dec. 10 issue of HARDWOOD RECORD, the Farmer's Handy Wagon Company of Saginaw, Mich., manufacturer of the "Saginaw Silo," has purchased a site and is building a plant at Fort Worth, Tex. The corporate name of the company in that state is The McClure Company of Texas.

The directors of the Michelson & Hanson Lumber Company of Bay City, Mich., which operated for over twenty years at Lewiston and completed its timber cut about two years ago, have filed a petition for a dissolution of the corporation. The Michelsons and Hansons are still extensively engaged in lumbering at Grayling, Johannesburg and at Michelson, Mich.

◀ CHICAGO ▶

W. L. Martin of the Embury-Martin Lumber Company, Cheboygan, Mich., visited the local trade on Jan. 9.

E. M. Holland and C. E. Cartier of the Cartier-Holland Lumber Company, Ludington, Mich., spent Thursday of this week in the city.

W. A. Spencer, office manager for the Stearns Salt & Lumber Company, Ludington, Mich., has been in the city for the past few days.

Within the last two weeks art calendars were received from: Mowbray & Robinson, Cincinnati, O.; S. M. Bradley, Morehead, Ky., entitled "The Lady of the Lillies"; The John Dulweber Company, Cincinnati, O., "Sweet Sixteen," from a drawing by Harrison Fisher; Charles K. Parry & Co., "Tantallon Castle, Scotland"; H. R. Foster, Chicago, "An Anxious Moment"; Robert Black & Co., Bay City, Mich., "The Headland"; "Our Girl," from Duhlmeier Brothers, Cincinnati, O.; The Prescott Company, Menominee, Mich., "Violet"; Southern Pine Company of Georgia, Savannah, Ga., "A Sea Nymph," and one from the Skillman Lumber Company of Grand Rapids, Mich.; "When Venice Ruled the Sea," from Tickle, Bell & Co., Liverpool, England.

Practical office calendars came in from Barker & Co., Boston, Mass.; The Farley & Loetscher Manufacturing Company, Dubuque, Iowa, and C. L. Willey, Chicago.

A very fine leather wallet, together with a travel accident policy, is acknowledged from The G. W. Jones Lumber Company, Appleton, Wis.; a red leather memorandum book from Louis Wuichet, Railway Exchange, Chicago, and a black leather booklet from the Three States Lumber Company, Memphis, Tenn. Another useful remembrance was received from The T. Wilce Company, Chicago, in the form of a clock, and a "Daily Reminder for 1913" from the Edward Hines Lumber Company, Chicago. A pin cushion made of redwood burl with redwood bark in the center reached this office from the John D. Mershon Lumber Company, Saginaw, Mich. Mowbray & Robinson sent out two photographs of their Quicksand, Ky., band mills and lumber yards, which make very handsome office decorations, and the J. M. Card Lumber Company, Chattanooga, Tenn., remembered its friends with a good sized picture of its yards.

HARDWOOD RECORD acknowledges receipt of handsomely engraved Christmas and New Year cards, extending best wishes for its future prosperity from:

Tennessee Oak Flooring Company, Nashville, Tenn.; E. C. Atkins & Co., Inc., Indianapolis, Ind.; Louisiana Red Cypress Company, New Orleans, La.; B. Heinemann Lumber Company, Wausau, Wis.; G. D. Crain, Jr., Louisville, Ky.; Packages, Milwaukee, Wis.; F. A. Brewer & Co., Chicago; Oconto Company, Chicago; Saul Brothers, Chicago; S. F. Minter, Delaware, Va.; James Crowell, Newark, N. J.; Patricia Fargas, Barcelona, Spain.

Leon Isaacsen, president of the Yellow Poplar Lumber Company of Coal Grove, O., was operated on for appendicitis on the evening of Dec. 30. He has had the good fortune to recoup promptly from the surgery and is now on the rapid road to recovery. He expects to be again able to attend to business within a very few weeks.

The St. Louis Lumberman celebrated the twenty-fifth anniversary of its inception at a reception in suite 1103 Lumbermen's building, St. Louis, Mo., on Dec. 31, 1912.

W. S. Sterrett, sales manager of the M. B. Farrin Lumber Company, Cincinnati, O., favored HARDWOOD RECORD with a call on Jan. 4. Mr. Sterrett reports an excellent condition of business in Cincinnati.

W. A. Rockwell, manager and treasurer of the Harriman Manufacturing Company, Harriman, Tenn., called at HARDWOOD RECORD offices on Jan. 7.

C. E. Davis, sales manager of the Richland Parish Lumber Company and manager of the lumber department of the Mengel Box Company of Louisville, Ky., has been in town several days on business in the interests of those concerns.

H. P. Keith of the Keith & Hiles Lumber Company of Crandon, Wis., was in this city a couple of days in the early part of the week in conference with members of the local trade.

Godfrey Saunders of the Foreign Hardwood Company of London, England, was one of the recent distinguished visitors to the city.

W. A. Runge, general manager of the Merrill Veneer Company, Merrill, Wis., was in this city on Friday of last week in connection with the interests of that company.

J. Moffett, formerly buyer for Heywood Bros. and Wakefield Company, chair manufacturer of Chicago, has taken a position with Walter Dewitt of the Seaman-Kent Company, Ltd., Toronto. Mr. Moffett will assist Mr. Dewitt in administering the local affairs of that concern.

J. F. Minge, Chicago manager of the Faust Brothers Lumber Company of Paducah, Ky., has been at the latter place for the past week in conference with his principals.

A. C. Wells and J. W. Wells of the J. W. Wells Lumber Company, Menominee, Mich., spent a few days in Chicago recently.

"Pointers" is the inscription on a booklet recently issued by James D. Lacey & Co., Chicago, Portland and Seattle. This book aims to give valuable information to prospective investors in timberlands.

E. W. Bartley, president of the Racine Lumber & Manufacturing Company, Racine, Wis., was in Chicago on Wednesday of this week.

F. D. Timlin of the Wheeler-Timlin Lumber Company of Wausau, Wis.,

and Chicago, was in the city two days this week in conference with his partner.

E. Bartholomew of John B. Ransom & Co., Nashville, Tenn., spent a few days the early part of the week in the city soliciting business.

A. H. Ruth, Chicago manager for the G. W. Jones Lumber Company, Appleton, Wis., will leave the early part of next week for a two weeks' trip through the South, visiting Memphis and Arkansas points.

➤ PITTSBURGH ◀

Hardwood prices remain very firm and higher quotations are looked for before long. Stocks everywhere are low. White oak has never been in such good demand. Lumber for manufacturing purposes is badly wanted. The market for low-grade hardwood is especially good and stocks in this line have been pretty well cleaned out at the mills. Nearly all wholesalers look for a big business throughout this year.

C. E. Breitwieser & Co. are getting well established for a new firm at their headquarters in the Bessemer building, where Frank Smith, formerly of the Breitwieser & Wilson Company, will be hardwood manager.

I. F. Balsley of the Balsley & McCracken Company is feeling good over some nice orders which came his way lately. Chestnut has been a favorite among his buyers during the last few weeks.

The Mutual Lumber Company is getting some big orders for chestnut crating and boxing lumber. One of these this week brings the company \$3.50 per M more than the price quoted sixty days ago.

The Kendall Lumber Company will shortly begin developing its immense Chess tract of timber on the Cheat river and is now building a railroad up the Cheat river to facilitate this operation.

The Pickett, Hyde & Langgans Company has been organized by D. M. Hyde, until recently salesman for the Babcock Lumber Company of this city, and J. W. Pickett and F. C. Langgans of Johnstown, Pa.

Joseph J. Linehan has secured the exclusive agency in the Pittsburgh district for the splendid poplar and oak stocks of Mowbray & Robinson, whose seven plants are located at Quicksand and West Ervine, Breathitt county, Ky., on the Louisville & Nashville railroad.

John M. Hastings, president of the J. M. Hastings Lumber Company, is spending a few weeks in Nova Scotia overseeing the immense operations of the Davidson Lumber Company of which he is also president.

The Foster Lumber Company is a new hardwood concern with offices at 814 Bessemer building, organized by W. E. Foster and P. M. Franklin, who have been for ten years operating country mills in West Virginia, western Pennsylvania and Ohio. They have seven such operations going now. They will handle all their own product through the Pittsburgh office and also do a considerable wholesale business in hardwoods.

The Aberdeen Lumber Company has orders on its books for 9,000,000 feet of gum and cottonwood, which makes its president, J. N. Woollett, extremely confident about the situation this year. The wagon manufacturing people and also other big hardwood using concerns have been very liberal with their orders and requisitions of late and promise to be all the year.

◀ BUFFALO ▶

Taylor & Crate have purchased a tract of about forty acres on the New York Central and Lackawanna railroads. This land was acquired for investment and to provide additional storage room for the firm's large stocks of hardwoods. The site recommended itself by reason of the rapid industrial growth of that part of the city and the railroad facilities afforded. The firm will continue business at the present yards for some time. It owns ten acres on Elk street and six acres on the river front at Hertel avenue.

John W. Welch came home from the Pacific coast for the holidays, having left the office of the Buffalo Hardwood Lumber Company last spring. He says that he is a member of the United States Pacific Lumber & Timber Company of Vancouver, with two logging operations on the Sound, which ship in logs to the Vancouver mills. He travels by water considerably nowadays and is often in Seattle. There is a proposition to make an \$8 rate on lumber from Puget Sound through the Panama Canal to New York, which he thinks will discount the all-rail rate about three to one on coarse lumber and two to one on siding and shingles. He is very enthusiastic over the country and will return in a few days.

The loss of the steamer H. S. Pickands by fire in Fairport harbor made it necessary for H. H. Salmon & Co. to bring in about 400,000 feet of maple all-rail. Manager F. T. Sullivan has the yard well-filled with hardwoods.

F. M. Sullivan has left for a trip to Chicago and will also visit Michigan. He expects to be away during most of the present month looking after purchases of lumber.

Miller, Sturm & Miller have received some good sized stocks of hardwoods within the past two or three weeks at their new yard. They report some trouble from a shortage of cars.

G. Elias & Bro. find a fair amount of trade in hardwoods at present, especially in oak. The building lumber demand has lessened considerably since the first of the year.

H. A. Stewart left early this month for West Virginia, where he will ship out some more oak and poplar for I. N. Stewart & Bro., remaining away for several weeks.

O. E. Yeager is busy at present looking after the affairs of the Chamber

of Commerce and closing up its yearly work, preparatory to his retirement from the office of president.

All the members of the Hugh McLean Lumber Company are in Buffalo at present to hold the annual meeting of the Hathurst Lumber Company, which, it is understood, transacted only routine business.

Anthony Miller looks for a pretty good year in hardwoods. His trade has been quite active so far this month, and the outlook is considered very fair for better business later in the month.

Blakeslee, Perrin & Darling have been shipping out some good stocks of oak this month. They are also selling chestnut, which is moving out about as fast as it comes in.

The Buffalo Hardwood Lumber Company is getting a good deal of oak and other hardwoods from the Southwest and states that trade so far this year has been very satisfactory.

Horace F. Taylor represented the Buffalo lumbermen late last month at the Washington hearing on the stop-over privilege. It is hoped that the commission will render an early decision.

The Standard Hardwood Lumber Company is getting in its usual large stocks of oak and chestnut from the South and its new yard now has several million feet of hardwoods.

◀ NEW YORK ▶

Of interest to manufacturers of trim throughout the whole country is the action of Justice Ford of the Supreme Court of New York, who recently dismissed the suit brought by John Savage, president of the Joint District Council of the United Brotherhood of Joiners of America, against Henry A. Potter, president of the American Anti-Boycott Association of New York, which sought to restrain the anti-boycott association from prosecuting cases on behalf of its members. This action of the court establishes the right of members of the anti-boycott association to legal protection in the matter of open shop operation. The anti-boycott association has been working on behalf of several large trim and millwork manufacturers whose product, it is alleged, has been barred out of Manhattan through the combination of the labor unions and certain manufacturers. Several suits have been brought by the anti-boycott association on behalf of trim manufacturers, members of the association, against the Brotherhood of Carpenters. These suits seek to restrain the boycotting of woodwork of these firms.

T. S. Miller, manager of the hardwood department of the Stevens-Eaton Company, wholesaler of 1 Madison avenue, returned last week from a trip to the company's shipping yard at Elkins, W. Va. The company is carrying a fine stock of hardwoods in its yard at that point and recent improvements which it has made there places it in fine shape for giving quick service to its customers. Being located at a railroad junction it is suffering less from car shortage than most shippers. Mr. Miller reports all the mills in that part of the country busy and the hardwood market generally strong.

William Schnette & Co., wholesalers of 220 Fifth avenue, announce the appointment of John A. Daley to assist William Schnette in the management of the local sales office at the above address.

T. H. Griffin of Price & Merce, lumber firm of London, sailed for home on the White Star liner "Celtic" last week. Mr. Griffin had been touring the American lumber markets for the past two months.

J. W. Love of Love, Boyd & Co., who makes his headquarters in New York, spent the holidays at his home in Nashville.

◀ PHILADELPHIA ▶

J. Gibson McVain of J. Gibson McVain & Co., says, considering that 1912 was presidential year and the first half anything but profitable trading, the year's business on the whole has been very satisfactory, and unless something unforeseen at this time occurs to cloud the business horizon, there is every reason to believe that business in 1913 will be a record breaker.

J. W. Floyd of The Floyd-Olmstead Company, reports a banner year's business and sees no signs of a diminished activity for 1913. Instead of issuing a souvenir calendar as heretofore, this firm this year presents to its customers and friends a handsome leather backed portfolio with files for private and valuable papers.

Fisher Dalrymple, secretary and treasurer the S. B. Vrooman Company, Ltd., testifies to the best trading for years. Fortunately the company was well supplied with mahogany during a shortage of this wood and was able to meet a suddenly increased demand.

Robert W. Schofield of Schofield Brothers reports a big year's business and the month of December the best they ever had. They are anticipating continued prosperity.

George M. Spiegle of George M. Spiegle & Co. says he has no fault to find whatever with trading, and everything looks promising for 1913.

"No trouble to get business," says Clem E. Lloyd; 1912 has proved a prosperous year for him.

A. T. Bliss of Bliss & Van Auken, New York, was a recent visitor to Philadelphia and a participant in the New Year's festivities of the Lumbermen's Exchange. He says business with them has been very satisfactory and they are much encouraged over the outlook.

The Kendall Lumber Company has given up its Philadelphia office and all eastern business will be handled from the home office in Pittsburgh, Pa., where W. J. Glantz, Philadelphia representative, will hereafter make his headquarters.

J. W. Turnbull of the J. W. Turnbull Lumber Company reports a big year's business and the Bristol Sash and Door Company, Bristol, Tenn. which it represents, is pushed to the limit getting out orders. It will remove to the new Stock Exchange building in February.

William H. Fritz of Wm. H. Fritz & Co., says although business was a little disappointing in certain lines the showing over 1911 is gratifying.

The Baldwin Locomotive Works have just closed an order for eighty-eight locomotives for the Santa Fe Railroad Company, calling for an expenditure of \$1,760,000. The Baldwin works are pushed to nearly the maximum capacity getting out orders for spring delivery.

Jesse Roberts, a prominent lumberman of this city, died on Dec. 20. He was seventy-five years old.

Jerome H. Sheip has incorporated his business under Pennsylvania laws, capitalized at \$150,000. It will hereafter trade as the Jerome H. Sheip Company, Inc.

◀ BOSTON ▶

The I. N. Chase Lumber Company, Boston, has been incorporated to succeed to the business of the Hayford-Chase Company. The capital stock is \$10,000 all paid in. Mr. Chase is very well known in the East. He became associated with A. W. Hayford in 1890 and remained in his employ until 1908, when he started a general commission business under his own name. In 1909, he again became associated with Mr. Hayford under the firm name of Hayford & Chase. Later this business was incorporated under the name of the Hayford-Chase Company.

A bad fire in the lumber district of Lowell, Mass., on Jan. 2 caused a heavy loss to the Pratt and Forrest Company and to A. L. Brooks & Co. of that city. The fire started in the boiler house of the former company and made great headway before it was discovered. The loss, while heavy, was well covered by insurance.

The Johnson-Jordan Lumber Company, Malden, Mass., has purchased the entire stock, plant, yards and good-will of the Interstate Lumber Company of the same city and will continue the business of the latter concern. The Interstate company made an assignment a few weeks ago.

Le Baron Hathaway, president of the Robbins Lumber Company, Plymouth, Mass., died late in December in Naples, Italy, where he had gone with his father, the latter being in poor health.

Five broke out in the dry-kilns of the Wason Manufacturing Company, Brightwood, Mass., late in December. The dry-kilns were destroyed as well as the storage sheds where the company carried a large stock of lumber. A stock of nearly 3,000,000 feet of lumber was burned. The company manufactures cars.

The violin case manufacturing plant in Charleston, N. H., owned and operated by the Superior Tap Company, has been totally destroyed by fire.

The Fuller-Smith Lumber Company, Boston, has been incorporated with a capital stock of \$50,000. The incorporators are: Charles W. Smith, Herbert A. Fuller and James R. McDowell.

The Webster Lumber Company, Watertown, Mass., has been incorporated with a capital stock of \$25,000 by William A. Webster and John E. Whitecomb.

◀ BALTIMORE ▶

Stephen S. Mann and Frank A. Parker, partners in the hardwood firm of Mann & Parker, which went into liquidation some months ago, and the affairs of which are still in the hands of a trustee, but who have been discharged from bankruptcy, have formed the Mann & Parker Lumber Company, with offices on the sixteenth floor of the Continental building. The company will be incorporated with a capital stock of \$25,000, and will engage in the wholesale trade as before, but is resolved to fight shy of sawmill operations, which are chiefly blamed for the previous embarrassments.

Rittler Brothers, formerly the Rittler Box Company, with a factory on South Carolina street, have filed plans with the building inspector for a three-story warehouse, 60 by 100 feet, which they intend to erect in the rear of their present factory. The structure will be of reinforced concrete and cost \$10,000.

C. E. Williamson, who represents Richard P. Baer & Co., in the Central West, making his headquarters at Cincinnati, was in Baltimore on a visit to the home office during the holidays, as was N. J. Warner, who is in charge of the Asheville office for the firm. Both reported business in their respective territories as decidedly active.

◀ COLUMBUS ▶

At Norwalk, O., the McCrillis Handle Company is planning to enlarge its plant. Work on the new addition has been started. The company has been operating a branch plant at Nellie, O., in Coshocton county, but has been unable to secure a lease on the building any longer and will enlarge its Norwalk plant to take care of the business. The McCrillis Handle Company was started in 1862 by Milo McCrillis and was incorporated in 1900. Milo McCrillis is president; A. V. Andrews, vice-president; F. H. Fox, secretary-treasurer, and L. A. Beston, superintendent and manager.

The E. M. Strucker Lumber Company of Cuyahoga Falls, O., has been incorporated with a capital stock of \$25,000 to deal in lumber and building materials. The incorporators are E. P. Otis, E. E. Otis, C. F. Beery, M. R. Kinney and L. R. Barnes.

The Smith-Lingham Lumber Company of Cleveland, O., has been incor-

porated with a capital stock of \$25,000. The incorporators are J. F. Smith, L. C. Lingham, Harry E. Hammar, C. Von Bessler and Phoebe A. Prentice.

The B. A. Leach Lumber Company of Toledo has been incorporated with a capital stock of \$15,000 to deal in lumber. The incorporators are Oscar A. Leach, B. A. Leach, Vivian A. Leach, A. M. Leach and Ralph B. Leach.

The new quarters of the Columbus Builders' and Traders' Exchange, located in the Arcade building, on North High street, were opened recently by a formal house warming. The exchange rooms are modern in every respect and are very commodious. The quarters consist of a dining room, assembly room, ladies' reception room, consultation and directors' room, pian room, kitchen and serving room.

R. W. Horton, sales manager for the central division of the W. M. Ritter Lumber Company, reports an active demand in hardwoods. He says the December business was far in advance of any December in the history of the company. The demand is good for all grades of hardwoods and advances have been made in quartered and plain oak, chestnut and poplar. Stocks are light both in the hands of manufacturers and retailers, and the only drawback is the car situation, which shows some improvement recently.

W. M. Ritter, head of the company bearing his name, left late in December for a hunting trip in the South.

H. M. Hayward of M. A. Hayward & Son says the demand is good for all hardwoods and there is a slight advance in price; in fact, the demand appears to be better than at any time during the past few weeks. The future outlook is considered good.

W. L. Whitacre of the Whitacre Lumber Company says there is a good demand for hardwoods. Retailers are buying some, although stocks are a little heavier than usual.

F. Everson Powell of the Powell Lumber Company says there is a good demand for hardwoods with prices holding up firm. Stocks are scarce, but manufacturers are cutting rapidly and there will probably be an increase in stocks soon.

W. B. Sisson, sales manager for the Sowers-Leach Lumber Company, says trade is good, especially in hardwoods. Inquiries are coming in well and the outlook for future business is good.

Since the tragic death of J. K. Sowers, president and general manager of the Sowers-Leach Lumber Company, the concern has been reorganized. Dan H. Sowers, brother of the late president, has been elected to the position of president; D. S. Benbow is secretary, treasurer and general manager, and W. B. Sisson, sales manager. B. A. Leach, formerly connected with the company, sold his interest in September and has organized a lumber concern in Toledo.

John R. Gobey, president of John R. Gobey & Co., reports a good demand for hardwoods. Prices are strong and inclined to advance. Stocks are light everywhere, and there is still considerable trouble with the car shortage.

At Logan, O., the Snyder Manufacturing Company, a furniture manufacturing concern, was totally destroyed by fire recently. The loss is estimated at \$100,000, with insurance of about half. The machinery was entirely destroyed and nearly 400,000 feet of lumber was burned. The fire started in the dry house and spread rapidly to other parts of the plant. Arrangements are being made to rebuild the plant at once.

During 1912 the value of buildings for which permits were issued in the city of Columbus was \$4,675,303, which is \$7,061 more than that of the year previous. The number of permits issued during the year was 2,657, or 18 less than in 1911. The increase of building during December, 1912, over that in the same month of 1911 is noticeable. Last month the valuation was \$157,473 and the number of permits 122. In December, 1911, the valuation was \$129,637 and the number of permits 78.

◀ CINCINNATI ▶

Harry Meade, local representative of the Babcock Lumber Company of Pittsburgh, Pa., has just returned from a trip to the company's mill at Tellico Plains, Tenn. He says that the big band mills are running full time and are cutting about 100,000 feet per day with shipments about equal.

W. E. Heyser of the W. E. Heyser Lumber Company, just in from a trip, states that his company is doing the biggest business in its history. He expects to see conditions even better in a couple of months.

The Reimeier Lumber Company reports a steady and satisfactory demand for most all hardwoods. It has received quite a nice lot of new lumber during the past couple of weeks and has much more awaiting shipment from inland mills.

The E. C. Bradley Lumber Company reports that trade has been fine during most of the past season and especially so during the latter part of the year. Mr. Bradley stated that he is looking for a big year for 1913.

At the yards of the Midland Lumber Company, located on the outskirts of the city, one of the up-to-date lumber yards can be found with a very good-sized stock of hardwoods. The company states that it is well satisfied with business conditions and has been getting its full share of trade.

The Tennessee Lumber and Coal Company reports that it is doing everything possible to increase the output of its band mill, finding it necessary to meet the increased demand for all kinds of hardwoods and white pine.

◀ INDIANAPOLIS ▶

Mr. and Mrs. W. W. Knight are home from their wedding trip to Panama and have taken apartments in the Buckingham.

The name of the Root Furniture Company at Shelbyville has been changed to the Albert Furniture Company.

Building operations in the city during 1912 amounted to \$9,150,407 as compared with \$8,349,477 in 1911, establishing a new record for the city.

The first big patron of the parcels post out of Indianapolis was the Interior Hardwood Company, which, on Jan. 2, mailed several hundred samples of hardwoods to various points throughout the United States.

The property of the Ford & Johnson Company, furniture manufacturers, has been sold by Elmer W. Stout, receiver, to Harry Webber of Cincinnati, representing the bondholders. The consideration was \$496,000.

With an authorized capitalization of \$8,000, the Paoli Hardwood Company has been organized and incorporated at Paoli and will conduct a hardwood manufacturing business. Those interested in the company are George M. Wells, W. H. Coppelock and A. M. Wells.

J. V. Zartman, secretary of the Indiana Manufacturers' and Shippers' Association, has opened a permanent office in the Lombard building. The association will have its annual banquet here Jan. 16.

J. A. Ross, M. C. Caldwell and J. S. Powell have organized the Midland Manufacturing Company at La Porte to manufacture woodenware. The company has been incorporated with an authorized capitalization of \$25,000.

After a two weeks' shut-down for repairs, the plant of the Udell Works, manufacturers of furniture, ladders, etc., has resumed operations. The company reports an excellent business during 1912.

◀ MEMPHIS ▶

The Valley Log Loading Company handled during 1912 11,703 cars of logs and it is estimated that about twenty per cent of these logs went to points other than Memphis, with the result that the receipts here were slightly more than 9,000 cars. All of this timber came over the Yazoo & Mississippi Valley lines of the Illinois Central System. The movement was reasonably free during January and February, when 1186 and 971 cars, respectively, were loaded. In March the total was 671. During April, May, June and July the movement was very much restricted as a result of the conditions growing out of the flood in the Mississippi valley. Cars loaded during this period numbered 400 for April, 564 for May, 787 for June and 755 for July. After that the movement increased until December when there was a reduction on account of the inability to secure cars for the prompt handling of log shipments. The totals for the last five months were: August 1089, September 1138, October 1286, November 1464, December 1152. The company is loading logs now at a very rapid rate and it is confidently stated by the officials of the company that the amount of timber loaded by it for Memphis will be the largest on record for the month of January unless there is some unforeseen development. It is estimated that the average output of a car of logs is about 4300 feet. It will therefore be seen that the movement of timber to Memphis over the Yazoo & Mississippi Valley line of the Illinois Central system amounts to slightly more than 38,000,000 feet.

The plant of R. J. Darnell, Inc., is temporarily closed down on account of inability to bring timber to Memphis. This firm owns extensive timberland holdings near Batesville, Miss., and is handling its logs over the Batesville Southwestern and the Illinois Central. It has been impossible to secure sufficient cars to keep the firm in timber and it has been necessary, on more than one occasion recently to close down pending the receipt of more timber.

The firms in Memphis which depend upon the western roads for their timber are meeting with slightly better results than a short time ago. This is due to the fact that the car situation is somewhat improved.

The hearing in the case of the Anderson-Tully Company, involving the issuance of through bills of lading on export shipments over lines west of the Mississippi river, did not result in anything definite. Special Examiner Marshall of the Interstate Commerce Commission was in Memphis and a number of prominent lumbermen appeared before him and gave testimony hearing upon the subject at issue. Owing to the limited time, however, it was impossible to present all of the evidence and the hearing was adjourned *sine die*. It is anticipated, however, that there will be a continuation of the presentation of evidence at a comparatively early date. Exporters here are of the opinion that, as the commission has made the ruling that it will force the railroads in Texas to issue through bills of lading on cotton shipments if the steamship companies are willing to honor these documents, it will hold a similar view with respect to shipments of lumber intended for export. They are therefore anticipating victory when the decision is handed down in this case. It is suggested that the next hearing will be held in New Orleans.

W. H. Greble of the Greble-Sine Lumber Company has recently returned from a trip to Mississippi and Arkansas. His firm is handling the output of several mills in these states. He says that the car situation is considerably improved, especially on the Iron Mountain between Helena and McGhee. He also emphasizes the fact that there is a decided shortage of dry lumber in the Memphis territory. He reports a good demand.

Building operations in Memphis during 1912 involved a total expenditure of \$7,159,214.15. The gain amounted to about 22 per cent as com-

pared with 1911 when the total was \$5,869,146. The actual gain in money value was \$1,300,068.15. The best showing was made in August when the total was \$1,101,595. The smallest was in January, which recorded a total of \$252,170.

The Green River Lumber Company is enlarging its offices in North Memphis considerably. Several rooms are being built and a new vault is also being installed. The office was originally built for the Green River Lumber Company, but it is also being used by S. M. Nickey and his assistants. Mr. Nickey is interested in the Green River Lumber Company.

The St. Louis, Iron Mountain & Southern has begun the operation of trains over the Marianna cut-off. This runs from Memphis to Marianna. It materially shortens the distance between Memphis and St. Louis and New Orleans. In addition to providing another outlet for export shipments of lumber the cut-off operates through a section which is quite rich in timber resources and will make the development of these possible. There has been considerable activity in timber lands in the territory which is opened up by this line.

J. T. Willingham, president of the National City Bank, has asked that he be relieved from his duties. C. T. Whitman of Earle, Ark., who is prominently identified with the hardwood lumber industry of that section, is scheduled as his probable successor.

Miss Frieda Moore has been elected assistant secretary of the Builders' Exchange and was able to secure the position only upon her agreement to resist the wiles of Cupid for an entire year. The exchange has lost so many of its assistant secretaries through the marriage route that the directors extracted a pledge from Miss Moore to this effect before tendering her the position.

One of the principal problems confronting the lumbermen from a purely local standpoint is that of securing lower rates on lumber insurance. This subject has been discussed with considerable vigor for some time and the lumbermen have about reached the point where they are willing to give some of their insurance to outside companies instead of confining their insurance to the board companies, if the latter do not show some disposition to make concessions. The rates are regarded as entirely too high and out of all proportion to those obtaining in other cities with which Memphis has to compete. What has worried the local lumber interests more than anything else has been the failure of the board companies to furnish the lumbermen with details regarding the amount of money paid in premiums and the amount paid by the insurance companies covering losses. There have been many promises but no executions. The lumbermen are quite determined in this matter and it is expected that very definite developments will occur in the near future. Already some insurance is being placed with non-board companies.

The year promises to be one of marked activity in opposition to the proposed advances in freight rates on the part of the railroad companies operating through this gateway. Advances of from one to five cents per hundred pounds have been announced in practically every direction and the Lumbermen's Traffic Bureau, according to present indications, will have its hands quite full. Petitions have been filed before the Interstate Commerce Commission in one instance and it is expected that every single advance proposed by the railroads will be fought before that body.

The Tennessee Hoop Company has increased its capital stock to \$100,000 and is now building a large plant for the manufacture of slack hoops, heading and staves. The plant of the Memphis Stave Company will be continued in operation on Henning Island, but the hoop plant of the old Tennessee Hoop Company will be dismantled and the machinery removed to the new plant. S. B. Anderson is president, C. J. Tully vice-president, Andrew Harris secretary and treasurer, and Mr. Taylor general manager. The latter was formerly vice-president of the old company.

◀ LOUISVILLE ▶

Most local hardwood men, who have discussed the subject of substituting flat rates for the milling-in-transit arrangement in effect in most manufacturing cities of this section, have agreed that flat rates would be preferable, provided they were placed on the right level. The difficulty, of course, would be found in arriving at a mutually satisfactory conclusion as to what satisfactory rates would be.

The Louisville Hardwood Club is considering arranging a series of talks by consumers of lumber, with an idea of developing the views of users as to difficulties, if any, they have experienced, and ways in which service to them by lumbermen could be improved. It is believed the talks would be very interesting and helpful.

Members of the W. P. Brown & Sons Lumber Company have secured control of the Rohe Lake Lumber Company of Memphis, Tenn., and have changed its name to the Brown Brothers Timber and Land Company. The concern does not expect to operate, but will hold its property, a large block of hardwood timber in Arkansas, for investment purposes.

The Big Sandy and Kentucky rivers have been filled up by recent rains and a tide has developed which will bring down a lot of logs. A number of mills on both rivers, which have been closed because of lack of material, will start operations again on the strength of the heavy receipts of logs.

The Alfred Struck Company of Louisville, large manufacturer of interior finish, has increased its capital stock from \$75,000 to \$175,000. The concern does not expect to enlarge its plant, but requires the additional capacity on account of its expanding business.

Thomas Moore of Paris, Ky., has bought some Perry county timber and

will erect a mill at Hazard, according to a report from that town which is getting to be a considerable manufacturing center.

The Nigh Lumber Company of Ironton, O., has bought a lot of timber in eastern Kentucky and will build a railroad to the Big Sandy river, floating the timber down to its mill at Ironton to be sawed.

According to information which has reached Louisville, the annual convention of the National Wholesale Lumber Dealers' Association, which was held here in 1912, will take place in Atlantic City this year. Nashville was one of the leading applicants for the convention, but it was thought best to have it in the East this time. Tennesseans will probably have an opportunity to entertain the wholesalers next year if they so desire.

— < NASHVILLE > —

The 1912 building permits for Nashville totaled more than \$300,000 over those for 1911 and yearly comparisons for the past nine years show a steady increase. Nineteen hundred and twelve broke the record for the entire period mentioned and with the prospects now materializing for the immediate future, there will undoubtedly be still greater activity during this new year in the way of erecting business houses especially, as well as in the opening of populous suburbs and other developments of an important character.

Fire recently caused \$12,000 damage to the plant of the Standard Box Company, with no insurance to cover the loss. Much lumber and material in the yards were also destroyed and the fire was with difficulty kept from adjoining establishments. The origin of the fire is unknown but incendiarism is suspected as several recent fires at this same plant have been prevented in their incipency. Damage to the extent of \$1,000 was done at the same time to the Home Building & Manufacturing Company near by. The Standard plant was owned by H. Schwartz.

Work has been commenced on a four-story brick warehouse for the Davidson, Hicks & Greene Company, to cost \$20,000. Part of the building will be occupied by the Standard Furniture Company as a wholesale display room and the remainder of the building will be sub-rented.

The boiler of the mill of Lantz Brothers, near Lawrenceburg, exploded recently resulting in the death of one unknown workman and the destruction of \$1,000 worth of property.
